

The trial through which men shall pass like Osiris is death; the solace held forth to them is the promise of a renewed life, of the same rebirth as was effected for Osiris. Such beliefs do not originate from the later epoch in Egyptian history; already in the IVth dyn. (c. 3000 B.C.) we find as an essential principle that any man receiving the funeral cult should be assimilated to Osiris. The funeral rites are connected with imitative magic; the dead man becomes identified with Osiris murdered and dismembered by Seth, then restored, vivified, and avenged by Isis and Horus; if those rites once proved efficacious for Osiris, they shall still prove so when repeated for any man. Therefore the mystery of the *perjt āat* must be renewed for the benefit of every dead man. On the day of the funeral a little sacred drama is performed in the chapel of the tomb; the defunct is said to be Osiris, his wife Isis, his sister Nephthys; his son and his friends assume the parts of Horus, Anubis, and Thōth, or, should the family decline to actually play the parts, professional priests take their place. In the course of this sacred drama the same rites occur—opening of the mouth, vegetal and animal rebirth—which are depicted upon the walls of the tombs, especially the tombs of the XVIIIth and XIXth dynasties (cf. Schiaparelli, where abundant material drawn from the tombs of Seti I. [XIXth dyn.], of Rehmarā [XVIIIth dyn.], etc., is brought together; cf. G. Maspero, *Études de mythologie*, Paris, 1893-1911, i.; Moret, *Mystères*, p. 36 ff.). Among those rites some—e.g., the opening of the mouth—were known without restriction, and formulæ and mimic are displayed upon the walls of the tombs; but certain others were kept secret, for they are only alluded to, or represented by enigmatic figures with hardly a legend to explain them. This 'mysterious' part of the rites is probably what the texts call the 'sacred rites celebrated in conformity with that secret book (*sesta*) of the officiating priest' (Moret, *Mystères*, p. 18), or the 'rites of Abydos of which the defunct must be "informed"' (*reh hert Ibdw*, C. R. Lepsius, *Denkmäler*, Berlin, 1849, ii. 127), which answers to the expression used by Iamblichus (vi. 5. 7) to designate the mysteries: τὰ ἀπόρρητα, τὰ κρύπτα ἐν Ἀβύδῳ. We may suppose that a formal initiation was necessary to be 'well informed' of these rites and admitted to their benefits. The most important of them is, according to documents, the one here called the mystery of animal rebirth. To effect the rebirth of Osiris, Anubis 'passed' under a hide, which thus became the cradle (*meshent*) of the god recalled to life (*Book of the Dead*, xvii. 18). This rite, applied to men, is often depicted in the Theban tombs: an officiating priest, called the *tikenw*, is drawn along on a sleigh, crouching in the same recumbent position as the fœtus in the womb (Moret, *Mystères*, p. 82 f.; principal source, tomb of Montwerj-hepsef and Rehmarā); in the same position again 'he lays himself down under the hide of a cow, in the land of transformation,' or 'the earth that reneweth life' (Rehmarā); when he issues from the skin, he is supposed to be born to a new life. Such an allegory is certainly analogous in its meaning to the *dikṣā* in Vedic ritual. Here the sacrificer passes under the hide of an antelope and, like a fœtus, evolves from that matrix to a new life (S. Lévi, *La Doctrine du sacrifice dans les Brâhmanas*, Paris, 1898; cf. Moret, *Mystères*, p. 84 f.). This rite admits of two explanations: on the one hand, the hide is that of Osiris's enemies; Seth, or an animal standing for Seth, has been sacrificed in order that his blood may rejuvenate the defunct; on the other hand, the very mimicking of birth, the imitation of the reclining attitude of a fœtus in the womb, possesses a magic virtue which operates in favour of the

defunct. Thus Anubis did for Osiris; thus would the *tikenw* or the *sem* (officiating priest) do for the benefit of the initiated defunct in the course of the funeral. Though the latter are especially described in the Theban tombs of the XVIIIth and XIXth dynasties, they had been in use ever since the Ancient Empire; the texts in the Pyramids (Vth and VIth dynasties) allude to them, and the rites of rebirth are figured in an allegorical yet clear manner on the famous *stela C 15* in the Louvre (Moret, *Mystères*, pl. i. pp. 66-71); they belong therefore to the ancient treasure of the Osirian cult. Since the New Empire the Egyptian deceased in state of grace often receives the epithet 'he who reneweth life (after death),' *whem anḥ* (*mḥet met*) (K. Sethe, *Urkunden*, Leipzig, 1906-09, iv. 196).

Any one who is buried according to the rites and 'consecrated in a perfect manner' (*lahw āger*) must therefore be considered as an initiate to the Osirian mysteries. But was that initiation conferred only upon the deceased, and at the time of the funeral? On this important point the texts give hardly any information. We possess no text describing the initiation of a living man and corresponding to the precious text of Apuleius for the mysteries of Isis (cf. Moret, *Kings and Gods*, p. 177 ff.), yet the formulæ engraved on the funeral *stela* furnish us with some statements, and, if we examine the latter in the light of the mysteries of Isis, so strongly influenced by the old Egyptian mysteries, they become much clearer. The man who in his lifetime sought to be initiated to the Isiac mysteries derived from his initiation a double benefit: (1) a long and happy life on earth; and (2) a rebirth, after death, to a blissful life near Isis, so that the Isiac feels like the Eleusinian initiate: 'death is no more an evil, but a boon' (*ib.* p. 194 f.). This state of grace conferred by initiation answers exactly to what the Egyptians called 'state of an *lmahw* (*amakhw*), a word which is generally translated 'liegeman,' 'attached to such or such a god,' or 'devotee.' A funeral formula often found since the Ancient Empire tells us that 'the *lmahw* comes forth after a very happy and prolonged old age among the liegemen of Osiris' and finds a 'good sepulture near the great god.' The state of *lmahw* was a consequence of the funeral rites, but we often see it also conferred by special favour in one's lifetime (cf. Moret, 'La Condition des fœaux,' *RT* xix. [1897] 114). A man might be *lmahw* towards the father or head of the family, towards the king, or towards a god; if the meaning of this word is, as the present writer believes, 'initiate,' it comes to mean that the initiation was conferred by the father upon his children (as in Eleusis, where the mysteries were originally a family cult), by the king upon his liegemen (a text from the XIIth dyn. [Cairo, 20538, ii. 1. 14] says: 'The enemy of the king has no tomb, but he whom the king loves enjoys rest as an *lmahw*'), or by a god upon his devotees. This would explain the epithet *neb lmahw* ('possessor of the state of *lmahw*') which is applied to all the dead, and also to living men who are in a state of grace—'initiated.' In Eleusis too all men, and even women and sometimes slaves, might be admitted to initiation; the number of Isiac initiates was very great.

4. The rites of initiation.—In the mysteries of Isis the neophyte, after a baptism that cleanses his body and soul, undergoes in the night a secret course of probation; he 'draws nigh to the confines of death,' then treads 'the threshold of Proserpine, approaches the gods above and the gods below, and, at break of day, he reappears crowned with palm leaves, his head in a halo of rays, like unto the sun' (Apuleius, *Met.* xi.; Moret, *Kings and*

Encyclopædia

Religion and Ethics

It was of the essence of the mysteries to establish a way of communion between the votary and the saving deity who was the protector of the society. Sometimes this was accomplished by a sacred meal, such as many societies in Greece celebrated on fixed days at the tombs of founders of families and clans. At Eleusis the drinking of the draught called *kykeon* was one of the most solemn acts of the festival. If we trace these meals of communion backwards, we must suppose them to have originated in that ceremonial eating of the sacred animal or plant which belongs to the rudest tribes. But we must beware of the aberrations of a certain school of anthropologists who tend to overleap all the long series of changes which took place before these savage beliefs became humanized. These writers assume that the notion of a ceremonial eating of a divine victim persisted, not only into the more civilized pagan mysteries, but even into early Christianity. They take ancient religion at its lowest, not at its higher levels. Magic and materialism no doubt persisted, but all the nobler spirits warred against them.

When a way was once opened between the votary and that aspect of the divine nature with which he could hold intercourse, there followed an *épanouissement*, or enlightenment, which led in some cases to visions such as Apuleius records as seen by his Lucius, to whom Isis appears as he sleeps in a vision of the night and says:

'Above all, remember and retain in your heart that the remaining space of your life on earth is dedicated to me, to whom you owe all your being.'

This would lead, not to a denial of other deities, but to a special self-consecration to the service of one.

All the mysteries professed to guarantee not only happiness in the present life, but a favourable reception in the world of the dead. They extended men's views to take in the future life as well as the present one. In the passage just cited Isis says to Lucius:

'In my keeping you will live happy and honoured; and when, having fulfilled the allotted space of life, you shall go to the shades below, there also in that underworld I shine through the darkness . . . and you shall often adore me as your protectress.'

The same language, under similar circumstances, would have been uttered by Cybele or Mithra. Each deity of the mysteries attached to himself a body of votaries who were willing to trust him, and whose safety he guaranteed amid the sorrows of life and on the dangerous journey to the world of the dead.

3. Influence on early Christianity.—The question how far early Christianity was affected by the mystic sects of the Græco-Roman world is one which has been much discussed in recent years, and opinions on the subject differ widely. We must distinguish between direct influence, any borrowing by the first preachers of Christianity from the pagan mysteries, and indirect influence, exerted rather by the atmosphere which the mysteries diffused than by direct pressure. The former can have been but slight, since everywhere Christianity and the pagan mysteries were bitterly opposed one to the other. But the latter, or perhaps tendencies arising from that spiritual condition of the world which favoured the spread of the mysteries, must have been considerable. It is clear that these cults smoothed the way for the spread of Christianity.

In the teaching of Jesus Christ, as reported in the Synoptic Gospels, we find little that is akin to the mystery-cults. The preaching is public; there were no ceremonies of purification and communion; comparatively little is said as to the future life. But, when we turn to the Pauline Epistles and the Fourth Gospel, the case is already different. Returning to our statement that the essential

features of the mysteries were rites of initiation, rites of communion, and a great concern as to the future life, we find that by the end of the 1st cent. all these features were becoming prominent in Christianity. St. Paul placed baptism and the Christian sacrament on a high and spiritual level. And the relation of the believer to the exalted Christ is obviously in a measure parallel to the relation between the pagan votary and his saving deity, though, of course, in an infinitely nobler sphere. The doctrine of heaven and hell, on the other hand, of future reward and punishment, has no great place in the Pauline scheme; St. Paul seems to have expected the total annihilation of the wicked rather than their relegation to a place of punishment. As long as the Christians were in constant expectation of the Second Coming of their Master, belief in individual destiny to happiness or misery in a spiritual world could not take deep root, although R. H. Charles maintains¹ that such beliefs did at the beginning of our era find a place in the thoughts of orthodox Jews. But the concrete views of heaven, hell, and purgatory which became usual among Christians after the Apostolic Age were taken direct from the teaching of the pagan mysteries, as has been proved by Dieterich in his *Nekyia*, where he analyzes the *Apocalypse of Peter*, and shows its pagan roots. At the same time, other elements prominent in the mysteries made their way into Christianity—the great stress laid on the sacraments, and the intercessory powers of the priesthood.

The intellectual elements in Orphism and kindred doctrines, views as to the origin of the world, the nature of the deity, and the like, did not enter much into orthodox Christianity, but were taken over by some of the Gnostic sects, who prided themselves on their *γνῶσις*, or saving knowledge of secret truth. Cf., further, MYSTERIES (Christian).

LITERATURE.—The literature of the subject is enormous in extent, and nothing like a full bibliography can here be given. Very little of it is in English. The great work of C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, is still indispensable. A very readable account of the mystery-religions is given in A. Maury, *Religions de la Grèce antique*, Paris, 1857-59, but it is somewhat out of date. Of recent short works, G. Anrich, *Das antike Mysterienwesen*, Göttingen, 1894, is about the best, moderate and trustworthy. A. Dieterich, *Nekyia*, Leipzig, 1893, G. Wobbermin, *Relig.-geschichtl. Studien zur Frage der Beeinflussung des Urchristentums durch das antike Mysterienwesen*, Berlin, 1896, and R. Reitzenstein, *Die hellenistischen Mysterienreligionen*, Leipzig, 1910, all contain useful matter, but the last is very speculative and extreme. As to the amount of influence exercised by the mysteries on early Christianity there is at present a wide variety of opinions. In K. Lake, *The Earlier Epistles of St. Paul*, London, 1911, and P. Gardner, *The Religious Experience of St. Paul*, do. 1911, more influence is attributed, at all events on the classes who accepted Christianity, than is allowed by conservative writers, or, in the opposite camp, by A. Schweitzer, *Paul and his Interpreters*, Eng. tr., London, 1912. A very learned and moderate estimate is set forth by H. A. A. Kennedy, *St. Paul and the Mystery-Religions*, do. 1913. P. GARDNER.

MYSTERIES (Roman).—There is very little to be said on the subject of Roman mysteries. In the Roman religion proper there were ceremonies of a secret character, as in almost all religions, but these had nothing in common with mysteries as defined in art. MYSTERIES (Greek); they were mere survivals of the rites of primitive Latium which had to be kept up because on their continuance prosperity, public and private, was supposed to depend. Their meaning was often obscure or forgotten.

As early as the 3rd cent. B.C. Italy was invaded by Greek and Oriental mystic societies, the character and history of which have been sketched above (see MYSTERIES [Greek], p. 77).

In 204 B.C., at the end of the war with Hannibal,

¹ *Religious Development between the Old and the New Testaments*, London, 1914, ch. iv.

focalized, or clearly differentiated into a subject-object state. The 'subject' and 'object' are fused into an undivided *one*. Whatever is seen, heard, or felt in these moments is flooded with an inrush from the abysses of the inner life. Deep-lying powers, not ordinarily put into play, seem suddenly liberated. The usual insulations, which sunder our inner life into something like compartments, seem shot through. The whole being—in an integral and undivided experience—*finds* itself. Not only so, but transcendent energies from beyond the margin appear to 'invade' the individual self, a larger, environing consciousness, an enfolding presence, makes itself felt. These undifferentiated experiences—J. A. Stewart, in his *Myths of Plato* (London, 1905), calls them 'transcendental consciousness'—occur in a great variety of fields, in numerous ways, and with all degrees of depth and inclusiveness. Lofty appreciation of beauty or sublimity, absorbed enjoyment of music, serene companionship with nature, sudden insight into the meaning of a truth, the awakening of love, moral exaltation of life in the pursuit of duty, illustrate some types of experience which immensely transcend 'knowledge'—experiences in which 'subject' and 'object' are fused into an undifferentiated *one*, and in which self is identified with object.

Religious mystical experience is an intense, and strikingly dynamic, variety of this fused, undifferentiated consciousness. The individual soul feels invaded, vitalized with new energy, merged with an enfolding presence, liberated and exalted with a sense of having found what it has always sought, and flooded with joy. In many instances, especially with persons of peculiar psychical disposition, the mystical experience is attended with unusual phenomena, such as automatic voices or visions, profound body changes, swoons, or ecstasies. These physical phenomena are, however, only the more intense and excessive resonances and reverberations which in milder degrees accompany all psychical processes. They mark no rank of sainthood, and indicate no miracle-working power. The mystical experience, especially in the loftiest spiritual geniuses of the race, may very well be the emergence of a new type-level of life, a higher manner of correspondence with ultimate sources of reality, an *élan vital* of the soul, a surge of the entire self towards ineffable fullness of life. It may be, in the higher sphere of the inner life, an instance of what biologists call a tropism, *i.e.* an inherent tendency of a living thing to turn towards the sources of its nutriment. We are here primarily concerned, however, with the fact of such an experience and with its functional value. The mystical experience itself, as an inner life-event, is unmistakably one of the great tap-roots of personal religion, bringing, as it does, to the recipient undemonstrable, but at the same time irrefragable, certainty of higher personal life in contact with the personal self, and revealing a superaddition of life-functions and new depth-levels of truth. It is not necessary to conclude that 'oracular communication,' or mysterious information, or ideas with novelty of content come into the world through the secret door of mystical openings. 'Ideas' and 'communications' and 'information' prove always, when they are examined, to have a historical background. They show the marks of group-experience, and they do not drop ready-made into the world from some other region. The mystical experience has undoubtedly a noetic value. But it consists in leaps of insight through heightened life, in an intensifying of vision through the fusing of all the deep-lying powers of intellect, emotions, and will, and in a corresponding surge of conviction through

the dynamic integration of personality, rather than in the 'gift' of new concrete knowledge-facts.

'Mysticism,' on the other hand, in its narrow and exact historical significance, is a doctrine of union with the Absolute. It implies a certain metaphysical conception of God and of the soul, and it implies, further, a 'mystic way' of attaining union with the Absolute. The fundamental metaphysics in which the doctrine of Christian mysticism is grounded is Greek rationalistic metaphysics, formulated by Socrates and his great successors, Plato, Aristotle, and Plotinus. God, according to this Greek interpretation—and for the present purpose the variations of it may be ignored—is Absolute Reality, Pure Being, Perfect Form, with no admixture of 'matter,' *i.e.* with no potentiality or possibility of change. God is That-which-absolutely-is, one, permanent, immutable, and free of everything that implies process or 'becoming.' He cannot, therefore, be found in finite things, or in transitory happenings, or in passing states of mind. He is utterly beyond the *here* and the *now*. He is for ever above all that can be seen or felt or known or named. There is, however, something in the human soul which is unsundered from the Absolute, something which essentially is that Reality. There are many names for this 'unsundered something' in the soul—'pure reason,' 'active reason,' 'creative reason,' 'recollective faculty,' 'apex of mind,' 'abyss of mind,' 'ground of consciousness,' 'synteresis,' 'divine spark,' 'word of God,' 'inward light,' 'uncreated centre.' However it may be named, it is conceived as an original ground or junction of soul with God, an unlost and inalienable soul-centre, the source and basis of all real knowledge of absolute truth, of the idea of the Good, and of all ideas of universal significance. The soul can know super-empirical reality only because, when it sinks to its deepest centre, it is one with that reality; it is identical with what it knows.

This intellectual formulation—and it is the metaphysics underlying historical mysticism—necessarily involves a *via negativa*. The Absolute Reality, the God with whom the soul seeks to be united, is above and beyond all that is concrete and finite. To ascribe any finite qualities or characteristics to Him is to limit Him. We can preserve the infinite oneness and wholeness of His being only by eliminating all that is finite in our account of Him. He is not 'this'; He is not 'that'; He is not 'this.' The soul that would reach the goal of bliss in union with Him must therefore rise above (or sink below) states and processes, above emotions and thoughts, above aspirations and deeds, and find, in wordless communion, in a consciousness transcending images, ideas, or states of any kind, a junction of soul-centre with Absolute Reality—a flight of the alone to the Alone.

The 'mystic way,' 'this flight of the alone to the Alone,' is described as steep and hard, lonely and arduous, a way of 'ladders' and 'steps' and 'ascents.' The historic 'grades' which divide 'the way' into well-marked levels, or heights of ascent, are the 'purgative,' the 'illuminative,' and the 'unitive' stages. The attempts to formulate mysticism into a fixed doctrine or systematic description of the spiritual life are necessarily only partially successful, and the carefully labelled stages of the 'mystic way' only loosely sum up and recapitulate the unfolding processes of the soul on its way to God. Like the metaphysics with which mysticism is allied, these formulations are partly true and partly false.

which can never be acquired by the worldly-minded. The steps in the process are similar to those which are the commonplaces of mystics generally. (1) The first stage is purgation. As Lao-tse says, 'Only one who is eternally free from earthly passions can apprehend the spiritual essence of *Tao*.' Chuang-tse says of the sages, or perfect men, 'They wear the forms of men, but are without human passions.' The process is a long and painful one, and Lieh-tse (Licius) is represented as telling an ambitious disciple of his own experiences as a novice, when for the space of three years his Master did not deign to bestow a glance on him, and nine years passed before he attained that inner unity which was his aim. 'I have not yet succeeded in cleansing my heart of impurities and discarding wisdom,' is the confession of a professed teacher, who failed to achieve such harmony with *Tao* as would have enabled him to overcome the opposition of material laws. (2) The second stage is illumination, when virtue requires no longer a conscious effort, but becomes an unconscious habit. Lao-tse constantly deprecated the interested 'virtue' of his own times, when the would-be 'virtuous' were characterized by acute self-consciousness and were actuated by mercenary motives. (3) Many instances are given of the third stage, when an inner unity is attained, notably by Lieh-tse (3rd cent. B.C.)—e.g., that of Shang Ch'iu K'ai, who thus explained his extraordinary independence of natural laws: 'My mind was simply One, and material objects thus offered no resistance. That is all'; and Tse Hsia, who said: 'The man who achieves harmony with *Tao* enters into close unison with external objects, and none of them has the power to harm or hinder him.' This is the goal of Taoist ambition, viz. to attain to such an unconscious harmony with nature as to become the unresisting vehicle of *Tao*, and partake of its properties which render the Taoist immune from the limitations which are imposed upon the uninitiated by the laws of matter, space, and time. This third stage included also that independence of external aids which is expressed by Lao-tse in the words, 'Without going out of doors, one may know the whole world,' etc.

The later history of Taoism goes to show that, in grasping the husk, i.e. the phenomenal powers which initiates were reported to exercise, the kernel was sacrificed, i.e. that unity of thought and intention, that conformity to nature, that contempt of the merely formal and external, which was the alleged secret of these attainments; and Taoism degenerated into a system of charlatanism, including the search for the 'pill of immortality,' the 'philosophers' stone,' and the traffic in amulets, charms, incantations, and exorcisms which are the chief stock-in-trade of its modern representatives. Not only so, but the pure abstractions of Lao-tse gave place to a ritual system, more mechanical and gross than the polytheism and idolatry against which the original Taoism was a protest; and a Taoist 'pope' now presides over the hierarchy, whose chief revenues are derived from the sale of meaningless autographs, of supposed virtue in the dispersion of demons, etc., and the Master of Heaven himself is open to engagements at the houses of officials and land-owners for the purpose of exorcizing evil spirits and other ghostly influences.

Tao is not only the source from which all things proceed, but also the goal towards which all things tend. The means by which that end is attained are simple, and generally available, demanding not exceptional gifts or acquirements, but only the precondition of absolute self-abnegation. To abandon the vaunted 'wisdom' of the schools, to avoid preconceptions, to lay aside self-consciousness, to throw open every avenue of thought and feeling to the

entrance of *Tao*, are the necessary steps to that final consummation, viz. return to *Tao*. Ambition, luxury, wealth, pleasure, must have no place in the life-programme of the Taoist. He must not 'strive' even for the promotion of virtue, nor 'lift up his voice in the streets' even in the propagation of his own tenets. Hence arises the doctrine of quietism, which is practically equivalent to non-interference. Lao-tse's treatment of this theme is highly paradoxical. He speaks of *Tao* as eternally inactive, yet all-effective, and exhorts his disciples to practise inaction, or, as it is expressed by his great exponent, Chuang-tse, 'Resolve your mental energy into abstraction, your physical energy into inaction.' Another phrase of Chuang-tse may, however, be quoted to show that this dictum is not to be too literally interpreted: 'While there should be no action, there should be also no inaction.' From this we may gather that by action is meant impertinent, ignorant, and aggressive interference, such as that which was producing disaster in the China of his day, and that inaction does not imply total cessation of activity, for, if the Taoist utterly refrains from taking a part in the battle of life, he ceases to be a vehicle or instrument of *Tao*; and, as a matter of fact, all the early philosophers were quite ready to impart the details of their system to ardent disciples. Their enunciation of these principles was, indeed, charged against them as a contradiction of their own theory of non-resistance, as it might justly have been represented had their utterances been taken literally. What they aimed at was the elimination of every purely human element which might obstruct the free operation of *Tao*, the impersonal force that makes not only for efficiency but also for righteousness; and they urged that, if every man, in whatever state he found himself, would thus submit to the overruling influence of *Tao*, the State would be tranquilly ordered, and all the forces of nature would be at his disposal. Some interesting illustrations of this unconscious (i.e. non-self-conscious, or subconscious) working are given in the writings of Chuang-tse and Lieh-tse.

In the sphere of morality the same principle holds good. The 'virtues,' so blatantly advertised and applauded, are by Lao-tse regarded as mere shadows of departed realities and desperate apologies for their absence. 'Cast off your Holiness, rid yourself of Sagacity . . . discard Benevolence, and abolish Righteousness' are samples of his vigorous protests against the 'vain oblations' which were laid on the altar of conventional morality, in an age when these things were valued for their rarity, and when spurious imitations were almost universal. Virtue which is artificially developed is valueless when compared with that which is the unconscious expression of the *Tao* within. It is only when the root (*Tao*) is present that the flowers (true virtue) will bloom naturally and spontaneously.

The fact that the possession of *Tao* is, potentially, available to all induces a breadth of sympathy between man and man; hence Lao-tse says: 'He who has no faith in others shall find no faith in them'; 'Among men reject none'; 'To the good I would be good, to the not-good I would also be good, in order to make them good'; 'Even if a man be bad, how can it be right to cast him off?'

To religion, in the ordinary sense, there is no reference, no idea of personal relation to God, who is only once referred to by Lao-tse, and then in an ambiguous phrase, no suggestion of duties, liturgical or eucharistic, as owing to Him. The whole duty of man is fulfilled when he submits his will and surrenders his being to the influence of *Tao*, so as to become the unconscious or subconscious agent of that great overruling principle and power. Such a theory, however, did not long survive, and

Christian groups and a striking dominance of these forces over the intellects and wills of the primitive believers.

There are many diverse strands in the Christianity of St. Paul and many historical influences converge in him, but no strand is more clearly in evidence than the mystical, and no influence is more certain than that which led him to expect a direct personal experience of the divine Presence. There are numerous autobiographical passages in the Epistles, which describe this 'experience of divine Presence' (e.g., Gal 1¹⁵⁻¹⁶ 2²⁰ 4⁹, 2 Co 3¹⁸ 4⁶ 12¹⁻⁴, Ro 8²⁻¹⁶, Eph 3¹⁴⁻²¹), but the consciousness of the interrelation of the human spirit and the divine Spirit is not incidental; it is interwoven in the entire fabric of his Epistles. There are indications of Stoic influence in his conception of God as Spirit, and there are evidences of familiarity with the experiences and terms of the Oriental mystery-religions which were already invading the empire in St. Paul's time, but the most important source of his faith in an immediate, divine, environing Presence, in whom men can live and move and be, was his own first-hand experience of what occurred to him personally, and what occurred in the groups of believers in the cities of his missionary activity. For him, 'to live is Christ' (Ph 1²¹), which means that to live a life of real spiritual significance is to partake of the divine nature, appropriate it in the formation of a 'new man,' and re-live, both in joy and in suffering, a kind of life which, like Christ's, reveals God. The central 'mystery' of Christianity, the secret of its power and promise, is the experience of Christ in the inner life, supplying within a conquering, resurrection life, overcoming sin, and creating a spirit of love (Col 1²⁷). The ethics of St. Paul is inherently bound up with his faith in, and mystical experience of, an inflooding divine Spirit—whether called 'God in you,' or 'Christ,' or 'the Spirit of Christ,' or 'the Spirit.' Something from a 'world above,' 'a spiritual realm,' comes into man and inaugurates in him a new life, an immortal nature, a new kind of man-nature, 'created after God in righteousness and holiness of truth' (Eph 4²⁴).

The influence of the Johannine writings on mysticism has been far greater than that of the writings of any other NT author, and yet the term 'mystic' does not as properly belong to St. John as to St. Paul. St. John is primarily a theologian, occupied and absorbed with interpreting the eternal significance of the Incarnation. There is far more evidence in his writings than in those of St. Paul of Platonic influence, though it is probably a Platonism that has filtered in through Philo and other Jewish interpreters. There are for this author two worlds—the world that is 'above,' the world that is 'true' or real, and the world that is of darkness and shadow and evil. Christ is eternally 'of God.' In Him is life of the real and eternal order. He is truth, as it is in its pure effulgence. His incarnation exhibits in 'this world' of shadow the intrinsic nature of the world 'above'—the world of spirit and light and life and truth—the God-nature, which nothing 'from below' could ever truly reveal or even adumbrate. It is, thus, wholly through Christ's mediation that men like us—empirical, natural beings—can partake of life. All that we can have we 'receive.' Spiritual life, the life of God, is not in us or of us. It is 'from above' and is appropriated by 'faith,' by 'knowing Him,' and by a sacramental eating of His flesh as the soul's bread and by drinking His blood as the soul's life-substance. Everywhere in these writings we are impressed with the interior depth of the author. We feel sure that, either inwardly or outwardly, he has 'lain on Christ's bosom,' and that his personal testimony, 'Of His

fullness have we received,' is profoundly true. But these writings predominantly turn our gaze, not to the immense resources of the soul's inner experience, not to the native testimony of the heart's kinship with God, but to the historical Person who was the Logos of God, in whom the glory of God is revealed, and from whom we may receive eternal life. We do not find primarily in St. John an interpretation of experience, but rather a theological interpretation of Christ as 'the way,' theological indeed, but so extraordinarily wonderful that it has ever since ministered to and fed the deepest life of man.

LITERATURE.—See list of authorities at end of art. MYSTICISM (Christian, Protestant).
RUFUS M. JONES.

MYSTICISM (Christian, Roman Catholic).—The word 'mysticism' is modern. The older expression is 'mystical theology,' which originally meant the direct, secret, and incommunicable knowledge of God received in contemplation, as opposed to 'natural theology,' the knowledge of God obtained through creatures, and 'dogmatic theology,' the knowledge of God by revelation. In comparatively recent times, however, 'mystical theology' has also been taken to mean a science dealing with the phenomena connected with this mystical knowledge of God (such as visions and locutions), with the dispositions for it, and its various external effects (ligature, quietude, ecstasy, levitation, etc.). This use of the expression is improper, just as if 'dogmatic theology' were used as the name for the method of learning dogma and for the consideration of the effects of dogma on the mind and conduct. In the earlier and strict sense mystical theology is an experience, not a science, for it cannot be expressed in words.

1. **Mystical theology in the early Church.**—The belief in mystical theology and its connected phenomena was taken over by Christianity from Judaism. But the prophets of Israel and their schools, the pure mystic desire and praise in some of the Psalms, the hidden wisdom of Job and the Sapiential books, were things of the past in the 1st century. Judaism tended to regard God as so transcendent and ineffable that He could deal with creatures only by angelic mediation; the creation and the theophanies were thus explained. It was the fashion to see or write of apocalypses, symbolic visions, angel-ministers. Philo finds his Neo-Platonist conceptions of contemplation symbolized in the OT, but he is not following a Jewish tradition. In the NT mysticism is not directly described or taught; it is far less on the surface than in the OT; yet it seems to be hinted at (e.g., 1 Co 2⁸⁻¹⁴ 6¹⁷) and even pre-supposed. And, further, the attendant phenomena are frequently mentioned: visions, dreams, trances, angels and devils, revelations, extraordinary gifts of the Holy Ghost, of which the chief is prophecy.

We know very little about the early years of Christianity. False apocalypses and Sibylline books testify (if testimony be needed) to the continuance of a belief in vision and prophecy. The *Pastor of Hermas* bears so striking a likeness to the symbolical visions of mediæval mystics that it is hard to regard it as fiction. If the writer was older than his brother Pius (pope c. 140-155), his earliest experiences may well have fallen c. 99-99, before the death of St. Clement. For the 2nd and 3rd centuries it will be sufficient to instance the visions of St. Perpetua († 203), those mentioned by St. Cyprian († 258) (see Harnack, 'Cyprian als Enthusiast,' *ZNTW* iii. [1902] 177). The prophecies of Montanus (began 155?), Priscilla, and Maximilla († 179) were rejected by the Church, not because locutions and raptures were suspect, but because these prophets claimed to add something to the

Nusairis.

the eyes; this was the error of the Anthropomorphites (x. 5). Our Lord has taught us by His example to retire from the noise and confusion of the world, in order that, while we dwell in the body, we may in some part prepare ourselves to receive a certain similitude of that future blessedness which is promised to the saints (x. 6), to be united to the Father and the Son, as they are united to one another (x. 7).

The first anchorite to dwell at Scete, the famous St. Macarius of Egypt († 389), is the reputed author of some epistles and homilies of extraordinary beauty. *Hom. viii.* (PG xxxiv. 527 ff.) is a record of personal experience, and demands quotation:

'A certain one enters to bend the knee, and his heart is filled with the divine working, and his soul exults with the Lord as with a bridegroom, according to the word of Esaias the prophet, saying: "As the bridegroom rejoiceth over the bride, so shall the Lord rejoice over thee"; and it comes to pass that, having been without leisure all the day, in this one hour he gives himself to prayer, and his inner man is rapt away into prayer, to the immeasurable depth of the other world, in much sweetness, so that his mind is afar, being aloft and carried thither away, so that at that time oblivion comes into the considerations of the understanding, because they have been filled up and taken captive unto divine and heavenly things, to the infinite and incomprehensible, to things wonderful and that may not be expressed by human mouth; so that in that hour he prays, and says: "Would that my soul had gone forth together with the prayer!"'

Macarius describes how 'grace' comes, sometimes as burning fire, sometimes more slowly; this lamp is always alight, but, when it shines brighter, it is because it is set aflame by the inebriation of the love of God. He relates spiritual experiences—a cross of light within the soul; the being caught in ecstasy, and finding himself before the altar in the church and being given three loaves to eat; a garment of light bestowed on him; a light in the heart, opening out the way to a deeper and secret light, so that the whole man was bathed in the sweetness of contemplation,

'so that no longer could he contain himself, but became as a fool and a barbarian to this world through the exceeding love and sweetness by reason of the hidden mystery, so that the man at that time was made free and attained to the perfect measures, and was clean and free from sin; but after this, grace withdrew, and the veil of the contrary power came across; but yet it partially shines, and he stands one step below perfection.'

For there are twelve steps: 'He who is rich in grace stands ever night and day on the summit, and is free and pure, for he is on high and captive'; but, if he never descended one step, 'he could not receive the ministry of the word, nor take care for himself or for the morrow, but could only sit in one corner uplifted and inebriated.' It is therefore impossible to remain long in the highest degree. In *Hom. i.* Macarius describes the life of the soul in God. As Origen had given 'Christ and the soul' as one of the interpretations of the Sponse and the Bride in the Canticle of Canticles, so Macarius habitually speaks, just like a medieval mystic, of the heavenly Bridegroom.

'Such a soul, putting away the shame of her face, and no longer mastered by the disgrace of her thoughts nor caused to commit adultery by the evil one, has communion with the heavenly Spouse, as being herself simple (μονότροπος); for, wounded with His love, she languishes and faints (if I may dare to speak thus) for the beautiful spiritual and mystical commerce in the incorrupt union of communion in holiness. Blessed indeed and happy is such a soul, which, conquered by spiritual love, has been worthily affianced to God the Word' (*Ep. ii.* [PG xxxiv. 416]).

Palladius tells us that this great ascetic was said to live in a continual ecstasy (*ἀδιαλείπτως ἐκστασθεῖς*), and to have more commerce with God than with earthly things (*Hist. Laus. xvii.*). This is his advice on prayer:

'It is not needful to speak much, but to stretch forth the hands, and say: "Lord, as Thou wilt, and as Thou knowest, have mercy." And if warfare should come: "O Lord, help." And He knoweth what is expedient, and hath mercy upon us.'

On Macarius's views see J. Stoffels, *Die mystische Theologie Makarius*, Bonn, 1908, and in *Theol.*

Quartalschrift, xcii. [1910] 88, 243; and C. Gore, in *JThSt* viii. [1906] 85. According to J. Stiglmair (*Sachliches und sprachliches bei Makarius von Ägypten*, Feldkirch, 1912), the works attributed to Macarius are a conglomerate, in which it is impossible to distinguish what is authentic from the additions by an editor (Constantinopolitan?) of the 5th or 6th century.

St. Nilus, in the 4th cent., gave clear instructions on pure prayer, without images (*de Oratione*, 56 f., 85, 117, 119 [PG lxxix.]).

Diadochus, bishop of Photice in Epirus, wrote *Capita centum de perfectione spirituali*, at a date which is unknown; the work was known to Maximus Confessor and to Photius (Latin version in PG lxxv.; Greek version in a rare volume *Philocalia*, Venice, 1782, and in a recent edition by J. E. Weis-Liebersdorf, Leipzig, 1912). The love by which a soul adheres to God and loses all love of itself is called by Diadochus *ἐν ἀσθήσει καρδίας* (14, 16), and it cannot be exercised save when the conscience is pure (23). The soul's natural perception, or 'accurate taste of the things which it judges' (30), has been split in two by original sin (25, 29). But, besides the ordinary use of our reason, there exists another use, without this division:

'That which comes to the soul from the Holy Ghost is simple, and no man can know it, save those who willingly release themselves from the pleasures of this life on account of the hope of what is to come, and dry up the corporal appetite by temperance' (25).

The joy with which the soul then rejoices, and which it can even communicate to the body, is an unerring admonition of eternal life (25). This joy and consolation are carefully to be discerned from false or diabolical consolations (30 f.). So there are two kinds of charity, a lower and a spiritual; and two kinds of humility (cf. *The Cloud of Unknowing*, below), of which the higher is the result of contemplation (95). Diadochus is aware of the special difficulties of beginners (93), of the special graces which they receive (88), and of the aridities and seeming dereliction which ensue (69). A man should speak only when he has a moderate illumination; for, when he has none, he is ignorant, and when he has much, it allows him not to speak. For then the soul, inebriated with the love of God, wishes to enjoy with silent voice the contemplation of the glory of the Lord' (8). Diadochus speaks from personal experience (cf. 91). He wrote for monks (52 f., 68). He teaches that the gift of 'theology' (cf. 68, 72) or contemplation is above all other gifts of God for inflaming the soul with love (67).

The Greek Fathers speak from tradition, and in rhetorical language, of leaving all creatures in order to arrive at the knowledge of God which is given to the pure in heart. A well-known passage of St. Gregory of Nyssa is unusually explicit and practical. He develops the *locus communis* which Clement had long before borrowed from Philo, that God is to be seen only in the darkness, as by Moses; so that, in order to rise to this knowledge, a man must put away all that enters through sense, that he may climb the steep mount of 'theology' (*de Vita Moysis, mystica interpretatio* [PG xlv. 372-377]).

Among the Latins St. Ambrose was apparently a mystic (cf. *Epp. i.* 29, in *Ps 118*, serm. xi.). St. Augustine's *Confessions* are too much read to need more than mention. It is not rare for him to refer to mystical sight ('Lo, now we have rejoiced in some inward sweetness; lo, in the summit of the mind ["acie mentis"] we have been able to see something that is unchangeable, in a momentary flash,' on *Ps 41*, no. 10), and he constantly shows the effects, in the burning and ever-present longing for the heavenly country, which he manifests more

Nabataeans.

is possible even for those in the world and the marriage state (*in Ezech. II. v. 19f.*). The active life may assist the contemplative, provided that tranquillity of mind is not too much impeded. Christ has given us an example of the union of the two lives (*Mor. xxviii. 33, vi. 56*), which is especially necessary for those who undertake the pastoral office (*Reg. past. ii. 7, etc.*). The conditions for the contemplative life embrace not only tranquillity and retirement, but severe self-discipline (*Mor. vi. 59f.*) and great love (*ib. vi. 58, etc.*) of God and of the neighbour. The immediate preparation is given from tradition as well as experience:

"The soul must first have learnt to shut out from its eyes all the phantasmata of earthly and heavenly images, and to spurn and tread under foot whatever presents itself to the thought from sight, hearing, smell, bodily touch, or taste, so that it may seek itself interiorly as it is without these sensations" (*in Ezech. II. v. 9*). After this 'the first step is that the soul should collect itself together ("ut se ad se colligat"), the second, that it should look upon its own recollection ("ut videat qualis sit collecta"), the third, that it should rise above itself, and yield itself up by effort to the contemplation of the invisible Creator' (*ib.*). The effort is 'a great striving of the mind, when it raises itself up to heavenly things, when it fixes its attention on the spiritual, when it tries to pass over all that is bodily seen, when it narrows itself that it may be enlarged. And sometimes, indeed, it prevails, and soars above the opposing darkness of its blindness, so that it attains to somewhat of the uncompassed Light ("incircumscriptum lumen") by stealth and scantily; but for all that, to itself straightway beaten back it returns, and out of that Light into which panting it had passed, into the darkness of its blindness sighing it returns, and 'by the very tasting, it faints away' (*ib. II. li. 12*).

This 'periodicity' of contemplative prayer is constantly dwelt upon by St. Gregory: the soul is 'beaten back' and sinks down by the weight of her corruption (*Mor. v. 27f., viii. 50, x. 13, xxiv. 12, etc.*), and the brief space of the highest experience is but the 'silence in heaven for half an hour' of Rev 8¹. All this describes the mystical prayer which was later to be labelled 'active contemplation,' and is sought by the soul. But St. Gregory does not omit the 'passive' states, when the soul is caught away ('rapt') into God and inflamed, so that, although yet in the flesh, all carnal thought is subdued, though God is not seen 'as He is' (*Mor. iv. 45*). Often the mind of the just is so suspended in contemplating things on high that outwardly their face seems to have been struck with stupefaction ('obstupuisse' [*Mor. xii. 35f.*]; the mind is often caught in ecstasy ('rapt', 'in excessu suspenditur' [*ib. xxiv. 12*]). The subsequent effect of the divine vision upon the soul is noticed, not merely detachment and contempt of the world (*Ep. i. 5, Mor. vii. 7*), but the experience of being above it and that it is a passing show (*Dial. pref. and ii. 32*: 'Animas videnti Deum angusta est omnis creatura'). Self-knowledge and humility are the fruits of contemplation (*Mor. xxxv. 3, in Ezech. I. viii. 11, 17, etc.*).

Though in contemplation the mind is expanded (*Mor. v. 50, Dial. ii. 32*) and the soul is filled with peace (*Mor. v. 9*) and with marvellous sweetness, and is afire with love (*ib. v. 58, etc.*), yet it is impossible in this life to see God as He is—that is reserved for heaven.

"The soul beholds something beneath His brightness by which refreshed it may progress . . . it does not yet behold that which God is, but that which is under Him" (*in Ezech. II. li. 14*). He is seen 'per aenigmati speculum,' not 'per speciem,' 'for the darkness of our corruption hides from us the incorruptible Light; and how far off it is, is shown, for that we can see it in some measure, and yet the Light cannot be seen as it is. If the mind could not see it at all, it would not even see that it is afar off; and if it perceived it perfectly, it would not see it as though through darkness. Therefore, because it is not altogether seen, nor again altogether unseen, it is rightly said that it is "seen from afar"' (*ib. xxxi. 101*).

Many quotations from the *Moralia* and a few from the *Hom. in Ezechielem* are collected by Blossius in his *Psychagogia*, bk. iv. It is noticeable that in those great works St. Gregory never speaks of any accidental psycho-physical effects of

contemplation, although his *Dialogues*, intended for popular reading, are full of miracles, prophecies, and visions.

2. The Middle Ages and Scholasticism.—We have seen that in the Patristic period mystical theology was fully recognized, and that the method of approaching it by abstraction was traditional. For the succeeding period there are materials to be found in the Lives of the saints, which are extremely numerous throughout the Middle Ages, and are usually the work of contemporaries. Special mention has to be made of St. John Climacus († 605-606); also of St. Maximus Confessor of Constantinople († 662), an ascetic writer as well as an acute theologian, who wrote some comments on pseudo-Dionysius. It was doubtless through his influence at Rome that the Areopagite was quoted by the Lateran Council of 649. The abbot Thalassius, a correspondent of St. Maximus, has left some notes on mysticism. These three Greek writers agree in insisting that all images and imagination are to be put away in prayer (Climacus, *Ladder of Perf.*, degree xxviii. 45; Maximus, *Cent. v. 69*; Thalassius, *Cent. ii. 26*). Among the Latins may be noted Rabanus Maurus († 856), especially in his *de Puritate Cordis*, John Scotus Erigena (9th cent.), who translated pseudo-Dionysius into Latin, St. Peter Damian († 1072), and Hugh of St. Victor († 1141).

St. Bernard of Clairvaux († 1153) had a great influence on the history of mysticism. A well-read and acute theologian as well as a man of genius, his mystical experiences are important records. Note his description of the 'third chamber of the Spouse,' the perfect peace of the soul (*Serm. in Cant. xxiii. 15*), and that of the visitations and absences of the Spouse:

'I confess that the Word has come to me (I speak as a fool), and that many a time. And though He has often entered into me, I have not perceived when He came in. I have felt Him to be there, I remember His presence, sometimes I have had prescience of His advent, but His entrance I could never feel, nor even His departure' (*ib. lxxiv. 5; cl. xxxii. 2*).

Here is a remarkable comment on 'murennulas aureas et vermiculatas argento' (*ib. xli. 3*):

'This means, I think, nothing else than to weave certain spiritual likenesses, and in these to bring the meanings of Divine Wisdom into the sight of the mind which is contemplating, in order that it may perceive, at least by a mirror and in a riddle, what it cannot as yet look upon face to face. What I speak of are things divine, and wholly unknown but to those who have experienced them, how, that is, in this mortal body, while yet the state of faith endures and the substance of the clear Light is not yet made manifest, the contemplation of pure truth can yet anticipate its action in us, at least in part; so that some, even among us, to whom this has been granted from above, can employ the Apostle's words "Now I know in part," and again "We know in part, and we prophesy in part." For when something from God has momentarily and, as it were, with the swiftness of a flash of light, shed its ray upon the mind in ecstasy of spirit, immediately, whether for the tempering of this too great radiance, or for the sake of imparting it to others, there present themselves certain imaginary likenesses of lower things, suited to the meanings which have been infused from above, by means of which that most pure and brilliant ray is in a manner shaded, and both becomes more hearable to the soul itself, and more capable of being communicated to whomsoever the latter wishes.'

This is perhaps the earliest account of the distinction between *pure contemplation*, in which reason as well as imagination remains in darkness, and nothing is understood by it, and *revelation*, in which the pure intellectual conceptions are made comprehensible by means of the imagery or words which the mind habitually employs. St. Bernard suggests that this translation into 'phantasmata' is the work of the angels.

A contemporary of St. Bernard, Richard of St. Victor († 1173), makes the same distinction between contemplation 'not by a mirror and in a riddle, but in simple truth, without any veil or shadow of figures,' on the one hand, when the mind goes forth out of itself, and, on the other hand, the action by which the mind draws in this

Literary Secretary of the Young Men's Christian Association in India; author of *Gita and Gospel*, *A Primer of Hinduism*, *The Crown of Hinduism*, *Modern Religious Movements in India*.

Narayana, New Dispensation.

St. Thomas has, however, incautiously followed St. Augustine, *de Gen. ad litt.* xii., in admitting that the beatific vision was granted to Moses and St. Paul, when rapt out of their corporal senses; he did not notice that St. Augustine distinguishes the beatific vision from intellectual visions only in degree, not in kind, so that he is not to be followed here. Dominican theologians have rigidly followed St. Thomas; some Benedictines have added St. Benedict to Moses and St. Paul; some Carmelites have added Elias the prophet; the Jesuit theologians have wisely agreed with Albertus, Alexander of Hales, and Bonaventura in denying that the *lumen gloriæ* has ever been given in this life except to Christ, though some of them have suggested that such a rapture may have been granted to the Blessed Virgin.

It follows from St. Thomas's epistemology that man's intellect in this life is not radically incapable of receiving pure intellectual species such as it will con-naturally receive after death. If it should receive any, however, it will not understand them in the ordinary way, except 'convertendo se ad phantasmata'—by forming examples of them in the imagination, and translating them thus into images and human words. Hence St. Thomas's theory of prophecy and visions (*Summa*, II. ii. qu. clxxi.; *Quæst. de Veritate*, xii.): God can communicate truth to man in three ways: (a) by 'corporal vision' of something real, together with an intellectual 'light' to judge of it; (b) by an 'imaginary vision,' which is the proper medium of prophecy (in this vision images are either produced or re-arranged in the imagination), together with intellectual light to judge its meaning—these are usually to the eye ('visions' proper) or to the ear ('locutions'); they are difficult to distinguish from the images which a lively imagination forms for itself, they may be imitated by the devil, or they may be falsified by admixture from the man's own activity; (c) by an 'intellectual vision' of pure truth without any phantasmata: this is the angelic kind of knowledge by pure infused species, the same as that given after death, and it is not in itself liable to error (so St. Thomas, with all theologians, after St. Augustine). In order, however, that the prophet may understand and communicate the truth which he has received, he must needs 'turn to phantasmata':

'Ita clare veritatis cognitio infunditur ut . . . ex veritate iam perspecta, ipse sibi imagines formare possit, quibus utatur propter naturam nostri intellectus' (*de Ver.* xii. 12 corp.); 'secundum intelligentis arbitrium in imaginativa congrue formantur imagines' (*ib.* ad 2).

These images and words can express pure truth only in an inadequate and symbolic way; they are therefore a grievous source of error, except in so far as 'intellectual light' guides the prophet to translate suitably. If the images are infused together with the truths themselves, then an imaginary vision accompanies the intellectual vision, and we are face to face with the phenomena so vividly described by St. Bernard. Intellectual vision is higher than prophecy (*ib.* xii. 7 and *Summa*, II. ii. qu. clxxiv. 3); in it the absolute simplicity of the divine light is, as it were, 'contracted and specified' by conjunction with the angelic light, which is less simple and universal, and more adapted to our nature. To fall back into imaginations is a weakness, due to defect of intellectual light.

St. Thomas teaches, with all earlier and later theologians, that Adam in the state of innocence could see God after this angelic fashion by pure species, as the angels do by nature (*de Ver.* xviii. 1 ad 12), 'per intelligibiles effectus' (*Summa*, I. xciv. 1), though his mind worked as ours does by 'turning to phantasmata'; only his imagination was the servant of his intellect, whereas ours is frequently its master. He could therefore 'consider' intellectual truths and God Himself by using his imagination to subserve his intellect, without fear of its leading him into error.

In all this St. Thomas is elaborating an older theory, which we have seen described by St.

Bernard and Richard of St. Victor as regards the contemplative state. We should anticipate that St. Thomas also must regard mystical theology as the angelic consciousness communicated to man, and we might confidently argue to this from the fact that 'intellectual visions' are not peculiar to prophecy, but are understood by all mediæval writers to be common in the saints. But, as a fact, St. Thomas incidentally confirms our anticipations by a clear statement.

He asserts that Adam's knowledge was 'contemplation,' and that 'in contemplation God is seen by a medium which is the *lumen sapientiæ*, which elevates the mind to perceive the divine, but not so that the divine essence is immediately seen; and thus by grace He is seen by him who contemplates after the state of sin, though more perfectly in the state of innocence' (*de Ver.* xviii. 1 ad 4).

Therefore contemplation restores to man by grace some measure of that angelic knowledge which Adam had of God before the Fall. Adam's infused knowledge was 'from the irradiation of the Divine wisdom' (*ib.* xviii. 2), and we receive the same by the 'gifts of the Holy Ghost' (these are infused at baptism) of wisdom and of understanding, which cause in us 'a certain affinity to the divine' (*in 3 Sent.* dist. 36, qu. 2, art. 1, sol. 1), and this 'leads us to a kind of deform and in some wise explicit contemplation of the articles which faith holds in human fashion as it were under a veil' (*ib.*).

'Hence faith, which causes us to hold the spiritual veiled, as it were, "by a mirror and in a riddle," perfects the mind in a human way, and therefore it is a virtue. But if the mind is so far uplifted by supernatural light, that it is introduced to behold the spiritual things themselves, this is above human measure; and this is done by the gift of understanding' (*ib.* art. 2, sol. 1).

St. Thomas seems to have been conscious of possessing something of this gift which is above faith, when in his dying act of faith in the Real Presence he declared:

'If there be in this world any knowledge of this sacrament that is stronger than faith, I wish now to use it, to affirm that I truly believe,' etc.

In his *Comm. on 1 Tim.* vi. he says that it is impossible to 'comprehend' God; but to touch Him (*attingere*), though impossible by nature, is to be our aim, in this life by grace, in the next by glory. This experience of God is a 'nobler faith,' though the virtue has a stricter right to the name (*de Ver.* xii. 12, corp.).

But St. Thomas nowhere treats the question which he thus incidentally answers. We can simply conclude that he is in harmony with tradition, but that he does not regard mystical experience as real knowledge until it is translated into phantasmata, nor as a part of dogmatic science. We are not to be surprised that in his disquisitions on the active and contemplative lives (*in 3 Sent.* dist. 35, qu. 1, and *Summa*, II. ii. qu. clxxx.) he describes contemplation 'humano modo,' as the brief rest of the mind upon the great verities at which it has arrived by argument and investigation, avoiding any mention of mystical prayer. He means by the contemplative life the life of study and passion for truth, as opposed to the life which uses the body to do external works. In the Order of Preachers, to which he belonged, he thinks the perfect admixture of the two is to be found in the combination of study with preaching. He did not simply distinguish the two lives as that of prayer and that of works of charity. The theory just exposed as latent in St. Thomas has not been discovered by most of his followers and commentators, but it is discernible in his predecessors. What is more, it justifies and explains the practical advice which we have traced from early times up to St. Thomas's own master, Albertus, that in prayer images and phantasmata should be put aside, and then the intellect can receive pure spiritual species, though secretly and obscurely, while its ordinary use remains in abey-

the two greatest of writers on mysticism, the Carmelites St. Theresa of Jesus († 1582) and St. John of the Cross († 1591). The incomparable charm of St. Theresa's personality and her robust common sense have given immense popularity to her writings, which are the most complete and vivid descriptions ever penned of the successive phenomena of the inner experiences of a saint. Their value as testimony can hardly be exaggerated. They contain much excellent counsel and many new and necessary distinctions. St. Theresa, however, differs greatly from other mystics in her estimates of the various facts, and she is the starting-point of a new tradition. In her earliest work she distinguishes the degrees of prayer according to their psychological effects: the first is meditation, in which all the powers of the soul act naturally and freely; they work hard with small result (*Life*, chs. 11-13); the second includes 'recollection' and the 'prayer of quiet,' wherein the will is united to God, while the imagination and intellect remain free to help or hinder this delightful union (14-15); in the third degree these powers are also drawn into union, without either being lost or yet able to tell how they work; this causes an inebriation, a glorious folly, and leaves behind it greater effects than quietude (16-17); the fourth state is a complete union of all the powers, so that it is impossible to speak or read; this lasts a bare half-hour, but may lessen and return so as to occupy hours; but the utmost point of transformation in God lasts only an instant. When the effects extend even to the body, insensibility, ecstasy, rapture, or flight of the spirit is produced, and even levitation (18-20). She speaks further of locutions (25), of intellectual and imaginary visions (27-29), of appearances of Satan (31), hell (32), and saints (33); she tells of the great value of seeing the humanity of Christ (37), of the gift of miracles (39). She concludes with more purely mystical visions of 'the truth itself,' and how all things are in God (40). The concluding chapters of the *Life* are later than the rest; but her last work, *The Spiritual Castle*, is more important still, having been composed after she had long been in the highest states which she had not yet attained when she wrote her *Life*. In this final work she places 'recollection' and 'quiet' in the fourth 'mansion' of the soul, 'union' in the fifth, complete union and ecstasies in the sixth, together with the vision of the humanity of Christ, the wounds of love, the pains of longing, etc. The seventh mansion is spiritual marriage, an anticipated heaven, in which the soul begins to understand the graces which it has received, and is continually conscious of the presence of the three Persons of the Blessed Trinity.

Now, though St. Theresa intends those degrees to represent stages of perfection, yet the main distinction between the four original degrees is psychological, not really according to the quantity of mystical light, but to the perceived effect of that light on the soul and body. Those degrees are roughly equivalent to the third, fourth, fifth, and sixth mansions. When the saint herself reached the seventh mansion, she discovered to her surprise that the psychological effects, which had reached their culmination in ecstasy, ceased or diminished (she had occasional raptures later on), and that she could experience even higher communications than before without any suspension of the bodily faculties; nay more, that the peace of 'quiet' or 'union' was no longer needed, for she could be conscious of the mystical Light, and of the Trinity, while giving her mind fully to necessary occupations. This should not have astonished her directors, for the beatific vision itself will not impede the intellectual, sensible, or corporal powers of

man in heaven, and St. Thomas teaches that intellectual visions do not of themselves impede the use of the senses (*de Ver.* xii. 9 ad 4; *Summa*, II. ii. qu. clxxiii. art. 3), although 'the more the mind is abstracted from the body, the more it receives the influence of spiritual substances' (*in 4 Sent.* dist. 50, qu. i. art. 1), according to the traditional doctrine; so that naturally St. Theresa herself found in the seventh state that her mystical consciousness, though permanent, was more vivid in the time of prayer, when distracting occupations were set aside.

Thus the smooth ascent of the original four degrees is roughly broken in *The Spiritual Castle* by the addition of the seventh, which reverses the process. St. Theresa's classification has been followed by most subsequent writers, and of late years it has been adopted by Poulain. His view is that mystical states are accompanied by a 'ligature' or tying up of the powers, which in the lower degrees (recollection, quiet) has only a partial and slight effect upon the intellect and imagination, but in 'full union' prevents all the powers from working in their natural way, and, finally, in ecstasy affects even the body. This ligature, after having produced its full effect in such ecstasies, disappears in the seventh mansion, or 'transforming union,' which is characterized by the appearance of a kind of double consciousness. This sudden reversal of the sequence seems to set us in front of an insoluble problem. Poulain is dissatisfied with the idea that his ligature is the natural result of attention to spiritual things, and that even ecstasy is but the natural effect of extraordinary mental concentration. He inclines to see in the ligature a sealing up by God of the doors of consciousness, in order that the soul may not be distracted from the heavenly vision. But then, why does it cease in the highest degree?

The simplest reply is to deny that St. Theresa's important and excellent analysis necessarily corresponds to an ascending scale of mystical elevation or of moral sanctity. It does not seem to be paralleled in the experience of most of the great mystics, and it is well known that the details of St. Theresa's 'mansions' are almost wholly from her own history, and cannot be verified in other saints. It is easy enough to obtain testimonies from persons who frequently experience the lower degrees of prayer that the phenomena of 'ligature' correspond exactly to the familiar experience that, while one is listening to the conversation of one person, one can hear, without understanding, what another person says. In such prayer the intellect, being engaged upon pure intellectual knowledge in an inchoate manner, feels blank and inactive; the will is drawn to God, without sensible fervour; the imagination may run wild, because the will prefers to leave it alone rather than detach itself from the act of loving, in order to control its vagaries. But in those persons to whom 'translation' into sensible impressions is easy, or when the communications are somewhat obscured by images and less 'pure' (as St. John of the Cross has it), the imagination also is occupied with holy things, and the lower appetite is filled with peace and joy; thus we have the prayer of quiet or of union. As to the effect on the body, St. John of the Cross teaches that ecstasy and sudden rapture are due to bodily weakness: as the man grows more spiritual by the effect of the intellectual light, his soul and body are spiritualized, so as to become a fitter vehicle to endure the higher kinds of union without any 'ligature' or bodily ecstasy. Psychologically it is probable that Ribot is right in holding that 'attention' is not the intensification of one faculty, but the detaching of the others; absence of mind is a mark of concen-

Pariah.

(*Obscure Night*, iii.), in which God humbles, detaches, and purifies the higher part of the soul for that more perfect union of which St. John speaks in *The Spiritual Cantic* and *The Living Flame of Love*. It is to be noted that the method of prayer inculcated for the 'night of the senses' is exactly the traditional one; the 'night of the spirit' is also traditional—the great desolation, trial, purification, taught by almost all mystics.

Something of the tradition of St. John of the Cross was preserved in subsequent writers of the Carmelite Order, among whom may be particularly mentioned Joseph a Jesu Maria († 1626), whose most useful Spanish treatise (1658–59, Ital. version 1654–69) gives in its first part an excellent theory, with practical advice, of contemplation, and Thomas of Jesus († 1627), a great mystic, who closely agrees with the doctrine of Aquinas as above described, adding much which is less to the point from St. Bonaventura, and (especially) Hugh and Richard of St. Victor. Mystical contemplation is knowledge like that of the angels, and is above faith, though below the beatific vision. He distinguishes the lower degrees, which are habitually exercised by the gifts of the Holy Ghost of wisdom and understanding, from the higher, which are never habits, but infused acts, in which experimental knowledge of God is attained by a kind of touch (cf. *Living Flame*, ii.) and embrace (*Via brevis et plana*, 14; *de Contemplatione Divina*, i. 5, v. 2, 14, vi. 1; *de Oratione Divina sive a Deo infusa*, iv. 2, etc.). A later Carmelite, Philippus a SS. Trinitate († 1671), is at times an astonishingly foolish writer. Having declared that we must rise to God from the contemplation of creatures, he wastes a large part of his work upon a summary description of all created things and their uses, with such comments as the following (in the chapter on precious stones): 'lapis iaspis confortat stomachum.' He suggests that mystical contemplation is not by infused intellectual species, but by a partial and blurred communication of the *lumen gloriæ*—an opinion which appears to contradict all Christian mystics, in particular, St. Gregory, St. Thomas, and St. John of the Cross. The Dominican Vallagornera († 1665), though he follows Philippus, is a far better authority. He has filled his book with quotations from St. Thomas, but has no philosophical explanation of mystical philosophy to offer.

5. The reversal of tradition.—St. Francis of Sales († 1622), who shows himself in his *Traité de l'amour de Dieu* as a theologian of wide and profound thought, has given in that work fine descriptions of contemplative prayer, which his subject causes him to treat from an affective point of view. Some of his spiritual letters, and those of St. Jeanne Françoise de Chantal, contain instructions on the traditional method which are of inestimable value.

But at this very time the dogmatic theologians were rising up against mystical theology. The great Dominicans, following the example of St. Thomas in his *Summa*, ignored it; the great Jesuits denied its very existence. For example, Théophile Raynaud († 1663) explains why the 'prayer of silence' and 'spiritual sleep' must be impossible (*Heteroclitia Spiritualia*, ii. 5). Supernatural contemplation, he insists, is the same as 'vulgar mental prayer,' only in a more perfect degree; it culminates in a 'simple intuition of God,' which is a judgment of the reason, completing and crowning a complex theological discursus. Suarez († 1617), the most voluminous of Jesuit theologians, works out precisely the same view at length (*de Virtute Religionis*, tract. IV. ii. 9–20). He admits that God can infuse pure intellectual knowledge (ib. 14–15), and did so in Adam's case, and also in that of the Blessed Virgin Mary, St. John

Baptist, and probably many others; but this is a process altogether above nature; it cannot be begun by man; it is very rarely granted, by some singular privilege, or for the sake of some great public utility, 'for God disposes all things sweetly, and does not perform these miracles without a great cause.' Therefore this miraculous kind of contemplation 'is not counted among the kinds of mental prayer'; it is not to be prayed for, or desired, or in any way procured.

This entire reversal of tradition was little noticed at the time, and many books on mysticism continued to be published by Jesuits as well as others. But the holy Cistercian Cardinal Bona († 1674), in his learned and pious *Via compendii ad Deum*, states boldly that the pure prayer which he inculcates, exercised without phantasmata, by the help of aspirations, 'is universally denied by the schoolastics,' but is admitted by holy and mystical writers. St. Theresa's famous Jesuit confessor, Balthasar Alvarez († 1580), succeeded in justifying before his superiors his own mystical method of prayer; but it was declared unsuitable to other Jesuits, who made meditation obligatory in their society soon after the death of their great founder. Mercurian, who was general of the society from 1573 to 1580, forbade the use of the works of Tauler, Ruysbroeck, Suso, Harphins, St. Gertrude, and St. Mechtilde. Yet some of the chief mystical authors of the 17th cent. are Jesuits, such as Alvarez de Paz († 1620), Sandæus († 1656), and Godinez († 1644); and the older tradition was carried on by various Jesuit ascetical writers, of whom Surin († 1665) is the most celebrated. Other books may be cited: that of the Franciscan Cardinal de Lauria († 1693), who followed mediæval authorities and also the experiences of his friend Joseph of Cupertino, a saint whose life is as touching and poetical as it is extraordinary; and the Benedictine Augustine Baker († 1641), whose many treatises were fused into the celebrated *Sancta Sophia* by Serenus Cressy.

The dangerous absurdities of the Quietists, led by Molinos († 1696) and Mme. Guyon († 1717), did more even than the theologians to bring contemplative prayer into disrepute. The great Bossuet († 1704), indeed, taught the traditional method with his accustomed lucidity, in some opuscles and in some of his letters. Yet the doctrine which prevailed in practice, even in the religious orders, was that discursive meditation, with much movement of the imagination, was suitable to all (except a very few extraordinary and favoured souls), and even to enclosed nuns. It was said to be not only possible, but easy, for every one; and for three hundred years pious souls have been in the habit of supposing their failure in meditation to be a sad and rare phenomenon, due to their own wickedness and laziness, and a peculiarity too disedifying to be owned except in confession. It has been as though St. John of the Cross had never penned his denunciations of directors, who bind souls to seek 'particular knowledge,' to 'apply the senses,' work the imagination, and deduce conclusions by the reason. 'Contemplatives,' 'mystics,' have become a byword, as if they were imaginative, idle, weak-minded, sickly persons—the very antithesis of the real article. But then the popular idea of mystical graces among the educated, the learned, and the students of that *ars artium, regimen animarum*, has been that they consist mainly in revelations and imaginary visions, in ecstasies and raptures (regarded as miracles intended by God to reveal the sanctity of the recipient), stigmata and levitations, and that the safest and most authorized among them are visions of our Lord's Passion, or consolations from His humanity, such as the sight of His sacred heart, or the reception of Him in the arms in the form of an infant, and so forth. Contemplation has been

JONES (RUFUS M.), M.A., D.Litt.

Professor of Philosophy in Haverford College, Haverford, Pennsylvania; author of *Social Law in the Spiritual World* (1904), *Studies in Mystical Religion* (1909), *Spiritual Reformers* (1914), *The Inner Life* (1916).

Mysticism (Introductory; Christian, New Testament, Protestant), Oversoul, Peculiar People.

JOSEPH (MORRIS).

Senior Minister of the West London Synagogue; author of *Judaism as Creed and Life* (1910).

Old Age (Hebrew and Jewish).

JOYCE (GEORGE HAYWARD), S.J., M.A. (Oxon.).

Professor of Dogmatic Theology at St. Beuno's College, St. Asaph, N. Wales.

Nihilianism.

JUYNBOLL (TH. W.), Dr. juris et phil.

Adjutor interpretis 'Legati Warneriani,' Leyden.

Ordeal (Arabian and Muhammadan).

KAY (D. MILLER), B.Sc., D.D.

Regius Professor of Hebrew and Oriental Languages in the University of St. Andrews.

Noachian Precepts.

KEITH (ARTHUR BERRIEALE), D.C.L., D.Litt.

Barrister-at-Law; Regius Professor of Sanskrit and Comparative Philology in the University of Edinburgh.

Numbers (Aryan), Om, Ordeal (Hindu).

KENNEDY (HARRY ANGUS ALEXANDER), M.A., D.Sc., D.D.

Professor of New Testament Literature and Exegesis, New College, Edinburgh; author of *St. Paul and the Mystery Religions* (1913).

Mysteries (Christian).

KENT (ROLAND G.), A.M., Ph.D.

Professor of Comparative Philology in the University of Pennsylvania.

Path.

LAGRANGE (MARIE-JOSEPH), Docteur en Droit, Maître en Théologie.

Directeur de l'école biblique et archéologique de Jérusalem; correspondant de l'Institut (de France, Académie des Inscriptions et Belles-Lettres).

Palmyrenes.

LANGDON (STEPHEN HERBERT), B.D., Ph.D., Hon. M.A. (Oxon.).

Shillito Reader in Assyriology and Comparative Semitic Philology in the University of Oxford; Curator of the University Museum, Babylonian Section, Philadelphia; author of *Nco-Babylonian Royal Inscriptions* (V.A.B. vol. iv.), *Sumerian and Babylonian Psalms*, *A Sumerian Grammar*, *Babylonian Liturgies*.

Mysteries (Babylonian), Names (Sumerian), Ordeal (Babylonian).

LEHMANN (EDVARD), D.Theol., D.Phil.

Professor ord. Theologiæ in the University of Lund, Sweden.

Mysticism (Primitive), Nature (Persian).

LINDSAY (JAMES), M.A., B.Sc., D.D., F.R.S.L., F.R.S.E., F.G.S., M.R.A.S.

Author of *Studies in European Philosophy*, *Recent Advances in Theistic Philosophy of Religion*, *The Fundamental Problems of Metaphysics*.

Neo-Kantism.

LOWIE (ROBERT H.), Ph.D.

Associate Curator, Department of Anthropology, American Museum of Natural History; Secretary, American Ethnological Society; President (1916), American Folk-Lore Society; associate editor of the *American Anthropologist*.

Ojibwa, Peyote Rite.

MACALISTER (ROBERT ALEXANDER STEWART), Litt.D., F.S.A.

Professor of Celtic Archæology in University College, Dublin; formerly Director of Excavations of the Palestine Exploration Fund; author of *A History of Civilization in Palestine* (1912), *The Excavation of Gezer* (1912).

Philistines.

Old Age (Roman).

SPENCE (LEWIS), F.R.A.I.

Edinburgh; author of *Mythologies of Ancient Mexico and Peru, The Popol Vuh, A Dictionary of Mythology, The Civilisation of Ancient Mexico, Myths of the North American Indians.*

Paraguay, Peru.

STARBUCK (EDWIN DILLER), Ph.D.

Professor of Philosophy in the State University of Iowa; author of *The Psychology of Religion.*

Old Age (Psychological).

STEWART (GEORGE WAUCHOPE), M.A., B.D.

Minister of the Church of Scotland at Haddington (First Charge); author of *Music in the Church.*

Mnsic (Hebrew).

SWANTON (JOHN REED), Ph.D.

Ethnologist in the Bureau of American Ethnology, Smithsonian Institution, Washington, D.C.; President of the Anthropological Society of Washington, 1916.

Natchez.

TEMPLE (Lt.-Col. Sir RICHARD C., Bart.), C.B., C.I.E.

Hon. Fellow of Trinity Hall, Cambridge; late of the Indian Army; Deputy Commissioner, Burma, 1888-94; Chief Commissioner, Andaman and Nicobar Islands, 1894-1903; editor of the *Indian Antiquary* since 1884.

Nicobars.

TENNANT (FREDERICK ROBERT), D.D., B.Sc.

Fellow and Lecturer of Trinity College, Cambridge.

Natural Law, Occasionalism, Original Sin.

THILLY (FRANK), Ph.D., LL.D.

Professor of Philosophy in Cornell University, Ithaca, N.Y.; editor of *The International Journal of Ethics.*

Pantheism (Greek and Roman).

THOMAS (EDWARD JOSEPH), M.A. (St. And. and Camb.), B.A. (Lond.).

Under-Librarian of Cambridge University; editor of *Buddhist Scriptures*; joint-editor of *Mahāniddesa and Jātaka Tales.*

Mysticism (Buddhist).

THOMSON (J. ARTHUR), M.A., LL.D.

Regius Professor of Natural History in the University of Aberdeen; author of *The Study of Animal Life, The Science of Life, Heredity, The Bible of Nature, Darwinism and Human Life, Outlines of Zoology, The Biology of the Seasons, Introduction to Science, The Wonder of Life.*

Ontogeny and Philogeny, Parasitism, Parthenogenesis.

THURSTON (HERBERT), B.A., S.J.

Joint-editor of the Westminster Library for Priests and Students; author of *Life of St. Hugh of Lincoln, The Holy Year of Jubilee, The Stations of the Cross.*

Office, The Holy.

TURNER (JAMES), M.A. (Edin.), B.A. (Oxon.).

Examiner in Philosophy in the University of London.

Ontology.

VINOGRADOFF (Sir PAUL), D.C.L. (Oxford and Durham), LL.D. (Cambridge, Liverpool,

Calcutta, and Harvard), Dr. Hist. (Moscow), Dr. juris (Berlin), F.B.A.

Corpus Professor of Jurisprudence in the University of Oxford; Fellow of the Imperial Academy in Petrograd; Foreign Member of Royal Danish and Norwegian Academies; Corresponding Member of the Academy in Berlin.

Ordeal (Christian, Greek).

VOLET (GEORGES).

Late Priest of the Eglise St. Denis, Paris, and editor of *Le Catholique Français.*

Petite Eglise (Anticoncordataires).

WADDELL (L. AUSTINE), C.B., C.I.E., LL.D., F.L.S., F.R.A.I., M.R.A.S., M.S.B.A., Lt.-Colonel I.M.S. (retired).

Formerly Professor of Tibetan in University College, London; Hon. Correspondent of the Archaeological Survey of India; author of *The Buddhism of Tibet, Tribes of the Brahmaputra Valley, Lhasa and its Mysteries.*

Padmasambhava, Patna.

WALSHE (W. GILBERT), M.A.

Author of *Confucius and Confucianism, Ways that are Dark*; formerly editor of *China.*

Mysticism (Chinese).

WATKINS (OSCAR DANIEL), M.A.

Vicar of Holywell, Oxford.

Penance (Anglican).

WATSON (EDWARD WILLIAM), D.D.

Canon of Christ Church, and Regius Professor of Ecclesiastical History in the University of Oxford.

Novatianists.

WEISFORD (ENID ELDER HANCOCK).

1st Class Honours Tripos Certificate (Cambridge); temporary Lecturer at Newnham College, Cambridge.

Nature (Lettish, Lithuanian, and Old Prussian, Slavic, Teutonic), Old Prussians.

WENLEY (ROBERT MARK), D.Phil., LL.D., D.Sc.,
Litt.D., D.C.L.
Professor of Philosophy in the University of
Michigan; author of *Modern Thought and
the Crisis in Belief, Kant and His Philo-
sophical Revolution*.
Neo-Cynicism, Neo-Pythagoreanism,
Pancosmism.

WERNER (ALICE), L.L.A. (St. And.).
Lecturer in Swahili, School of Oriental Studies,
London; Goldsmiths' Scholar, Newnham
College, Cambridge, 1878-80; Mary Ewart
Travelling Scholar, 1911-13; formerly
Associates' Fellow, Newnham College,
Cambridge; author of *The Language
Families of Africa*; translator of *An Intro-
duction to the Study of African Languages*.
Nama, Nyika.

WESTERBY (HERBERT), Mus.Bac., F.R.C.O.,
L.Mus. T.C.L.
Tallis Gold Medallist; author of *The Piano
Works of the Great Masters, A History of
Pianoforte Music, The Music of the
Russian Church*.
Music (Christian).

WHITLEY (WILLIAM THOMAS), M.A., LL.D.,
F.R.Hist.S., F.T.S.
Secretary of the Baptist Historical Society;
formerly Principal of the Baptist College
of Victoria, and Secretary of the Victorian
Baptist Foreign Mission.
Persecution (Modern Christian), Phila-
delphians.

WHITTUCK (CHARLES AUGUSTUS), M.A. (Oxon.).
Vicar of St. Mary-the-Virgin, Oxford; late
Fellow of Brasenose College, Oxford; author
of *The Church of England and Recent
Religious Thought*.
Obscurantism.

WIDGERY (ALBAN G.).
Director of the Seminar for the Comparative
Study of Religions, and Professor of Philo-
sophy, Baroda, India.
Needs.

WOODHOUSE (WILLIAM J.), M.A.
Professor of Greek in the University of
Sydney, New South Wales.
Nysa, Old Age (Greek), Omphalos.

YOUNGSON (JOHN W.), D.D.
Of the Church of Scotland Mission, Poona, India.
Nanak.

II. BOOKS OF THE BIBLE

Old Testament.

Gn = Genesis.	Ca = Canticles.
Ex = Exodus.	Is = Isaiah.
Lv = Leviticus.	Jer = Jeremiah.
Num = Numbers.	La = Lamentations.
Dt = Deuteronomy.	Ezk = Ezekiel.
Jos = Joshua.	Da = Daniel.
Jg = Judges.	Hos = Hosea.
Ru = Ruth.	Jo = Joel.
1 S, 2 S = 1 and 2 Samuel.	Am = Amos.
1 K, 2 K = 1 and 2 Kings.	Ob = Obadiah.
1 Ch, 2 Ch = 1 and 2 Chronicles.	Jon = Jonah.
Ezr = Ezra.	Mic = Micah.
Neh = Nehemiah.	Nah = Nahum.
Est = Esther.	Hab = Habakkuk.
Job.	Zeph = Zephaniah.
Ps = Psalms.	Hag = Haggai.
Pr = Proverbs.	Zec = Zechariah.
Ee = Ecclesiastes.	Mal = Malachi.

Apocrypha.

1 Es, 2 Es = 1 and 2 Esdras.	To = Tobit.
	Jth = Judith.

Ad. Est = Additions to Esther.	Sns = Susanna.
Wis = Wisdom.	Bel = Bel and the Dragon.
Sir = Sirach or Ecclesiasticus.	Pr. Man = Prayer of Manasses.
Bar = Baruch.	1 Mac, 2 Mac = 1 and 2 Maccabees.
Three = Song of the Three Children.	

New Testament.

Mt = Matthew.	1 Th, 2 Th = 1 and 2 Thessalonians.
Mk = Mark.	1 Ti, 2 Ti = 1 and 2 Timothy.
Lk = Luke.	Tit = Titus.
Jn = John.	Philem = Philemon.
Ac = Acts.	Ho = Hebrews.
Ro = Romans.	Ja = James.
1 Co, 2 Co = 1 and 2 Corinthians.	1 P, 2 P = 1 and 2 Peter.
Gal = Galatians.	1 Jn, 2 Jn, 3 Jn = 1, 2, and 3 John.
Eph = Ephesians.	Jude.
Ph = Philippians.	Rev = Revelation.
Col = Colossians.	

III. FOR THE LITERATURE

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

- Baethgen=*Beiträge zur sem. Religionsgesch.*, 1888.
 Baldwin=*Dict. of Philosophy and Psychology*, 3 vols. 1901-1905.
 Barth=*Nominalbildung in den sem. Sprachen*, 2 vols. 1889, 1891 (²1894).
 Benzinger=*Heb. Archäologie*, 1894.
 Brockelmann=*Gesch. d. arab. Litteratur*, 2 vols. 1897-1902.
 Bruns-Sachau=*Syr.-Röm. Rechtsbuch aus dem fünften Jahrhundert*, 1880.
 Budge=*Gods of the Egyptians*, 2 vols. 1903.
 Daremberg-Saglio=*Dict. des ant. grec. et rom.*, 1886-90.
 De la Saussaye=*Lehrbuch der Religionsgesch.*, 1905.
 Denzinger=*Enchiridion Symbolorum*¹¹, Freiburg im Br., 1911.
 Deussen=*Die Philos. d. Upanishads*, 1899 [Eng. tr., 1906].
 Doughty=*Arabia Deserta*, 2 vols. 1888.
 Grimm=*Deutsche Mythologie*⁴, 3 vols. 1875-1878, Eng. tr. *Teutonic Mythology*, 4 vols. 1882-1888.
 Hamburger=*Realencyclopädie für Bibel u. Talmud*, i. 1870 (¹1892), ii. 1883, suppl. 1886, 1891 f., 1897.
 Holder=*Altceltischer Sprachschatz*, 1891 ff.
 Holtzmann-Zöpfel=*Lexicon f. Theol. u. Kirchenwesen*², 1895.
 Howitt=*Native Tribes of S. E. Australia*, 1904.
 Jubainville=*Cours de Litt. celtique*, i.-xii., 1883 ff.
 Lagrange=*Études sur les religions sémitiques*², 1904.
 Lane=*An Arabic-English Dictionary*, 1863 ff.
 Lang=*Myth, Ritual and Religion*², 2 vols. 1899.
 Lepsius=*Denkmäler aus Ägypten u. Äthiopien*, 1849-1860.
 Lichtenberger=*Encyc. des sciences religieuses*, 1876.
 Lidzbarski=*Handbuch der nordsem. Epigraphik*, 1898.
 McCardy=*History, Prophecy, and the Monuments*, 2 vols. 1894-1896.
 Muir=*Orig. Sanskrit Texts*, 1858-1872.
 Muss-Arnolt=*A Concise Dict. of the Assyrian Language*, 1894 ff.
 Nowack=*Lehrbuch d. heb. Archäologie*, 2 vols. 1894.
 Pauly-Wissowa=*Realencyc. der classischen Altertumswissenschaft*, 1894 ff.
 Perrot-Chipiez=*Hist. de l'Art dans l'Antiquité*, 1881 ff.
 Preller=*Römische Mythologie*, 1858.
 Réville=*Religion des peuples non-civilisés*, 1883.
 Riehm=*Handwörterbuch d. bibl. Altertums*², 1892-1894.
 Robinson=*Biblical Researches in Palestine*², 1856.
 Roscher=*Lex. d. gr. u. röm. Mythologie*, 1884 ff.
 Schaff-Herzog=*The New Schaff-Herzog Encyclopedia of Relig. Knowledge*, 1908 ff.
 Sohenkel=*Bibel-Lexicon*, 5 vols. 1869-1875.
 Schürer=*GV*², 3 vols. 1898-1901 [*HJP*, 5 vols. 1890 ff.].
 Schwally=*Leben nach dem Tode*, 1892.
 Siegfried-Stade=*Heb. Wörterbuch zum AT*, 1893.
 Smend=*Lehrbuch der alttest. Religionsgesch.*², 1899.
 Smith (G. A.)=*Historical Geography of the Holy Land*⁴, 1896.
 Smith (W. R.)=*Religion of the Semites*², 1894.
 Spencer (H.)=*Principles of Sociology*², 1885-1896.
 Spencer-Gillen^a=*Native Tribes of Central Australia*, 1899.
 Spencer-Gillen^b=*Northern Tribes of Central Australia*, 1904.
 Swete=*The OT in Greek*, 3 vols. 1893 ff.
 Tylor (E. B.)=*Primitive Culture*², 1891 [⁴1903].
 Ueberweg=*Hist. of Philosophy*, Eng. tr., 2 vols. 1872-1874.
 Weber=*Jüdische Theologie auf Grund des Talmud u. verwandten Schriften*², 1897.
 Wiedemann=*Die Religion der alten Aegypter*, 1890 [Eng. tr., revised, *Religion of the Anc. Egyptians*, 1897].
 Wilkinson=*Manners and Customs of the Ancient Egyptians*, 3 vols. 1878.
 Zunz=*Die gottesdienstlichen Vorträge der Juden*², 1892.

ENCYCLOPÆDIA

OF

RELIGION AND ETHICS

M

MUNDAS.—The Mündās are a tribe of Northern India, numbering, at the Census of 1911, 574,434, of whom 410,440 were found in the Province of Bihār and Orissa, 67,252 in Bengal, and 91,293 in Assam, where they have emigrated in search of work on the tea-plantations. The headquarters of the tribe is Chotā Nāgpur, and the Rānchi District in particular. The word Mündā is of Skr. origin, meaning 'head-man of a village,' and it was applied to them by their Hindu neighbours, while they call themselves Horo-ko, 'men,' the same root appearing in the tribal names Kol and Orāon (*qq.v.*).

1. Physical characteristics and language.—The skin colour of the Mündās is dark brown, not uncommonly approaching black; the head inclines to be long or dolichocephalic, the nose is thick, broad, sometimes depressed at the root, the lips thick, the facial angle comparatively low, the face wide and fleshy, the features irregular, the figure squat, the limbs sturdy and well-formed, the stature short (S. C. Roy, *The Mundas and their Country*, p. 362). The tribal language, known as Mündārī, is spoken by a collection of tribes, including Santāls, Mündās, and Hos, who inhabit a compact block of country on the Chotā Nāgpur plateau, and by one or two outlying tribes in the south of the Orissa States and the east of the Central Provinces. But before the advent of the Aryan-speaking tribes into Northern India there is evidence that Mündārī dialects were current over the greater part of the Indo-Gangetic plain. The theory of F. Hahn, that the Mündā and Dravidian languages belong to the same family, has been controverted by G. A. Grierson:

'The two families only agree in such points as are common to most agglutinative languages, and there is no philological reason for deriving them from the same original' (*Linguistic Survey of India*, iv. [Calcutta, 1906] 31.).

W. Schmidt (*Die Mon-Khmer-Völker: ein Bindeglied zwischen Völkern Zentralasiens und Austro-nesiens*, Brunswick, 1906) has shown that the Mündā languages can no longer be referred to an assumed Dravido-Mündā family, but are a sub-family of the Austro-Asiatic group, and therefore allied to the languages spoken by the Mōns, Palaungs, and Wās of Burma, the Khāsis of Assam, the pagan tribes of the Malay Peninsula, and the Nicobarese (see art. KOL, KOLARIAN).

2. Theories of origin.—Risley (*TCi.*, Introd. xli) established on the basis of anthropometry that there was no physical difference between the Kolarian (*q.v.*) and the Dravidian-speaking tribes, and he identified the Mündās with the latter; in other words, he assumed that they were immigrants from Southern India. S. C. Roy (p. 43 f.) points out that their traditions suggest that they came from the Himālayan region, and he has collected references from Vedic and later Hindu literature connecting them with the non-Aryan races known collectively as Dāsa and Dasyu—general terms for the aborigines who resisted the Aryan-speaking tribes. But these do not specially refer to the Mündās. Grierson suggested that the Dravidian ethnic type may really be that of the Mündās; that the former intermarried with Mündās, while their descendants retained their own language. Gait points out that the absence of Mündā languages anywhere in the south of India stands in the way of this hypothesis. The wide currency of Mōn-Khmēr dialects in Northern India can be explained only on the supposition of a migration of these people from Further India.

'Except where it has been influenced by immigration from the north-west or north-east in comparatively recent times, the general uniformity of physical type throughout India seems to show that the speakers both of the Mündā and of the Dravidian languages must have been settled there for countless ages, during which intermarriage and climatic influences and environment gradually destroyed the former racial distinctions and evolved an uniform type' (*Census of India*, 1911, i. 825).

3. Social structure, totemism, and occupation.—Mündās, except as regards the Bhumij and Khangār tribes, are endogamous, and intermarriage with other neighbouring tribes is prohibited. The tribe is divided into a number of exogamous sects (*kili*), many of which are of totemistic origin. So great is the Mündā's respect for his totem that he prevents it, if he can, from being eaten by men of other castes or tribes in his presence. As examples of these totemistic sections S. C. Roy (p. 407 ff.) gives the Soē *kili*, which takes its name from the soē fish; the Horo (or tortoise) *kili*; the Nāg (or serpent) *kili*, and so on. By the more Hinduized Mündās their section names have been modified in order to assimilate them to the Hindu *gotra*, or sections. Thus the Sāndi (or bull) section has been transformed into the Sāṇḍilya *gotra*, which sprang

from the ancient *r̥ṣi*, or saint, *Sāṇḍila*, and so on (p. 410f.). In early days the functions of the *mūṇḍā*, or secular head-man, and the *pāhān*, or ecclesiastical head-man, were not differentiated. Later on, villages, generally twelve in number, were grouped together in a local body (*paṭṭī*) under a chief known as *manki*. The offices of the *mūṇḍā* and the *manki* gradually came to be hereditary, and the *mūṇḍā*, or village-chief, was assisted by a council (*pañch*), which arbitrated on the basis of local customary law in disputes between the villagers. Originally hunting and iron-working were their chief occupations, but these were gradually replaced by agriculture. Drinking was a tribal propensity, and, according to their legends, the mysterious root used in the manufacture of rice-beer was revealed to their first parents by their god Singbonga.

4. Religion.—Their legend of the creation of the world and of the origin of the human race is thus told :

'Otē Borām and Sing Bonga were self-created, and they made the earth with rocks and waters, and they clothed it with grass and trees, and then created animals, first, those that are domesticated, and, afterwards, wild beasts. When all was prepared for the abode of man, a boy and a girl were created, and Sing Bonga placed them in a cave at the bottom of a great ravine, and, finding them to be too innocent to give hope of progeny, he instructed them in the art of making *illī*, rice beer, which excites the passions, and thus the world became peopled. When the first parents had produced twelve boys and twelve girls, Sing Bonga prepared a feast of the flesh of buffaloes, bullocks, goats, sheep, pigs, fowls, and vegetables, and, making the brothers and sisters pair off, told each pair to take what they most relished and depart. The first and second pair took bullocks' and buffaloes' flesh, and they originated the *Kols* (Hos) and the *Bhūmī* (Matkum); the next took of the vegetables only, and are the progenitors of the *Brāhmins* and *Chattris* (*Kṣatriya*); others took goats and fish, and from them are the *Gūdras*. One pair took the shell-fish and became *Bhuiyās* [q.v.]; two pairs took pigs and became the *Santāis*. One pair got nothing, seeing which the first pairs gave them of their superfluity, and from the pair thus provided spring the *Ghāsīs*, who toil not, but live by preying on others. The Hos have now assigned to the English the honour of descent from one of the first two pairs, the elder. The only incident in the above tradition that reminds of the more highly elaborated *Santāl* account is in the divine authority for the use of strong drinks' (Dalton, *Descriptive Ethnology of Bengal*, p. 185).

Other tribal legends have been collected by S. C. Roy (App. i.).

The *Mūṇḍā* divinities have no image or symbol, but they may, when propitiated by sacrifice, take up their abode for a time in places specially dedicated to them, such as masses of rocks or more particularly in small patches of forest carefully preserved and left untouched as refuges for the sylvan gods when the jungle was cleared. These groves (*jāhira*, *sarnā*) are sacrosanct, and, if a tree be cut down, the deities show their displeasure by withholding seasonable rain (Dalton, p. 185f.). The other centres of religious and social life are, first, an open space (*akhrā*), where public meetings are held, disputes investigated, crimes punished, and on moonlit nights and during festivals the young folk dance and sing in the presence of the elders seated round the arena on slabs of stone; secondly, the tribal cemetery (*sasān*), where the deceased members of each family are commemorated by large slabs of stone lying prostrate or propped up by smaller stones. If a *Mūṇḍā* dies abroad, his bones will, if possible, be conveyed to the family cemetery.

At the head of the divine pantheon stands Singbonga, usually identified with the sun, a beneficent but somewhat inactive deity, who concerns himself little with human affairs, the direction of which he entrusts to departmental deities. When his subordinates permit sickness or other calamity to attack men, he is propitiated, by way of appeal, with sacrifices of white goats or cocks. Next in order of dignity comes Burubonga, Marang Buru, or Pāt Sarnā, a mountain-god, who dwells on the highest hill or rock in the neighbourhood. He

is represented by no visible object, the sacrifices being made to him on a globular mass of rock. Next come the village tutelary deities (*hātu bongāko*), who assist in agriculture and hunting, and order every human event. They are worshipped in the sacred grove at stated times by the *pāhān*, or village-priest. In the last class are the house-gods (*orā bongāko*), the spirits of the deceased ancestors of each family, who are worshipped in the house-chapel (*āding*) by the house-master. These classes of deities alone are the object of worship, and are to be carefully distinguished from the host of malevolent spirits who must be appeased or propitiated. They are believed to be the earth-bound spirits of persons who died a violent or unnatural death, and their propitiation is conducted, not by the regular village-priest, but by a class of ghost-finders (*nājo*, *matī*, *deonrā*) who are not infrequently drawn from tribes other than the *Mūṇḍā*. With these may be grouped the elemental spirits or nature-gods, such as *Ikirbonga*, who rules over wells and sheets of water, and *Nāgā-erā* or *Nāgē*, serpent-gods, who haunt the swampy lower levels of the terraced rice-fields, and are ordinarily benevolent, but, if offended, are aroused to mischievous activity, and require propitiation conducted by a ghost-finder or by the village *pāhān*. The special village-god is *Desvālī*, or *Kārāsarnā*, who lives with his consort *Jahir Būrhi* or *Sarbūlsarnā* in the sacred grove. In addition to these various gods there are benevolent guardian spirits, like *Achraebonga*, who looks after married women. But he is supposed to punish them severely if, during their periodical visits to the house of their parents, they pilfer anything.

According as a man has led a good or an evil life, he will be sent back to the world by Singbonga as a man, a beast, a bird, or an insect. At the time of death the soul (*roā*) goes to *Jom Rājā*, the Yama of the Hindus, who lives in the south. The *Mūṇḍā* idea of metempsychosis is elementary, and is probably, to a large extent, borrowed from the Hindus.

5. Festivals.—The *Mūṇḍā* festivals are connected with the phases of the agricultural seasons. They are as follows: (1) *Māgē Parab*, held after the harvest in January, when the divine ancestors are invoked to bless the household; (2) *Phāgū*, held in the spring month *Phālguna* of the Hindus, corresponding to the *Holi*, or vernal, festival of the Hindus; (3) *Sarbūl* or *Bā Parab*, 'flower feast,' in March-April, to commemorate the flowering of the sacred *sāl* tree (*Shorea robusta*); garlands of its leaves are worn, and all the food eaten that day is served on its leaves; (4) *Honba Parab*, in April-May, when rice-sowing begins; (5) *Batauli*, after the transplantation of the rice; (6) *Karam*, when a branch of the *karam* tree (*Nauclea parvifolia*) is set up, worshipped, and then flung into water, apparently as a rain-charm; (7) *Kolomsingbonga*, in November, held at the threshing-floor after the rice has been harvested; (8) *Sohorāi*, in October-November, when cattle are adored; (9) *Sosobonga*, held about August and apparently intended to exorcize evil spirits, the chief part being played, not by the *pāhān*, or village-priest, but by the ghost-finder, *matī* or *deonrā*. For details of these festivals see S. C. Roy, p. 472ff.

6. Christianity.—The most remarkable event in the modern history of the tribe is the conversion of large numbers to Christianity. Buddhism and the earlier *Brāhmanism* have left little or no trace of their influence. If modern Hinduism is to play any part in the evolution of their religion, it will probably be through preachers of the *Vaiṣṇava* sect. L. S. S. O'Malley (*Census Report, Bengal, 1911*, i. 220f.) thus sums up the question of Christian conversion among these people:

'One reason why the aboriginal tribes are more receptive of Christianity than other communities is that a convert to Christianity is not so completely cut off from his relations and friends. In parts of Rānchi where the Christian community is strongly represented, not only have their heathen brethren no objection to eating with the Christians, but a renegade Christian can be re-admitted to his original tribe. A further attraction is the hope of obtaining assistance from the missionaries in their difficulties and protection against the coercion of landlords. Keenly attached to their land and having few interests outside it, they believe that the missionary will stand by them in their agrarian disputes, and act as their legal adviser. It must not be imagined that Christian missionaries hold out such efforts as an inducement to the aboriginals to enrol themselves in the Christian ranks, but the knowledge that the missionaries do not regard their duties as confined to the care of souls, but also see to the welfare of their flock, has undoubtedly led to many conversions. To their credit, be it said, the missionaries have not failed in this trust, and the agrarian legislation, which is the Magna Charta of the aboriginal, is largely due to their influence.'

Christianity has also influenced the tribal customs of those who have not embraced it.

'There is, I believe, no question that a generation or two back the Mūṇḍās invariably burnt their dead; but with the spread of Christian customs and with the diminution of the fuel supply, for the last generation or so, burial has almost entirely superseded cremation, and there are very few Mūṇḍās now who can say what their ancestral custom was. The Christmas festival is now generally recognized among the heathen Mūṇḍās as the Paus Parah (the feast of the month Pūa, December-January), and I have no doubt that in another ten years it will be confidently claimed as a traditional Mūṇḍā festival.'

According to the latest figures, the Christian Mūṇḍā community numbers 80,292, of whom 66,992 live in the Rānchi District (*Census Report, Bengal, 1911, i. 220*). This large conversion is the result of the labours of various missionary bodies: the German Evangelical Lutheran Mission, started at Rānchi in 1845, which in 1869 split into two sections, one of which joined the Church of England; the Roman Catholic Mission, established at Rānchi in 1874; the Dublin University Mission, established at Hazāribāgh in 1892 and at Rānchi in 1901. A full account of the missionary and social work of these bodies is given by S. C. Roy (p. 227 ff.). A strange episode which deserves notice is the outbreak in 1895 headed by a youth named Birsā Mūṇḍā, who claimed to be an incarnation of Bhagvān, the Hindu Divine Father, and preached a doctrine compounded in the main from Christian and Hindu sources. After some resistance and bloodshed the movement was suppressed; the leader was arrested and died in prison (*ib. p. 325 ff.*).

LITERATURE.—Sarat Chandra Roy, *The Mundas and their Country*, Calcutta, 1912; H. H. Risley, *TC*, do. 1891, ii. 101 ff.; E. T. Dalton, *Descriptive Ethnology of Bengal*, do. 1872, p. 161 ff.; *IGI* xviii. 281, xxi. 203 f. W. CROOKE.

MURDER.—See CRIMES AND PUNISHMENTS.

MUSAHAR (generally derived from Hindi *mūs*, Skr. *mūṣa*, 'rat,' 'mouse,' because the tribe eat these animals; others regard it as the corruption of some non-Aryan term).—A non-Aryan, forest, hunting, and out-caste tribe of N. India, numbering, at the Census of 1911, 699,207.

In Bengal their religion 'illustrates with remarkable clearness the gradual transformation of the fetishistic animism characteristic of the more primitive Dravidian tribes into the deified Hinduism practised in the lower ranks of the caste system' (H. H. Risley, *TC*, Calcutta, 1891, ii. 116).

Of the standard gods Kālī alone is admitted to the honour of regular worship, the men of the tribe offering a castrated goat, and the women five cakes, that she may aid them in childbirth. In parts of the Gayā district, however, a more primitive cult of the goddess is practised.

'Her shrine stands at the outskirts of the village, and she is regarded as a sort of local goddess, to be appeased on occasion, like the Thakurānī Māl of the Hill Bhuiyās, by the sacrifice of a hog. It is curious to observe that the definite acceptance of Kālī as a member of the Hindu system seems rather to have detracted from the respect in which she was held before she assumed this comparatively orthodox position. Her transformation into a Hindu goddess seems to have rendered her less malignant. Her worship, though ostensibly put forward

as the leading feature of the Musahar religion, seems to be looked upon more as a tribute to social respectability than as a matter vitally affecting a man's personal welfare' (*ib.*).

Next to Kālī come six personages, known as *bir* (Skr. *vīra*, 'hero'), who are regarded as spirits of departed Musahars and are excessively malignant. Of these Rikmun is regarded as the tribal progenitor.

'On ordinary occasions the Birs are satisfied with offerings of sweetmeats prepared in ghi (clarified butter), but once in every two or three years they demand a collective sacrifice of a more costly and elaborate character. A pig is provided, and country liquor, with a mixture of rice, molasses, and milk is offered at each of a number of balls of clay which are supposed to represent the Birs. Then a number of Bhakats or devotees are chosen, one for each Bir, with the advice and assistance of a Brahman, who curiously enough is supposed to know the mind of each Bir as to the fitness of his minister. The shaft of a plough and a stout stake being fixed in the ground, crossed swords are attached to them, and the Bhakats, having worked themselves up into a sort of hypnotic condition, go through a variety of acrobatic exercises on the upturned sword-blades. If they pass through this uninjured, it is understood that the Birs accept the sacrifice. The pig is then speared to death with a sharp bamboo stake, and its blood collected in a pot and mixed with country liquor. Some of this compound is poured forth on the ground and on the balls of clay, while the rest is drunk by the Bhakats. The ceremony concludes with a feast in which the worshippers partake of the offerings' (*ib. ii. 117*; cf. the Dāsadh rite, *ERE* iv. 853).

In the United Provinces of Agra and Oudh the caste follows ancestor-worship, a tribal hero named Sadalā Lāl being specially invoked with the sacrifice of a hog and the dedication of native spirits, flowers, and a piece of cloth. Various evil spirits are supposed to cause disease and death, and to them hogs and liquor are offered near one of the sacred fig-trees in which they are believed to dwell. In other places they practise the cult of tribal ancestors named Deosī and Ansārī, the latter being identified with the well-known deified bridegroom Dullā Deo. Another deity, who seems also to be a tribal hero, is worshipped under the title of Banrāj, 'forest king.' In connexion with him, probably as his consort, a female deity known as Bansaptī (Skr. *Vanasaptī*, 'queen of the wood') is invoked as the forest guardian, and it is by her command that the trees bear fruit, the bulbs grow in the earth, the bees make honey, the silkworm breeds, and lizards, wolves, and jackals, useful as food to man, multiply their kind. She is also the goddess of childbirth, and grants offspring to barren women, while in her name, and by her aid, the medicine-man or sorcerer expels devils from the bodies of the possessed. In her name and to her honour the new fire is set alight in the brick-kiln. Woe to the man who takes a false oath in her name! She abides in a little clay altar or platform smeared with river water and cowdung in the corner of the hut; but she has no image or symbol. The offering to her consists of fruits, grasses, or roots; but, if the worshipper asks any special favour, he cuts the ball of his finger with some blades of the holy *kūśa* grass (*Poa cynosuroides*), and lets a few drops fall on the altar—a rite which has been supposed to be a survival of human sacrifice. She is supposed to be married periodically to the phallic god Ganśām, who seems to have been adopted from the non-Aryan pantheon under the name of Ghana-śyāma, 'dark as the heavy clouds of the monsoon'—possibly one of the many cults which have been combined in the worship of Kṛṣṇa. His place is sometimes taken by Bhairon, who has become a manifestation of Siva.

LITERATURE.—The most elaborate account of Musahar beliefs is that by J. C. Nesfield, *Calcutta Review*, lxxxvi. (1883) 1-53, which seems to include material from some of the allied tribes. In addition to Risley's art. quoted above, see W. Crooke, *TC*, Calcutta, 1896, iv. 12 ff.; A. Baines, *Ethnography* (= *GLAP* ii. 5), Strassburg, 1912, p. 781. W. CROOKE.

MUSES.—The conception of the nature of the Muses, of their character and attributes, became

fixed at a very early period; for we find it expressed in the poems of Homer and Hesiod in substantially the form which it subsequently retained during the predominance of Hellenic culture. The Muses were the daughters of Zeus and Mnemosyne (Memory), nine in number (Homer, *Od.* xxiv. 60), and named Clio, Euterpe, Thalia, Melpomene, Terpsichore, Erato, Polymnia, Urania, and Calliope (Hes. *Theog.* 50 ff.). They were pre-eminently the goddesses of song, wherewith in their home on Mt. Olympus they enchanted the divine gathering (Hes. *Theog.* 40 ff.; Hom. *Hym. Apoll.* 189); Apollo was their choir-master, accompanying their anthems with the music of his lyre (Hom. *Il.* i. 603; Pind. *Nem.* v. 22 ff.). At Delphi in the precinct of Apollo they joined the Graces in the dance led by Artemis (Hom. *Hym.* xxvii. 15), or danced by night on Mt. Helicon round the fountain of Aganippe (Hes. *Theog.* 1-10). Their divine wisdom embraced the past and the future as well as the present (*ib.* 38), and they were the source of the poet's inspiration when he essayed to celebrate the feats of men (Hom. *Il.* ii. 484). This does not mean merely that they supplied him with the form in which he clothed his thoughts as they strove for utterance, but rather that they alone were cognizant of the truth, which he repeated as their mouthpiece. Hence the Muses were the source of human wisdom when it was expressed in speech, not merely by the poet, but by the king in his capacity as dispenser of justice (Hes. *Theog.* 80 ff.). The home of the Muses was the country adjacent to Mt. Olympus, which was known as Pieria, and their cult was widely extended in the north of Greece, particularly along the coast of Macedonia and Thrace. In the neighbourhood of Mt. Athos was placed the scene of their contest with Thamyris, who arrogantly challenged them to a trial of skill, and was punished with blindness and the loss of his power of minstrelsy (Hom. *Il.* ii. 594 ff.; Eur. *Rhes.* 916 ff.; Eustath. *Il.* p. 299. 5). At a very early date the cult of the Muses passed southward to Boeotia (Strabo, p. 410), where Mt. Helicon became the centre of their worship (J. G. Frazer, *Pausanias*, London, 1898, v. 152 f.). From Boeotia it may be supposed to have spread to Delphi, and to have reached Attica by way of Eleutherae (Paus. i. xix. 5). It was perhaps owing to Delphic influence that Apollo first became associated with the Muses, who were originally independent of him.

Although the meaning of the name (*μοῦσα* = *μουσα*) is not discoverable with certainty, the attempt to connect it with the Latin *mons*, owing to the occupation by the Muses of Mt. Olympus and Mt. Helicon (J. Wackernagel, in *Zeitschr. für vergleich. Sprachforsch.* xxxiii. [1893] 571), cannot be approved. It is much more probable that it was a cognate of *μολομαι*, *μῦναι*, *μῦρος*, and *μενείω* (cf. Lat. *mens*, *monere*), and that its original meaning was 'inspirer,' or 'inspiring power' (cf. Plat. *Cratyl.* 428 C), that is to say, the psychical effect of some unseen agency insinuating itself upon us from without (K. Brugmann, in *Indogerm. Forsch.* iii. [1893] 253-259). From this fundamental signification the later senses of song and musical skill would readily emerge. The development is such as we should expect—from the vague sense of a mysterious force, indwelling or external, which characterizes certain individuals and is associated with certain forms of emotion, to the definite conception of a personal agency which imparts the power of song. We conclude, therefore, that the traces which are still to be found of a wider activity pursued by the Muses belong to an earlier stage in their history. This remark applies especially to their occasional identification with the nymphs who presided over the waters of sacred fountains (W. H. Thompson, on Plato, *Phædr.* 278 B

[London, 1868]; schol. Theocr. vii. 92; Lycophr. 274)—evidence which appears to support the view that the differentiation of the two terms was effected only by gradual stages. For it must be remembered that a draught of water from a sacred spring was believed to cause inspiration (see art. POSSESSION [Greek]), and that the Muses were put on a level with the Nymphs as a source of prophetic ecstasy (cf. *μοῦσάληπτος*, *νυμφάληπτος*). From this point of view it is not surprising that the Muses should occasionally take the place of the Nymphs as the nurses and attendants of Dionysus (Eustath. *Od.* p. 1816. 5; Plut. *Mor.* 717 A; Diod. Sic. iv. 4; *IG* v. 46, *μουσαγέτης* [Naxos]), or that Sophocles, in describing the opposition of the Thracian Lycurgus to the gods, should speak of him as 'provoking the Muses that love the flute' (*Ant.* 965). Moreover, the Muses instructed Aristæus in the arts of healing and prophecy (Apoll. Rhod. ii. 512).

The course of development, as affected by local worship and traditions, serves to explain the various accounts given of their parentage, condition, and number. Apollo, usually their chief (*Μουσαγέτης* [Paus. i. ii. 5, etc.]), is also mentioned as their father (Eumel. frag. 17). Others made them daughters of Pierus (Cic. *de Nat. Deorum*, iii. 54; Paus. ix. xxix. 4), or even of Uranus and Gaia (Cornut. 14). No doubt each of the different sanctuaries claimed to be the original home of the cult, and some such rivalry is implied in Ovid's story (*Met.* v. 294 ff.) that the daughters of Pierus—or Pierian Muses—ventured to contend with the Muses of Helicon and were turned into magpies. The Muses, as was to be expected in view of their history, are usually represented as maiden goddesses; but, since it was natural to ascribe the eminence of highly gifted poets and musicians to a special relationship with the patronesses of song, the tradition of their celibacy was not invariable. Thus Linus is called the son of Urania, Orpheus of Calliope, Hymenæus of Clio, and Thamyris of Melpomene (schol. Eur. *Rhes.* 347). The parentage of Rhesus, the son of Strymon and one of the Muses (Eur. *Rhes.* 920 ff.)—Euterpe, according to one account (schol. Eur. *Rhes.* 347)—is another testimony to the close connexion of their worship with Thrace. Nothing is more significant of the gradual growth of the cult than the variety of report concerning their proper number. The reason for the selection of the number nine, which, as we have seen, was fixed at an early date, has not been discovered; but it is worthy of mention that the same number was attributed to the Korybantes, Telchines, and Kouretes (*FHG* i. 71; Strabo, p. 473), and it has been conjectured that a company of nine was required for the performance of certain sacred dances (Gruppe, *Gr. Myth.* p. 1077, n. 1). There is evidence that three Muses were worshipped at Asara, Delphi, and Sicyon (Paus. ix. xxix. 2; Plut. *Mor.* 744 C; *Anth. Plan.* iv. 220), and seven at Lesbos (*FHG* iv. 458). Two Muses are attested by Cornutus (*loc. cit.*), four by Aratus (J. A. Cramer, *Anecdota Græca*, Oxford, 1835-37, iv. 424), and eight by Crates of Mallus (Arnob. *adv. Nat.* iii. 37). Some of these examples may be due to late literary combinations, but enough remains to show that the number nine was not always and everywhere an essential feature in the worship of the Muses.

Besides the nine names recorded by Hesiod, to which subsequent tradition firmly clung, several others occur sporadically. Some of these, such as Theoria and Praxis (Cornut.), Nete, Mese, and Hypate (Plut. *loc. cit.*), Melete, Mneme, and Aæde (Paus. ix. xxix. 2), are obviously the inventions of a late period. Others, such as Cephiso, Apollonis (for which Achelois has been conjectured as a substitute), and Borysthenis (Enmel. frag. 17), which

appear to have belonged to water-nymphs before their functions were entirely differentiated from those of the Muses, never obtained more than a local circulation.¹ The origin of the Hesiodic list is past discovery; but some of them at least—e.g., Urania as the daughter of Uranus—probably had a separate existence before they were joined together in the sisterhood which was required for the original source of the *Theogony*.

There is no evidence of an early date bearing on the diversity of functions subsequently assigned to the several Muses of Hesiod's list. The distribution with which we are familiar appears for the first time on works of art belonging to the Roman period (Bie, in Roscher, ii. 3238 ff.). It is not based on any logical system of classification; for Clio, Urania, and Euterpe, as the Muses of history, astronomy, and flute-playing, are not grouped according to the same principle of division as the six who represent the various kinds of poetry. There are also several divergent arrangements, in some of which the Muses represent branches of philo-

sophy, as well as the arts of rhetoric and husbandry (schol. Apoll. Rhod. iii. 1; Plut. *Mor.* 744 D; *Anth. Pal.* ix. 504 f.). It is probably to be inferred that the traditional distribution rested upon a classification of poetry into three branches, epic, lyric, and dramatic, each of which comprised three species. In that case Clio and Urania represented the historical and astronomical epics respectively, and Euterpe the music of the flute as distinguished from that of the cithara and lyre, and so far as it constituted a branch of lyric poetry. But, if tragedy and comedy were placed under the protection of Melpomene and Thalia, there was nothing left but the mime to be assigned to Polymnia (Gruppe, p. 1090).

MUSIC (Primitive and Savage).—1. Music in savage life.—While the quality and range of savage music differ considerably in various regions, there are but few tribes which can be said to be indifferent to music. Of many of them, indeed, it may be asserted that music accompanies every action of life, and that they have a largely developed love of and capacity for it. This is true of some of those tribes which are deficient in musical instruments, like the Fuegians,² while even such a low race as the Bushmen were extremely musical and had many instruments (§ 5). Even the African Pygmies are 'innately musical,' possess many melodious songs as well as instruments of their own (drums, horn trumpets), and borrow stringed instruments from higher tribes when they can.³ Generally, it may be said that work, especially work which can be performed in a rhythmic manner, is accompanied by singing.⁴ Men on the march keep time to the songs sung, and before a fight, as with the Maoris, 'war songs are sung to work them up to fury for battle.'⁵ All feasts partake largely of a musical character, whether at marriages or funerals or upon other occasions. At these feasts, and, indeed, at many religious ceremonies, dancing occupies a prominent place, and it is accompanied by singing, playing of instruments, rhythmic clapping of hands, and movements of the limbs and head. Often each dance, as with the Bushmen, has its own special tune.⁶ Similar or various instruments are often combined to form an orchestra.

A simple instance of this is found in the case of the Samucos and Moxos, with whom a number of Pan's-pipe players combine

to produce monotonous, yet harmonious, music.¹ More elaborate is the Fijian orchestra of twenty to thirty players,² or the orchestras which many African chiefs possess—consisting mainly of drums and trumpets, but sometimes also of the native piano, bells, rattles, zithers, etc.³—or the Javanese orchestra of gongs, Jews' harps, bells, and xylophones.⁴ In many instances care is taken to attune the instruments, so that harmonious music will be produced; in others, again, noise seems to be mainly sought after.

Frequently European music is appreciated even by tribes which have few or no instruments of their own; the Andamans delighted in regimental band music, the Fuegians were equally appreciative, and the Maoris, with no drums of their own, took pleasure in listening to the European drum.⁵ The Tengers compose music on the European model; and many tribes, even those of Torres Straits, easily pick up our tunes and whistle or hum them.⁶ The same receptiveness is seen where new instruments are introduced from other tribes or races possessing them, as in the case of the Pygmies already cited, or where African tribes under Muhammadan influence have adopted a native fiddle, or the Bechuana the European mouth harmonica.⁷

A practical rather than a musical purpose is served by the drum or gong in signalling or conveying messages. For this see DRUMS and CYMBALS, vol. v. p. 92^b; *Handbook*, pp. 226, 232, 243; Wallasehek, p. 112.

2. Religion, magic, and music.—As many savage dances are of a religious or ceremonial character, it is obvious that music, even on this ground alone, must play a large part in religion. The words of the songs or hymns and the swell of the music, as well as the rhythmic motions of the dance and the fact that so many are taking part in the same action, heighten the religious feel-

¹ The names Neilo, Tritone, Asopo, etc., in Ezech. frag. 41 K., are taken from a comic description of the Muses as fishwives.

ing. Other ritual acts of a communal character—e.g., processions round fields and the like—are largely musical (see PROCESSIONS AND DANCES). At the initiation of youths to manhood or to tribal mysteries music, vocal and instrumental, as well as dancing plays a large part. In religious worship music is either itself an act of worship or the accompaniment of such acts.

The Fijian priests used large mussel-trumpets in the temples.¹ Drums were sounded while human sacrifices were made in Ashanti.² In Polynesia the god Tane was saluted with every kind of drum; that instrument being himself or his embodiment, its sound was his voice.³ Among the Hottentots one class of verses consisted of hymns, prayers, invocations, and songs of praise to Tsuni Goam and other gods.⁴ The Malays used drums to accompany invocations to spirits. In sacrificing the Kenyahs sound drums 'to keep away from the worshippers all sounds but the words of their own prayers.'⁵ Among the Musquakie Indians a man takes a drum with him when he goes to the forest to pray, and keeps time on it as he intones his prayer. With this people a whistle is used to summon ghosts, but, as these are called for purposes of sorcery, it is regarded as an accursed instrument.⁶ With the Zulus songs were sung after the elient sacrifice of and feast upon a black ox to cause rain, and also at the feast of firstfruits.⁷ With the Haldas reed instruments are used to imitate the voices of the spirits in the religious ceremonies.⁸

Music also plays its part in most shamanistic ceremonies—e.g., in exorcism or in cases of sickness.

With the Gilyaks dancing to the music of a tamhourine is part of the operation.⁹ The beating of gongs and drums accompanies the long rite of exorcism with the Klemantans, the operators also whistling or breaking out into a chant.¹⁰ During the ceremonies of healing in connexion with the Navaho sand pictures chants are sung by the priest and officiants.¹¹ With the Menomini Indians, when the medicine-man is curing sickness, he sings and strikes a rattle and his assistant beats a drum.¹²

See also GONGS AND BELLS, DRUMS AND CYMBALS.

3. Sacred properties of musical instruments.—Because musical instruments are used in sacred ceremonies, or for other reasons, they are sometimes regarded as themselves sacred or as possessing magical properties. Sometimes they are tabu.

Among the Uaupes, with whom large pipes or trumpets—*jurupari* pipes—are blown at the celebration of the mysteries, no woman may see them on pain of execution.¹³ In New Guinea women may not look at certain flutes, else they would die.¹⁴ The Malu music in Murray Island is so sacred that no woman or child may hear the tunes and live.¹⁵ The Musquakie Indian hides his prayer-drum in his wigwam when it is not in use.¹⁶ Among the Malays part of the regalia includes royal drums, pipes, and flutes supposed to have come into existence of themselves. They give miraculous powers to the king, and some of them are so sacred that none can handle or use them save one tribe of Malays, and only at 'the proper time and season.' Sounded at any other time or by any other person, they would cause instant death.¹⁷

Some instruments are regarded as possessing magical or divine properties.

Of this the best example is the Polynesian drum already referred to as an embodiment of the god Tane (§ 2). With this Bush Negroes of Dutch Guiana the drum is thought to have a soul; it is given drink from time to time and is supposed to lead men into the other world.¹⁸ Among the Batuma some drums had fetish properties or were emblems of sovereign power. One drum had a smaller drum as its wife and a still

smaller one as its prime minister.¹ In Uganda, when the drum Kaula had a new cow-skin put on it, the cow's blood and also that of a man decapitated were run into the drum, in order that new life and vigour would be given to the king when it was beaten. Temple drums contained fetishes.² Similarly among the Araucanos wizards have drums inside which are small white stones to which healing powers are attributed.³ In many instances instruments used in ritual are regarded as sacred, like the rattle and hull-roarer of the Navaho shamans, or the drum used by the Chippewas in religious dances. In Saa and San Cristoval large houses are made for the drums, which are much valued.⁴

See also BULL-ROARER, DRUMS AND CYMBALS. For the sacred drum of the Lapps see LAPPS,⁵ and of the Buddhists see CHARMS AND AMULETS (Buddhist).

Sometimes music, whether the instruments used or the songs sung, is held to have been first communicated by the gods.

In Manipur the deity long ago distributed songs among the tribes. The Marrings caught them in a wide-meshed basket, but they escaped; hence they have no songs.⁶ Among Australian tribes the songs are believed to be obtained by birds from spirits of the dead in dreams or while awake.⁷ The Navaho gods Hasjelti and Hostjoghon are the great song-makers of the world, and myth tells how they communicate the sacred songs and dances to men.⁸ With the Zulus the *amatongo*, or spirits, cause men to compose songs when they are about to become diviners.⁹ Among the Maoris, as among the folk of Europe, songs have been learned from the fairies.¹⁰ The Maidu Indians believe that the original sacred rattle as well as the dances was given them by two old diviners long ago, who told them that the spirit of sweet music was in the rattle, and that, when it was shaken, songs would sound better, and, when prayer was made for grasshoppers, it would be answered.¹¹ Similarly the Menomini Indians think that the Good Mysteries gave the drums to be used in making medicine or in doing harm to enemies, and the rattle to invoke the *manidos*.¹² In the Torres Straits Islands the old culture-heroes are thought to have taught the sacred dances and cults with their sacred songs.¹³ The Asaha people think that music and dancing were first learned from a hunter who heard the songs of a party of forest spirits.¹⁴

4. Songs.—Most savage poetry is made to be sung. As has been said of the Melanesians, they have no conception of poetry without a tune, although tunes without words exist.¹⁵ Generally there is a great variety of songs—for dances and feasts, for funerals, for war and the chase, love-songs, songs of labour, and the like—but the class which is probably the most primitive of all is that which is extemporized upon the events of the day. These naturally differ much in character, being more elaborate or more simple, but they are mostly of the nature of a rhythmic recitative, the same line being constantly repeated by the bard and then sung by all as a kind of chorus. Sometimes songs are unaccompanied by any instrument; Hose and McDougall say of the Punans:

'The finest songs are sung without accompaniment, and are of the nature of dramatic recitals in the manner of a somewhat monotonous and melancholy recitative.'¹⁶

More generally, however, songs are accompanied either simply by clapping, slapping the body, stamping, beating the ground, striking sticks together, and the like, or by the use of some of the various instruments already described. Even when singing softly to himself a native will play some instrument—e.g., the Ba-Mbala play the drum, native piano, or harp.¹⁷ As already stated, many

songs are sung by an individual, while the others sing a chorus—the same word, line, or distich being taken up after having been repeated many times by the singer. The song may then be closed by a long-drawn shout or cry, as with the Sakai.¹ Other methods exist.

In Savage Island there is a long solo on the drums—the same bar repeated. Then follows a gesture 'dance' to this accompaniment. Then the leader sings, while the drum rhythm does not vary, until at last it quickens at the end. All the performers now sing—the leader taking the melody, the chorus the second part.² With the African Pygmies some songs have a melody, a strophe, antistrophe, solo part, and chorus.³ In the Banks Islands, 'a song has certain regular successive parts with distinctive names, each introduced by a vocalic prelude which marks the *gau-as*, the knee, or turn, of the song.' Some are led off by a single voice, some with many; or the singers are divided: some start the song; the rest follow with an answering part.⁴ Among the Ba-Mbala men and women sing alternate verses of a song.⁵

In many cases *Märchen*, or stories, contain metrical parts—a recurring formula or recitative—or songs which are sung by the teller of the tale or by the listeners—the *cantefable*. These are found not only in European, but in Eskimo, Negro, Basuto, and other tales.⁶

While it is possible for any one to describe in a rhythmic manner events which have happened to him, as when among the Basutos the friends of a hero press him to narrate his deeds, which he does with emphasis, becoming poetical, the crowd repeating some of the lines,⁷ there are often professional makers of songs or of tunes, or professional musicians. Even in Australia such bards exist, the office being sometimes hereditary.⁸ In general they are much esteemed, more especially where they are the repositories of the heroic deeds or traditions of the tribe.

It is worth noticing that some songs are made up of words unintelligible even to those who sing them. This is either because they are mere musical sounds, or because songs in the language of another tribe have been adopted, or more usually because the words are so archaic that their meaning has been forgotten.⁹ Emotional and religious formulae often thus persist when the words have passed out of common use, just as stone knives continued to be used in ritual after metal had been discovered.

Brinton says that all the American Indian languages examined by him had a poetic dialect different from that of ordinary life.¹⁰ According to Codrington, in Melanesia words not in common use are thought poetical and are used in songs. In the Banks Islands there is a poetic dialect—of archaic or borrowed words, or of contracted or lengthened words. On one side of Mota songs are composed in something like the language of Gaus, and *vice versa*.¹¹ The Formosan priestesses had a jargon of their own for their chants and incantations, unintelligible to the uninitiated.¹² This is analogous to the fondness for half-understood foreign or barbarous words in magic formulae everywhere, as is seen in the Greek magical papyri and in Gnostic documents.

5. Distribution of musical instruments.—Nearly every tribe and race has musical instruments of some sort, the exceptions being found at the lowest stage of culture.

The Fuegians have none, but keep time to a song by jumping.¹ The Veddas of Ceylon have no instruments, though some of them borrow drums from the Sinhalese. Time is kept in their dances by slapping chests, bellies, and thighs with the open hand, or by waving objects rhythmically.² The Andaman Islanders have merely a hollowed-out trunk used as a sounding board, which is stuck in the ground and kicked with the heel to mark time in the dances. Time is also kept by clapping, or by slapping the hollow between the outstretched thighs.³ In Australia there was no native musical instrument except an opossum skin rolled up with either inside or stretched between the knees and beaten. In W. Victoria the rolled-up rug contained shells to jingle. Sticks or boomerangs were also struck together or on the ground. The nose flute is known at Port Essington—perhaps a Malay borrowing. Shell-rattles and drums have been borrowed in the north from the Papuans.⁴ Similarly, the Tasmanians use sticks to beat time.⁵ The dwarf Ahongo, W. Africa, strike two pieces of wood together while singing, and have no musical instrument.⁶ Deficiency in musical faculty and lack of instruments are asserted of the Charruas and Guaranis, the latter of whom strike the earth with hamboos while singing hymns to Tamol.⁷

Some tribes know no more than one musical instrument.

The Damaras had nothing but the bow converted into a musical instrument by tying string and handle near the centre, holding the bow against the teeth, and striking the string with a small stick. With this the gallop or trot of animals was perfectly imitated.⁸ The Eskimos have no other instrument than a kind of tambourine or drum.⁹ Among the Alnus the only instrument is a small bamboo Jew's harp.¹⁰

Some of these peoples belong to the lowest culture, yet most of them are fond of singing; some possess comparatively elaborate songs, and appreciate European music.

The Bushmen, another low people, 'had invented a greater variety of musical instruments than any other S. African people, and there was greater compass and variety in the refrains which accompanied their dances.' They had the musical bow (a more elaborate form than that of the Damaras), a bow the string of which was vibrated by blowing through a quill fixed upon it (the *goorra* or *goura*), a wind-stringed instrument, used also by the Hottentots, a reed flute, drum, and bells of hide.¹¹

At low levels of culture the variety of musical instruments is usually considerable, and they may be roughly classified as instruments of percussion, stringed, and wind instruments. As the instances among peoples without musical instruments would seem to show, instruments of percussion—some form of the drum, which is well-nigh universal—may have been invented first. Stringed instruments probably came next—the hunter's bow, as with the Damaras, being easily convertible into a primitive form of these. Wind instruments, at least in their more elaborate forms, were probably invented last. The reed is easily formed into a kind of pipe, and in fact is so used at low levels of culture.¹² This order is not an absolute one, and in various districts one form of instrument may have preceded others which came first in other districts.

Whistles and flutes made of human or animal bones have been found in deposits of the palaeolithic and neolithic ages, the flutes being pierced with holes at regular intervals or consisting of two bones, which, when joined, would make modulated tunes. Although these discoveries seem to give priority to wind instruments, it is obvious that others—e.g., drums of wood with skin covering—being of more perishable material, were less likely to be preserved.¹³

Metal trumpets and bells have been found in deposits of the bronze age.¹

(1) *Instruments of percussion*.—Among instruments of percussion the *drum*, in some shape or form, is of almost universal occurrence (see DRUMS AND CYMBALS). It is lacking among the Maoris, whose range of instruments is small, the Haidas, who beat boards with sticks, some S. American tribes, and the Thonga of S. Africa.

The *rattle* is known among the Gilyaks,² the Barotse, Ba-Ngala, and other African tribes,³ Australian natives (an importation), Papuans,⁴ extensively among the N. American Indian tribes, who had few instruments save this and the drum,⁵ and some S. American tribes—Samucus, Uaupes, Abipones, and Lengua.⁶ Held in the hand or hung about the body, rattles serve to mark the rhythm of a dance; but, as among the Virginian Indians, several rattles of different tones are used together with effect.⁷

Bells, from those of hide made in spherical shape and filled with pebbles, as used by the Bushmen, to the beautifully-toned metal bells of other peoples, which are sometimes sounded in concert, are known among aboriginal tribes in India, widely in Africa, among the Maoris, several American Indian tribes, and the Mongols and Indo-Chinese races.⁸ Gongs (often made of hollowed wood and elaborately carved) are known in most parts of Melanesia and Polynesia, in some parts of Africa, in Malaysia, among the Lushai of India, the Nahuatl of Mexico, and widely among the Mongols.⁹

The so-called native *piano* is found very widely among African tribes. It usually consists of a piece of hollowed wood to which are fixed a number of strips of metal, slightly curved at the free ends. These are twanged with the fingers of one or both hands. Sometimes a resonator is attached—a gourd or even a human skull (Ba-bangi of the Congo).¹⁰ With these may be compared an instrument from the New Hebrides, consisting of a block of wood with four projecting tongues which are vibrated by the fingers and give out different notes.¹¹

Another instrument found widely in Africa is the *xylophone* (*timbala*, *marimba*). In this strips of wood or metal of varying lengths are attached to a wooden frame with some form of resonator, or to a gourd (sometimes each strip to a separate gourd). They are beaten with sticks, and a considerable compass is sometimes attained.¹² A similar instrument is known among the N. American Indians, and in Borneo and Java.¹³ Its simplest form occurs among the Punans; they lay

strips of hard-wood across the shins of the operator, who beats them with two sticks.¹

Midway between instruments of percussion and wind instruments is the *Jews' harp*, of which one form is the musical bow already mentioned. Its widest distribution is among the Papuo-Melanesians, but it occurs among the Ainus (their only instrument) and the Gilyaks, in Java, Borneo, the Philippines, and among the Aracanos.²

(2) *Stringed instruments*.—Of stringed instruments the most common is some form of *harp* or *lyre*, of which a simple kind is the musical bow already described. Harps are found among the Punans and Kayans of Borneo, made of thick bamboo, from the surface of which six longitudinal strips are separated and raised at their ends by little bridges.³ Bamboo harps are used by the savage races of the Malay Peninsula, perhaps of Malay derivation.⁴ Harps and lyres are also found among many African (Bantu and some Negro) tribes and among the Malagasy,⁵ the last resembling the bamboo harp of the Punans. Some African harps seem to be derived from ancient Egyptian types. Rude stringed instruments are found in the Solomon Islands and New Britain.⁶

Violin-like instruments are found among the Gilyaks (of one string played with a bow),⁷ the Kamchadals,⁸ the Lushai (resembling the bamboo harp),⁹ the Semang,¹⁰ in the Nicobar Islands,¹¹ in Java, Borneo, the Philippines, and Sumatra,¹² and sporadically in Africa, especially where Muhammadan influence has penetrated.¹³ The Apache Indians have also a species of violin;¹⁴ a one-stringed violin is used by the Chaco Indians (Lengua) of Paraguay;¹⁵ and a stringed instrument is in use among the tribes of the Sepotuba river, S. America.¹⁶ A species of *guitar* is widely used in Africa, and occurs also among the Kamchadals and Ostiaks, in Tibet, among aboriginal tribes of India, the Kayans and other tribes of Borneo, the Sakai, and some tribes of the Amazon; and a primitive *banjo* is used in New Britain.¹⁷

A primitive Æolian harp is found in Guiana.¹⁸ Reference may here also be made to what is really a wind instrument—the *turnan*, or bull-roarer (q.v.).

(3) *Wind instruments*.—Wind instruments are of great variety, and some of them have been developed from utilizing the reed as a kind of pipe or flute. In some cases shells form trumpets, and, as has been seen, the whistle was used in pre-historic times. A compound string and wind instrument—the *goura* of the Bushmen—is noted above.

Pipes and flutes of various kinds (already known in pre-historic times) are found among the aboriginal tribes of India (Karens, Santals, Gonds,

Khonds), the Kayans of Borneo, the wilder and more civilized tribes of Indonesia, the Nicobar Islanders, most African tribes, widely in Polynesia and Melanesia, and among many N. and S. American tribes. Common to the Tipperahs, the Lushai, and the Kayans, and other eastern tribes, is a gourd in which some narrow bamboo pipes are inserted, each with its free end open and a lateral hole or stop cut in it. The player blows into the neck of the gourd, and the air enters the base of each pipe through an oblong aperture filled by a vibrating reed, the pipe emitting a note only when its hole is stopped.¹ A pipe inserted in a huge gourd and giving out a hollow, moaning boom is known among the Parecis Indians of Brazil.² Nose-flutes occur among the Kayans, the Sakai, and other wild tribes of Borneo, generally throughout Indonesia (except with the civilized Malays), Polynesia, and Melanesia, among the Botocudos, and with the Bechuana in Africa.³

The use of the nose-flute in the East has been explained as the result of the caste-system in India, whence its use may have spread, which forbade a Brâhman to touch with his lips a flute which a low-caste man might have made and used. Among the Botocudos its use is explained by the large lip-ornament worn.

A double flute occurs in Savage Island (played with the nose) and elsewhere in Melanesia, in Guiana, and among the Iroquois.⁴ The *syrinx*, or Pan's-pipes, is known in Sumatra, among the Baganda, in Samoa, generally throughout Melanesia, and among many S. American tribes, and it was also used by the ancient Peruvians.⁵ Horns are known in Sumatra, among several African tribes, and in Paraguay.⁶ Trumpets or largo tubes are found among the Khonds, Malays, Malagasy, many African tribes, Sameans, Tahitians, Maoris, in New Guinea, Torres Straits, and New Britain, with the Uaupes, Abipones, Botocudos, and other S. American tribes.⁷ Those of the Malagasy, Polynesians, and Melanesians are made of shells; those of the Uaupes are long tubes of bark.

Whistles are known in most parts of the world. The Maoris make them of the bones of slain enemies. The Ba-Mbala use them in war and hunting, this use being common elsewhere, though they are also used as musical instruments.

Eolian flutes—bamboo rods pierced and placed in trees—are found in Aurora, Melanesia.⁸

(4) Thus, while instruments of percussion have an almost universal range, stringed instruments are comparatively rare in N. and S. America, Melanesia, and Polynesia, and wind instruments are universal in N. and S. America, though commoner in the latter than in the former.

6. Characteristics of savage music.—A scientific examination of savage music is a thing of recent growth. By the aid of the phonograph it is now possible to obtain permanent records of tones, so that they may be carefully examined and analyzed. Musical instruments can also be studied from an individual as well as from a comparative point of

view. The results of these investigations will throw light upon the origin of music and the history of its growth. Savage melodies are never long; they consist of a few notes, and a phrase tends to be endlessly repeated. A primitive people like the Veddas have two-note songs with a descent from the higher to the lower tone. Other songs have a third note of a higher pitch, and others, again, have a fourth note, usually a tone below the tonic.¹ Generally, however, savage music is more complex than this. Even pre-historic flutes have a wider range, one of these showing the first four notes of the diatonic scale.² Savages also sometimes use smaller intervals than those to which we are accustomed—*e.g.*, quarter-tones. The degree of development varies. Thus the Tongans had a native scale limited to *a, c, d, e* flat, and *f*, without any indication of a chord. Yet they have now adopted our notation and compose music on the European model.³ The Thonga, again, have music based on a seven-interval scale, recognizing major and minor keys, and following a certain system of harmony.⁴ In many cases the melody is of the simplest possible kind, as is obvious where only two notes are employed, and is nothing but a species of rhythm—the only kind of music which many savages recognize. In many instances savage notation is incorrectly observed because it has been recorded in our own heptatonic scale, whereas other and simpler scales are sometimes all that are known. The nature of the scale will always be largely affected by the character of the instruments used and the range of notes possessed by these. Both major and minor keys are used by savages, some preferring the one to the other, probably, however, without any clear connexion between these and a joyful or melancholy mood respectively.⁵ While harmony is a much later development than melody, and does not exist at all with many savage peoples, some degree of knowledge of it is found even at low levels—*e.g.*, among the Hottentots, Bechuana, Solomon Islanders, Fijians, etc.—while the orchestral use of instruments shows that it is in part at least understood and appreciated.

7. The origin of music.—Much discussion has taken place regarding the origin of music. H. Spencer was of opinion that emotional speech with its different cadences was the foundation of musical development; the chant is a copy of the voice raised in moments of emotion, and both show the same characteristics distinguishing them from ordinary speech—loudness, different timbre, rapid variation, increased intervals.⁶ This theory, however, has been strongly opposed on various grounds, and it does not correspond to the facts as revealed by the most primitive music known to us. Darwin's conclusion was that musical notes and rhythm were first acquired by the male or female progenitors of mankind for the sake of charming the opposite sex. Thus musical notes became firmly associated with some of the strongest passions that an animal is capable of feeling. This also has been strongly criticized, and it is not by any means proved that, *e.g.*, the female bird is charmed by the song of the male, while there is no evidence that at low levels of humanity music is one of the factors in love-making, as one would expect it to be if this theory were true. Much more probable are those theories which connect the origin of music with man's innate love of rhythm, rhythmic action and rhythmic speech. The most primitive forms of song or chant are rhythmic with the minimum of melody. Now, savages are fond of repeating a phrase in a rhythmic manner, and it is

almost inevitable that, as a result of such repetition, the voice will utter the words or sounds in varying tones, generally two, a higher and a lower. This would be still more accentuated where, as is generally the case, the rhythmic utterance is the accompaniment of the rhythmic dance; the voice keeping time to the movements of the body would almost necessarily utter different tones. The different tones emitted by primitive musical instruments—e.g., by beating on various things serving as drums—would be apt to be imitated by the human voice. Similarly, where the taut string of a bow was twanged to produce a musical note, it was soon found that by shortening the string another note could be produced. Great advances were possible as soon as man came to appreciate the difference between mere noise and tone.

C. S. Myers concludes his analysis of the simple songs of the Veddas, Malu, and Kenyahs by showing that the beginnings of music depend on eight factors: (1) discrimination between noises and tones; (2) awareness of difference in loudness, pitch, duration, character, and quality; (3) awareness of absolute pitch; (4) appreciation and use of (small) approximately equal tone-distances; (5) appreciation and use of (larger) consonant intervals and the development of smaller intervals in relation thereto; (6) melodic phrasing; (7) rhythmic phrasing; and (8) musical meaning.¹ But probably the real factors were much less numerous than these.

J. A. MACCULLOCH.

MUSIC (American).—Musical expression has been very generally developed into a conscious art by the American Indians. It is not an art characterized by either complexity or science, but it does show æsthetic sensibility and expressive power, while the universality of its appeal is evidenced in the use made of the aboriginal melodies by musicians of the cultivated world.

1. Instruments.—Of the three types of musical instrument, percussion, wind, and stringed, the last were rarely natively known to the aboriginal American. Brinton mentions four cases of stringed instruments of primitive type in the hands of American aborigines ('Native American Stringed Musical Instruments,' *American Antiquarian*, Jan. 1897); M. H. Saville adduces good evidence for the use of such an instrument in pre-Columbian Mexico (*American Anthropologist*, x. [1897] 272 ff., 'A Primitive Mayan Musical Instrument,' *ib.* xi. [1898] 280 ff., 'The Musical Bow in Ancient Mexico'); and R. Lehmann-Nitsche (*Anthropos*, iii. [1908] 916 ff.) describes a curious musical bow, having certain affinities in its mode of playing with the flute, in use among the Tehuelche and Araucanian Indians; but it is uncertain whether knowledge of such instruments dates from pre-Columbian times. C. Lumholtz (*Unknown Mexico*, New York, 1902, i. 474-476) describes a musical bow, formed of a monochord and gourds in use among the Tepehuanes of N. W. Mexico, which he regards as an aboriginal instrument. A similar bow is used by the Apache Indians of the United States (G. A. Dorsey, *Indians of the Southwest*, Chicago, 1903, p. 190).

¹ *Essays and Studies presented to W. Ridgeway*, p. 576.

The most important of the native American instruments is the drum. This varies in type from the Eskimo tambourine-like hoop with taut skin, through single- and double-headed instruments, great and small, culminating in the huge snake-skin drum whose booming from the temple of the Aztec war-god brought dread to the heart of the Spaniard. The *teponaztli* of the Aztecs is the most interesting of the native drums; it consisted of a hollowed block provided with a sounding-board in which were cut two tongues of differing thickness whose vibrations produced tones commonly in the interval of a third, although drums have been found containing the interval of a fourth, of a fifth, of a sixth, and of an octave. The drum is very generally regarded with a kind of veneration—naturally perhaps in view of its intimate association with the emotional and religious life of the Indian. Among the Ojibwa (Chippewa) there is a 'religion of the drum.' According to their tradition, it was derived from the Sioux at the time when they made peace with the latter tribe. It is a religion inculcating peace and social responsibility, its important ritual being the 'drum-presentation' ceremony (see *Bull.* 53 BE, p. 142 ff.).

Next in importance to the drum, among native instruments, is the Indian flageolet or flute. This instrument seems to have evolved from the bone whistle with a single vent or stop. In its developed form it is provided with a mouth-piece and has from three to six finger-holes. The double flute is also found with as many as four finger-holes to each reed. In Peru a species of syrinx with from five to eight reeds was in use, and the Pan's-pipes is also to be found among the Mexican Indians of to-day, although in the latter case perhaps of European origin. Neither flute nor pipes were constructed to scale, unless fortuitously. The materials of which these instruments are made are bone, wood, pottery, and even stone. Whistles of like materials and in a great variety of forms are abundant and ingenious, pottery examples being frequently modelled after the bird or animal whose call is imitated by the instrument. There is a keen sense of propriety in the use of these instruments, governed doubtless by religious sanction.

E.g., in the *Hako* ceremony, the priest remarks of the song telling of the flocking of the birds: 'We do not use the drum as we sing it, but we blow the whistle. The whistle is made from the wing bone of an eagle. In this song we are singing of the eagle and the other birds, so we use the whistle' (*22 RBEW* ii. 185).

Again, Garcilasso remarks of the Peruvians that the flute was not used in warlike music, but only in festivals and triumphs. For war were reserved the drum and the native trumpet, which might be of wood, pottery, or, as with the Mexicans, conch shells.

Other instruments native to the American include the ubiquitous and multiform rattle, essential alike to dance and 'medicine'; bells, of pottery, copper, bronze, or gold (in forms obviously evolved from the gourd rattle), found in the more civilized communities; and noise-producers, such as the Hopi *truhkanpi*, a notched stick with bone rubber, and the widely used bull-roarer (*q.v.*); while the curious whistling bottles of Peru, double or with double vents, which when filled with water and swayed to and fro give forth musical notes, deserve mention as musical curios rather than as proper instruments.

2. Records and transmission.—J. F. Rowbotham (*History of Music*, 3 vols., London, 1885-87, iii. 198) maintains that the N. American Indians sometimes recorded their melodies by means of notched sticks, rise and fall of tone being indicated by the position of the notches. The Chippewa, with their elaborate development of pictographic signs, preserve their songs by these mnemonic aids written upon birch-

bark rolls. *Quipus* were used by the Peruvians for a similar purpose (cf. Garcilasso de la Vega, *Royal Commentaries*, Eng. tr., London, 1809-71, bk. iii. ch. xxvii.), and in both Peru and Mexico there appear to have been bards whose business it was to transmit the national song. The germ of this institution appears in many a tribe where rites and mysteries are transmitted in traditional songs. Since the study of Indian music has become serious, many records have been taken, either by transcription into the European notation or by the use of the phonograph.

3. Song.—Indian music is primarily vocal. To be sure, melodies are played upon the native flute, and Garcilasso is authority for the statement that the Peruvians knew a kind of ensemble performance of flutes or pipes; but, even where so used, the flute seems to be regarded as merely a substitute for the voice.

'They played upon these flutes,' says Garcilasso (bk. ii. ch. xxvi.), 'airs of which the words were rimed, composed in a spirit of gallantry upon the rebuffs or favours received from their mistresses.'

In N. America this instrument is commonly called the 'lover's flute,' since its music is regarded as a substitute for vocal song from the bashful lover (cf. Burton, *American Primitive Music*, pp. 83-86).

While their music is thus vocally conceived, the Indians generally appear to have no clear conceptions of the difference between the verbal and tonal materials of their songs.

To the Ojibwa, says Burton (*loc. cit.*), 'whatever departs from plain prose is *nogaman*, song, which means that his poetry is not only inseparable, but indistinguishable from music.'

Burton found difficulty more than once in convincing an Indian who sang new words to an old melody that new music was not being offered. But the words themselves need not be significant apart from the air. Frequently they are meaningless, sometimes because the original meaning is forgotten, sometimes because archaic or foreign, sometimes because originated as mnemonic syllables or ejaculatory refrains, or as pure nonsense. It is the common thing for an Indian song to require a story to explain its meaning. In short, the verbal elements of Indian music form a kind of notation, dimly analogous to our *do re mi* method of denominating the scale.

Frances Densmore, writing of the Mide society songs, says:

'The songs of the Mide represent the musical expression of religious ideas. The melody and the idea are the essential parts of a Mide song, the words being forced into conformation with the melody. To accomplish this it is customary to add meaningless syllables either between the parts of a word or between the words; accents are misplaced, and a word is sometimes accented differently in various parts of a song; the vowels are also given different sounds, or changed entirely. . . . The writer has even been informed that it is permissible for different members of the Mide society holding high degrees to use slightly different words for the songs, but the idea of the song must always remain the same. The words serve as a key to the idea without fully expressing it. Sometimes only one or two words occur in a song. Their literal translation is meaningless, but to an instructed member of the Mide society they bear an occult significance. Many of the words used in the Mide songs are unknown in the conversational Chippewa of the present time' (*Bull. 45 BE*, p. 141.).

Le Jeune's *Relation* of 1634 contains an interesting account of Montagnais music (*Jesuit Relations*, ed. R. G. Thwaites, Cleveland, Ohio, 1896-1901, vi. 182 ff.), indicating the same general character:

'They use few words in singing, varying the tones and not the words. . . . All their religion consists mainly in singing. . . . Not one of them understands what he is singing, except in the tones which they sing for recreation,' etc.

Interesting too, though chiefly as a token of the fundamental identity of N. and S. American conceptions, is Garcilasso's naive comment on Inca music:

'Each song has its particular air, and they could not sing two to the same tune; for the lover who would serenade his mistress indicated the state of his passion upon his flageolet by the diversity of the sound, sad or gay, making known to his beloved the joy or sorrow of his heart. But were he to give two different songs to the same air, each would be confused,

and the gallant defeated in his effort to make his feeling known' (*Royal Commentaries*, bk. ii. ch. xxvi.).

4. Mode of composition.—Aristotle's remark that poetry first takes form in hymns to the gods and personal lampoons seems to have a fair illustration in native American song. Various writers have noted the Eskimos' love for contests in satirical song, with which they while away their long winter evenings; while satire and lampoon are not uncommon in Indian song. These songs naturally vary indefinitely with occasion and mood. On the other hand, religious song (and, as Le Jeune says, Indian religion is mainly song) is strongly conservative, even while it marks almost every phase of native life.

Advocates of the 'communal origin' of poetry find good materials in the recreative type of song, but the evidence in the case of the more serious compositions points in another direction. Songs which have to do with tribal traditions, with rites and ceremonies, with love and death, and even cradle-songs, while they tend to assume a traditional form and come to be sung in chorus, in many if not all cases owe their composition to the stress of an inspirational moment on the heart of the individual composer (cf., e.g., the accounts of the origins of the *Hako* and *Mide* songs in *22 RBEW* ii. and in *Bull. 45 BE*). Song, with the Indians, is, in fact, much more than verbal music; it is a part of life itself, and is efficacious in altering life's destinies. They use their songs, says Le Jeune (*loc. cit.*), for a thousand purposes; they sing in sickness and in health, at the feast, and in peril and suffering:

'During the time of our famine I heard nothing throughout these cabins, especially at night, except songs, cries, beating of drums and other noises; when I asked what this meant, my people told me that they did it in order to have a good chase, and to find something to eat.'

Burton tells of an old pagan whom he could not persuade to sing hunting-songs out of season. The priest who gave Alice Fletcher the *Hako*—which is a ceremonial prayer for life—told her that it must not be sung in winter, but only in spring, summer, or autumn, when life was stirring; similarly, the several songs must be sung at suitable times:

'Sometimes the songs of the nest and the wren are sung early in the day, as these songs were made in the morning. The song of the owl must be sung toward night' (*22 RBEW* ii. 168). The song is, in short, a kind of spell, helping to tide over the exigencies of life and invented to meet them.

The Navaho myth of the man who discovered the use of corn as food begins: 'A man sat thinking, "Let me see; my songs are too short; I want more songs; where shall I go to find them?"' Hasejidi, the white-maize spirit, appeared to him, and led him to a country where he learned the use of corn and the appropriate songs, which he brought back to his own people (*8 RBEW* (1891), p. 278).

An interesting feature of Indian song is the sense of personal proprietorship which attaches to compositions. Burton states it thus:

'A has no right to sing B's songs; B did not compose them, but they came down to him through his family, or from some chief who taught him, and B alone should say whether they might be given to another' (p. 118 f.).

So in Le Jeune's *Relation* of 1636:

'Each has his own song, that another dare not sing lest he give offense. For this very reason they sometimes strike up a tune that belongs to their enemies, in order to aggravate them' (*Jesuit Relations*, ix. 111).

The personal song is evidently a portion of the 'medicine' which every Indian owns, and it is potent in the same way. A special type of song comprises the spontaneous melodies coming in dream and dance, to which the Indian attaches especial significance as revelations of superhuman power, many of them being associated with some animal, revealed as the tutelary of him to whom the song is given. Perhaps the most picturesque and affecting aspect of Indian life is the death-

song with which every Indian seeks to face his end, sometimes composed upon the spot, sometimes prepared in advance; if possible, every Indian dies singing; and the breath of life goes forth to the spirit-world as a breath of song.

5. Structural traits.—The study of the structure of Indian music, in spite of the serious attention devoted to it, is hardly more than begun. From investigations already made it is evident that there are many types of Indian music, perhaps as many as there are linguistic stocks, each with its structural peculiarities. On certain points, however, there is an approach to agreement, and these we may broadly summarize.

(a) From the Arctic southward, American music is primarily (though not exclusively) drum-song. The voice and the drum are the Indian's instruments, and his music is a kind of concord of the two; the drum is the instrument of his rhythmic, the voice of his melodic, expression. But his drum-rhythms are not primarily guides to the rhythms of the voice; rather they are the rhythms of movement, of the dance, to which the rhythms of vocal utterance may, or may not, conform. White observers have been astonished at the apparent duality of the Indian's time-sense—his drum being beaten to one time, his song sung to another time, and this even when the drum is obviously used as accompaniment. In sixty-three out of ninety-one Mide songs recorded with the drum accompaniment, Frances Densmore found the metric units of voice and drum to differ from each other. In one instance the metric units of voice and drum were so nearly alike that the same metronome indication was used for each; at the beginning the drum-beat was slightly behind the voice, but it gained until with the voice, and then gradually passed it. Normally, when drum and voice have the same metric unit, they are slightly in sequence in beat (*Bull.* 45 BE, p. 5 f.).

'I have heard Indian music wherein the conflict between voice and drum was much more marked than is the case between 3-4 and 4-4' (Burton, p. 46).

The voice is sometimes made to mark its own time by rhythmic pulsations (cf. 22 RBEW ii. 282); while, again, both voice and drum employ rhythmic accents, or beats, to mark the metric units. The vocal rhythm frequently changes even in the course of a brief song, but the recurrence of rhythmic figures, or motives, serves to give outline and unity to otherwise formless compositions.

(b) The question of the range of tone-material and of the existence of scales in Indian music is still moot. Early observers, struck by the strangeness of the intervals which they seemed to detect in Indian singing and by the constancy with which these intervals were repeated, jumped to the conclusion that the American Indian possessed an ear of unusual delicacy of discrimination, and scales of a refinement which the white man's could not duplicate. More careful studies have led to the reverse view, that Indian music is built upon scales in the making, or even that it is essentially adiatonic. The latter is the view of Hopi music adopted by Gilman. He characterizes Pueblo song as a kind of rote-song having no fixed intervals:

'The singer's musical consciousness seems restricted to a few intervals of simplest vibration ratio approximately rendered, and to melodic sequences formed by their various analysis and synthesis and rendered with a certain loose fidelity. If a scale were in his mind, even dimly, it should make itself known in a more uniform interval production and in a more impartial use of the tones continually at hand in the fancy. The hearer seems witness to a wholly strange method of musical thought and delivery. The total complex of tone, timbre, and articulation—doubtless at times movements, and other noises also—moves on apparently without guidance by any vanguard of fancied tones at fixed intervals' ('Hopi Song', in *Journal of Am. Eth. and Arch.* v. [1903] 5).

Other authorities do not go to this radical extreme, but credit the Indian with an adumbrate

consciousness of a scale or scales, which his lack of musical standards prevents him from clearly finding, or, if found, from holding. Burton says:

'The Ojibways recognize all the intervals of our major diatonic scales, but the fourth and the seventh rarely occur in the same song' (p. 41),

and he indicates a pentatonic major and minor and a hexatonic major and minor scale as in use among them. Frances Densmore's study of the music of the same people is in substantial agreement with this. A similar view—interesting, as coming from S. America—is taken by F. J. de Augusta with respect to Araucanian song (*Anthropos*, vi. [1911] 685 f.). Alice Fletcher says of the Omaha music:

'The octave is seemingly the only fixed interval. The songs are not built on any defined scale.' Nevertheless, the Omaha have 'a standard of musical tones,' as witnessed by their drum-tuning and by their recognition of 'good singers' (27 RBEW, p. 374).

Another interesting observation is that the Omaha object to the rendering of their songs on the piano as unsupported arias; when rendered with harmonic chords, 'That sounds natural,' was their comment. Burton found the Ojibwa lively in their appreciation of harmonizations of their melodies. This aptitude of the native ear for the appreciation of harmony seems to lend some colour to the supposition that they do actually (even if imperfectly) think their music in harmonic intervals.

(c) A third structural feature deserving note is the predominance of downward progressions in their melodies; like the ancient Greek, the Indian thinks his music mainly in the descending order. Melodic form is fluid and undeveloped, but repetition, balance, and antithesis give form to their better pieces. Further, uncertainty of form is partially offset by definite conventions of execution, amounting to artistry. The accomplished singer affects a vibrato, or wavering of the voice, a drawling tone, a portamento or slurring, an ornamentation of grace-notes. In many of the Omaha societies a fine was imposed if a member made mistakes in singing (A. C. Fletcher, 27 RBEW, p. 373). Finally, the inner harmony of a general tonality is set by the mood of the composition, or perhaps keyed by the incessant drum, whose drone serves as a tonal background for the melodic broiery.

6. Adaptations.—No account of Indian music would be complete without mention of the use of themes caught or imitated from Indian melodies as the foundations of artistic compositions. These vary from simple harmonizations of Indian songs (many of which have been published by the Wawan Press, Newton Center, Mass.) to elaborate symphonic compositions. The most notable works of this nature yet achieved are doubtless Dvořák's 'New World Symphony,' MacDowell's 'Indian Suite,' and Coleridge-Taylor's 'Hiawatha' music.

LITERATURE.—F. R. Burton, *American Primitive Music*, New York, 1909, is a careful and readable introduction to the subject; it contains harmonizations of twenty-eight Ojibwa songs. N. Curtis, *The Indian's Book*, New York, 1907, contains melodies from some eighteen tribes. Thorough studies are F. Densmore, 'Chippewa Music,' forming *Bulletins* 45 and 53 BE (1910, 1913), and B. I. Gilmore, 'Zuni Melodies' and 'Hopi Songs,' in *Journal of Amer. Ethnology and Archaeology*, i. [1891], v. [1903]. Alice C. Fletcher, 'A Study of Omaha Indian Music,' in *Papers of the Peabody Museum*, vol. i. no. 6 [1893], *Indian Story and Song*, Boston, 1900, 'The Hako,' 22 RBEW ii. [1904], 'The Omaha Tribe,' 27 RBEW [1911], and 'The Study of Indian Music,' reprinted from *Proc. of Nat. Acad. of Sciences*, i. [1915] 231 ff., contain indispensable material. Special mention may also be made of: J. Reade, 'Some Wabanaki Songs,' 'Aboriginal American Poetry,' *Trans. Royal Soc. of Canada*, v. ii. [1888]; W. Matthews and J. C. Fillmore, 'Navaho Music,' *Mem. of the Amer. Folklore Society*, 1897, pp. 255-290; F. Boas, 'The Central Eskimo,' 6 RBEW [1889], p. 409 ff.; W. J. Hoffman, 'The Mide'wiwin,' 7 RBEW [1891], p. 149 ff.; J. Mooney, 'The Ghost-Dance Religion,' 14 RBEW i. [1896] 653 ff.; S. Cullin, 'Games of the North American Indians,' 24 RBEW [1907]; F. Russell, 'The Pima Indians,' 26 RBEW [1908], p. 3 ff.; F. G. Speck, 'Ceremonial Songs of the Creek and Yuchi Indians,' *Anthropological Publications of the Museum of the Univ. of Pennsylvania*, vol. i. no. 2 [1909]; A. T. Cringan, 'Description of Iroquois Music,' *Archaeological Report of Ontario* for 1898. T. Baker, *Über die Musik der*

nordamerikanischen Wilden, Leipzig, 1882, is one of the earliest scientific studies in this field. The *Report of the U.S. National Museum for 1896*, Washington, 1898, contains an account of native American musical instruments (pp. 561-684). Periodical articles of importance include: A Génin, 'Notes sur les danses, la musique et les chants des Mexicains anciens et modernes', *REH* iv. [1918] 301 ff.; F. Boas, 'Chinook Songs', *JAFLL* [1888] 220 ff.; 'Songs and Dances of the Kwakiutl', *ib.* p. 49 ff.; Washington Matthews, 'Songs of Sequence of the Navajos', *ib.* vii. [1894] 185 ff.; Alice C. Fletcher, 'Indian Songs and Music', *ib.* xi. [1898] 85 ff.; E. Sapir, 'Song Recitative in Palute Mythology', *ib.* xxiii. [1910] 455 ff.; W. Thalbitzer, 'Eskimo-Musik- und Dichtkunst in Grönland', *Anthropos*, vi. [1911] 485 ff.; F. J. de Augusta, 'Zehn Araukanerlieder', *ib.* 684 ff.; R. Lehmann-Nitsche, 'Patagonische Gesänge und Musikbogen', *ib.* lii. [1908] 910 ff., containing a discussion of the origin of stringed instruments in use by American Indians; E. Fischer, 'Patagonische Musik', *ib.* p. 941 ff.

H. B. ALEXANDER.

MUSIC (Babylonian and Assyrian).—As the inscriptions seem to furnish no easily recognizable indications of a musical notation, very little can be gathered concerning the music of these nationalities (see, however, below, § 6). The representations of musical instruments in their bas-reliefs, however, make it clear that they not only loved music, but had also made some progress in the art—progress fostered originally, in all probability, in their temple-ritual.

i. Its antiquity in Babylonia.—As their sign-list implies that the Sumerians (the non-Semitic inhabitants of Babylonia) had musical instruments before they settled in that tract, they must have had music in practically pre-historic times. It is true that G. A. Barton, in his *Origin and Development of Babylonian Writing* (=BASS ix. [1913] pt. i.), gives (p. 186) only three forms, of which the third (*balag*) seems to be merely a variant of the second (*tigi*); but this number could probably be increased. The three characters in his list express various ideas derived from music, such as 'to be joyful', 'to strike,' etc.

2. Musical instruments.—These were sufficiently numerous, judging from what we find in their sculptures, and may be classified as follows.

i. INSTRUMENTS OF PERCUSSION.—(a) *Drum* (Sumerian *dla*, Semitic *dlu*, according to Langdon, though *lū* would seem also to have been used).—The earlier forms were very large—indeed, one relief (about 2500 B.C.) shows an instrument nearly as high as the man who, with his left hand, seems to be striking it (B. Meissner, *Grundzüge der altbabylonischen Plastik*, Leipzig, 1914, p. 14). It looks like an enormous tambourine resting edgewise on the ground, and was probably moved from place to place by rolling. For the later (Assyrian) portable forms see G. Rawlinson, *The Five Great Monarchies*, London, 1862-67, ii. 160.

(b) *Tambourine* (Sum. *liliz*, Sem. *lilisū*, according to Langdon; *tabbalu* [F. Thureau-Dangin, *Huitième Campagne de Sargon*, Paris, 1912, p. 26 f., 1. 159]).—The forms shown naturally do not differ much from the modern instruments, but the rim was in some cases not provided with rings or disks (see Rawlinson, ii. 158; E. de Sarzec, *Découvertes en Chaldée*, Paris, 1884-1912, pl. 39, no. 5).

(c) *Cymbals*.—Late forms are given in Rawlinson, ii. 158 f. Those with rounded backs have a loop, those with conical backs a fixed rod, by which to hold them.

ii. STRINGED INSTRUMENTS.—(a) *Harp*.—The earliest example (c. 2500 B.C.) is probably that in de Sarzec, pl. 23, which shows considerable development, and has 11 or 12 strings. An Assyrian harp with 16 strings is shown in Rawlinson, ii. 153, where there is also an Elamite harp of 19 or 20 strings. According to Langdon, this was the Sum. *balag*, Sem. *balaggu* or *balangu*. Thureau-Dangin renders the group *giš zag-sal* by 'harp.' In *WAI* ii. 44, 55, *giš zag-sal-sisa* is rendered by *išar[ti]*, 'the straight'—a word translating *sisa*, and therefore qualifying *giš zag-sal*.

(b) *Dulcimer*.—A primitive form of this (? before 2500 B.C.) is shown in a relief, originally inlaid, found at Bismaya (E. J. Banks, *Bismaya*, New York, 1912, p. 268). It had 5 or 7 strings and was played with a plectrum. For the Assyrian form see Rawlinson, ii. 161; A. H. Layard, *Monuments of Nineveh*, London, 1849, i., plates 12, 22 (held with a downward slope), and 73. In the first case the musicians welcome Aššur-našir-pal on his return from a bull-hunt, while the last celebrates the capture of the Babylonian city Dilman (Dailani) by Sennacherib.

(c) *Lyre and cithara*.—Though these must have been among the earlier stringed instruments, the extant pictures are mainly of a late date (see Rawlinson, ii. 154-155, 158). Being rather rectangular in form, they did not, apparently, give a wide range of notes. The number of strings of a lyre varied from 4 to 10 (see Rawlinson, ii. 154, also 153, where a 4-stringed lyre similar to a 'trigon' is shown). A band of foreign musicians (captives) is shown in Rawlinson, ii. 164=Brit. Mus., Assyrian Saloon, no. 14. Notwithstanding their likeness to the Israelitish captives in Sennacherib's Lachish reliefs, it is doubtful whether they wore of that nationality, since those sent by Hezekiah were not captives. That the yoke or cross-piece of their instruments terminates in swans' (?) heads, however, would probably present no difficulty.

(d) *Guitar*.—This rather resembles the Egyptian *nefer*, or banjo, which may have been borrowed from Babylonia (F. W. Galpin, in Stainer, *Music of the Bible*, p. 45). This was known in Babylonia at a very early date (*ib.* pl. i. B). The form is similar to that used later in Assyria (Rawlinson, ii. 156).

iii. WIND INSTRUMENTS.—(a) *Pipe, whistle, or flute*.—This probably became a favourite instrument after the arrival of the Sumerians in Babylonia, where reeds are plentiful. The common Sumerian word for the pipe or flute is *gi-gid*, 'long reed,' or *gi-sir*, 'reed of music,' in Semitic *mēlilu*, from *ēlilu*, 'to make a joyful sound.' According to the *Descent of Istar into Hades*, rev., lines 49 and 56, this was the instrument of Tammuz, who possessed one made of the sacred lapis lazuli. When Tammuz joyfully played thereon, the mourners, male and female, played with him, and then the dead might arise and enjoy the incense. The flutes depicted on the Assyrian monuments are played in pairs (Rawlinson, ii. 157). The Elamite double flute was similar to the Assyrian (Layard, ii., plates 48, 49).

(b) *Trumpet*.—Pictures of this instrument are rare, the most noteworthy example being that in the hands of a director of works in Sennacherib's time (Layard, ii. 15=Brit. Mus., Nineveh Gallery, 51, 52). It was probably not a speaking-trumpet, but an instrument conveying orders by its note.

(c) *Horn*.—Though the inscriptions do not seem to refer to this as a musical instrument, it is probable that they used it as such. The Sumerian for 'horn' is *si*, Sem. *garnu*, Heb. *geren*.

(d) *Other wind instruments*.—According to Langdon, the Sum. *tigi*, Sem. *tigā*, was an ordinary reed-flute, and something similar is to be understood by the *gi-erra*=*gan bikiti*, or 'reed of wailing.' The *gi-di*, Sem. *takaltu*, and the Sem. *pagā*, he suggests, may be bagpipes.

3. Singers.—Of these there were many classes, but we have still much to learn about them. Some were probably for secular performances only.

(a) *Nāru* (sem. *nārtu*).—These are expressed by the character *lul*, preceded by the determinative for 'man' or 'woman.' *Lul* was possibly the picture of a harp or lyre, to which they seem to have sung. According to Sennacherib, a choir of these, male and female, was sent to Nineveh by

Hezekiah, and accompanied his tribute (see above, § 2, ii. (c)). The native Babylonian (or Assyrian) *nāru*, however, seems to have been a kind of precursor, who sang or intoned portions of their ritual. One of these, named Qisīā, chanted the songs used at the funeral of one of the Assyrian kings, and was aided by a choir of young women (*mārāti*, 'daughters'; R. F. Harper, *Assyrian and Babylonian Letters*, Cambridge, 1911, no. 473).

(b) *Kalū*.—This word is derived from the Sum. *gala* (dialectic *mulu*), and seems to mean, properly, 'male servant,' 'deacon.' He was the specialist in temple-music through the study which he had devoted to it:

'O temple, thy deacon (*mulu-zu*) is not present—who decideth thy future?

The deacon (knowing) thy chant is not present, thy future to the harp he singeth (not)' (Langdon, *Babylonian Liturgies*, p. viii).

Words given as synonyms of *kalū* in *WAI*, pl. 21, line 38 ff., are the Sum. *ir*, or 'mourner,' the *sur(a)*, a special singer, the *sura-gala*, or chief of the same class, the *lagar* (dial. *labar*), 'deacon,' the *nunuz* (?) *pa*, 'declarer of oracles,' and others.

The lists connect with the *kalū* the *lallaru* and the *munambū*, the former rendering the Sum. *ilu-ali*, 'he who chants mournfully' (Langdon), and the latter *ilu-di*, perhaps 'the soft singer.' These are given in *Cuneiform Inscr.*, pt. xix. pl. 41, and follow the *gala-maḫa*, Sem. *kalamahhu*, 'the high' or 'chief *kalū*' (K. 4323, l. 17). The Sum. *ilu* forms part of two words for *zammeru*, the usual word for 'singer,' in *WAI* ii. pl. 20: *ilu-dudu* and *ela-i-lu* (lines 7 and 9). The fem. was *zammeru*, translating the Sum. *sal-ulili* and *sal-ula* (?) *la*. These words possibly contain the root of the name of the 6th month of the Babylonian year, Ululu or Elul, the month of the mourning for Tammuz, snatched away to dwell in the under world. The goddess Ištar, spouse of Tammuz, seems to have had a special *kalū*, or class of *kalē*, devoted to her, possibly under the leadership of a *gala-maḫa* (see above).

4. The divine patrons of music.—Besides Ištar, the chief patron of Babylonian music was the god Ea, who figures in the lists as the great creator of all things, apparently before the appearance of Merodach as the father of the gods. Written with the sign for 'singer' (*nāru*), he bore the name *Dunga*, and, with that for 'harp' (*balag*), he was called *Lumḫa*.

5. Musicians.—Besides being a singer, the *nāru* was probably a player of the lyre or cithara. A somewhat uncertain name is *lu balag-ga*, Sem. *mušēd*, possibly a harpist. From what has been said above, it will be gathered that musicians, as well as singers, must have held official posts. The Assyrian bands were various; the simplest consisted of two harpists, but one of four players shows a tambourinist, a lyre-player, a player on a small cithara of varied compass, and a cymbalist (Rawlinson, ii. 158). These were apparently foreigners. The largest band depicted is that in which the Elamites come out to welcome their new king, Umman-igāš, whom an Assyrian eunuch is installing. There are eleven instrumentalists, with harps, double pipes, a small drum, and a kind of dulcimer. Three of the leading performers (men) have one foot raised, as though half dancing as they advance. These are followed by women and children, clapping their hands, and possibly singing (*ib.* ii. 166 = Brit. Mus., Nineveh Gallery, 49). The band which played to summon the people to worship the great golden image set up by Nebuchadrezzar in the plain of Dura (Dn 3⁵, etc.) consisted of a number of instruments of which the cornet or horn (*qarnā* = *qarnu*, § 2, iii. (c) above), the flute, the harp, the sackbut, the psalter, and the dulcimer are specially mentioned. Notwith-

standing its suitability in such a case as this, the drum does not appear, but the piercing sound of the cornet would naturally form a good substitute.

6. Possible indications of a notation.—These are to be found in certain tablets from Babylon, of late date, now in the Royal Museum, Berlin, and edited by George Reisner (*Sum.-bab. Hymnen*), who has tabulated them in two classes (Introd. p. xvi), namely, vocalic characters, both singly and in groups, and words or ideographs expressing words. The former consist of the vowels *a*, *e*, *i*, and *u*, which are placed at the beginning, in the middle (before the *caesura*), and at the end of the lines to which they refer. Were they placed over the words, and not in the margins and blank spaces, it might be contended that they stood for four notes of a scale. It seems more likely, however, that they indicate the tones attached to the lines, in chanting which, in that case, considerable latitude was allowed. As a mere conjecture, it might be suggested that *a* stood for an even tone, *e* (= *qabū*, 'to speak') for modulated chanting, *i* ('sublime,' 'exalted') for a high tone, and *u* (= Addu, Hadad) for one which was deep, thunderlike. The difficulty, however, is that this takes no account of the words, among which are *annū*, *ilī*, or *lī* (?), 'loud,' *nu-idim*, 'not weak,' 'not silent' (= *lā ulālu*, *lā sukutū*). In one place *e* is placed over *a*, and in another *i* over *i* (? part-singing). All this would seem to imply considerable elaboration, whatever interpretation be placed on these mysterious characters. In some passages the character *meši*, Sem. *manzū*, followed by *lu*, *la*, and *gub*, 'passing,' 'hovering,' and 'standing'—so, apparently, the general meanings—appears. This would indicate some such rendering as 'sound,' 'music,' for *meši* = *manzū*.

7. References to music in the historical inscriptions.—The word used in these seems to have been *ningūtu*, *ningūtu*, 'joy,' 'merrymaking,' or the like. Sargon of Assyria (722-705 B.C.) constantly uses it to indicate the rejoicings at his military successes, in which, however, musicians took part. In other passages the word may be translated in the same general way, but that in which Aššurbanipal is directed by Ištar of Arbela to eat food, drink wine, make music (*ningūtu*), and glorify her divinity (G. Smith, *Hist. of Assurbanipal*, London, 1871, p. 125, 65-66) is possibly correctly rendered—as is also the passage in his great cylinder where the kings of Arabia are described as having been compelled to wear badges and work at the rebuilding of Bit-ridāti, and are said, whilst engaged thereon, to have passed their time in 'singing (and) music' (*ina ēlīli ningūti*), in order that the Assyrian king should 'build (that palace) from its foundation to its coping with rejoicings and festivities' (*ina ḫidāti ū risāti*).

LITERATURE.—The Introduction to G. Reisner, *Sumerisch-babylonische Hymnen*, Leipzig, 1896; J. Stainer, *Music of the Bible*, ed. F. W. Galpin, London, 1914; S. Langdon, *Babylonian Liturgies*, Paris, 1912. T. G. PINCHES.

MUSIC (Buddhist).—The history of ancient Indian music, including that of the centuries when Indian culture was predominantly Buddhist, has not yet been compiled, and probably, from lack of materials, never will be. The classical literature of Buddhism does not contribute much to such materials, but some features of interesting suggestiveness may be pointed out. On the psychological side, a very keen emotional susceptibility to the charm of music, either sung or played, is alluded to as an ordinary phenomenon. In one of the late (*vijā*) parables in the *Piṭakas* certain persons are supposed to hear its sound for the first time, the instrument being concealed. They ask what it is, 'the sound of which is so fascinating, so charming, so intoxicating, so entrancing, so ravishing, so

captivating' (*Samyutta-Nikāya*, iv. 196 f.), and their hearers, in replying, agree with their opinion. Some of these adjectives are applied to music yielded by 'the five kinds of instruments, when well played upon,' for the skilled musician (*Dialogues of the Buddha*, Oxford, 1899-1910, ii. 214), and a similar æsthetic effect is said to have been derived from a golden and a silver network of bells, hung round the mythical palace of the 'great king of glory,' and shaken by the wind (*ib.*). A similar charm, in the later commentaries of Baddhaghosa, is ascribed to the song of the *karavika* bird. The possession of a musical speaking voice, holding men spell-bound, was held of sufficient importance to record supreme distinction in this gift in the order's list of such brethren as were foremost in certain attainments. The champion in question was the Thera 'Dwarf' Bhaddiya (*Aṅguttara-Nikāya*, i. 25; *Psalms of the Brethren*, London, 1913, ccxxv.; the commentarial tradition held that he was born under a former Buddha as a 'variegated cuckoo,' *kokila*). Yet another bird was brought in to compare with the sweetness of Sāriputta's voice—the *sālikā* (*Psalms of the Brethren*, 1232 f.). But the Buddha's voice was compared to the celestially sweet vocal organ, with its eight characteristics, of the Apollo of the Brahma-heavens—Brahmā Saṇaḥ-Kumāra, the Eternal Youth (*Dialogues*, ii. 245, iii. 173; *Kathāvatthu*, xii. 3).

A second point of interest, already alluded to, is the names and varieties of instruments mentioned in this literature. They are sometimes called collectively *turiyā* (see *Dialogues*, ii. 18, n. 1); sometimes *pañchaṅgikā* (*turiyā*), 'fivefold' (*Samyutta-Nikāya*, i. 131; *Psalms of the Sisters*, London, 1910, pp. 83, 183). These the commentaries enumerate as *ātata*, *vitata*, *ātata-vitata*, *ghana*, *susira*, the first three of which are varieties of tom-tom, and the other two respectively yet another instrument of percussion (a species of cymbal) and a wind instrument (a species of reed or pipe). It is curious that the seductive *vīṇā* is not included in this list. The word *turiyā* (Skr. *turya*, *turiyaka*) came, centuries later, to bear the meaning of 'fourth' (*cha-tur-*) part or state, but its original meaning, in these earlier books, in connexion with music, is very obscure.

Other instruments with which we meet are drums—the *duṇḍubhi* ('Striking salvation's drum, Ambrosia's alarm' [*Majjhima-Nikāya*, i. 170 f., quoted in *Psalms of the Sisters*, p. 129]) and the *bheri*, *mutiṅga*, *saṅkha*, *paṇava*, and *deṇḍima* (*Dialogues*, i. 89), the third and fourth of these five being the chank (shell) and a kind of horn. Concerning the chank, which is also a species of horn, another parable is told (*Dialogues*, ii. 361). Here again the fivefold adjectival formula is used to describe the charm of its sounds.

More material of this kind might be extracted by a thorough sifting of the early, the middle, and the later or mediæval strata of the Bddhist literature. Here let it suffice to name one more feature that is suggestive, namely, the reference to all congress work concerned with canonical (but unwritten) texts, or records, as 'singing-together' or 'singing-through'—*saṅ-gīti* (*Vinaya Texts*, iii. [=SBE xx. (1885)] 372 f.). A similar idiom is used for the procedure observed by contemporary Brāhmins when meeting to go over their *mantras* (*Majjhima-Nikāya*, ii. 170). It is fairly evident that, in the absence of written documents, the time-honoured Indian custom of intoning or chanting the memorialized runes was adopted by the Indian Buddhists. Cf. art. HYMNS (Bddhist).

C. A. F. RHYS DAVIDS.

MUSIC (Celtic).—I. Musical instruments.—Little is known of the music of the ancient Celts,

as the classical references to it are few and casual, and native evidence is lacking save in the case of the Irish texts, which cannot be taken as decisive for the earlier period. Some classical authors refer to the trumpet (*carnon*, *carnux*).¹ It was used to summon assemblies and also in battle, especially in the charge and as loud and clamorous accompaniment of the war-cries for which the Celts were famous.² The pipe of the trumpet was made of lead, and the bell was in the form of an animal, according to contemporary accounts. Archaeological research has discovered several trumpets of the bronze or early iron age. These are made of cast bronze, or of tubes of sheet-metal riveted together. Some are of very fine workmanship, and one of the early iron age (late Celtic period) found in Ireland has its disk extremity ornamented in hammered work. These trumpets are of two varieties—with the mouth-piece at one end or at the side. Straight cylinders have also been found, evidently parts of some larger instrument.³ The Celtic trumpet is figured also on Roman monuments.⁴ Horns are referred to by classical writers as used both in war and by swincherds to call together the swine.⁵ These as well as pipes and reeds of different kinds are also mentioned in Irish texts, and bone flutes have been discovered in Thor's Cave, Staffordshire.⁶

'The Courtship of Ferb' speaks of seven *cornaire* (horn players) with *corns* of gold and silver. These, however, may have been the trumpets already referred to. Instruments of ox-horn were also in use.

An Irish poem of the 11th cent. on the fair of Carman mentions pipes, and these are probably a form of the bagpipe, as the plural name *pipai* is still used in Ireland, as in the Highlands of Scotland, for this instrument. The Irish form differs in some particulars from the Scots; its scale is more complete and full, while the reeds are softer. While the bagpipe has become the characteristic Highland instrument, it has ousted the harp at one time so popular.

The harp or lyre (*chrotha*, Ir. *cruith*, *crot* [= Welsh *croth*, a fiddle]) was used by the bards of Gaul as an accompaniment to their chants, and is figured on Gaulish coins.⁷ It was common also to Irish, Welsh, and Highland music, and is frequently referred to in the Irish texts. In early times its power over the mind of men was the subject of a myth which recurs constantly in Irish story. The reference is first to the harp of the god Dagda, one of the Tuatha Dé Danann (see CELTS, § V.).

With it he played 'the three musical feats which give distinction to a harper, viz., the Suantraighe, the Gentrailge, and the Goltraighe. He played them the Goltraighe until their women and youths cried tears. He played them the Gentrailge until their women and youths burst into laughter. He played them the Suantraighe until the entire host fell asleep.' Before this the harp is said to have come itself from the wall to its owner, killing nine persons on its way.⁸

The number of strings on the harp varied. The so-called Brian Boru's harp in Trinity College, Dublin, must have had thirty strings. Others had eight. But in some early texts reference is made to three-stringed harps, and in a story of Fionn in the *Agallamh na Senorach* to each string is attributed one of the powers of Dagda's harp.⁹ In a story

⁸ 'Battle of Magh Tuireadh,' *Harleian MSS.*, cited in O'Curry, iii. 214.

⁹ O'Curry, iii. 223.

in the *Book of Leinster* (Dublin, 1880) this three-stringed harp is called a *timpan*, and elsewhere the *timpan* is differentiated from the *cruit*, or harp; it appears to have been played with a bow or wand with hair. It may, therefore, have been a species of violin or fiddle, and separate references to a stringed instrument of the violin type exist.¹

The origin of the harp is the subject of an Irish myth. A woman walking on the sea-shore saw the skeleton of a whale. The wind striking on the sinews made a pleasing sound, and, listening to its murmur, she fell asleep. In this position her husband found her, and, perceiving that the sound had caused her to sleep, he made a framework of wood, put strings from the whale's sinews on it, and so made the first harp.²

Bells of the bronze age have been found in Ireland. They are spherical or pear-shaped, and contain loose clappers of metal or stone, producing a feeble sound. These may have been the kind of bells which were hung on valuable cows and on horses.³ Gongs are also mentioned—e.g., the plate of silver over Conchobar's bed struck by him with a wand when he desired silence.⁴

An instrument to which most soothing powers are ascribed is mentioned in many texts—the musical branch, or *craebh ciúil*, carried by poets and kings. This O'Curry conjectures to have been a branch or pole on which a cluster of bells was suspended.⁵ When shaken, it caused all to be silent; in other words, it was a signal for silence. But in some cases mythical qualities are ascribed to the branch. Cormac Mac Art's branch of golden apples produced the sweetest music and dispelled sorrow.

'Sweeter than the world's music was the music which the apples produced; and all the wounded and sick men of the earth would go to sleep and repose with the music, and no sorrow or depression could rest upon the person who heard it.'⁶

In tales about the Irish Elysium reference is often made to trees growing there which produce marvellous music, causing oblivion to those who hear it. These trees are different from the instrument called *crann ciúil*, or 'musical tree,' which O'Curry describes as a generic name for any kind of musical instrument—harp, *timpan*, or tube.⁷

Special names were given to the players upon these various instruments, the name being taken from that of the instrument itself—e.g., *pipaire*, 'piper'; *cruitire*, 'harpist.'

2. Songs and chants.—The bards of the ancient Celts, frequently referred to by classical writers and corresponding to those of the Irish and Welsh Celts,⁸ composed poems of various kinds—epic, satiric, panegyric. Some of these were improvised and were sung to the accompaniment of the lyre. Glimpses of these bards, attached to the train of chiefs or great men, and singing their praises or those of their guests on festive occasions, are found in classical sources.⁹ They sang also of the heroic deeds of the past and of great warriors.¹⁰ They were doubtless also the composers of the battle-hymns which warriors sang before or after battle while they beat their arms in rhythmic cadence or danced. These may have been invocations of the gods, or traditional warrior-songs, or even spells to ensure divine help.¹¹ Individual warriors sometimes improvised their own songs. Chants were also sung by the priestesses of the Isle of Sena in order to raise storms.¹² Traces of

archaic hymns, doubtless of the order of spells, are found in Irish texts, and Irish druids used incantations for their magical actions. Of the words of the hymns or chants of the continental Celts no trace now remains. See BARDS, CHARMS AND AMULETS (Celtic), HYMNS (Celtic), MAGIC (Celtic).

3. The love of the Celtic peoples for music is reflected in well-nigh every old legend and tale, and is a well-known characteristic, while the peculiarly intense emotional effects produced on the people by their own songs or instrumental music are very striking, and are felt by those who have even the slightest strain of Celtic ancestry. Nowhere is this love of music better seen than in the tales of the Celtic Elysium—a land where music, sweet, delightful, and soothing, is constantly resounding. Not only do the birds on the trees sing most ravishingly, but there are trees themselves which produce music, like the silver tree with musical branches in the story of Cúchulainn's sickness.¹ 'There is nothing rough or harsh, but sweet music striking on the ear,' says the mysterious visitant in the story of Bran. Even its stones are musical. There is a stone 'from which arise a hundred strains'; it is not sad music, but it 'swells with choruses of hundreds.'² 'Harpers shall delight you with their sweet music,' says the maiden who would lure Oisín to the Land of Yonh.³ Mider describes Elysium to Etain as 'the wonderland where reigns sweet-blended song.'⁴ Its inhabitants 'hear the noble music of the *sid*,' says Loegaire MacCrimthainn after his sojourn there.⁵ The same idea recurs in later Celtic fairy-lore. The belated traveller passing by fairy-mound or fairy-haunted spot, hears the most ravishing music. All this is the expression of a racial love of music, passionate and satisfying.

The love of the pagan Celts for music remained when they became Christian. This is borne witness to by the hymns composed by early Celtic saints⁶ and by ecclesiastical music, and also by the secular music—vocal and instrumental, as well as dance music—so prominent in the social life of all Celtic regions. Of late years in Wales, the W. Highlands, and Ireland there has been a great revival and development of the native music. This is a popular movement and already has been productive of interesting results.

LITERATURE.—This is mentioned throughout the article.

J. A. MACCULLOCH.

MUSIC (Chinese).—It is questionable whether any nation has had a higher idea of the importance and power of music than the Chinese. Its mysterious influence has been a theme of their writers through all the ages, for the art of producing harmonious sounds which move the human heart has been known in China since the remotest antiquity. Its discovery is attributed to the Emperor Fū Hsi (2352 B.C.), the invention of the lute being ascribed to him. Doubtless, however, the Chinese not only brought their own music with them into China, but found the aborigines possessed of a system, and possibly the two were amalgamated.

At first emperors had their different systems until Hwang Ti, the Yellow Emperor (2697 B.C.), introduced order; a note was fixed for the base note, sounds had names given to them, etc., and music was considered to be the key to good government. Succeeding emperors followed his system. Hymns were composed by these rulers, and the Great Shun (2255 B.C.) composed a piece

entitled 'Ta Shao,' which is generally believed to have exercised such a wonderful effect on Confucius, 1600 years after, as to make him lose the taste of his food for three months. It was 'perfect in melody and sentiment,' while the martial music, 'The Great War-Music' of King Wu (i.e. 'The Warrior,' 1122 B.C.), though perfect, did not meet with the Sage's approval.¹ The Master again was delighted on visiting the City of Wu (i.e. 'The Martial City') to find that, notwithstanding its position, favourable for military operations, the people had been converted from a delight in military pursuits to a love of stringed instruments and singing.²

Some of the reforms which Confucius instituted were in connexion with music.³ He declared that it is not the sounds produced by instruments alone that constitute music.⁴ As to the playing, he said that the parts should sound together at the commencement. Then 'as it proceeds they should be in harmony, severally distinct and flowing without break, and thus on to the conclusion.'⁵ The Master himself both sang and played.

Mencius endorses the dictum of the ancients that music, if rightly employed, is conducive to good government.⁶

'In music of the grandest style there is the same harmony that prevails between heaven and earth.'⁷ 'Music is an echo of the harmony between heaven and earth,' and 'has its origin from heaven.'⁸ 'The fervency of benevolence, the exactness of righteousness, the clearness of knowledge, and the firmness of maintenance, must all have their depth manifested in music.'⁹

In the Book of Poetry it is said: 'The dancers move with their flutes to the notes of the organ and drum.'¹⁰ This refers to the sacrifice to the ancestors some centuries before the Christian era. The dancing, of which there were six kinds, was not what in the West is understood by that term, but grave evolutions and posturing intended to show veneration and respect.

The performance of this ritual music at the Chinese imperial court and at religious ceremonies such as those already mentioned, and those of worship to heaven and earth, to the sun and moon, and to Confucius, have been kept up until recently during all the centuries that have elapsed since the early Chinese historic periods. These ceremonies are much alike. Music of a solemn character accompanies the worship, the offerings made, and the hymns sung.

Confucius spoke of 'music that has no sound.'¹¹ This is not the Chinese equivalent of 'songs without words,' but it is deep and silent virtue. Thus it will be seen that music with these Chinese sages connoted more than the simple word 'music' in English.

The superior man, so the Master said, must take music and apply it: 'to act and to give and receive pleasure from what you do is music.'¹² No wonder that some of this music is said to have 'embraced every admirable quality.'¹³ 'The sages found pleasure' in it 'and (saw that) it could be used to make the hearts of the people good.'¹⁴ The airs of the *Shang* were conducive to 'decision in the conduct of affairs,' i.e. 'bravery'; the airs of the *Khi* produced 'a spirit of righteousness' in giving 'place to others' even at a loss.¹⁵ 'Where there is music there is joy.'¹⁶

But this ancient music has perished, leaving abstruse, obscure theories ill understood. The execrated Tsin Shi Hwang Ti (200 B.C.), the builder of the Great Wall and the destroyer of the

literati, was also the tyrant at whose mandate music books and instruments perished, leaving scarcely a remembrance behind them. As with the classics, however, ancient literature and instruments again saw the light of day, being rescued from hiding-places. Notwithstanding this, though attempts have also been made to revive the glories of ancient music's 'golden tongue,' the music of the Chinese sages remains practically unknown, though some pieces are supposed to represent it.

Times have also radically changed even with such a conservative people as the Chinese, and the professional musician is not now highly respected. Music, which Confucius considered as completing a man's education,¹ is entirely neglected as a part of a scholar's course, and is not studied seriously. Some of the educated are able to play the flute, the *ch'in*, and a few other instruments, while the common people delight in the banging of the sonorous booming gong, the rattling drum, the shrieking clarionet, and the screeching violin. Music always accompanies marriage, funeral, and religious processions.

The music of China has not been appreciated by the foreigner, who has considered it monotonous, noisy, and disagreeable. It has been much misrepresented and misunderstood, but there are indications that 'her strange, weird, almost ghostly music is winning its way to an appreciation it is worthy of.'² There are many excellent Chinese melodies. The instructions as to playing the scholar's lute far surpass in delicacy and refinement anything in the West.

The emperor Hwang Ti is said to have been the inventor of the *liu*, a series of twelve bamboo tubes, each tube representing a semitone, so that the twelve tubes render the twelve chromatic semitones of the octave. The emperor sent to Bactria for the bamboos, as there, in 'the Valley of Bamboos,' they grow of a regular thickness. The hollow piece between two joints, or *septa*, was taken, and the note which one of the tubes produced was selected as the base or tonic. Similar tubes of different lengths were used for the other notes of their chromatic scale, nearly identical with ours. Several accounts more or less fantastic are given as to why this division into twelve semitones was employed, such as the singing of birds, rolling waves, and voices of men and women of a wild tribe, etc. These tubes have each a name, and they are supposed to be connected with the dualistic system of Chinese philosophy, half of them being classified under the *yang*, or male principle, and the rest under the *yin*, or female. The different Chinese months and hours were also assigned to these tubes. There is an absence of tempering in Chinese music, so that to our Western ears some of the Chinese intervals sound too sharp or too flat.

Their scale being theoretically correct is too perfect for practice.³

It is this as well as the general absence of piano effects and gradations of sound, there being no crescendos, legatos, etc., that makes Chinese music often so discordant to the foreigner, and the high pitch increases its unpleasant nature.

Though theoretically there is this chromatic scale approximating to that in the West, a pentatonic scale is in use. The five planets were looked on as the bases of the five notes. At one time (1100 B.C.), however, a heptatonic scale was developed by the addition of two more notes to the five. It then consisted of five full tones with two

semitones, but even then the Chinese gamut was not identical with ours.

This lasted till the time of Kublai Khān (A.D. 1280), when the Mongols who then conquered China brought a new scale and notation, which, with a slight modification, lasted the century of Mongol rule. The native Ming dynasty (1368-1644) excluded the half-tones. The late Manchu dynasty (1644-1912) again made some slight alterations. Now, though theoretically there is a chromatic scale approximating to that in the West, the Chinese are content with a pentatonic scale, having dropped the two half-tones to which most of them have never taken kindly. At the same time, they are further content with fourteen sounds, their music being generally confined within these narrow limits.

As to the notation, there is no stave, the characters representing the notes being written in vertical columns in the same way as in books. To distinguish between a grave and an acute note, a little addition is sometimes made to the character standing for the higher note. In fact, Chinese solmization is imperfect. The musical notation is of such a character that to know exactly how a piece should be played a Chinese musician first requires to hear it played. For some instruments the notation is of a most complex character, containing the fullest directions as to the mode of playing, but generally the Chinese characters simply show that a certain sound is to be produced, in which of the two octaves often being unindicated. Further, it is simply a note, no indication of its length being given, though signs or dots to the right are occasionally inserted in manuscripts to indicate a longer holding of that note. Nor are rests ordinarily shown, nor time, etc., except that a space between two notes may mean either a rest or the end of a verse. Emphasis may be shown by a note being written larger.

Time and measures are thus not always indicated. Four time is the only time known scientifically, but others are heard in practice. The drum or castanets are the instruments which give the time in a band, and on no account is the one or other left out in an orchestra. The pentatonic scale is closely adhered to, whence no sharps, flats, or naturals are found.

The Chinese scale may be said to be neither major nor minor, but to participate of the two. Chinese melodies are not majestic, martial, sprightly, entrancing, as our music in the major mode; and they lack the softness, the tenderness, the plaintive sadness of our minor airs.¹

But this is true of Chinese music played by the Chinese on their own instruments. When transferred to our notation and played on our instruments, the melodies may be described as major.

Chinese vocal music is most disagreeable to European ears, as the Chinese do not sing in a natural voice.

The sounds seem to proceed from the nose; the tongue, the teeth, and the lips have very little to do except for the enunciation of some labial words.²

The *voix de tête* is generally used. The singing is in unison, no parts being known, though there is an ancient book containing the rudiments of harmony. The guitar is usually the accompanying instrument. A kind of recitative is used in the theatre. Chords, counterpoint, etc., are unknown. On some instruments two strings are played simultaneously. In chanting in Buddhist temples each priest sings in the key best suited for him. Indian music was introduced by the Buddhists.

As Chinese music may be divided into ritual (or sacred) and popular, so the instruments may be similarly divided—the former of a complicated structure, and the latter of a common form. The

spiritual principle of music being derived from heaven, the materials of which the instruments are made are earth-derived, and, as there were eight symbols (of Fu Hsi) which express all changes in the universe, the materials from which musical instruments are made are likewise eight. These are stone, metal, silk, bamboo, wood, skin, gourd, and earth, and are supposed to correspond with certain points of the compass and seasons of the year.

Stone chimes were held in high esteem, and there was also the 'single sonorous stone.'¹ The stone chimes are used only in court and religious ceremonies. There are two stone flutes. A conch shell is used by soldiers, watchmen, etc.

Under metal are classed bells, gongs, hell-chimes and gong-chimes, cymbals, and trumpets; and the *la-pa* is a trumpet with sliding tube.

Under silk are the *ch'in* (lute with seven strings) and the *sé* (which has now 25 strings). The latter is supposed to have a compass of five octaves. The four strings of the *p'i-p'a*, or balloon guitar, represent the four seasons. It often accompanies the flute, and is the instrument used by the blind singing-girls, who ply through the streets at night with their duennas, ready for hire. Others also use it. The *san-hsien*, or three-stringed guitar, is a favourite instrument of ballad singers. The *yueh-ch'in*, or moon-guitar of four strings, is also used to accompany ballads and songs. There are one or two varieties of violins—one with four strings and one (the rebeck) with two. In both of these instruments the bow strings pass between the violin strings, so that the player has not only to play the correct note, but must take care that he does not produce a wrong one by the bow string grating against wrong strings. The foreign harp-sichord, as it is called, is something like a zither, but has sixteen sets of fine wires with two bridges.

Under bamboo are included a Pandean pipe, used only in ritual music, and several kinds of flutes, the clarinet, etc.

Wood is employed in castanets, the wooden fish used by priests, and one or two curiously-shaped instruments.

Different kinds of drums account for the use of skin.

The *shêng* has the wind-chest sometimes made of gourd. The tubes which rise from the chest are reeded as in a harmonium, and are said to have given the idea for the construction of that instrument. It is used in the worship of Confucius, and is the most perfect of all Chinese musical instruments. In fact, it is nearly perfect—sweet in tone and delicate in construction.

The principles embodied in it are substantially the same as those of our grand organs. . . . Kratzenstein, an organ-builder of St. Petersburg, having become the possessor of a *shêng*, conceived the idea of applying the principle to organ-stops.²

An ocarina was made of baked clay or porcelain. Some of these instruments are most ancient in their origin.

The Chinese, as a rule, do not appreciate Western music, though, when taught, they play the harmonium well, and the Christians enjoy singing in church and school. The Chinese voice can be made to do almost anything if taken early enough and properly trained. The present writer has heard foreign music most beautifully rendered by German-trained Chinese.

MUSIC (Christian).—I. INTRODUCTORY.—1. Origin.—All authorities are agreed that the music of the early Church was of Hebraic origin. It is known that the apostles, as Hebrews, engaged in prayer and praise in the Temple, and they would undoubtedly utilize the same chants used there by the people in response to the Levitical choir.

The first record of Christian worship is that memorable hymn sung at the institution of the Lord's Supper: 'And when they had sung a hymn, they went out unto the mount of Olives' (Mk 14²⁶).

It was the custom at the Passover Feast to sing certain of the 'Hallel of Egypt' Psalms (Ps 113-118). The most prominent of these, Ps 114, 'In exitu Israel,' has been associated 'throughout the ages' with the chant known as 'Tonus Peregrinus,' which, leaving out intonation notes, may be shown as follows:

In the Anglican Church this melody is likewise associated with the Communion service—where it is intoned to the 'Nunc Dimittis' at the close. The origin of this chant does not seem to have been traced, nor do we know the melodies to which the hymns of the NT were set, i.e. the Magnificat (the 'Hymn Evangelical' of Isaac Williams), the song of Zacharias after the birth of St. John the Baptist, the Angels' song at the birth of our Saviour—later expanded into the 'Gloria in excelsis,' and the 'Nunc Dimittis'—associated as they are with Christian worship from the earliest times.

Music must have played an important part in early Christian worship, if we judge by St. Paul's references to it in his Epistles—written not very long after the Ascension of Christ—since he repeatedly admonishes the adherents to sing and make melody in 'psalms and hymns and spiritual songs,' while he seeks to regulate the order of worship in his Epistle to the Corinthians (1 Co 14²⁶), where he says: 'When ye come together, each one hath a psalm.'

The liturgy of the Christian Church was largely founded on the Jewish model, the oldest form being the vigil celebration, which later was divided into Evening, Night, and Morning forms of service.

The mode of Jewish worship, viz. the precentor singing the psalm as a solo, with the congregation joining in the refrain, or *cantus responsorius*, was copied by the early Christians, and was later highly elaborated as regards the solo portions.

Regarding the melodies used originally for the chanting of the Psalm little is known. In an illuminating article in *Musical Times*, January 1914, A. M. Friedländer (a Jew) says:

'We do not know the musical interpretation of the musical signs used in the Book of Psalms.' What is known is that 'for the cantillation of the Holy Law and Prophets' the latter differs widely from that used for the Pentateuch. The author proves that there is a strong similarity between (1) the Jewish system of accents fixing the modulations of the voice employed in the cantillations and the early European system of musical notation known as 'neumes'; and also between (2) the cantillations used for the chanting of the Prophets 'and the oldest known music of the Catholic and Protestant Churches'—a particular instance being given in the melody known as the 'Ambrosian Te Deum,' the origin of which has hitherto been shrouded in mystery.

Hebrew origin has also been claimed for the

melodies which have come down to us as the 'Gregorian or Psalm tones,' which were collected and codified by St. Ambrose in the 4th cent., and again to some extent during the time of St. Gregory the Great († 604) in his *Antiphonarium*, a copy of which he had nailed to the altar of St. Peter's in Rome as a standard of reference. It was this system or collection of Church song that was introduced by St. Augustine into Britain in A.D. 597, when he founded the Augustine school of music at Canterbury. There is, however, no definite proof of Hebrew origin, though circumstances certainly favour the idea that it is highly probable.

The Jews themselves at the present time chant the Psalms, but, as mentioned above, cannot identify the ancient musical signs particularly associated with them. No doubt the early Christians may possibly have set the ancient melodies differently. These melodies would be brought by Christian converts to Rome, and during the era of persecution they would be sung in the catacombs. During that time of struggle we may expect the evolution only of the fittest.¹

2. Early musical material available.—As regards the form of the music in use in the early Christian era, it is sufficient to say that the song melodies or cantillations were entirely dependent on, and subordinate to, the varying accent and metre of the text; and, as Hebrew poetry is mostly constructed on a responsive basis or in parallelisms, it is inferred that the Psalms were chanted antiphonally or as a solo with a limited congregational refrain. This responsive method passed on to the Church of Milan in the 4th cent. and to Rome shortly afterwards. As in the Temple service, the female voice was excluded.

Incidentally, the titles to some of the Psalms (Ps 22, etc.) indicate that they were sung to secular melodies. This example of appropriating the best secular melodies is one that has been followed throughout the ages.

Any knowledge of harmony at this time seems to be entirely wanting, while instrumental music with the Hebrews seems to have been confined to *selah* interludes, or flourishes on trumpets, hand clappings, and sweeping chords on instruments of the harp type.

Such, then, together with the NT hymns and, in addition, the melodies composed by the early Christians themselves, seems to have been the musical material available at this time. Thus the musical foundation of the early Church seems to have been decidedly Hebraic—although at the time Greek philosophy and Greek art were dominant, Greek influence being shown by the fact that the earliest liturgies are written in Greek. Probably Greek melodies were also borrowed from the Greek metrical songs and adapted to the unmetrical Church Psalms, antiphons, prayers, responses, etc.; the early Fathers, however, shunned the Greek instrumental accompaniment as being previously associated with pagan rites (see below, § XV.).

We have spoken of the introduction to the Church of Milan of responsive or antiphonal methods of chanting from the East in the 4th century. At an earlier period (early 2nd cent.) Pliny (*Ep.* xvi. 'de Christianis,' 7) had mentioned that the Christians sang 'by turn among themselves,' while St. Ignatius, bishop of Antioch in the 2nd cent., is also credited with its introduction both by Amalaricus (*de Ecclesiasticis Officiis*, iv. 7) and by Socrates (vi. 3), who says:

'Ignatius . . . saw a vision of angels hymning in alternate chants the Holy Trinity.'

¹ See, further, J. Stainer, *The Music of the Bible*, new ed., London, 1914, pt. iv. 'Vocal Music of the Hebrews.'

Philo describes the singing of the Jewish monastic sect of the Essenes (Therapeutæ).

They used two choirs, 'one of men, the other of women. . . . They then sing hymns to the praise of God, composed in different kinds of metre and verse, now with one mouth, now with antiphonal hymns and harmonies' (*de Vita Contemplativa*, p. 484 f. (Mangey)).

This method of singing alternately at the interval of an octave in pitch differed from the Greek idea of antiphony, since in their case the method was simultaneous (and not alternate) and was termed 'magadizing.' Since in the early Church the sexes were divided, the antiphonal response of women's (or boys') and men's voices at the octave was quite a natural one. This method has recently been revived in High Anglican services.

'Such a method is quite destructive of the genuine effect of antiphonal chanting, which ought to be equally balanced on each side of the choir' (Bumpus, *Dict. of Eccles. Terms*, p. 23).

It must be remembered that circumstances compelled the singing to be in unison and unaccompanied—certainly a crude and primitive method executed under trying conditions, though the situation would be lightened by the emulation which the division of the sexes would create. This method developed later on, as the congregations were better organized and the antiphonal singing was led with a double choir. Anglican choirs to-day sing antiphonally in the Psalms, but not the congregation. This could be easily remedied.

3. Orders of service.—By the middle of the 4th cent. the growth of the power of priests had led to the concentration of the devotional offices in their own hands and to the formation of definite orders of service or liturgies, and in this matter the Churches of the East in Syria and Egypt led the way. In the Eastern liturgies of St. Mark and St. James we find that the people are allotted such responses as 'Amen,' 'Kyrie Eleison,' 'And to thy spirit,' the 'Thrice Holy,' and others. Prayers, readings, and chanted sentences were delivered by the priests or deacons and a choir of singers, the responses being rendered by the people, as above. The Council of Laodicea (341–381) allowed only appointed singers 'to sing from the book'; this probably was intended to refer to the priest's part or to sentences allotted to him. The constituted liturgy of the ordinary service was termed the 'Office.'

4. Other musical features.—Besides the Psalms and hymns other musical features arose. The 'Psalm tones' were sung, not in our scales, but in the primitive 'modes' of the time. Many of these did not end on the 'final' of the mode, since the idea of tonality or key was undeveloped, and, to obviate the inconclusive effect, 'antiphons,' consisting of a verse from a Psalm and terminating on the final, were sung both before and after the Psalm. These antiphons varied with the season; sometimes they were sung to the word 'Alleluia,' (as originally found in the Psalms themselves), and these 'Alleluia' chants taking a florid turn were named 'tropes.' The antiphon was known in the East in the 4th cent., and in the 5th cent. it was also inserted in the Communion service or Mass.

The liturgy of the Mass was a matter of slow growth. On the 'perpetual miracle' of transubstantiation the Roman Church built up an elaborate service, High Mass being musical throughout. The ordinary Mass includes introits, collects, epistles and lessons, graduals, tracts, gospels, offertories, communions and post-communions. In the High, or sung, Mass there follow in order the introit (verse of a Psalm), 'Kyrie,' 'Gloria in Excelsis,' the gradual (consisting of a Psalm verse sung to ancient plain-song on the steps of the ambon) or an 'Alleluia' verse or a tract (a Psalm verse also set to ancient Church song, sung

slowly), and on certain festivals an animated antiphonal hymn termed a 'sequence' (see A. Riley, 'Concerning Hymn Tunes and Sequences' [*Church Music Soc. Papers*, 4 and 5], ch. viii.). The Confession of Faith, or 'Credo,' is sung next by the choir, and is followed by the often elaborate offertory (during the offering), the 'Sanctus,' 'Benedictus,' and 'Agnus Dei' (after the consecration), all sung by the choir.

II. THE AGE OF UNISONAL SONG.—I. Plain-song.—St. Ambrose, as has already been mentioned, is credited with the codification of the plain chant melodies and their classification into four 'authentic modes,' or scales, as most easily represented by the white notes only of the piano thus:

Dorian	D to D, or <i>r</i> to <i>r</i> .
Phrygian	E to E, or <i>m</i> to <i>m</i> .
Lydian	F to F, or <i>f</i> to <i>f</i> .
Mixo-Lydian	G to G, or <i>s</i> to <i>s</i> .

Later St. Gregory († A.D. 604), it is related, supplemented the labours of St. Ambrose, though history is not very definite on this point;¹ but he is credited with the extension, or the recognition of the extension, of the existing modes upwards thus:

Hypo-Dorian	A to A, or <i>l</i> to <i>l</i> .
Hypo-Phrygian	B to B, or <i>t</i> to <i>t</i> .
Hypo-Lydian	C to C, or <i>d</i> to <i>d</i> .
Hypo-mixo-Lydian	D to D, or <i>r</i> to <i>r</i> .

These were known as the four 'plagal modes.'

Antiphonal song is said to have been introduced into the Church of Rome by Pope Celestine I. (422–432). It was further encouraged by Leo the Great (440–461), who established a singing-school of plain chant in Rome.

Gevaert (*La Mélodie antique*) ascribes the 'compilation and composition of the liturgic songs' to the Greek popes at the end of the 7th and the beginning of the 8th centuries.

'The Antiphonarium Missarum received its definitive form between 632 and 716; the Antiphonarium Officii was already fixed under Pope Agathon (678–681).' Gevaert says also that 'the oldest chants are the simplest. . . The florid chants were of later introduction, and were probably the contribution of the Greek and Syrian Churches' (Dickinson, p. 110 f.).

No definite system of notation arose before the 7th cent., and the monks had to refresh their memories of the traditional melodies by means of a series of scratches and dots termed 'nenms.' Singers then, as later, took liberties with the melodies, so that musical knowledge of this period is somewhat vague; but, as every monastery became a singing-school, the knowledge of the Church song was spread abroad. The Milan and Gallican Churches had adopted other forms of the chant, but the Roman version with the aid of Charlemagne (768–814) prevailed. In 790 two monks, taking with them the *Gregorian Antiphonary*, reached the monastery of St. Gall in Switzerland, with which certain monks of Irish nationality were prominently connected. St. Gall henceforth became an important centre or music-school, and that *Antiphonary*, as the oldest MS extant, still exists. A facsimile was published by L. Lambillotte at Brussels in 1867.

The 'Gregorian or Psalm tones' consist of eight tones with various introductory notes or intona-

tions and endings, which, together with the irregular 'Tonus Peregrinus' and 'Tonus Regius,' make up some 46 chants in all.

¹ See Dickinson, *Music of the Western Church*, p. 107.

Various versions of the 'Psalm tones' existed in the Meehlin Office Books, the English Sarum Psalter, and the Roman and French Psalters; and, the chant having degenerated throughout the ages, a reform and restoration movement was carried on through the monks of Solesmes (who published their *Paltographie musicale* in 1889) and the Cecilian Society. Pope Pius X. also decreed the restoration of the plain chant in an authorized form in 1903 and again in 1912. The 'Psalm tones' are to be sung in unison as intended. They were originally unaccompanied from necessity; there can, however, be no objection to judicious organ accompaniment, if congregational singing is intended, so long as it is in keeping with the mode and the spirit of the Psalm.

Plain-song, or chants, broadly speaking, may be classified into (1) simple syllabic melodies, and (2) florid, or melismatic, song.

It has also been classified into periods thus: (i.) the first six centuries A.D.; (ii.) the next seven or eight centuries. Its decline dates from the introduction of the *organum* in the 9th cent. and the development of polyphony, and continued till (iii.) the debased period, from the 16th cent. to 1880; (iv.) its revival by the monks of Solesmes and the pope's decrees of 1903 and 1912, the latter of which points out 'that the entire congregation should take part in executing those portions of the text which are assigned to the choir.'

Since the Roman Church has never really encouraged congregational music, this is certainly a step in the right direction, and the result will be watched with interest. The step from concertized Masses sung only by the choir to the Office and Mass sung only in plain-song is, however, an extreme one. The strength of plain-song is its startling contrast to modern music as heard everywhere around us. Its primitive or undeveloped sense of key, its vague rhythm essentially fitted for prose only (well-defined rhythm is absolutely necessary for unanimous and hearty congregational singing), its limited compass, and its unharmonized or unaccompanied presentation are all useful as a means of contrast. But, when used to the entire, or almost entire, exclusion of ordinary fully-developed music, it becomes dreary in the extreme—its primitiveness becomes only too apparent.

Plain-song in its best form is eminently fitted to the traditional congregational responses, and in the 'Psalm tones' for the chanting of the prose Psalms; there are also some fine ancient hymn melodies which have survived the test of time and are found in many Hymnals. It should, however, be remembered that plain-song is essentially men's song (i.e. of monastic origin), and fitted principally for male voices; and to have the proper effect it must be rendered in unison by voices in which the male element preponderates.

2. The carol.—As one of the earliest forms of Church music, the carol merits separate attention.

It was a festal hymn designed for special occasions and usually written in metrical form. Hymns were in use before Christ (see the Delphic Hymn to Apollo [280 B.C.] with melody in *Musical Times*, June 1894; also Duncan, *Story of the Carol*, p. 9 f.). Augustine gives an interesting definition of a hymn. The 'Gloria in excelsis,' or 'Angels' hymn,' has been termed the first carol of the Church.

Clement, in the 1st cent., exhorted his brethren to keep in 'the first place the day of Christ's birth' (Duncan, p. 10), and Telesphorus, bishop of Rome, instituted in A.D. 129 the custom of singing Christmas carols, ordaining then the singing of the 'Angels' hymn' (ib. p. 11). Prudentius (b. 348) is known as the first writer of carols, and St. Jerome testifies in the 5th cent. that carols were in use. Early examples are the well-known 'Corde natus' of Prudentius and the 5th cent. 'A solis ortus cardine' (ib. p. 17). Julian (*Diet. of Hymnology*, p. 207) states that many of the early Church lyrics in various forms partook of the character of the carol. Charlemagne encouraged the use of carols and hymns, and condemned the vulgar type of songs which had crept into the Churches.

In the canons of Elfric made in 957 priests are admonished to keep the song-books for the various services at hand.

Minstrelsy at this time was very popular, and with the preaching of the Crusades in 1095 arose the Order of Troubadours and the Crusaders' hymns. The rise of the miracle-play and pageant brought the carol 'Orientis partibus,' the melody of which is preserved in our Hymnals, and from the 12th cent. onwards the carol is preserved to us in frequent quaint examples, some of which are very popular in their refreshing and unstilted melody. They take various forms, and composers like the English Marbeck and Byrd wrote them, while Bach harmonized specimens.

In Duncan's *Story of the Carol* an example of an early carol of the 11th cent., 'Congaudeat turba fidelium,' taken from the Swedish collection *Piæ Cantiones* (1582), is to be found.

Scott, *A Book of Old Carols*, London, 1907; *Corley Carol Book*, do. 1902. See also bibliography in Duncan.

III. THE RISE OF POLYPHONY.—So far Church song had been confined to melody. The first step away from this took the shape of *organum*, or the organizing of a rigidly concurrent accompaniment of fifths or fourths on the organ, which was introduced into the Church about the 7th century. To modern ears this effect, taken by itself, would be extremely crude, but, sustaining a large body of men's voices singing in unison, would probably be quite tolerable.

This organ effect was tried also by the choristers, and probably with more euphonious results. Later the experiment of voices singing a drone or stationary bass, combined with previous efforts, gave the necessary beginning in polyphony, or the art of harmoniously weaving the various voices together. Guido of Arezzo, in the 11th cent., wrote an account of the methods of *organum*, or diaphony, and examples are given in the *Musica* of Johannes Cotto (c. 1100).

The introduction of other intervals besides those of the 5th and 4th, and more definite indications of time and rhythm come next in order, first in two and then in three parts, until we come to the composition of the early sacred motet, in which (as in all early monk-made music) the melody is put into the tenor part.

The canon, or imitation by one voice of another voice part, and vocal interchange of the parts occur

in 13th cent. music. This device became more and more artistically worked—indeed, too much so for the unsympathetic ears of one John of Salishury (1120–80), who complains that the congregation is depraved by listening to these ‘enervating performances’ in ‘the re-doubling of notes, repetition of phrases, and clashing of voices’ (*Polyeraticus*, i. 6). These devices of descant became more and more florid, so much so that Pope John XXII., in 1322, forbade all descant except the simple addition of octaves, fourths, and fifths, unless for special occasions. Musical composition at this time—i.e. from the 11th to the 15th cent.—was one long experiment. The conditions were anything but simple. The notation was the indefinite square note system used for plain-song; bar-lines were wanting. Many different clefs were used, and composition was attacked mostly from the mathematical aspect, and became a tangled and abstruse contrapuntal puzzle. The scale itself was not understood, and ideas of interchange of key were strictly limited by the hexachord (or six note) arrangement.

As already mentioned, the theme, often that of a secular song, was put in the tenor, and various parts were added in an artificial style. This tenor melody arrangement was termed *faux-bourdon*, ‘false bass,’ since the effect of its heing sung by high men’s voices was to make the lower voice stand out above the higher or boys’ voices—a kind of inverted or top-heavy effect being produced:

as written the effect.
(melody in black notes).

Of great historical interest is the famous rota ‘Sumer is icumen in,’ a four-part canon with a pes, or foundation, of two parts making six part harmony, written about 1226, in the handwriting of John of Fornsete at Reading Abbey. Between this and the compositions of John of Dunstable († 1453) there is little worthy of note. Dunstable was well known on the Continent through his motets, and he seems to have been the first to attempt to practise independent part-writing with success.

1. A capella masses and motets.—English Church composers were now pre-eminent from about 1530 to 1561, after which Palestrina and the Italians came to the front. In the interval after Dunstable’s death the Flemings were pre-eminent through the Netherlanders Jean Okeghem († 1513) and Josquin des Prés (1445–1521). Josquin des Prés was at this time the ‘idol of Enrope,’ his compositions being sung everywhere. They are now being revived (see John Hullah, *Hist. of Modern Music*, p. 49 f.). In the meantime a setting of the Passion music by Richard Davy, famous as the earliest known (c. 1490–1504), is to be noted.

The three great English cathedral composers before the Reformation were Christopher Tye (1510–72), Robert Whyte († 1574), and Thomas Tallis († 1585). At this time the Mass music in England had grown to be very elaborate. The ‘Gregorian tones’ were in common use before and after the Reformation, but the Reformers rightly aimed at making the words clear, and later John Marbeck († 1585) was given the task of making plain settings of the Church service. English pre-Reformation Church composers played an important part, but unfortunately most of their MS works are still locked up in college and university libraries (see H. Davy, *Hist. of English Music*, London, 1895).

The Church works of this period, we must remember, are purely *a capella*, or unaccompanied. This *a capella* style reached its climax in Palestrina

(1526–94), who clothed the learning of the Netherlands school with spirituality and dignity. Palestrina’s works are written in both (a) simple chordal style, and (b) the complicated polyphonic style of the period, which in its substance is based on imitative work and lacks the defined periods of the simple secular style. His work was founded upon the Gregorian chant, and the Marcellus Mass is still a model of the more elaborate *a capella* style. Palestrina overshadowed somewhat the fine works of his contemporaries, Willaert, the two Gabriellis (Andrea and Giovanni), Vittoria, the two Anerios (Felice and Giovanni-Francesco), Tallis, C. Goudimel († 1572), and others. For Palestrina see W. S. Rockstro, *Hist. of Music*, ch. vii.; Hullah, p. 87 f.; and G. Baini, *Memoirs of Palestrina*, Rome, 1828, Germ. tr., Leipzig, 1834; see also Grove, s.v.

Adrian Willaert, though a Fleming, was chapel-master from 1527 to 1563 at St. Mark’s, Venice. Prompted by the existence of its two opposite music galleries, he wrote compositions for double choir, thus presenting effects of contrast and climax.

Out of emulation G. Gabrieli (1557–1612) wrote a twelve-part Psalm, as C. von Winterfeld says, for ‘three choruses, one of deep voices, one of higher, and the third consisting of the four usual parts.’

‘Like a tender fervent prayer begins the song in the deeper chorus, “God be merciful. . . .” Then the middle choir continues with similar expression, “And cause his face to shine upon us.” The higher chorus strikes in with the words, “That thy way may be known upon earth.” In full voice the strain now resounds from all three choirs, “Thy saving health among all nations”’ (Winterfeld, *Johannes Gabrieli und sein Zeitalter*, Berlin, 1834, ap. Dickinson, p. 170).

The strong point of the best of this mediæval unaccompanied Mass and motet music is its detached, exalted, and mystical air, as exemplified in Palestrina. Its weak point is the lack of the emotional interpretative element; this was left to the ceremony and ritual of the Church to suggest and foster. Nevertheless, it was this that led to its decay and disuse and the substitution of the newer style described below, § XII.

After Palestrina the motet was cultivated by all grades of composers. The pre-Reformation motets of the English composers C. Tye, J. Taverner, J. Shepherd, R. Fairfax, W. Byrd, and O. Gibbons in pride of place stand next to those of Palestrina. In Italy itself the fine motets of T. L. Vittoria (1560–1608) were followed by the more modern works of A. Scarlatti, L. Leo, F. Dnrannte, and G. B. Pergolesi, in the latter half of the 17th cent., and these are still worthy of study. The sceptre then passed to Germany, where the great Johann Sebastian Bach (1685–1750) reigned supreme, whose magnificent motets for double chorus, such as ‘Be not afraid,’ and ‘Blessing, Glory and Wisdom,’ astonish and gratify the artist. Handel’s motets are also very fine and well worth reviving.

The motets of Haydn and Mozart are really cantatas. In England the motet was continued under the name of the ‘full anthem.’ S. Wesley’s motets are fine examples of the earlier style. In later times we have also worthy examples by Brahms, Hauptmann, Rheinberger, and Cornelius. Mendelssohn’s ‘Hear my Prayer’ is really an anthem.

2. Passion music.—(a) We have already mentioned the earliest example of Passion music—an English work by Davy. From the 4th cent. onwards, the history of the Passion has been set forth in Holy Week in musical form.

At first, after the Greek manner, the events of the sacred Passion were disposed in dialogue form and chanted and interspersed with choruses, arranged like those of Æschylus and Sophocles. An ancient plain chant named ‘Cantus Passionis’ has come down to us, but its origin and date are

unknown. The subsequent manner was to divide the words spoken by (1) the narrator, (2) our Lord, and (3) the apostles, or chorus, among three priests or deacons, and each one had his own chant. This manner seems to have prevailed generally till about 1550 or 1570. The interesting Passion music of Richard Davy, who was organist of Magdalen College, Oxford, in 1490, is according to St. Matthew, and for four voices; it is not written in a plain-song, but in free early 16th cent. style. It was discovered in a MS choir-book at Eton College containing originally 66 motets and 28 magnificats. Davy composed also a 'Stabat Mater,' motets, etc. This is a specimen of the pre-Reformation treasures still in existence, but as yet mostly neither transcribed nor reproduced in any form (Davey, p. 90).

A Passion according to St. John comes next (c. 1560-70), and after that an early Protestant work is found in Keuchenthal's Book (see Winterfeld, *Der evangelische Kirchengesang*, Leipzig, 1843-47), published in 1573, in which there are short choruses for the people or crowd, and soliloquies in recitative form. Vittoria in 1585 wrote a similar work in artistic style which, rendered by the pontifical choir in Rome, has since remained a classic (Grove, s.v. 'Passion Music'; Naumann, *Hist. of Music*, pp. 431, 478).

(b) These works prepared the way for the Passion oratorios of H. Schütz (1585-1672) and J. Sebastiani (1672), who introduced in them Protestant chorale melodies, of R. Keiser (1673-1739), who introduced the sentimental element, and for the climax, the magnificent Passion oratorios of Bach. Graun's 'Der Tod Jesu,' produced in 1755, Haydn's 'Seven Last Words' (1785), Beethoven's 'Mount of Olives' (1803), Spohr's 'Calvary' (1833), and many English works down to the sincere and popular Stainer's 'Crucifixion' (1887), may be mentioned.

LITERATURE.—C. E. H. de Coussemaker, *Dramas liturgiques du moyen âge*, Rennes, 1880; see also literature below, § XI., and Dickinson, p. 275 ff.

3. The effect of the Reformation.—We now come to the movement which exerted marked influence on the course of Church music. We have to remember that so far the music of the Church had been practically confined to the priests and the choir. The music-schools were in the hands of the priests, and no effort seems to have been made to train the lay element or congregation, so that their part was limited practically to an occasionally ejaculated 'Kyrie' or 'Amen'; the rest involved listening to complicated compositions in the polyphonic style set to Latin words, and to the Psalms and the Office, also in Latin, as set to the ancient plain-song of the Church. The congregation was thus practically ignored. Hence the natural demand of the Reformers for simplicity and for a share in the worship (see Naumann, p. 429).

IV. ENGLISH CATHEDRAL MUSIC.—The music of the Reformed Church resolved itself into (a) that performed by the choir, in England known as cathedral music, and (b) congregational responses, chorales, metrical Psalms, and hymns.

Here it should be noted that the Reformation took a comparatively mild course in England. Henry VIII. threw off the pope's authority in 1534. The dissolution of the monasteries began in 1536, some 600 monasteries and convents being destroyed. Previous to this every monastery and abbey had acted as a school of music or song-school for the training of the singing priests and boys. The choirs at this time of cathedrals, abbeys, universities, the Chapel Royal, and private chapels of large estates had been well supplied with Mass and motet music by Tallis, Tye, R. Whyte, Fairfax, Taverner, Shepherd, and others. In 1536 Church

music and organ playing were reckoned among the eighty-four 'faults and abuses of religion,' and, despite the later publication of the Six Articles in which they were defended, enormous damage was done, innumerable MSS by pre-Reformation composers being destroyed. Choirs were dispersed and organs broken up.

It is interesting to relate that Messrs. Novello are now, in their 'Cathedral Series,' publishing some of the best of the English pre-Reformation compositions which have survived, and so far had lain in oblivion. The boy king Edward VI. was won over to the cause of the Reformation, and reforms in doctrine and ritual were brought forward. The Book of Common Prayer took the place of the Missal and Breviary. The Mass was abolished and the Communion Service as set forth in the first Prayer Book of Edward VI. in 1549 took its place.

1. The Anglican service.—The order of the ordinary services was founded to some extent on the ancient Latin Office named the Hours, certain items being omitted. It contains the responses for the people, the canticles, the daily portion of the Psalms, and room for a hymn or anthem, and also the Litany, as compiled from the old litanies of the English Church and set as before to the old plain-song. The Communion Service was framed on the ancient use of the church of Sarum (Salisbury).

The order is one which gives considerable latitude, since responses, creed, Psalms, and canticles may be said or sung. In a full choral or cathedral service these are all sung, the canticles ('Te Denm,' etc.) being taken to anthem-like settings; other grades of service depend on taste and the capacity of the choir, the canticles being chanted and the anthem perhaps omitted. The acknowledged guide to the full choral service is now the *Cathedral Prayer Book* (Novello and Co.).

The first musical reform of the services of the Church was accomplished by John Marbeck. In 1550 Marbeck made a plain one-part or unison setting (founded to some extent on Sarum use) of the various responses and liturgical portion of the services, as well as of the canticles which were set to Gregorian chants; the Psalter was not given. The Communion Service commenced with a verse from the Psalms as an introit, and the Commandments, 'Gloria in Excelsis,' 'Credo,' 'Sursum Corda,' 'Sanctus,' 'Benedictus,' 'Pater Noster,' and 'Agnus Dei' followed. At the revision of the Prayer Book in 1552 the introit, 'Benedictus,' and 'Agnus Dei' were excluded and the 'Gloria' put at the end. Marbeck's settings have certainly an Elizabethan ring about them, but they are devotional even if lacking in characterization.

LITERATURE.—S. Royle Shore, 'The Choral Eucharist since the Reformation,' *The Cathedral Quarterly*, April 1913; D. Slater, 'Additional Notes on Communion Services between the Elizabethan and early Victorian Epochs,' *ib.*, July 1913.

2. Choral settings of the Anglican Service.—(a) The first book of full choral settings of the Service was published by John Day in 1560. It contained settings of the 'Te Deum'—with the Ambrosian melodies in the tenor part—and a fine Communion Service by T. Causton († 1569), also settings of the Litany, the Lord's Prayer to a chant, and various anthems by Tallis and others. Tallis and Tye both embraced the Reformation. Tye, in obedience to the universal demand which set in for the metrical versions of everything, made a setting in 1553 of such a version of the Acts of the Apostles. Of this he completed fourteen chapters in all. These were set in a kind of metrical anthem form, displaying the usual fugal and canonic entries, but in simple and clear style. Some portions were afterwards arranged as Psalm tunes, such as the one

known as Sonthwark. Tye's Service in G minor has recently been re-published.

Previous to the Reformation Tallis († 1585), who wrote mostly in the Dorian mode, had composed his important five- and six-part motets and a Mass in F. His motet, or 'Song of Forty Parts,' written for eight choirs of five voices each, still remains a wonder of counterpoint. His anthems in Day's Service-Book and others, his nine tunes in Parker's *Metrical Psalter* of 1560, and his harmonization of the Church responses and Litany with melody in the tenor keep his name ever before us. It is well known that congregations sing, not the tenor plain-song in his festal responses, but naturally the upper soprano or added part. The original arrangement is suitable only for men communities (see also Barrett, *English Church Composers*, p. 23).

Richard Farrant († 1581) is known for his solid and solemn Services and anthems. His association with 'Lord, for thy tender mercies' sake' is doubted. N. Patrick, N. Strogers, R. Whyte, and W. Mundy († c. 1591) are likewise well-known names of the pre-Reformation period.

(b) *Elizabethan and Stuart periods.*—W. Byrd († 1623), though a Romanist at heart and a composer of important compositions for the Roman Church, wrote anthems and Services for the Reformed Church. His anthem 'Bow thine Ear' and the canon 'Non nobis domine' preserve his renown. Other works of this period were T. Morley's († c. 1604) fine Burial Service and T. Tomkins' († 1656) Service in C. The Services and anthems of Orlando Gibbons (1583-1625), the leading composer of this polyphonic period (and known as 'the English Palestrina'), are masterpieces of their kind. His 'Hosanna to the Son of David' is still a favorite, and an advance on the heavy style of Tallis and Byrd (see also Barrett, p. 58).

The Stuarts did little for English music, and cathedral choirs were much reduced at this time. Adrian Batten († 1673), who was about the first composer to use bar-lines, is noted for his devotional full choral Communion Service.

The historic Barnard's *Collection of Church Music*, quite a repository of this period, was published in 1561 in the usual parts. These parts were dissipated through the Civil Wars and were not got together again till 1863.

The Puritan interregnum now intervened, and Parliament decreed that organs should be taken down and choral music books destroyed, as already mentioned.

After the Restoration E. Lowe's *Short Directions for the Performance of the Cathedral Service*, published in 1661, and J. Clifford's *Collection of Services and Anthems* (1693) and *Chants* were certainly needed (see Rockstro's interesting account of the English school of the Restoration [ch. xv. p. 162]). The chants at this period for the Psalms and canticles were the ancient Gregorian tones.

One sign of the changed times is seen in the action of Charles II., who, 'tyred with ye grave and solemn way' of Tallis, Byrd, and Gibbons, 'ordered ye composers of his Chappell to add Symphonys etc. with Instruments to their Anthems . . . to be done when he came to ye Chappell . . . after ye French fantastical light way' (T. Tudway's [† 1730] collection quoted from Bumpus, *Hist. of Eng. Cathedral Music*, p. 123).

In order to meet the king's tastes Pelham Humphreys (1647-74) was sent to France to acquire the prevailing Italian style. Humphreys introduced the declamatory recitative style and more dramatic feeling into his anthems, and they are still used. For Humphreys see Hullah, p. 120 f.

The early anthem was practically a motet—i.e. written in full chorus and more or less involved contrapuntal style—and the modern anthem may be said to date from about the time of Humphreys and Purcell, with the introduction of more dramatic

feeling or necessary characterization of the emotions, solo (or 'verse') passages, and accompaniments in the Italian style.

The anthems and Services of J. Blow (1648-1708) are characterized by vigour, pathos, and freshness, and give evidence of a new element of imagination. These, with the melodious anthems by Michael Wise († 1687) and the pathetic and expressive works of R. Langdon († 1803), pave the way for Henry Purcell (1658-95), the premier genius of English cathedral music. By this time the cathedral establishments had been fully restored after the Commonwealth. Purcell's Church works comprise 3 Services, 32 anthems, and 20 interesting anthems with orchestral accompaniment. The last, written for the Chapel Royal, are mostly verse anthems, i.e. intended for solo voices with short refrains for chorus and with introductions and interludes for the stringed instruments. They are characterized by brevity of movement and frequent changes of tempo—strong contrasts intended to claim the royal interest (see G. P. E. Arkwright, 'Purcell's Church Music,' *Musical Antiquary*, Jan. and July 1910). Refined melody and harmony combined with great ingenuity are Purcell's characteristics. His remarkable 'Te Deum' and 'Jubilate' for four voices, strings, trumpets, and organ, and the anthems 'Out of the Deep' and 'O give Thanks,' sung at the Purcell Commemoration Festival in 1895, may be mentioned as examples. For Purcell's harmonies see Barrett, p. 97.

Anthems by W. Child († 1697) and B. Rogers († 1698)—known for his Service in D—and also the works of Henry Aldrich († 1710) and the original R. Creighton († 1736) close this period.

(c) *1700-50.*—In this period we have J. Clarke († 1707) with his sympathetic 'I will love thee,' W. Croft's (1678-1727) 'majestic and melodious' *Thirty Select Anthems*, Service in A, and Burial Service, the 'Chanting Services' of J. Hawkins († 1729) and T. Kempton († 1762) (i.e. the Psalms set to a single chant—interspersed with florid verses set anthemwise), J. Weldon's († 1736) deeply religious and modern *Six Select Anthems*, J. Bishop's († 1737) Service in D, the simple melodious Services of C. King († 1748), the Evening Services of T. Kelway († 1749), and J. Travers' († 1758) Service in F. The melodious anthems of Maurice Greene († 1755) show Italian and German influence. Greene was organist of St. Paul's Cathedral from 1718 and the friend of Handel, who took great delight in playing the cathedral organ.

As regards the parish churches, the music appears not to have been of a high order. The manners of the time have been described in Addison's *Tatler*. The services were interrupted with noisy and tricky solos on the trumpet and stops of the mixture type (mounted cornet).

(d) *Later Georgian period.*—In 1760 appeared W. Boyce's unique collection of cathedral music, of which modern editions, discarding the old clefs, appeared at a later time. Boyce (1710-79) himself, with his massive, dignified, and finely-written anthems, which are considered cathedral classics, and his contemporaries, J. Kent († 1776), W. Hayes († 1777) and his son Philip († 1797), and J. Nares († 1783), who wrote in the popular style, open this period.

B. Cooke († 1793), the writer of glees, chants, and Psalm tunes, is known for his solid Service in G; chants by the clever organist, T. S. Dupuis († 1796), Jonathan Battishill's († 1801) beautiful seven-part anthem 'Call to remembrance,' S. Arnold's († 1802) *Collection of Cathedral Music* (1790), W. Jackson († 1803) of Exeter's simple and practical congregational 'Te Deum' in F (a composition which should be sung fluently in chant style and which would be improved by a modern

accompaniment), J. Alcock's († 1806) 'Miserere,' and T. Ebdon's († 1811) 'Service in C' complete the period.

At this time the music in our cathedrals had once more sunk to a low ebb. Fortunately, owing to the 19th cent. High Church or Tractarian movement and the efforts of S. S. Wesley, the necessary administrative and musical reforms were introduced.

(c) 19th century.—During this time also support for Church composers was lacking somewhat, and cheap adaptations of foreign oratorios undermined our unique school of English cathedral music. Nevertheless J. Clarke Whitfield († 1836), with his simple melodious anthems, Samuel Wesley (1766–1837), son of Charles Wesley the brother of the great John Wesley, a musical genius and great organist, and known for his scholarly motets, and T. Attwood (1767–1838), a pupil of Mozart, in his Service in F and fine modern anthems, kept in touch with the best traditions. Attwood was organist of St. Paul's Cathedral in 1833, when Mendelssohn played the organ there on a certain memorable occasion. J. Pring († 1842), who wrote anthems in Boyce's style, and W. Crotch († 1847), known for his pleasing anthems and Service in F, also belong to this period.

The devotional and elevated Services and anthems of T. A. Walmisley († 1856), the noble Services and 'Wilderness' anthem of S. S. Wesley († 1876), a fine organist; the Service in F of Henry Smart († 1879), the leading English organ composer, the devotional and melodious anthems of John Goss († 1880), as well as the solid eight-part Service in C and fine anthem 'It came even to pass' of F. A. G. Ouseley († 1889), have kept up the noble traditions of the past.

It is difficult to write of later English composers, but the names of C. V. Stanford, J. Stainer, A. S. Sullivan, J. Barnby, G. J. Elvey, and E. J. Hopkins bring memories of finely-written works, which above all are endowed with melody and modern style. It only remains for our Church composers to cling off the influence of Mendelssohn and Spohr, to keep in touch with past traditions while using virility of style and all modern resources to maintain English cathedral music as the noblest school of Church music since the days of Palestrina.

LITERATURE.—Reference may be made to the following selected works: J. S. Bumpus, *Hist. of English Cathedral Music*, 2 vols., London, 1903; Myles B. Foster, *Anthems and Anthem Composers*, do. 1901; W. A. Barrett, *English Church Composers*, do. 1882; *English Music* ('Our Cathedral Composers'), do. 1908; *Church Music Society Occasional Papers*, do. 1910–15; A. M. Richardson, *Church Music*, do. 1904; J. Baden Powell, *Choralia*, do. 1903; G. P. E. Arkwright, 'Purcell's Church Music,' *Musical Antiquary*, Jan. and July 1910; J. F. Runciman, *Old Scores and New Readings*, do. 1898, etc. 1. 'Our last great Musician.' Different points of view will be found in the two following works: T. F. Forth, *Sanctity of Church Music*, London, 1914; R. B. Daniel, *Chapters on Church Music*, do. 1894. See, further, *Cathedral Prayer Book*, do. 1891; J. Jebb, *Choral Service*, do. 1843, *The Choral Responses and Litanies*, 2 vols., do. 1847–57 (contains the various ancient usages).

3. The Anglican chant.—It has been said that 'the principle of using harmonized chants for the Psalms and canticles is neither specially English, nor is it the product of the Reformation or the English type of Service' (Royle Shore, 'The Early Harmonized Chant of the Church of England,' *Mus. Times*, Sept. Oct. Nov. 1912, p. 585 f.). In England harmonized chants were probably in use a century before the Reformation. Abroad they were in use at the beginning of the 16th cent. and probably before that. The early harmonized chants consisted of the 'Psalm tones' with melody in the tenor, and, like all early music, were barless. They still survive under the name of *faux-bourdon*s, and are in regular use as such to the Psalms or Magnificat with alternate verses rendered in unison. As the

tenor plain-song melody has mostly disappeared; however, the connexion hardly exists now. As with the old Psalm tune, the *faux-bourdon*, or tenor melody, does not favour mixed congregational singing, and the Anglican chant with melody in the soprano is the natural outcome. In the old plain chant Psalters every word was noted—i.e. had a note to itself. This was succeeded by the long note for reciting purposes and the bar-lines to ensure correct endings. These bar-lines have unfortunately proved to be a snare, because the latter measured portion should always be recited as freely and at the same speed as the first portion of the chant. The weak point of the Anglican chant in long settings is the over-repetition of the same harmonies. Hence unison verses are desirable with changed harmonies. More varied forms, as with plain chant, are also to be wished for. The earliest double chant dates back to one of Byrd's *Collection*—1641. In this class it is desirable that the second half of the chant should be responsive or sequential in form.

LITERATURE.—*The Barless Psalter*, London, 1913; P. A. Wales, *Rhythmic Psalter*, Oxford, 1910; A. M. Richardson, *The Psalms: their Structure and Musical Rendering*, London, 1904; *The Responsive Psalter*, do. 1913; *Faux-bourdon Magnificats and Harmonized Plain Chant Settings* by Tallis, Byrd, Gibbons, etc., for the Canticles and Psalms, do. 1916; H. Grace, 'Old English Service Music,' in *Mus. Times*, July 1915. It must be noted that these ancient harmonized chant settings of the Psalms were much longer compositions than the ordinary Anglican chant, as they were liable to alteration, repetition, or general free treatment. They were also more richly harmonized. Refer also to J. Heywood, *Art of Chanting*, London, 1893; J. S. Curwen, *Studies in Worship Music*, i. 117; Grove, s.v. 'Chant'; R. Bridges, art. 'English Chanting,' in *Musical Antiquary*, April 1911.

V. IRISH CHURCH MUSIC.—Early Irish Church music is surrounded with something of mystery. An Irishman, St. Gall, founded the musically famous monastery called after him, and it was an Irish monk who introduced the Roman chant to Cologne about 1025.

'Irish Psalmody and Hymnody were distinctly Celtic in the first half of the 7th century'—which is assumed to be about the time that plain-song reached Ireland—'and were mainly adaptations of the old Irish pre-Christian melodies. . . . The Irish were the earliest to adopt neums as a musical notation of plain chant,' and 'they modified and introduced Irish melodies into the Gregorian chant' (Flood, *Hist. of Irish Music*, p. 8).

Early in the 9th cent. organs were introduced. Giraldus Cambrensis († 1220) wrote:

'Only in musical instruments I find commendable the diligence of that nation; in these it is incomparably superior to every other nation we have seen' (*Topographia Hibernica*, lii. 10).

Among the ancient Church MSS the Kilcormick Missal of 1458 deserves mention. The ancient cathedral of Christ Church, Dublin, kept the light burning with its choral Services, except from 1559 to 1595. Versions of the metrical Psalms were first printed in 1637, but no music for them appeared for over a hundred years. The Commonwealth made its anti-musical effect felt there also.

The subsequent Church musical history of Ireland does not seem to be marked in any way. Although Ireland possesses a store of unique and beautiful folk-melodies, and though Irish hymn-writers are well known, it does not appear to have any essentially distinct hymnody or school of composers of sacred music.

LITERATURE.—W. H. G. Flood, *Hist. of Irish Music*, Dublin, 1905; J. S. Bumpus, 'Irish Church Composers' (*Musical Association Papers*, vol. xxvi., London, 1900); M. Conran, *National Music of Ireland*, do. 1846–50.

VI. WELSH CHURCH MUSIC.—The early musical history of Wales is also somewhat clouded. A 6th cent. saying of the bard Taliesin, 'No musician is skilful unless he extols the Lord,' implies ancient interest in sacred music. Beyond this and the well-known 12th-cent. passago from Giraldus Cambrensis (*Descriptio Cambriae*, iii. 3), to the effect that the Welsh sang not in unison but in parts, there is little definite information about Welsh

music before the beginning of the 19th century. A Welsh tune is mentioned in Ravenscroft's *Psalter*, and it is said that the hymns of Rees Prichard (1579-1644) were sung throughout Wales in his days. Edmund Prys (1541-1624) was the author of a Welsh metrical version of the Psalms.

In modern days, however, Welsh hymns are well worthy of study. It is calculated that there are some 4000 of them. They are mostly emotional in type, but grave and solemn themes are to be found, both traditional and modern. A number appear in the English *Hymnal*.

LITERATURE.—Reference should be made to the *Hymnals* of the various Welsh denominations and to Grove, and especially to A. Riley, 'Concerning Hymn Tunes and Sequences' (*Church Music Soc. Papers*, 4 and 5), London, 1915, ch. vii.; E. Walker, *Hist. of Music in England*, Oxford, 1907, p. 325 f.; H. F. Chorley, *The National Music of the World*³, London, 1911.

VII. AMERICAN CHURCH MUSIC.—The music of America began in a religious atmosphere. The Pilgrim Fathers sang the old Psalm tunes of their fathers, and the *Bay Psalm-Book*, published 1640 at Cambridge, Mass., exerted a wide influence, over 70 editions being published. The musical settings were limited, and Ravenscroft was drawn upon. The first organ was imported, after much opposition, in 1713, and choirs and singing-schools were formed not long afterwards. W. Billings' *New England Psalm Singer* appeared in 1770 and Isaac Watts' *Hymns* began to make headway, while modern music might be said to have made its advent with the Handel and Haydn Society, founded in Boston in 1815. The Church tunes of Lowell Mason († 1872), a leader of American music, exercised strong influence.

Of modern American composers of sacred music H. W. Parker, J. C. D. Parker, and Dudley Buck must be mentioned as having done good work.

The weakness of the American non-liturgic Churches is the want of a definitely authorized order of services. The great freedom of choice opens the way equally to the American gospel hymn (mostly fit only for shouting at a street corner) and some tawdry operatic-like chorus from a modern Mass.

'Happy are the people who, like the Germans or the Scots, have inherited in the past generations such noble things as the chorales with their splendid tunes, or the metrical Psalms with their fine melodies from different quarters' (Fuller-Maitland, *Church Music Society Paper*, London, 1910, p. 18).

Musically speaking, there are great opportunities for American Churches if wisely guided.

LITERATURE.—L. C. Elson, *The National Music of America*, Boston, 1900; F. L. Ritter, *Music in America*, London, 1884; N. D. Gould, *Hist. of Church Music in America*, Boston, 1853; J. S. Curwen, *Studies in Worship Music*, i. 57; P. Lutkin, *Music in the Church*, Milwaukee, 1910.

VIII. METRICAL PSALMODY.—1. The Lutheran chorale.—It was the belief of the Middle Ages, following the dictum of St. Paul, that women should keep silent in the churches, and until the Reformation all singing of Psalms and hymns was restricted to the male choir and the clergy and conducted in Latin. The 16th cent. brought the invention of printing and the Reformation, and it might be said that, in one sense, the Reformation was a movement for the rights of the people—in this case, the right of the people to participate fully in divine worship. Up to the 10th cent. German congregational song had consisted of one phrase, 'Kyrie Eleison,' usually an ejaculation only, but sometimes set to a plain-song melody as a kind of refrain and termed a *Leisen*.

Among the numerous German popular songs were many of a religious nature, some of them written by well-known poets. In the 14th cent. many of these were adapted to secular tunes.

The *Hymn Book of the Bohemian Brethren*, an order virtually founded by Hus, the Bohemian martyr, led the way in 1505. These hymns were

founded upon (1) the Psalms, (2) the old Latin hymns, and (3) the old vernacular religious songs and the tunes from older melodies both secular and religious.

Luther, in his *Formula Missæ* of 1523, removed from the Mass everything savouring of the act of sacrifice and intercession through the saints. Three years later he added to it congregational chorales, while the Creed, 'Agnus Dei,' and 'Sanctus' were, he ordered, to be sung in metrical form in German. A little before, in 1524, he had been moved 'after the example of the Prophets and ancient Fathers of the Church to make German Psalms for the People' (*Letter to George Spalatin*), and in that year his *Christliche Lieder, Lobgesänge und Psalmen* appeared. It included eight metrical hymns and a selection of metrical Psalms with five tunes—German psalmody was always of a mixed nature.

Other collections followed with the tunes derived as before from (1) Latin hymns, (2) popular religious songs, (3) secular songs, (4) melodies of the knightly Minnesinger and Meistersinger guilds, and (5) foreign tunes. These tunes showed great variety of metre; the arbitrary equalizing and drawing out the rhythm was a later innovation. Some of the tunes were adaptations by Luther, but Crüger (1644) was the principal later contributor, while Bach harmonized a large number in different styles for different purposes (see C. Sanford Terry, *Bach's Chorales*, London, 1915).

In accordance with the monastic custom, the melodies when harmonized were put in the tenor part, the upper parts, or descant, being sung by boys. Played on the organ, these upper parts proved an obstacle to the congregation, and the organ in the Lutheran Church was allowed to be used only alternately or to preludize. In motet settings for the choir alone the organ could, of course, be used.

The Lutheran Church continued the unison singing of Psalms and chorales without organ accompaniment till about 1650, when it was found possible to use an independent chordal accompaniment, and so the bogey of descant was put down.

For the same reason—the distraction of descant upper parts—the Genevan Church banned the use of the organ altogether for the next two centuries, and the Scottish Church, as founded on the Genevan order, followed suit. This is the result of the monastic arrangement of the melody for men (tenor part) instead of the natural highest voices, those of women and children. This tenor arrangement continued for a long period—in Scotland down to about 50 years ago, the precentor usually being a tenor.

LITERATURE.—G. R. Woodward, 'German Hymnody' (*Musical Association Paper*), London, 1905-06; *Songs of Syon*, do. 1904; Grove, s.v. 'Chorale,' 'Luther'; G. W. Stewart, *Music in the Church*, ch. v.; J. Zahn, *Melodies of the German Church Song*, 6 vols. (8306 chorales), Gütersloh, 1889; Dickinson, p. 223 f.; E. Naumann, *Hist. of Music*, Eng. tr. 2, ch. xiii.; Curwen, ii. 121-151.

2. Genevan psalmody.—Eighteen years after Luther's first collection there appeared in 1542 the 30 metrical Psalm versions of Clément Marot, a French poet. Sung to secular melodies, they became extraordinarily popular at the frivolous court of Francis I.

John Calvin, the French Protestant convert, had arrived in Strassburg as a refugee, and, following Luther's example, brought out in 1539 a collection of 18 Psalms with tunes mostly of German origin. This Strassburg collection became later the foundation in both music and words of the first Bourgeois, or French, *Huguenot Psalter of Geneva of 1542*, the music of which was edited by Louis Bourgeois, a Parisian music-master settled in Geneva. Meanwhile in 1539 (the same year as the Strassburg

collection) one Symon Cock published *Two Hundred and Fifty-nine Hymns or Sacred Songs*, arranged in groups under the heading of the music of the tune appropriate to the particular motto, the melodies being of mixed origin, as before. Next year the same publisher brought out the remarkable *Souter Liedekens Collection*, 1540, containing the whole of the 150 Psalms in a metrical version in the Flemish language, each Psalm being preceded by its appropriate tune, the tunes, as before, of mixed origin; but a 'large proportion of the music is adapted to that of the popular songs of the day—the titles of the same being given' (see *Mus. Times*, April 1913, p. 240). It must be remembered, however, that at this period little distinction can be made between secular and religious style in song. This work contained also versions of the canticles and sacred songs of the Bible, together with the Lord's Prayer, Apostles' Creed, etc. In 1556 Clemens von Papa harmonized a selection of the melodies.

Bourgeois had charge of the French Geneva Psalter from 1542 to 1557, and this collection was much drawn upon later for English, Genevan, and Scottish Psalters. The 1562 edition contained 125 tunes, including those to the 'spiritual songs' (canticles, etc., in metrical form).

During Queen Mary's reign English and Scottish Protestant refugees gathered together in Frankfurt and Geneva, and in 1556 we find the first *English Genevan Psalter* issued for them with the approval of Calvin. It contained 51 Psalms in the Sternhold and Hopkins version, each one set to a double common-metre tune, and was published by Crespian. As the French metres were different, these tunes must have been adapted or composed specially. It is noteworthy that 42 of these tunes were transferred to the Scottish Psalter of 1564, and 32 of them appear in the complete work of 1635.

LITERATURE.—O. Donen, *Clement Marot et le psautier huguenot*, 2 vols., Paris, 1878-79; Grove, s.v. 'Bourgeois,' etc.

3. English psalmody.—Meanwhile vorsifiers of the Psalms had been busy in England and Miles Coverdale's *Thirteen Goostly Psalmes* appeared in 1539 with settings to Gregorian tones and tunes of German origin. This work was prohibited.

About 1546 Wedderburn's Scottish version appeared, but without music.

Authorized by Edward VI., Thomas Sternhold's first version of 19 Psalms appeared in 1547, and the whole of the Psalter by one Robert Crowley in 1549. The latter contained a plain chant for the chanting of the metrical version, an intermediate device frequently copied in later works, especially in the Walloon and Scottish Churches. The year 1553 saw Francis Seagar's 19 Psalms set to music in four parts in motet style.

With the accession of Queen Elizabeth in 1558 the *Genevan Psalter* of the English and Scottish refugees became popular in England. The Psalter itself was completed by 1562, but it did not contain more than 65 tunes, cross-references being made where necessary. The following year, 1563, saw the first harmonization of the tunes in four parts with additions and settings of specimen verses only, Day being the publisher. Up to this time the melodies only had appeared. The Reformed Church of Calvin did not allow singing in parts till the 19th cent., but for private use Bourgeois had issued in 1547 a complete Psalter harmonized in four parts, the melody as usual in the tenor part. Le Jeune's more elaborate motet settings appeared in 1580; his simple settings did not appear till after his death in 1601-02.

In the English Reformed Church there were two musical currents running side by side. The more artistic side, with its unique traditions of cathedral music, was maintained in the cathedrals and larger

churches, where choirs and organs were available. In the ordinary parish churches metrical Psalms only were sung. 'Lining out' by the 'clerk,' or precentor, was the order, singing in unison without organ accompaniment the rule. Zeal for the Reformation did not favour artistic musical development for the time being, though later on music advanced till the Puritan Commonwealth came into power.

Metrical Psalm-singing became the visible sign of the Reformation. By the year 1600 '6000 people, old and young of both sexes,' could be seen at St. Paul's Cross after the service, singing together (*Strypo's Annals* [see Curwen, i. 1]).

There was but one obstacle to general and hearty congregational singing in the churches, and that was the melody in the tenor part. The reform of this was furthered principally by the German Osiander and Lobwasser Psalters of 1586 and 1594 respectively. S. Marshall, who edited the latter (Basel, 1606), refers to the tenor melody arrangement as being unsuitable.

'For it brings those unlearned in music (the larger part of the congregation) often into a state of uncertainty so that they often know not what is being sung, because the melody is crowded among the other voice parts, some of which are being sung above, some below' (see Stainer, 'On Musical Introductions in certain Metrical Psalters,' *Musical Association Lecture*, London, 1900, p. 25).

At this time, as in the later Scottish Psalter of 1635, no bar-lines existed, and, though the lines contain notes of various lengths and are in varied rhythm, yet the notation is frequently erratic with regard to both the uncongregational syncopations (borrowed from cathedral choir music) and balance of sentences. It was probably this kind of thing that prompted the exposition of the rudiments of music which began to appear in all psalmody collections.

Notable English Psalters and psalmody collections were as follows:

1579—William Damon's *Collection*, in four parts to specimen verses and in plain style: settings in motet style were issued in 1591.

1592—T. Este's *Psalter*, with 57 tunes; better harmonizations.

1599—R. Allison's *Psalter*; melody given to treble part; 10 tunes for use in common.

1604—W. Barley's *Psalter* (a later ed. of Este); settings by Morley and Bennett.

1621—T. Ravenscroft's *Psalter*; leading work; 100 settings; tunes classified.

1623—G. Wither's *Hymns and Songs of the Church*; consists of paraphrases of Bible canticles; contains 16 tunes by Gibbons in two parts.

1636 and 1648—G. Sandys' *Psalter*, to a new version with 24 two-part tunes by Lawes; later in three parts.

In 1649 the Commonwealth came into power and a high standard of music was not encouraged. The metrical Psalms were sung in unison without organ, and by the time of the Restoration in 1660 the tunes in use had dwindled down to half a dozen.

1671—J. Playford's *Psalter*; 47 tunes. Playford began the 'barbarous method' in England of ignoring the original marked and varied rhythm, so essential for good singing and congregational interest, and reduced all notes to the same length.

1677—Three-part edition of Playford containing the whole of the 'Church tunes,' with melody in the treble.

1698—Tate and Brady version, with supplement of tunes mostly from Playford; editions down to about 1860.

From this time (1698) on miscellaneous collections of psalmody by illiterate editors swarmed under such titles as *Harp of Zion*, *Melodies of the Heart*, etc.

1718—J. Chetham's *Collection*, widely circulated.

1843—J. P. Hullah's *Psalter*; old style with syncopated effects.

1847—W. H. Havergal's *Old Church Psalmody*.

1852—H. E. Dibdin's *Standard Psalm Book*.

Metrical psalmody flourished in English parish churches till about 1860. Since then it has practically been confined to Presbyterian churches.

4. Psalmody ornamentation.—One past feature should be noted, viz. the craze which set in about 1650 or earlier for ornamenting the notes of the tune. The 1659 Gobert edition of the *Godeau Metrical Psalter* issued by the French Catholics (but later suppressed) gives directions for ornamenting by means of slurs, shakes, and turns. This absurd

idea was no doubt prompted by the Italian solo graces of the period and also possibly by florid figures of plain-song. This corruption lasted for some time; Chetham's Psalter of 1718 gives instances of the 'old way' of singing, as it was termed, and there are reminiscences in Jackson's 'Te Deum' in F. Interesting to relate, this method still prevails in the remote Highlands of Scotland, where, however, the ornamentation has rendered the ancient melodies of Scottish psalmody practically unrecognizable (for examples see Lachlan Macbean, *Songs and Hymns of the Gael*, Stirling, 1900), and they have become, to all intents and purposes, different tunes. See also Stewart, p. 152f.

5. Scottish psalmody.—Scottish psalmody, like English psalmody, is essentially founded on that of Geneva. The Scottish Protestant refugees, together with John Knox and other Scottish leaders of the Reformation, assembled together for worship in Frankfurt and Geneva, and, as mentioned, their manual was the English Genevan Psalter, from which many tunes were transferred to the first Scottish Psalter of 1564.

In Scotland from the 13th cent. onwards music had been taught to the boys at the old Church (Grammar) or 'Sang Schules,' and this was continued after the Reformation till about 1700. With the advent of the Reformation chanting was no doubt discontinued and organs were removed (see Livingstone's reprint of the 1635 Psalter, Glasgow, 1864, dissertation i. pp. 2, 15). Thomas Mace, in his remarkable and quaint *Musick's Monument* of 1676, directs attention to the 'sang schules' of Scotland as being worthy of imitation in England (see W. Milne Gibson, *The Old Scottish Precentor*, p. 6, 'Sang Schules').

In 1566 a MS harmonized version of the 1564 Psalter was made or 'noted' by Thomas Wood, vicar of Sanctandrous. The harmonizations were done by the Scottish organists and priests, David Peebles, J. Angus, Andrew Blackhall, John Futhie, and Andrew Kemp (for an account of this remarkable first harmonized Scottish Psalter see J. W. McMeeken, *Scottish Metrical Psalms*, p. 107f.).

From 1700 psalmody was at a low level, but a revival took place in Aberdeen about 1750, which the evangelist Wesley's visit in 1761 further stimulated, and the good example thereupon spread throughout Scotland (see Stewart, p. 151f., and Gibson, pp. 25f., 35).

Notable Scottish Psalters are the following:

1564—*Scottish Psalter*, founded on the Genevan collection of 1556 issued for the English and Scottish refugees; contained 105 proper tunes, melodies only.

1566—Harmonized version, ed. T. Wood.

1596—Andrew Hart's ed. of *Scottish Psalter*, containing metrical doxologies.

1615—Ed. of *Scottish Psalter*, containing also 12 common tunes as a separate class.

1625 and 1629—E. Raban's *Aberdeen Psalter*, harmonized in four parts and with tunes in reports (see Gibson, p. 19).

1631—In 1631 King Charles tried to foist on the people the high-flown version (really by Earl of Stirling) which his father James I. was reported to have made. This, along with Laud's Liturgy, was rejected, and the episode was ended by the romantic revolt of Jenny Geddes in St. Giles' Cathedral in 1638.

1635—This important and unusually complete Psalter contained, besides the proper tunes, 31 common tunes and 8 in reports, i.e. constructed in imitative form; also the usual metrical spiritual songs, metrical Lord's Prayer, Creed, etc. The tunes were of Genevan, English, and Scottish origin with their original and varied rhythm and metre. The weak points were the harmonies—which are poorly done—and, for the rest, those of the period, viz. the general unsuitableness of most double common-metre tunes, the syncopated effects, and the indefinite tonality and rhythm common to this early polyphonic period.

Reference should be made to the fine Livingstone reprint of this Psalter.

1650—The new Scottish authorized version of the Psalms (as at present in use) appeared, but unfortunately no tunes were provided, and Scotland before long became dependent

on imported English collections, though a number of the fine Scottish tunes were kept alive.

Various Scottish collections of tunes now appeared, such as those of T. Bruce (1726), T. Moore (1750), R. Bremner (1756), J. Thomson (1778), R. Gilmour (1793), and H. Boyd (1793). The Steven Collection of 1800 brought in the florid emotional tune; and the collections of J. Robertson from 1814 on ('Seraph' selection, 1827), W. Mitchison (1830), J. Turnbull (1840), A. Hume (1844), Bonaccordi (1845), G. Cameron (1855) (continued by J. S. Marr) also included these tunes together with those in previous use.

Official Church collections began to appear from 1845, eschewing tunes with repeats, but also (under English editorship) omitting many of the fine national tunes, and the introduction of the cut-leaf system, while favouring precursors of very limited capabilities, has also restricted the choice generally to a few favourites, which are unduly repeated in various settings, with the inevitable clashing of associations.

Fortunately, the traditions of the grand old psalmody still prevail in Scotland and in parts of Ireland and Wales, to the great gain of the congregational singing. While all Churches admit the Psalms as the foundation of the musical service, the chanting of some of them at least is necessary if the congregation is to obtain the bird's-eye view or insight into the meaning of the whole. If chanting, however, is admittedly difficult for the choir, it is much more so for the congregation, who almost invariably do not possess pointed Psalters; hence the chanting of the Psalms can rarely become universally congregational in aspect. Therefore it is best to use also the metrical version, presuming that all worship should be congregational—except the anthem, which, as the 'sermon of the choir,' is an instrument for good. The authorized Scottish version is by far the nearest to the Bible version, though revision is certainly required in some respects; the provision of additional (and alternative) metres would also be a gain. Concerning the congregational element see H. C. Shuttleworth, *The Place of Music in Public Worship*, London, 1893; also Stewart, ch. x.

LITERATURE.—Curwen, i. 'The Old Parochial Psalms'; Daniel, *Chapters on Church Music*, Appendices A and B; H. A. Glass, *Story of the Metrical Psalter*, do. 1883; Grove, s.v. 'Psalter,' etc.; H. Davey, *Hist. of English Music*, London, 1895; F. L. Ritter, *Music in England*, do. 1884; *Oxford Hist. of Music*, Oxford, 1901-05, iii.; reprints of the *Este* and of the *Ravenscroft Collections*; J. W. McMeeken, *Hist. of Scottish Metrical Psalms*, Glasgow, 1872; G. W. Stewart, *Music in the Church*; J. Love, *Scottish Church Music*, Edinburgh, 1891; W. M. Gibson, *The Old Scottish Precentor*, Aberdeen, 1907; C. G. McCrie, *Public Worship of Presbyterian Scotland*, Edinburgh, 1892, p. 337.

IX. MODERN HYMNODY.—The first stage in this period is occupied by the hymns of Isaac Watts, based mostly, like those of Luther, on the Psalms. It was, however, the Wesleyan revival that again brought about real congregational worship. Just as the singing of the Lutheran chorales and the metrical Psalms of the Genevan English and Scottish Reformers carried through and firmly established the Reformation, so the Wesleyan hymn was a great means of reviving the whole Church in Britain. Previous to the last revival ordinary English Church psalmody had once more subsided into a moribund condition. Only in the English cathedrals was a higher order of musical service kept up, and that with fluctuations. To both sides the Wesleyan revival was, through its music and its hymns, an element of good; the new energy of its rhythm and its fervour carried all before it. Needless to say, however, like all novelties and new movements, it was carried to excess in the florid repeating tunes of last century. This element has now died out, and in its place we have the tunes of Dykes, Barnby, Smart, Sullivan, Monk, Hopkins, and others. These tunes preserve the variety of rhythm and the energy which the Wesleyan movement revived, but with the addition of the element of sentimentality—an element not necessarily weak or bad, but which has been overdone, probably as the result of the Mendelssohnian

wave, the effect of which is not yet spent. The best collections are *Hymns Ancient and Modern, English Hymnal*, and *Scottish Hymnary*.

Love, *Musica of Scottish Hymnary*, do. 1901; historical ed. of *Hymns Ancient and Modern* (literary introd.).

X. THE CHURCH CANTATA.—By the word 'cantata' was originally meant anything that was sung, as the word 'sonata' meant a piece that was sounded or played. The modern cantata differs from the oratorio only in its exclusion of the dramatic and epic elements—*e.g.*, the soloists do not represent certain personages—and it is usually not laid out on so large a scale. The Church cantata is practically analogous to the modern anthem, but it is usually on a more extended scale and generally given orchestral accompaniments. Handel's 12 fine Chandos anthems, written (1718-20) while he was acting as chapel-master and organist at the princely estate of Cannons near Edgware, are really Church cantatas. The 6th Chandos anthem, *e.g.*, contains four solos and four choruses, the opening one of which is built up on the English Psalm tune, 'St. Anne.' Handel manages to incorporate something of the unique style of English cathedral music as instanced in the works of his great predecessor, Purcell.

The daily musical service at Cannons was 'performed by a choir of voices and instruments superior in numbers and excellence to that of any sovereign prince in Europe' (*Handel* (Great Musician Series), p. 63 f.).

The Church cantata as defined seems to have first developed in Germany, flourishing especially in the time preceding Bach. Cantatas were written for the great festivals of the Church in accordance with the Christian year and for festal occasions. D. Buxtehude, G. P. Telemann, and Bach's uncles, Michael and Johann Christoph, wrote specimens before Bach himself wrote his 295 Church cantatas, of which 193 have survived. The German chorale is particularly identified with these cantatas, and they usually comprise a chorus, founded on a chorale which is repeated by itself, with recitatives, arias, and duets. They were usually written for four voices and full orchestra, and comprised from four to seven movements, the text being verses from the Bible and chorales.

In the Advent cantata 'Sleepers, wake' (written 1742), the opening chorus is built up on the fine stately chorale 'Wake, awake' (employed also by Mendelssohn in 'St. Paul'): the second verse is sung as a separate movement (later with elaborate accompaniment), and the third verse in four parts concludes the cantata; two recitatives and two duets complete the whole. The orchestra parts are for strings, two oboes, and organ.

These beautiful works are only recently becoming known in this country. No doubt they will yet earn full recognition in Britain and America.

English composers have also made a special feature of the Church cantata. The following are the most representative cantatas for the special festivals of the Christian year.

ADVENT.—'Sleepers, wake,' and 'God's Time' (Bach); 'The Two Advents' (Garrett); 'Voces clamantium' (termed a motet) (Parry); 'Advent Hymn' (Schumann).

CHRISTMAS.—'The Holy Child' (Adams); 'The Story of Bethlehem' (West); 'Christmas Eve' (Gade); one of the six portions of Bach's 'Christmas Oratorio.'

CHRIST'S CRUCIFIXION.—'The Last Night in Bethany' (Lee Williams); 'Watch ye' (Bach); 'Olivet to Calvary' (Mauder); 'Stabat Mater' (Dvorák and Stanford).

EASTER.—'Christ lay' (Bach); 'The Transfiguration' (Cowen). WHITSUNTIDE.—'God so loved' (Bach); 'Veni Creator' (Mackenzie); 'Light of Life' (Elgar); 'The Story of Bethany' (Edwards).

CHRIST'S ASCENSION.—'Ascensiontide' (Coward); 'God goeth up' (Bach); 'The Ascension' (Steanne).

HARVEST.—'Lauda Sion' (Mendelssohn); 'Jubilee Cantata' (Weber); 'Harvest cantatas by Garrett, Lee Williams, West, and Mauder.

GENERAL.—13th, 42nd, and 95th Psalms (Mendelssohn); 13th Psalm (Liszt); 'God, thou art great' (Spohr); 'Rebekah' and 'The Lord is King' (Barnby); 'Daughter of Jairus,' 'St. Mary Magdalene,' etc. (Stainer).

LITERATURE.—Grove, *s.v.* 'Kirchen Cantaten'; G. W. Stewart, *Music in the Church*, 'Bach's Cantatas'; E. O. Prout, *Some Notes on Bach's Church Cantatas*, London, 1907.

XI. ORATORIO.—It will be easily understood that Passion music is bound up with the early oratorio. The early miracle-plays and renderings of Passion music inevitably suggested the oratorio. *Commedia Spirituale* were performed in Italy in 1243 and 1298, and *Geistliche Schauspiele* became common in Germany about 1322.

The term 'oratorio' originated in Rome, where St. Filippo Neri († 1595) gave 'Azioni Sacre' in the oratory adjoining the church. The sermon occupied the first portion; the second consisted of a dramatized story from Scripture written in verse and set to simple music as chorus and solo by the chapel-master Animuccia. It will be remembered that Vittoria, the composer of more advanced Passion music, was a contemporary, and also lived in Rome. In 1600 the sacred drama, 'L'Anima ed il Corpo,' was produced by Emilio del Cavaliere in Rome. Other similar works followed, and these, together with the still interesting oratorios of G. Carissimi (1604-74) (with their advanced type of recitative and chorus) and the works of Alessandro Scarlatti (1693 and 1705) (who employed the old Church style), all prepared the way for the masterly works of Handel.

Handel in his youth wrote an oratorio in the dramatic 'Passion' style while at Hamburg in 1704, and in the Italian manner at Rome in 1708, but not till 1720—when he composed his first English oratorio 'Esther'—does he reach a position of supremacy. His immortal 'Messiah' was written in 1742, and performed in Dublin; the others which still claim the affections of the public are 'Judas Maccabæus,' 'Samson,' 'Israel in Egypt,' 'Solomon,' and 'Jephthah,' his last work, written when blindness was approaching. His mighty choruses, built like a cathedral combining science, symmetry, and artistic truth, and the telling and direct solos, which in their characterization go straight to the heart, will always appeal to lovers of good music. Inspired by Handel's success, Haydn wrote his 'Creation,' though in a very different style—in fact, in the language of the orchestra rather than the voice—and it was produced in 1798. Since then a succession of fine works in different styles has been presented in Spohr's 'Last Judgment,' Mendelssohn's 'St. Paul' and 'Elijah,' Brahms' 'German Requiem,' Sullivan's 'Prodigal Son,' Mackenzie's 'Rose of Sharon,' and Elgar's 'Vision of Gerontius.'

LITERATURE.—For the study of the subject generally refer to A. W. Paterson, *Story of Oratorio*, London, 1902; Grove, *s.v.* 'Oratorio,' 'Passion Music,' etc.; G. P. Upton, *The Standard Oratorios*, Chicago, 1886; A. Mees, *Choirs and Choral Music*, London, 1901; F. L. Ritter, *Music in America*, do. 1884; Introduction to *Bach's Matthew Passion*, ed. Novello; E. O. Prout, *Some Notes on Bach's Church Cantatas*; *Handel* (Great Musician Series), do. 1890; A. Schweizer, *J. S. Bach*, Leipzig, 1903, tr. E. Newman, London, 1911; A. W. Pollard, *English Miracle Plays*, Oxford, 1890; Stewart, *Music in the Church*, *s.v.*

XII. THE MODERN CONCERTIZED MASS.—The modern Mass is entirely different in style from the early polyphonic and unaccompanied Masses which culminated in those of Palestrina. It was, in fact, founded on Italian opera, which originated in the Florentine G. Caccini's efforts (1558-1640) to emulate the Athenian drama. A declamatory recitative, followed by the accompanied recitative, evolving later into the grand aria with all the Italian's passion for melody and display, together with the addition of simple chorus-work, provided the

material. The composers of this period wrote for both Church and opera, and the spirit of the theatre invaded the Church. The demand for melody got the better of ecclesiastical tradition. Women were admitted into the Church choirs, and the prima donna was given an opportunity to display the new florid vocalism.

But 'the first step in the decay of true Catholic sacred music was the introduction into it of orchestral instruments.' Through them it assumed 'a sensuous character.' 'The virtuosity of the instruments at length called forth in the singers a similar virtuosity, and ere long the secular operatic taste penetrated into the Church. Certain portions of the sacred text, like the *Christe eleison*, were marked out as standing texts for operatic airs, and singers trained in the manner of the Italian opera were brought into the Church to deliver them' (Richard Wagner, *Gesammelte Schriften*, Leipzig, 1871-83, ii. 335; cf. Weinmann, *Hist. of Church Music*).

It was natural, to some extent, that the music of the Mass should follow the style of the cantata, oratorio, and opera with their fully developed florid arias, duets, etc., complete orchestra, and declamatory chorus. Hence we find that the Masses of Haydn, Mozart (with the possible exception of the 8th and 9th), Cherubini, Beethoven, Bach (a Protestant), Verdi, and Gounod are lacking in true ecclesiastical style, and are unsuited for liturgical purposes. They are, in fact, purely in concert style. The *Ab Mass* of Schubert, however, and those of Rheinherger, Kiel, Havert, and Grell are more in accordance with ecclesiastical requirements and traditions as being free at least from theatricality. The first step towards better things was the foundation of the St. Cecilia Society in 1863, having for its aim the cultivation of plain chant, congregational singing, and polyphonic vocal music (see, however, R. W. Terry, 'Sidelights on German Art: the great Church Music Imposition,' *Musical Times*, Aug. 1915, and the *Paris Schola Cantorum*). Later followed the pope's rescript in 1903 and 1912 in favour of plain chant (see above), which, if not followed to extremes, should do much to restore the standard desired.

LITERATURE.—Weinmann, *Hist. of Church Music*; Dickinson, *Music of the Western Church*; Grove, s.v. 'Mass,' etc.; Curwen, *Studies in Worship Music*, ii. 71.

XIII. CONGREGATIONAL SERVICES. — 1. The people's part.—The concert element unfortunately enters largely into many of the choral settings used in the Anglican and other Episcopal Churches. The ambitious Church composer cannot or does not always repress the temptation to make a telling effect at the expense of the sanctity of the musical worship which he leads, and the same is not unknown in nonconformist and American churches, especially where the admiring congregation have delegated their own part to a professional quartette of soloists. The people, or congregation, have, or should have, a well-defined part, and that not a small one, in the conduct of divine worship.

A German lady who had lived in England is quoted by Curwen as saying, 'In our Lutheran service, the clergyman does everything. We, the laity, remain passive; we have nothing to do but sing 2 or 3 verses, and this is done in such a dragging, lifeless and unvaried fashion that it must prove a torment to any musical ear' (Curwen, ii. 145).

The music of the Lutheran and Calvinistic Churches in Germany and throughout Europe is still unfortunately in a primitive condition. The chorales are sung sitting, and so slowly that breath must be taken every two or three notes without regard to phrasing or verbal or musical structure. The motet of the choir affords relief to what is, musically speaking, a very unsatisfactory service. In the city churches of Denmark, and throughout Scotland, Wales, and Ireland (with the exception of some churches in the Highlands or remote districts), the introduction of hymns of varied and often quick rhythm has given the services an element of brightness. In Denmark and Scotland congregational responses have also been introduced.

2. Types of service.—A comparison of the musical services (ancient and modern) is most instructive. First we have the original primitive type in which the minister does everything; then Psalms or hymns are introduced for the people; next comes the discovery that the people have the right also to take part in the prayers, amens, and responses, not only in the ordinary services but also in the Communion and supplicatory services like the Anglican Litany. Meanwhile, a choir is introduced to lead the praise; the introduction of an anthem or motet proves, or may prove, of real devotional value; but here the choir may overstep its proper function, provide a musical display, and take over the portions which should belong to the congregation.

Take the choral Anglican service: the anthem like settings of the 'Te Denm,' 'Benedictus,' and other canticles in which the congregation cannot join are distinctly out of place (except as an anthem), since they are the property of the congregation. In the Communion Service, again, the singing of the Creed usually makes it a choir Creed, not a Creed of the Church, or the people; in the same manner the elaborate settings of the 'Agnus Dei' and 'Gloria in excelsis' defeat their object. It is perfectly appropriate to reserve the 'Sanctus' and 'Benedictus' for the choir and priest—though the beautiful Anglican Communion Service, like the Litany, is admittedly already much too long. What has often been called the 'tyranny of the choir' is due to this tendency to appropriate and concertize certain portions of the service. One might say that it is due to (1) the demands of the Prayer Book, (2) musical ambition, and (3) acquiescence of musically uneducated clergy. The inevitable tendency of such things is towards a purely concertized service, as in the Roman concertized Mass, until some pope can arise and direct the attention of the clergy and Church musicians to the first principles of Christian worship.

LITERATURE.—Stewart, ch. x. 'The Congregation'; F. G. Edwards, *Common Praise*, London, 1887.

XIV. MUSIC OF THE EASTERN CHURCH.—The Eastern Church has been described as the Mother Christian Church. The patriarch of Constantinople at the close of the 6th cent. claimed superiority over the Christian Church. In 606, however, the supremacy was given to the bishop of Rome, and the Eastern Church ultimately separated and went on its own way. The present powerful Greek Church comprises (1) the Orthodox Church of Greece and the Greek colonies of Asia Minor and the Churches of Serbia and Bulgaria, (2) the Russian Church, and (3) the Churches of Syria, Egypt, Armenia, and Kurdistan.

1. The Greek Church.—The liturgical music characteristic of the Eastern Church is somewhat primitive, sung only by priests and a male voice choir unaccompanied. The congregation have no part, and stand throughout. The liturgical melodies and choral sentences, as in the examples given in S. G. Hatherly's *Byzantine Music*, are primitive in both structure and tonality; they consist of short sections frequently repeated, and the tonality is vague, resembling the Gregorian modes and represented entirely by the white keys of the piano; one specimen given according to the use of the Greek Church at Constantinople shows, however, Turkish or Eastern influence in its chromatic intervals (see also 'Bryennius' and 'Church Modes,' in Riemann's *Dictionary of Music*). Like plain-song the music is unbarred and unrhythmical.

The earliest tunes employed in the Greek Church were not written; all singing except that by trained choirs was forbidden, and the tunes were handed down traditionally. St. John of Damascus arranged the hymns in use for ritual purposes and

wrote on musical theory, based on the eight Byzantine modes. After the 9th cent. few hymns were written, though fresh settings were made occasionally as the service became fixed. Among the composers of these John Cuccuzels is the best known for his settings of the Psalms and hymns (c. A.D. 1100). He also added to the signs for musical notation.

Oriental influence came through the Arabo-Persian school in the 14th century. The Greek theorists consider their system similar to the Oriental.

In the usual Greek service the choir sing antiphonally, the resting section furnishing a drone or stationary bass. The vocal production is apt to be nasal. Reformers have made attacks on the notation, which is one great difficulty, different systems of neums having been used. Part-singing was sanctioned for the Greek Church at Athens in 1875—to be used on special occasions only—and a new system of versification was introduced about that time. The Psalms are sung to what are believed to be Hebrew melodies.

2. The Russian Church.—As indicated, the Russian Church is a branch of the original Greek Church. Till about the year 1700 Russian Church music was traditional in origin. Neums were in use for notation as copied from the Greek service-books. According to A. Soubies (*Histoire de la musique en Russie*, Paris, 1893), the Czar Alexia brought musicians to Kieff, who executed before him choral pieces in eight, twelve, and twenty parts.

In the 18th cent. a five-line plain-song notation was adopted, and part-singing became popular; the theme, however, was placed in the bass. The Psalter was paraphrased by Titow, and metrical versions were sung.

About 1750-75 reforms were introduced in the court choir, and new music in the Italian style was introduced under Bortnyansky († 1825). Not long after the decease of the latter the national movement under Balakireff exercised great influence, and new music preserving the tonality and genre of the old melodies was composed. Much of this is simple and massive in style, and depends upon nuance and expressive effects. The text is usually taken from the Psalms. More elaborate polyphonic settings are adopted for the Creation Hymn, the Evening Service, and other parts of the liturgy (see W. H. Frere, 'Notes on Russian Church Music,' *Cathedral Quarterly*, Christmas, 1914).

In recent years non-liturgical pieces have been used in the Russian Church set in thoroughly modern style, but unaccompanied in the *a capella* mode. In a programme of Russian Church music performed in New York in Dec. 1914 occur the following:

Four-, five-, and ten-part 'Cherubim Songs' by Bortnyansky, Rimsky-Korsakoff, and Rachmaninoff; eight-part 'Easter Verses' by Smolensky; eight-part 'Nunc Dimittis' by Gretchaninoff; six-, seven-, and eight-part motets by Nikolsky, Tchesnokoff, Arkhangelsky, and others (*Organist and Choirmaster*, Jan. 1916, p. 384).

One feature of Russian choirs is their cavernous bass voices, singing an octave below the ordinary bass, and creating a kind of organ *bourdon* pedal effect.

LITERATURE.—H. J. W. Tillyard, 'Greek Church Music,' in *Musical Antiquary*, March 1911; Curwen, li. 44; S. G. Hatherly, *Byzantine Music*, London, 1892; Rebours, *Traité de psaltique*; J. M. Neale, *Hymns of the Eastern Church*, London, 1882; A. P. Stanley, *Lectures on the Hist. of the Eastern Church*, do. 1861; A. Pouglin, *A Short Hist. of Russian Music*, tr. L. Howard, do. 1915. A cantation of the Faithful Departed was sung to a Kieff melody at the Gregorian Festival in St. Paul's Cathedral in June 1915 (music published by Novello).

XV. INSTRUMENTAL MUSIC IN CHURCH.—It is well known that instrumental music played an important part in both Greek and Hebrew temple rites.

1. Primitive instruments.—In Greek ritual

trumpets and elarions were prominent. In the Hebrew Temple at the beginning of the Christian era the harp, lute, flute, trumpet, and drum were used as accompaniment to the Psalms and canonical hymns; yet, owing to the necessity of avoiding comparison with pagan rites, instrumental music was forbidden in the early Christian Church. Justin Martyr (103-167; *Quæst. a Gent. Christian. propositarum*) argues against it (C. Sayle, *In Praise of Music*, London, 1897, p. 52). On the other hand, Clemens Alexandrinus, also in the 2nd cent., quoting the Psalmist in favour of instrumental music, says:

'If you are able to accompany your voices with the lyre or cithara, you will incur no censure' (*Pæd.* li. 4).

St. Jerome (345-420) says:

'That which David made for the worship of God, inventing musical instruments.'

St. Augustine (354-430) likewise encourages 'the singing of Psalms to the lyre or psaltery' (J. A. Latrobe, *The Music of the Church*, London, 1831, p. 42). This regulation, or partial allowance, of instrumental music in the service of the Church seems not to have affected the Eastern branch, since in the Greek Church instrumental accompaniment has never been allowed, probably from its proximity to the pagan East.

Where instrumental help was allowed, it is easy to understand that the lyre, cithara, etc., would soon give way to the organ; the advantage of having the accompaniment under the control of one person would be apparent, and from the 5th cent. onwards the organ became supreme. Ancient MSS of the 8th, 9th, and later centuries show the use of the harp, the square stringed psaltery, the rotta or crwth (of the viol species), and trumpet, which the minstrel galleries seen in ancient churches both on the Continent and in England confirm.¹ In the minstrel gallery of Exeter Cathedral are representations of a cithern, bagpipe, harp, violin, tambourine, etc. In recent times a bagpipe lament has been played in York Minster. A MS of Charlemagne's time depicts King David 'singing Psalms, assisted by four musical instruments, the pneumatic organ, a sort of violin, a trumpet and a set of bells' (E. J. Hopkins and E. F. Rimbault, *The Organ*, London, 1877, p. 32).

Aelred, or Ethelred, the abbot (1109-66) of Rievaulx Abbey (Yorkshire), in his *Speculum Charitatis*, speaks of the 'common people' admiring 'the sound of organs, the sound of cymballs and musical instruments, the harmony of the pipes and cornets' (Prynne's tr.; see Davey, p. 19).

Again, in the poem by Houlate, written in 1450, occurs this passage:

'Clarlions loud knellis
Portatives [organs] and bellis.'

John Case, writing in the *Praise of Musicke* in 1586, says:

'In our English Church the Psalmes may be song, and Song most cunningly and with diverse artificial instruments of musick' (Sayle, p. 83).

Later Fynes Morrison, in his *Itinerary* written at the end of the 16th cent., speaking of the Lutheran Church, says:

'Before Divine service they had music in the gallery of the Church, of wind instruments, namely organs, cornetts, sagbuttes, and the like' (quoted by H. Antcliffe, 'The Orchestra in Church,' *Organist and Choirmaster*, Jan. 1916, p. 386; see also K. *Psalter and its Bearings on the Hist. Mus. Antiquary*, Oct. 1910).

About A.D. 1600 instrumental accompaniment for oratorio was introduced. G. Gabrieli (1557-1612) had used four sackbuts (trombones) as an accompaniment to his 'Surrexit Christus'; but probably they were used only to double the vocal parts.

In the first 'sacred drama,' 'L'Anima ed il Corpo,' produced by Emilio del Cavaliere in Rome in 1600,

¹ See Neumann, fig. 196, and p. 484.

an orchestra of remarkable composition, consisting of a double lyre, a harpsichord, a large or double guitar, and two flutes, was used.

T. Coryate (1577-1617), describing a visit to Venice which must have occurred not long after the above event in Rome, says:

'At that time I heard much good musick in St. Markes Church.' 'Sometimes sixteene . . . Instrumentall musitians . . . played together upon their instruments, ten sagbutts, foure cornets and two viedgambas of an extraordinary greatness, also treble viols and theorboes together with seven pair of organs . . . standing all in a rowe together' (*Coryate's Crudities*, in Sayle, p. 112).

In England also about this time (1604) Henry Peacham says:

'Wherein doth our practice of singing in our churches differ from the practice of David? . . . Doe wee not make one signe in praising and thanking God in voyces and instruments of all sorts?' (Sayle, p. 139).

Following the Reformation came a period when instrumental music in church was tabned. The loss of boys' choirs necessitated separate instrumental help later after the Restoration. In 1661, at a festival at St. George's Church, Windsor, two double sackbuts and two double courtals were placed in the choir to help the weaker parts, while in 1664 at Westminster Abbey and again in 1673 in the Chapel Royal cornets were used for the treble parts, 'there being not one lad for all that time capable of singing his part readily' (M. Locke, *Present Practice of Music Vindicated*, London, 1673, quoted in Bumpus, *Eng. Cathedral Music*, pp. 122, 126).

It will be remembered that after the Restoration King Charles II. in 1660 sent Pelham Humphreys to France to learn the Italian style. Evelyn, writing in his diary on 21st Dec. 1662, remarks:

'One of his majesty's chaplains preached, after which, instead of y^e antient, grave and solemn wind music accompanying y^e organ, was introduced a concert of 24 violins between every pause, after y^e French fantastical light way, better suiting a tavern, or a playhouse, than a church. This was y^e first time of change, and now we no more hear the cornet¹ wch gave life to y^e organ; that instrument is quite left off, in which the English were so skillfull' (Bumpus, *Eng. Cathedral Music*, p. 124).

2. The orchestra.—The modern orchestra may be said to date from about 1676, when the Italians Stradella (in his oratorio 'John the Baptist') and Alessandro Scarlatti were writing for the usual foundation of strings with various wood and brass wind instruments added for variety and colouring effects. Before that the older lutes, viols, flutes, cornets, etc., were used in the manner of vocal parts.

At this time Italian music was pre-eminent. Our English Purcell took the Italian school as his model, and his 'Te Denm' and 'Jubilate,' written in 1694 with accompaniment for strings, trumpet, and organ, was a remarkable achievement.

We now come to the time of Bach († 1750) and Handel († 1759). Handel's oratorios were given in the concert room; Bach's Church cantatas were rendered in church and had an accompaniment of strings, oboes and bassoons, and high-pitched trumpets in addition to the organ. After the death of Handel the spirit of the orchestra invaded all branches of music. Haydn and Mozart were chapel-masters with modern orchestras at their command, and they composed Masses in concert style for church use, with accompaniment for full orchestra; their example has since been followed and only in recent years has declined. In England the Handel Commemoration held in Westminster Abbey in 1784, in which an orchestra of 250 instrumentalists took part, was a striking event. An orchestra in church on the occasion of festivals or oratorio presentations is now a common occurrence in this country. In St. Paul's Cathedral,

¹ The ancient *cornet* was of wood (leather-covered) and resembled a flute with a trumpet mouth-piece. The *shawm* was a primitive clarinet and the *sackbut* an early form of trombone. All these were made in sets, small and large (see Stainer, *Music of the Bible*, also *English Music*, pp. 349 and 4531).

for instance, fine renderings are given with orchestra of the principal oratorios.

It only remains to mention the English village orchestra which, as late as the middle of last century, was to be heard in most village churches. It consisted generally of a violin, bass, a flute or clarinet, and a bassoon. Their performances were perhaps not artistic, but their banishment by means of the harmonium was nevertheless a loss to the musical life of the countryside.

3. The organ.—The earliest mention of the organ as understood in the modern sense is with regard to the Roman *hydraulus*, or hydraulic organ, invented some three centuries before Christ. It is supposed, from references in the Talmud, to have been used in the Temple worship. Later it seems to have been heard in the Roman theatres. It was famed for its loud note (single notes only) and light touch (see J. W. Warman, 'The Hydraulic Organ of the Ancients,' *Musical Association Lecture*, Jan. 1904, also *English Music*, London, 1906).

Organs seem to have been in common use in the Spanish churches in A.D. 450, according to Julianus, a Spanish bishop (Hopkins and Rimbault, *The Organ*, London, 1877), while Pope Vitalian introduced the organ to Rome in the 7th cent. in order to assist the congregational singing. There were organs in Aix-la-Chapelle in 811. A hundred years before this the Anglo-Saxons were using organs in England, and they were introduced into Ireland in the 9th century. In the 10th cent. there appears to have been a remarkably large organ in Winchester Cathedral, blown by twenty-six bellows and containing four hundred pipes. In Scotland Fordun describes the use of the organ at the re-interment of the English Queen Margaret at Dunfermline in 1250.

So far the organ was a most cumbersome instrument, and in place of keys had rods or levers. In the 11th cent. clumsy short wooden keys were invented. These were beaten by the fist in much the same way as the keys for the church tower carillon, or peal of bells. As to organ-builders, the earliest known was a priest Van Os, who built the organ for St. Nicholas church, Utrecht, in 1120. Organ pedal keyboards in rudimentary form appeared in the 15th cent. as well as distinctive names for the stops, but the compass was still very limited.

Modern organ-playing is said to have begun in Italy with Francesco Landino († 1390), organist of St. Lorenzo in Florence. The church organ had hitherto been used to lead out the plain-song—in unison only. There were, however, smaller organs used which could be moved about. The positive, often circular in shape, had one or two rows of pipes. The portative, so small that it could be placed on the knees, was blown with one hand and played with the other, and it was on this smaller organ that organ-playing, as an art, originated. There was also, later on, the small reed organ called the *regals* in use; it was portable like the others (Hopkins and Rimbault, p. 39).

In the next century we find that organists of repute begin to appear.

The great popularity of the Lutheran chorale in Germany led to its being treated in artistic form for the organ and played as a prelude, or *Choralvorspiele*. Originally the organ was played only between the verses as mentioned, but in 1650 Samuel Scheidt († 1654), in his *Tablatur Book*, begins to treat the organ as an accompaniment also for the singing. In the Roman Church organ interludes helped to spread out the Magnificat to the necessary length when sung in procession. The greatest of Dutch organists, Jan Swelinck († 1621), at Antwerp, and Geronimo Frescobaldi († 1640).

who had 30,000 listeners when he first played in St. Peter's, Rome, in 1614, were noted for their extemporizations of such interludes.

In the English Church the choir dominated the situation, and the organ had no pedals. No distinguished executants arose until the Reformation. With the advent of Queen Elizabeth in 1558 the influence of the Geneva Protestants, who did not believe in instrumental worship, began to be felt. Their demand was for simplicity in worship. As a result the Puritan party in England decreed in 1571:

'We allow not the tossing of the Psalms from one side to the other, with intermingling of organs.'

Matters came to a climax during the Civil War in 1644, when the destruction of church organs was ordered by Parliament (see Hopkins and Rimbault, p. 91 ff.).

After the Restoration in 1660 organs were re-erected in great haste in the cathedrals and churches, and organ-builders were imported, including 'Father' Smith, who built the organ in St. Paul's Cathedral. Parcell, the great English predecessor of Handel, wrote a 'Voluntary for ye Double Organ.' By 'double' is meant a 16-foot pedal organ. A custom arose at this time in England of playing a middle voluntary after the Psalm, generally on the mounted cornet (a mixture stop) or trumpet; it usually served only as a means of vulgar display. In addition to the middle voluntary, other features of the times were the interludes at the end of each line of the metrical Psalms, with a flourish or shake at the end, the sitting down for the metrical Psalms (except at the 'Gloria'), and the later introduction of barrel organs. The interludes and sitting down still persist in the Lutheran Church abroad.

The musical inefficiencies of the country and smaller town churches at this time are quaintly described by Mace (*Musick's Monument*). He says:

'I shall not need to blazon it abroad in Print how miserably the Prophet David's Psalms are (as I may say) tortured or tormented.' He advocates that 'it is better never to sing at all than to sing out of tune,' and thence goes on to say that organists are 'a constant charge, a terrible business,' and that a 'Parish clerk' could be easily taught 'how to pulse or strike most of our common Psalm Tunes' (cp. Williams, *Story of Organ Music*, p. 216).

With the 19th cent. English organists began to come to the front, represented by such men as Russell, Adams, S. S. Wesley, Smart, and others, and at the present time English organists and organs easily occupy the front rank.

In Scotland the organ was practically unused in church from the Reformation up to 1864, when it was re-introduced (McCrie, p. 337; Stewart, p. 157).

LITERATURE.—C. F. A. Williams, *Story of the Organ*, London, 1903, *Story of Organ Music*, do. 1905; H. C. Lahee, *The Organ and its Masters*, do. 1909; H. Statham, *The Organ and its Position in Musical Art*, do. 1909; J. I. Wedgwood, *Dictionary of Organ Stops*, do. 1905; H. W. Richards, *The Organ Accompaniment of the Church Services* (Anglican), do. 1911.

In conclusion it may be said that music is the most powerful ally that the Church has at its disposal. It can touch the emotions and the heart where all other means fail. If the organist is in earnest (and the minister is sympathetic), he becomes the active colleague of his minister in his great calling. The best results, however, can follow only if both keep an open mind and 'live to learn.' The study of the past is the best corrective for the present.

HERBERT WESTERBY.

MUSIC (Egyptian).—1. Sources.—It is unfortunately impossible to derive much information with regard to ancient Egyptian music from the writings of the classical authors. They confine themselves to general observations, none of which carry us very far, and some of which are demonstrably inaccurate. Diodorus (i. 81), indeed, is responsible for an observation on the subject which led, for a time, to the mistaken idea that the Egyptians were an unmusical race. 'It was not customary,' he says, 'for the Egyptians to practise music, because they considered it effeminate and undesirable.' On what grounds his statement is based it would be difficult to say, and he himself admits that the Greek poets and musicians visited Egypt in order to improve their art. Plato (*Legg.* ii. 656 f.), on the other hand, ascribes a very high antiquity and a very noble character to the sacred music of the Egyptians, whose rules concerning it were, according to him, most rigid, only certain kinds being allowed by Government. This is confirmed by Strabo (xvii. 1), who says that 'the children of the Egyptians were taught letters, the songs appointed by law, and a certain kind of music, established by government, to the exclusion of every other'; and, further, that vocal and instrumental music was usually admitted in the worship of the gods, especially at the commencement of the services, except in the temple of Osiris, where neither singers nor players on the flute or the lyre were allowed to perform. It is questionable how much of this confident assertion is the result of actual knowledge; the statement as to the limiting of the kinds of music certainly does not agree with what is known from more reliable sources. Herodotus (ii. 79) speaks of his surprise at finding that the song called *Maneros* by the Egyptians, a dirge said to have been named after the son of the first king of Egypt, was similar to the Cyprian dirge *Linos* or *Alinos*. This, however, is practically all that can be gathered from such sources.

2. System of music.—The paucity of information is still more deplorable when we come to the question of the system of music used by the Egyptians. No specimens of their musical notation have been preserved to us, for reasons which are manifest. Almost the whole of our knowledge of the life of ancient Egypt is derived from sculptures, wall-paintings, and reliefs; and, while musical scenes and instruments are there depicted with considerable frequency, it is obvious that nothing more is to be expected from such sources. A musical score would scarcely lend itself to representation in granite or limestone. The increasing care with which MSS on papyrus are now being collected and examined may in time provide us with the necessary information; but up to the present it is lacking.

Something may be inferred from the construction and range of the musical instruments represented on the monuments and wall-pictures, but the limits of such inference are narrow. It is, for example, probably a fair inference from the material mentioned above that the music of the Egyptians was not only in unison, but that they were accustomed to harmony, and that they had even attained to considerable skill in the building up of harmonic effects. The opposite view has been frequently expressed, but the testimony of the monuments seems conclusive on the point. One representation, for example, shows a harp of ten strings, and a lute on which at least three times as many intervals must have been producible in

union with a lyre of only five strings. Others show pipes playing together of such various lengths that they must have been designed to play in harmony and not in unison. In fact, there are repeated representations of what might be called an orchestra, and it seems out of the question to suppose that these aggregates of instruments were designed only to multiply the melody.

Instances of the various combinations of instruments found in these orchestras are given by Wilkinson (*The Ancient Egyptians*, ed. 1871, i. 86-89). The fact that the harp is the instrument most frequently depicted, and that it evidently formed the basis of Egyptian instrumental music, suggests the further inference that the Egyptian harmony was purely diatonic, and that every piece must have been played, from beginning to end, in the same key; for, before pedals were invented, the harp could play only a straight up and down diatonic scale. Little more than this can even be inferred, much less asserted. Students of this aspect of the subject must be referred to the various musical works mentioned in the Literature at the end of the article, where they will find all that can be made of it.

3. Importance of music in ancient Egypt.—There is, however, abundant evidence of the important place which music held in Egyptian life. Its origin was ascribed to divinity—sometimes to the goddess Isis, but more particularly to the god Thoth, or Tebuti. Among the sacred books attributed to him are two *Books of the Singer*. From a very early date it appears to have been the custom that a regular part of the royal establishment should consist of a band of instrumentalists and singers. Thus under the Old Empire we have mention of a certain Ra'henem, 'the superintendent of the singing,' who was also, with a somewhat curious jumbling of duties, superintendent of the royal harim (Erman, *Life in Ancient Egypt*, p. 250). Another reference gives us the names of three 'superintendents of the royal singing,' two of whom seem to have been singers themselves, for they observe that 'they daily rejoice the heart of the king with beautiful songs, and fulfil every wish of the king by their beautiful singing' (*ib.* p. 250). Some of these choir-masters appear to have been of high rank—they are called 'royal relatives'—and to have held priestly as well as musical office, being priests of the king and of his ancestors. Under the New Empire there are also references to men who were singers to Pharaoh, and particularly to one man, Neferonpet, who was 'superintendent of the singers to Pharaoh' and also 'superintendent of the singers of all the gods' (*ib.* p. 251). This points to a regular organization of the sacred music of the whole Empire; and the probability is that there was a stereotyped form of religious music, preserved and maintained by the priests, in which, however, part was sometimes taken, especially in the time of the New Empire, by lay performers—more particularly by women. Under the XVIIIth dynasty many women of high rank were appointed to offices connected with the worship of the temple of Amen, some of them bearing the title *gemät en Amen*, 'singer of Amen' (Budge, *History of Egypt*, 1902, iv. 179 f.). In fact, Erman states that 'we scarcely meet with one lady under the New Empire, whether she were married or unmarried, the wife of an ecclesiastic or layman, whether she belonged to the family of a high priest or to that of an artisan, who was not thus connected with a temple' (p. 295). The chief duty of these women was to play the sistrum before the god. In some of the wall-pictures of the time of the New Empire, particularly in those of the tomb of Ramessu III. (dynasty

XX.), priests are represented as performers upon the harp. Altogether, therefore, it may be concluded that music, at least in its higher branches, was held in very high estimation by the ancient Egyptians, and occupied no small place in their life. The more secular branch of the musical profession in Egypt seems to have held a very different position, and to have performed music of a very different type, which was mixed with other elements of a sufficiently frivolous kind—a fact which may account for the misleading statement of Diodorus already quoted. The representations which have been preserved show that secular music was used mainly in connexion with festivals and entertainments not always of the most decorous type, according to our ideas, and was frequently accompanied by the performances of professional dancers and jugglers. It is perhaps permissible to infer that the average of musical taste in Egypt was not very different from what it is in our own land.

Variations in the current musical taste may be traced from the pictures of social life. Under the Old Empire instrumental music seems to have been performed solely by men, and to have served mainly as an accompaniment to the voice. In the time of the New Empire women-players on the lyre, the lute, and the double pipe are met with.

The singers seem at all periods to have marked the rhythm by clapping the hands—in fact, this simple method of marking time is so inseparable in the Egyptian mind from the idea of music that the word 'to sing' is written in all periods by the hieroglyphic sign of a band. Blind performers were not unknown—a representation from Tell el-Amarna shows a blind harpist accompanying several blind choristers who mark the rhythm with the clapping of hands.

4. Musical instruments.—When we come to the question of the musical instruments employed by the Egyptians, there is no lack of reliable material, the mural decorations of the various tombs abounding in representations of the different instruments. Of these the *harp* seems always to have been the chief and the favourite. It is found in various forms and various degrees of elaboration, ranging from small instruments with six or seven strings, which could be easily carried, and were frequently played by performers seated or kneeling on the ground—the instrument being either rested on its own base or supported on a light stand—up to very large and elaborate ones, whose base was enlarged to form a resonance-chamber, and which sometimes carried as many as twenty strings; these were played by performers standing, and seem to have been more or less reserved for music of a more elevated, possibly altogether of a religious, type, as the performers upon them appear to have been priests. A very small harp with four strings, and played by a performer who rests it on her shoulder (Wilkinson, i. 121), is considered by Naumann to be the first authentic form of the Egyptian harp. Erman, however, refers it (p. 252) to the time of the New Empire, and his opinion is to be preferred. The greatest elaboration of the harp is reached in the time of dynasties XIX. and XX. The representations of priests playing the harp in the tomb of Ramessu III. show instruments which are not only distinguished by the number of their strings, but are also very elaborately decorated, the framework being carved and inlaid with gold, ivory, tortoise-shell, and mother-of-pearl, and ornamented with various figures. The chief distinction between the Egyptian and the modern harp is that in the former the front support or pole is lacking, and there are no pedals, so that change of key can have been accomplished only by retuning the instrument by means of the pegs. The strings of the harp, as also those of the lyre, appear to have been of catgut; in one

specimen of the latter they have been found still in position, and so well preserved as to sound when struck. Several smaller instruments of harp type but of unusual shapes were also in use, and are figured by Wilkinson (i. 119).

Of smaller instruments, the *lute* or *guitar* is the one most frequently met with; its symbol 𓪓 , *nefer*, is one of the commonest hieroglyphic signs. Its Egyptian name was derived from the Semitic *nbl*. It appears to have been played chiefly by women, and was sometimes slung by a band round the neck. The body was of wood, sometimes covered with leather. Originally it was an exceedingly primitive instrument, with only one string, but later it became possessed of three, which were played by means of a plectrum. The strings were fastened at the lower end to a triangular piece of wood or ivory, and at the upper extremity of the handle they passed over a small crossbar and were secured either by pegs or by being passed through an aperture in the handle, round which they were then bound. The lute does not appear to have had any bridge.

The *lyre* was probably not a native Egyptian instrument, but a foreign importation. It does not make its appearance before the time of the XVIIIth dynasty except on one occasion. On the wall of the tomb of the prince Khnem-hetep at Beni Hasan (dynasty XII.) it is represented in the hands of one of a company of Aamu or Bedawin who are being introduced to the prince. In this case it is being played by a man; but as an Egyptian instrument it seems to have been more frequently played by women. It is found of various shapes and sizes, ranging from small instruments with five strings, which were carried under the arm and played either with or without a plectrum, up to large ones of eighteen strings, reaching a height of about six feet, and standing on an ornamental base. Specimens of the Egyptian lyre in the Berlin and Leyden museums show one of its arms shorter than the other, in order possibly to provide an easy method of tuning, by sliding the strings along the bar on which they were tightened.

Of *wind instruments* almost none but wooden specimens have been preserved. Pictures in the monuments, however, show troops accompanied by trumpeters who use a very simple straight trumpet of about 18 inches in length, and made apparently of brass or some similar metal (e.g., the representation of the battle of Ramessu II. against the Kheta). Various kinds of flute are represented. In the time of the Old Empire there were two sorts in use, one of extraordinary length—4 or 5 feet—which was held by the player obliquely behind him, and a short one, varying in the specimens preserved from 7 to 15 inches in length. Later, in the time of the New Empire, these seem to have been almost superseded by the double pipe, an instrument with the mouth-pieces brought together and the tubes separating in V-shape and terminating in bell-shaped mouths. This form of pipe is frequently figured, being played mostly by female performers, and often as an accompaniment to dancers.

The flutes preserved are of wood, ivory, horn, or bone, but others were made of reeds; and, in 1859, W. M. Flinders Petrie found at Illahun, in the tomb of a lady named Maket, two musical reeds incased for protection in a larger reed. The scale indicated by their holes is the major scale (*Ten Years' Digging in Egypt*, London, 1893, p. 124).

Garstang's excavations at Beni Hasan in 1902-04 provided good specimens of several of the instruments described above. A harp of five strings presented no differences of any importance as compared with already-existing specimens in Paris, Turin, and the British Museum. A drum, 65 centimetres in length and 29 in breadth, was

carved from a single cylinder of wood. Its ends were of parchment, connected together by a network of leather thongs. These thongs were tightened by being twisted with a short stick, so as to enable the pitch of the instrument to be maintained. Two flutes were of considerable interest, and were the subject of an article by Southgate in the *Musical News* of Aug. 1903. They are respectively 90 and 95 centimetres in length, made of the water-reed (*Arundo donax*). Each has four notches, the tubes are open throughout, and a slight thinning at the mouth-end suggests that a mouth-piece of some sort may have been attached. There are three finger-holes 5 millimetres in width, the distances of these from the mouth-end being 62.5, 68.6, and 81 centimetres in the shorter flute, whose natural note is *f*. The natural note of the longer tube is *c* natural. The notes produced by the finger-holes are in the one case *c*, *f*, *g*, *b* flat; and in the other *f*, *f* sharp, *a* sharp, and *c*. An Arab flute-player at Beni Hasan had no difficulty in playing these ancient instruments, which very much resembled his own flute in principle, though the latter was made out of an old gun-barrel. The date of the tomb in which these objects were found is unfortunately somewhat uncertain, but they may be ascribed to the period of the Middle Kingdom.

Among *instruments of percussion* there were several forms of drum, cymbals, castanets, the tambourine, and the sistrum. The commonest form of *drum* is a long narrow cylinder of wood or copper covered with parchment at both ends, the parchment being strained by braising cords. It occurs chiefly in military scenes. During the march it was slung in a vertical position over the drummer's shoulder, and he played it by beating it with his hand. Another type of drum was mere like the side drum of present times in shape, with this difference, that its sides were convex, giving it the shape of a small cask. This type was beaten with two drumsticks. A form of drum frequently represented corresponds to the *darabuka* used at the present time by peasant women and the Nile boatmen. It is of funnel shape, and was apparently made of pottery, with parchment strained over the wide mouth. The Egyptian *cymbals* were smaller than those now in use, ranging from 5½ to 7 inches in diameter. In other respects they were similar to them, and were made either of brass or of an alloy of silver and brass. *Castanets* were in the form of slightly curved sticks of wood or ivory, about a foot long, and often terminating in a human head. The *tambourine* or *timbrel* appears to have been a favourite instrument in religious ceremonies as well as in secular music. It was played by either men or women, but oftener by the latter. Three types are represented—one circular, one square or oblong, and a third of two squares, separated by a bar. There is no direct evidence of the existence of the metal rings or disks found in the frame of the modern instrument; but, from the way in which the performer is seen to wave it over his head, it may be concluded that these existed. There remains the *sistrum*, which was the sacred musical instrument *par excellence*, if indeed it may be called a musical instrument. It consisted of a handle, generally carved in the shape of a head of the goddess Hathor, from the upper end of which rose an arch of bronze ribbon, somewhat in the shape of an elongated horseshoe. Through holes in the sides of this arch there were loosely inserted three or four metal bars, bent at each end to keep them from slipping out. When the sistrum was waved, these bars, striking on the bronze arch, emitted a tinkling sound. The sistrum was used in the most solemn religious services, and was frequently carried by women of the most exalted

rank. Several sistra have been preserved, varying from 8 to 18 inches in length. Models of sistra in enamelled ware were often deposited in tombs, being first broken in sign of mourning.

JAMES BAIKIE.

MUSIC (Greek and Roman).—Any tradition as to the first stages of development of Greek music is veiled in mythical obscurity. It is natural that with a lively and artistic people, such as the Greeks were, the culture of music should have been very wide-spread. There was a great abundance of popular melodies, which brightened up the everyday life of the people (see Bücher, *Arbeit und Rhythmus*); their social life was enlivened by love-songs and drinking-songs, and they glorified the gods at their festivals, as well as the victors in the national games, with choral songs accompanied by dances. Pindar, from whose pen there are still in existence forty-four odes of the last-mentioned kind, was a composer as well as a poet. The oldest piece of Greek music which has come down to us—leaving out of account as unquestionably spurious the composition of three verses of the Homeric Hymn to Demeter—is the beginning of a melody to Pindar's first Pythian Ode. The Jesuit Athanasius Kircher published it in his *Musurgia universalis* (Rome, 1650). It is true that the manuscript to which he appeals has not been found, and therefore the genuineness of the melody has been doubted in various quarters. Von Jan (*Musici scriptores Græci*; see also *Supplement*, 'Melodiarum reliquiæ') has not admitted it to his list at all. The most reliable information on all questions relating to the history of Greek music is to be found in Hugo Riemann's *Handbuch der Musikgeschichte*, i. i. (the Pindar melody is given on p. 131).

The epoch-making researches of Rndolph Westphal (*Die Musik des griech. Altertums und Griech. Harmonik und Melopoeie*) require critical testing, because Westphal, with more imagination than discretion, has advanced a great many uncertain hypotheses. F. A. Gevaert's *Hist. et théorie de la musique de l'antiquité* must also be used with caution, as he depends too much upon Westphal's hypotheses. The same applies to Gleditsch, who treats the music of the Greeks as an appendix to metrics in Iwan Müller's *Handbuch der klass. Altertumswissenschaft*, vol. ii.

Out of the choral lyric sprang the drama, which in the classical period was chiefly musical drama. The comparative criticism which Aristophanes in his *Frogs* devotes to the art of Æschylus and Euripides is aimed at their music quite as much as the contents of their dramas. There is also extant a short fragment of a melody from the *Orestes* of Euripides (see von Jan's *Supplement*, p. 4 f.).

Alongside of the drama, from about B.C. 400 the dithyrambus assumed an important part in the perfecting of musical expression; and the primitive *vbos* became from that time the field in which ever-increasing virtuosity could display its skill. In correspondence with the freer formation of the lyrical rhythms, from this time onwards the voice-part paid more attention to the distribution of the accents, which in the Greek language have a

musical meaning of their own (cf. Crusius, 'Die delphischen Hymnen' in *Philologus*, liii., Suppl.). Besides songs accompanied by stringed instruments (*κιθαριδική*) and those accompanied by wind-instruments (*αὐλοφδική*), there was also pure instrumental music (*κιθαριστική* and *αὐλητική*). Guhrauer has shown (*Altgriech. Programm-musik*) that the instrumental music of the ancients was essentially 'programme' (i.e. illustrative or descriptive) music, especially in the case of the Pythian νόμος, which represented Apollo's fight with the dragon.

The great importance which the Greeks attached to music is also shown in the fact that music culture and instruction were subjects of minute State control. Even Plato, who in his *Politeia* expresses himself a pronounced opponent to art, gives in that work most detailed attention to the regulating of music. On the high estimate of the ancients of the ethical value of music, and the controversy of the schools of philosophy about it, see Ahert, *Die Lehre vom Ethos in der griechischen Musik*. Sparta especially, acting under government orders, took an interest in music, and we find Terpander of Lesbos, the oldest musician of importance, active there in the 6th or 7th cent. B.C. His name is closely connected with the history of citharodic music.

Songs in ancient times, whether sung by individuals or by a choir, were in unison throughout, with the exception that boys' and men's voices were an octave apart from each other. Moreover, the independent tones of the accompanying instruments, which may have been inserted between, must not be understood as a second part in the sense attached to that expression by an ear accustomed to harmony. Westphal's contentions about polyphony rest partly on arbitrary conclusions and partly on a misunderstanding of the word *πολυφωνία*, which does not have the same meaning as our modern 'polyphony' (see Graf, *de Græcorum veterum re musica*; for information about stringed instruments see von Jan, *Die griech. Saiteninstrumente*, and art. 'Saiteninstrumente,' in Baumeister's *Denkmäler des klass. Altertums*, iii.).

The bow was entirely unknown to the ancients; the strings were either plucked with the fingers, as we play our harps, or beaten with a small plectrum (*πλήκτρον*), like our zither or the cymhal of the gypsies. The stringed instruments may be divided into two chief classes: the older simple *λύρα* (called in Homer the *κίθαρις* or *φόρμιγγις*), and the *κithára*, which is distinguished from the *λύρα* by its large square sounding-board. The original number of strings was seven. How they were tuned, if in the Dorian octave (see below) with the omission of the third highest degree, just as, we are informed, Terpander used it, or otherwise, we cannot now determine. Each string gave only one sound; the Greeks knew nothing about shortening the strings by means of bridges. The flageolet seems to have been the only known means of getting from the string a note different from the fundamental one. Besides the seven-stringed lyre, there were also in common use a number of different harp-like instruments with a far greater number of strings.

The class of wind-instruments is represented by the *αὐλός*, which in size and pitch resembled our clarinet rather than the flute, as it had a double set of reeds, and was blown from the end (see von Jan, art. 'Flöten,' in Baumeister).

It is peculiar to the Greeks that almost invariably two *αὐλοί* were used at the same time by one player—a fact which Gevaert tries in vain to gloss over. The oldest representative of *αὐλός*-playing is Olympus, who, like Terpander, was from Asia Minor, and belonged probably to about the same

time. The oldest so-called enharmonic scale is ascribed to him, and is, according to Riemann's convincing hypothesis (p. 43 f.), the five-note scale without semitones, which makes its appearance as the earliest stage among other peoples as well—*d c g a h d'*. From *d* to *d'* is the Phrygian octave, and Olympus came from Phrygia. After they had become acquainted with the full seven-note octave, people felt in these old melodies the intentional omission of the third note in each tetrachord, *f* and *c*. When the series of tones was transferred to the Dorian octave *c-c'*, and by this transposition the third tone was omitted, they had reached the second stage of development of the enharmonic *c f a h c'*, where twice an interval of a semitone and one of two whole tones succeed one another. Riemann demonstrates the same arrangement in Japanese music. Finally, by means of inserting the quarter-tone (*dieais*) between *c* and *f* as well as between *h* and *c'*, they again made up the tetrachord to four notes. This is the latest form of enharmonic, and the only one recognized by later theorists.

Among other instruments, apart from cymbals, kettle-drums, and castanets, which serve the purposes of rhythm only, not of harmony, we must mention the organ because of the great importance which it has assumed in Christian times. It appears for the first time in Alexandrian and Roman times as *hydraulus*, 'water-organ'—so called because the air-supply was obtained by means of water-pressure—but it had only a limited and wholly secular use. The Alexandrian and Roman epochs (cf. Friedländer, *Sittengeschichte Roms*?) show, indeed, a wide-spread musical activity, but it was not sufficiently creative; it lived entirely in the traditions of the classical Greeks. In fact, an attempt was made in Hadrian's time, as by Julian afterwards, to approach still nearer to these by means of a reform to the archaic (cf. Möhler, *Gesch. der alten und mittelalterl. Musik*, p. 34 f.). The early Christian music, therefore, which grew out of the musical life of the Romans, seemed to be a direct continuation of the ancient Greek. Attempts to show the close connexion between the two have been made, especially by Gevaert (*La Mélodie antique dans le chant de l'église latine*), and Möhler ('Die griech., griech.-röm., and alchrist.-lat. Musik,' in *RQ* ix. Suppl.). Abert (*Die Musikanschauung des Mittelalters und ihre Grundlagen*) acknowledges a direct connexion for the East only, while the Christian music of the West is a thing really new and only artificially adapted to the ancient theory by the scholars of the Middle Ages.

Along with the development of practical music theoretical investigation of music was also proceeding. The first important stride was made by Pythagoras, when he showed how the numerical proportions of the consonances correspond to the varying lengths of a string. The later Pythagoreans were aware that the notes are due to aerial vibrations, which have similar underlying relations to one another. The only consonances recognized by the ancients were the octave, the fifth, and the fourth; it was much later that they became conscious of the third as a harmonious chord (cf. Graf, *Die Theorie der Akustik im griech. Altertum*). The proportion of the third 4:5 seems to have been hit upon more by accident as one of the results of many calculating experiments; it was as unknown to Pythagoras as the small whole-tone 9:10. He got by the addition of two large whole-tones the very large third 64:81, and, as the difference between this and the fourth, the very artificial semitone 243:256. An excellent example of these Pythagorean studies is the *Sectio Canonis* of the great mathematician Euclid

(von Jan, *Musici scriptores Græci*, p. 148 f.; on pp. 115-147 is collected all that is known about the Pythagoreans).

An attitude of opposition to the Pythagoreans was assumed to some extent by the school of Aristotle. What we find scattered through the different writings of Aristotle about music, von Jan has carefully gathered together at the beginning of his collection. Bk. xix. and part of bk. xi. of the Aristotelian *Problemata* treat of weighty musical questions. These are reproduced and annotated in von Jan, p. 39 f. But his treatment is superseded by the edition of Gevaert and Vollgraf (*Les Problèmes musicaux d'Aristote*), which handles the subject from new and fruitful points of view. The most important pupil of Aristotle, with regard to music, and at the same time the greatest musical theorist of antiquity, was Aristoxenus, whose *Elements of Harmony* should be studied in Maeran's *Ἀριστοτέλεως ἁρμονικὰ στοιχεῖα* (Oxford, 1902) instead of in the somewhat profuse treatment of Westphal (Leipzig, 1883-93). Aristoxenus managed to find the proper medium between the empiricism of the practical musicians, which was based on no principle, and the too abstract theory of the Pythagoreans. A very important source of information is found, again, in the three books *de Musica* of Aristides Quintilianus (ed. Albert Jahn, Berlin, 1882), who lived in the 1st or 2nd cent. A.D. We get the greatest amount of historical information in the book preserved under Plutarch's name, *Περὶ μουσικῆς* (ed. Weil and Reineck, with Fr. tr. and notes). A little later lived Ptolemæus, the great geographer and astronomer, whose *Harmonics*, along with the commentary of Porphyry, represents the last great system of ancient musical theory. Both of these works were largely supplemented by Bryennius the Byzantine, who belonged to the 14th century. The newest (!) edition of all these three books is that of John Wallis, in his *Opera mathematica*, iii., in the year 1699.

Among other Greek writers special mention is due to Alypius in the 4th cent. A.D., as the man who has handed down to us most fully the Greek system of notation, by writing out and describing altogether fifteen transposition-scales in the three kinds of tones, so that—with the omission of the last six series—he has really given and described thirty-nine scales through two octaves and in two kinds of musical characters (von Jan gives the tables on p. 367 f.).

The Greeks had a double musical notation. The newer employs the well-known letters of the Ionic alphabet, and that in descending order; the older consists of heterogeneous signs, and up to the present time neither its origin nor the system of its composition has been explained. Only the practical meaning of the signs has been made quite clear. In the older system the raising of a note a quarter-tone or a semitone was signified by a different position of the same sign. The newer notes used to be called singing-notes and the older ones instrument-notes, but the Delphian discoveries have shown us that their use was not originally distinguished in that way. Among the Latin writers Boethius, who was a contemporary of the great Theodoric, is worthy of mention on account of the authoritative position which his work, *de Musica*, held all through the Middle Ages. We now find the most lucid collection of sources in Riemann, pp. 10-26.

With regard to the extant specimens of music, the three Hymns of Dionysius and Mesomedes were the first to be made known; they belonged to Hadrian's time, and were communicated by the father of Galileo in 1581. In 1650 there followed Kireher's Pindar melody. All the other pieces we

owe to the last decade of the 19th century. There is the fragment from Euripides' *Orestes*, preserved on papyrus; and there are also the two Hymns to Apollo, apparently from the 2nd cent. B.C., which the excavations of the French at Delphi have brought to light; and, lastly, the only completely preserved piece, the Epitaph of Seikilos. All these are admirably brought together in von Jan's *Supplement*; the Seikilos song is given in facsimile in Möhler, *Geschichte*, p. 19.

The basis of the ancient Greek tone-system was the tetrachord, i.e. a succession of a semitone and two whole tones—*e f g a*; and there may have been an ancient sort of singing theme, which moved only within the compass of these notes—the tonic *a* and the dominant *e* (cf. the frequent recitative conclusion *a e* in modern music). The addition of a second similarly constructed tetrachord above it—*h c' d' e'*—gives rise to the Dorian octave *e-e'*. It corresponds to our A minor, for *a* is the tonic, and the Dorian octave therefore contains the notes for melodies which reach as far as a fifth above the tonic and a fourth below it. The key-note *a* is called μέση (the names of the notes are feminine, χορδή being understood); the lowest is the ὑπάτη (the idea of high and low is here apparently reversed; probably the designation is due to the position of the strings on certain old instruments); the highest, *e'*, in contrast to this, is called νήτη (= νεάτη, lit. 'the lowest'). The stringed instrument was held on the left side, so that the lowest string was farthest away from the body. As the tonic was the one which sounded most frequently and loudest, it was struck with the thumb; and then the index-finger came on the next lowest. This finger is called δ λιχανός (from λείχω, 'lick,' lit. 'licking finger'); and hence the note *g* itself is called ἡ λιχανός. The names of the remaining notes are simply derived from their position, the Dorian octave being named in this way:

$\begin{matrix} e & f & g & a & h & c & d & e' \\ \text{ὑπάτη} & \text{παρυπάτη} & \text{λιχανός} & \text{μέση} & \text{παραμέση} & \text{τρίτη} & \text{παρανήτη} & \text{νήτη} \\ & & & & \text{or} & & & \\ & & & & \text{παραμέσος} & & & \end{matrix}$

The upper tetrachord can also be added in such a way that the μέση is its starting note. Then it is called, not *h c' d' e'*, but *a b c' d'*. The two tetrachords are drawn so nearly together by this process that the two form only seven tones. From συνάπτω, 'join together,' the notes of this upper tetrachord are called the *συνημμένοι*, and in contrast to this the notes of the tetrachord first described are the *διεξευγμένοι*. The παραμέση drops out, *b* is called τρίτη, and so on. Thus, for example, the νήτη of the combined tetrachord is the same note as the παρανήτη of the other, namely *d*. By introducing the note *b*, they now made use of this tetrachord as a means of modulating from A minor to D minor. The Dorian octave was extended in both directions, a combined tetrachord *h-e*, the ὑπατοι, being added below (*e-a* are called, in contrast to this, the μέσοι); and similarly a combined *c'-a'*, the ὑπερβολαιοι, was added above. Now we have two complete octaves, with the exception of the note *a*; this is added and is therefore called the προσλαμβανόμενος. In this way the complete system of fifteen notes is formed—or eighteen rather, as the three notes of the combined tetrachord are usually added. In reality it consists of sixteen notes, two of which (*c'* and *d'*) have double signs; *a* is now really μέση, for it stands at the interval of an octave from the προσλαμβανόμενος as well as from the νήτη ὑπερβολαίων.

The Dorian octave *e-e'* is one of the seven possible sections from the infinitely continuous diatonic scale without chromatic signs. In our music there are only two of them in use, namely,

the (descending) minor scale *a'-a* and the major scale *e-c'*. In Greek music we find all the seven used. They are called the seven ἀρμονίαι, from ἀρμόζω, 'fit together,' because the combination of semitones and tones in each scale was in a different order. Coming downwards from *e* to *e'* of the Dorian scale, *d-d'* is called the Phrygian octave, *c-c'* the Lydian, *b* Mixolydian, *a* Hypodorian or Æolian, *g* Hypophrygian or Ionic (Iastic), and *f* Hypolydian. Thanks to Boethius, these names came to be used in the Church music of the Middle Ages, but, through a confusion, possibly due to the transference of the names to the transposition scales (see below), the Church notes are placed differently and in an inverted order:

	Ancient.	Middle Ages.
Dorian	<i>e'</i>	<i>d</i>
Phrygian	<i>d'</i>	<i>e</i>
Lydian	<i>c'</i>	<i>f</i>
Mixolydian	<i>h</i>	<i>g</i>
Hypodorian	<i>a</i>	<i>a</i>
Hypophrygian	<i>g</i>	<i>h</i>
Hypolydian	<i>f</i>	<i>c'</i>

(cf. Möhler, *Gesch.* p. 79 f.).

The position of the tonic in the Greek octaves is still an unsolved problem. If, as in the Dorian, it is to be looked for at the fourth stage from below, then, for example, the Phrygian would be a G major with a large seventh, the Lydian an F major with an exceedingly large fourth. Perhaps several octaves have the same tonic (as Dorian and Æolian, which at that time stood in the relation of authentic and plagal to each other), and differ only in the compass of the notes used in the melody. Probably the scales were originally accidental, i.e. they contained the tones of certain melodies which were well known in particular localities (hence the names), and not until some time later, when they were united in a system, were they conceived as essential, i.e. always depending on a fixed tonic.

Up to this point the basis of our examination has been the diatonic scale without chromatic signs. Now each of the seven octaves can be transposed to our scale of equal temperament of twelve semitones; thus arise the τρόποι, or transposition-scales, which are called likewise by the names Dorian, Phrygian, etc. If, in the octave *e-e'*, we raise *f* and *c* to *f#* and *c#*, we get a Phrygian octave, and if we also raise *g* and *d*, the Lydian is formed. To correspond to this Riemann composes the Lydian τρόπος like the scale with four sharps, and transcribes in C# minor the pieces handed down in this kind of scale. In all other writers we find them transcribed in D minor. For Bellermand and Fortlage, who started the investigation of Greek musical notation in 1847, regarded the Hypolydian octave (*f-f'* without signs) as the fundamental scale, and so related the transposition-scales to this octave that, for example, the Dorian τρόπος was fixed as B minor with five flats, for in this way *f-f'* gives a Dorian octave. Riemann (pp. 186, 193 f.) rejects this raising as groundless and misleading. The setting up of these scales presupposes a knowledge of tempered pitch. (Properly speaking, there could be only twelve, but they went far beyond the octave, and so Alypius counts fifteen specially-named τρόποι.) As a matter of fact, practical musicians made use of tempered pitch even in classical times, and Aristoxenus made it the basis of his theory, in opposition to the Pythagoreans, who contended from the speculative standpoint for the pure pitch.

With the seven ἀρμονίαι and the twelve τρόποι or τόνοι in diatonic succession the wealth of the Greek tone-system is not exhausted. The two inner notes of the tetrachord could always be lowered according to the character of the piece of music, and were therefore called the variables, in oppo-

sition to the two outside notes, which always formed a fourth. If the third note was lowered a semitone, there arose the series of $\frac{1}{2}$ tone $\frac{1}{2}$ tone $1\frac{1}{2}$ tone— $c f \sharp a$. This is the chromatic genus, in contrast to the diatonic. The third genus of tone was two enharmonic already mentioned, where two quarter-tones are followed by an interval of a third, $c f a$ — f now occupying the third place in the tetrachord. Besides these three genera, there were numerous intermediate gradations used by the virtuosi; and the fragments of music which have been preserved also show mixtures of chromatic and diatonic elements, about which the writers on theory give no information. We can see from the scales of Aristides (p. 21) that the scale-system was not so systematically complete in Plato's time as it appears later (cf. Laloy, in *RPh* xxiv. 31 f.).

MUSIC (Hebrew).—1. Origin.—Hebrew tradition ascribes the origin of music to Jubal, one of the three sons of Lamech. 'He was the father of all such as handle the harp and organ' (RV 'pipe,' Gn 4²¹). He had an elder brother Jabal, who is likewise described as 'the father of such as dwell in tents, and of such as have cattle' (v. 20). The close relation thus assigned to the fathers of the pastoral and the musical arts—they are represented as being born of the same mother, while Tubalcain, the first smith, was the son of the other wife of Lamech—witnesses to the belief that the origin of music is to be found among a people of pastoral habits. The shepherd playing on his pipe to call the sheep (Jg 5¹⁶ RV), or to beguile the tediousness of his watch, appeared to the Hebrew mind the earliest type of musician. Similarly the Greeks ascribed to Pan the invention of the syrinx. It may be that the inclusion in Cain's family-tree of the originator of the art of music indicates a tendency on the part of the compiler to view with disfavour the arts which had banished the severe simplicity of primitive times. But, if so, this is a view which, so far as music is concerned, finds no further expression in the Bible, where music is consistently regarded with favour as the natural utterance of the joy which fills the heart, and the fitting channel whereby the voice of man may convey to God his gratitude and devotion.

2. Music in rejoicing.—In the Bible the employment of music in connexion with religion is a later development. The first uses to which it was put

were secular, and in the social life of the people it played an important part. It was used on occasions of rejoicing. Victory in battle is celebrated in song (Ex 15^{1a}, Jg 5^{1a}). The women welcome the conqueror with music and dancing. So Miriam and the women celebrate the discomfiture of Pharaoh's host (Ex 15^{20a}), and Jephthah's daughter brings her fate upon herself, in consequence of her father's rash vow (Jg 11^{34a}). After his victory Jehoshaphat goes up to the Temple 'with psalteries and harps and trumpets' (2 Ch 20²³). At feasts and convivial meetings there were song and instrumental music (Is 5¹², Am 6⁵, Sir 32⁵⁻⁹), and, among the features which go to make up the happy life which Job grudges to the wicked, music is not forgotten (Job 21¹²). The merry-making at the vintage festival took the form of dance and song (Jg 9²⁷ 21²¹, Is 16¹⁰). One of the outstanding features in the marriage celebrations was the festal procession with music and dancing to the house of the bridegroom (1 Mac 9³⁷⁻³⁹). It was such a familiar sight that the very children in the markets used to imitate it in their sport (Mt 11¹⁷). To Jeremiah the ceasing from the streets of the voice of the bridegroom and of the bride is typical of the desolation which is to overtake the land (Jer 7³⁴ 16⁹ 25¹⁰). The long-lost son is welcomed home with music and dancing (Lk 15²³). It appears likewise to have been the custom on occasion to speed the parting guest with music (Gn 31²⁷). At any public ceremony, such as the coronation of the king, music played an important part (1 K 1⁴⁰, 2 K 11¹⁴). In all ranks of society it was esteemed. The king had his singers and instrumental performers (2 S 19³⁵, Ec 2⁸); the young men at the gates entertained themselves with music (La 5¹⁴); the shepherd lad had his lyre (1 S 16¹⁶); the harlot used song and playing to augment her blandishments (Is 23¹⁶); in the Exile the Jews used to take their lyres with them, as had doubtless been their wont at home, when they gathered together for social intercourse, though they had no heart to sing (Ps 137¹⁴).

3. Music in mourning.—But music was not employed only on joyful occasions. It had its place also in the ceremonial of mourning. The dirge was a recognized form of Hebrew poetry. It was sung in connexion with the obsequies. Jeremiah composed one for Josiah, which was sung by the singing men and the singing women (2 Ch 35²⁵), and David's lament over Saul and Jonathan has been preserved (2 S 1¹⁸⁻²⁷). It became the custom to employ professional mourners to bewail the dead. The lamentation began in the home (Mt 9²³), and was continued as the funeral procession marched with mournful music to the grave. Flutes are the only instruments of which we read in connexion with funerals (Mt 9²³). The use of music at funerals became so firmly established that, according to Maimonides, the poorest husband was expected to provide at least two flute-players and one mourning woman for the funeral of his wife (Comm. in *Mishnaïoth*, ch. 4).

4. Hebrew susceptibility to music.—Evidence of the susceptibility of the Hebrew temperament to music is supplied by the cases of Saul and Elisha. When Saul is troubled by an evil spirit, his melancholy is dispelled by the playing of David (1 S 16¹⁶⁻²³). When as a young man he meets the company of prophets working themselves up into an ecstasy by the music which accompanies them, Saul too is carried away and prophesies (1 S 10⁵). The same thing happened on a later occasion when he attempted to take David prisoner as he was dwelling in Naioth with Samuel and the prophets. The various messengers whom he sent were all overcome by the spirit and prophesied; and, when Saul himself came to

achieve the capture, he too was carried away (1 S 19²⁰⁻²⁴). There is no express mention of music in the latter passage; but doubtless this was the method by which the prophets produced that state of ecstasy suggested by the description of them as 'prophesying.' So, when Elisha desired to prophesy, he called for a minstrel, and by the aid of the music the hand of the Lord came upon him (2 K 3¹⁵).

5. Music in religious worship.—It was natural that an art which played such an important part in the social life of the people should have its place in religious worship. Of the history of its introduction in this connexion we have, however, no record. If we accept the account of Chronicles, then it is to David that is to be assigned the credit of making provision for the musical service of the Temple. But it is characteristic of the Chronicler to antedate the religious practices of his own day. So, however valuable his account as furnishing a picture of the Temple service in post-Exilic times, it is quite unreliable as evidence regarding the conditions in the first Temple. There is no mention of sacred singers or musicians in the Pentateuch, and it is hardly credible, if the musical service of the first Temple was in the highly organized state described in Chronicles, that no regulations regarding it should be laid down there. But, while we cannot accept the account in Chronicles of the elaborate arrangements made by David, that does not mean that the whole musical service was a post-Exilic development. There must have been a considerable musical staff in the first Temple, for we read of a body of singers, called the children of Asaph, in the list of those who returned from the Exile (Ezr 2⁴, Neh 7⁴⁴). These would be descendants of those who had held office before the fall of Jerusalem, for it is impossible that the organization of a staff of Temple musicians was the work of the Exile. From Am 5²³ and Is 30^{29, 32} we know that the use of music in connexion with religious worship was an established practice. Indeed, it is probable that the association extends much further back than the time of David. Among the ancient Hebrews there was not the sharp distinction between the sacred and the secular that obtains with us. Many of the social festivities with which music was associated had a certain religious significance. The great historical feasts which assumed such importance in the Jewish religion were originally rustic festivals to celebrate the more important agricultural events of the year. It is natural that the music which played such an important part in these social celebrations should have a place in the religious festivals which took their place. The dance and song which were features of these rustic festivals were retained in the religious procession, such as is described in connexion with the bringing up of the ark to Zion in 2 S 6. Thus, gradually and naturally, music was associated with religious celebrations. As these celebrations became more elaborate, the provision for the employment of music in connexion with them would become more complex. Whether David had any part in the organization of the musical arrangement in divine worship we cannot tell. In the book of Samuel he is described as a skilful player upon the lyre (1 S 16¹⁸), and in Am 6⁵ there is a reference to his invention of musical instruments (Nowack would read 'all kinds of songs' instead of 'instruments of song'). But there is nothing in the earlier historical books, with the exception of the two psalms attributed to him in the appendix to 2 Sam., to identify him with the David who figures in Chronicles as the founder of the Temple psalmody. The instruments of song which he invented, alluded to in Am 6⁵, are such as are in use at

banquets rather than those intended for worship. And there is a striking contrast between the scenes at the bringing up of the ark described in 2 Sam., where David danced and leapt before the ark, and the stately ceremonial on the same occasion described in Chronicles. It may very well be that David, an expert musician, interested himself in the wider use of music in religious services. But, if he did, we have no data upon which to come to a decision as to the extent and character of his work.

For the same reason we are unable to form any clear idea of what was the nature of the musical service in the first Temple. We may confidently assume that the musical staff would be on a very much more modest scale than Chronicles alleges. It has been thought by some that the people took a more active part in the musical service than in later times (Cheyne, *Origin of Psalter*, p. 194). But how far this participation extended, and what precisely was the nature of the musical side of the service, we have no means of determining. With regard to post-Exilic times our information is somewhat fuller. There was a large staff of Temple musicians. They were grouped together in guilds called by the name of the head of the family from whom they were descended—e.g., Asaph, Heman, Korah. The headings of many of the Psalms indicate that they are taken from the collection which bore the name of one of these guilds. Previous to the time of Ezra and Nehemiah the musicians were distinguished from the Levites (Schürer, *HJP* II. i. 271; art. 'Priests and Levites,' in *HDB* iv. 92^b), but from this time onwards they were included among them. Their particular function was to accompany the daily burnt-offering and other parts of the service with song and instrumental music. To what extent the people joined in the musical service is uncertain. Probably their participation, in later times at any rate, was restricted to occasional responses such as 'Amen,' 'Hallelujah' (1 Ch 16³⁸, Ps 106⁴⁸), 'For His mercy endureth for ever' (Ps 136; cf. Jer 33¹¹). The instruments generally used at the Temple service were the two stringed ones, the *kinnôr* and the *nebel*, of which a considerable number were employed in the Temple orchestra, and the cymbals, of which there was only one pair played by the conductor to mark the time. These instruments appear to have been supplemented on occasion by flutes (Is 30²⁹, Ps 5, superscription 'Upon Nehiloth,' which is taken by some to indicate accompaniment by flutes [see Delitzsch, *ad loc.*]). There likewise fall to be included in the list of instruments used in worship the trumpets, which were played, not by the Levites, but by the priests. They were used at the daily offering and other parts of the service, and were likewise sounded from the roof of the Temple to announce the dawn of the Sabbath (Josephus, *BJ* iv. ix. 12). According to the account given in 1 Ch 15^{16st}, the singers played their own accompaniment, whereas in Ps 68²⁵ the singers are distinguished from the instrumentalists, and march first in the procession. Perhaps the latter arrangement was a later development (Ewald, *Die Dichter des alten Bundes*, Ia. 212). From the descriptions given of the dedication of the Temple (2 Ch 7⁶), and of the consecration of it after its cleansing by Hezekiah (2 Ch 29²⁵⁻³⁰), it appears that the singing and the instrumental performance by the Levites and the blowing of the trumpets by the priests all took place simultaneously. But in the second Temple the blowing of the trumpets, at any rate, did not accompany but succeeded the performance by the choir and musicians. There have even been some who maintain that the instruments did not accompany the voices at all, but played interludes at pauses in the singing by

the choir, and that the word 'Selah,' which occurs occasionally in the Psalms, indicates that the instrumental interlude should here begin (so Diestel, in Schenkel's *Bibel-Lexikon*, iv. 260 f.). To take the word 'Selah' as a sign for some kind of instrumental interlude is perhaps the most satisfactory interpretation. But it does not follow that the instruments were entirely silent during the singing of the choir. They may have been supplying an accompaniment, and at the sign 'Selah' may have been meant to play alone, perhaps louder than previously. It is not likely that the instruments were restricted to these interludes in the singing. The Hebrews had little knowledge of music save as an accompaniment to the voice. Musical instruments were to them pre-eminently 'instruments of song' (1 Ch 16⁴², 2 Ch 7⁶ 34¹², Am 6³, Neh 12²⁷).

It is a point of dispute whether there were any women among the Temple musical staff. One or two passages seem to favour the positive. Ezr 2⁶⁵ and Neh 7⁶⁷ speak of singing women among the returned exiles. According to 1 Ch 25⁴, Heman had three daughters who with their brothers were instructed for song in the house of the Lord. And in Ps 68²⁵ the damsels with timbrels are described as taking their place among the singers and players. But it is not said in Ezr 2⁶⁵ and Neh 7⁶⁷ that the female singers there mentioned belonged to the Temple musicians, who have already been mentioned earlier in these chapters. And the verse in Ps 68 describes, not a Temple service, but a religious procession. This leaves only the reference to the daughters of Heman. In view of the general tendency of the post-Exilic cultus to exclude women from office, we should require fuller evidence to convince us of the fact that they had any recognized place on the musical staff of the second Temple.

6. Character of Hebrew music.—We have no data upon which to base any conclusions as to the essential character of the music of the Hebrews. We do not know, e.g., what was the nature of the scale or scales which it employed, or what the structure of its melodies. The Hebrews do not appear to have had any system of musical notation.

It has been suggested that we may find such notation in the Hebrew accents; but there is no evidence that these had any musical significance, or served any other than a rhetorical purpose (cf. Forkel, *Gesch. der Musik*, i. 152 ff.). Some of the superscriptions of the Psalms appear to contain musical directions, and, were we certain of their significance, we might get more insight into the character of Hebrew music. For instance, some have thought to find in the direction 'Upon Sheminith' (Pss 6. 12, 1 Ch 15²¹), which they translate 'in the octave,' proof that the Hebrews had, like ourselves, a scale of seven steps. That translation might be accepted, were we satisfied on other grounds of the employment of such a scale among the Hebrews. But, apart from independent proof, it is quite unjustifiable to assign this interpretation to the phrase, and base upon it a conclusion as to the nature of the Hebrew scale. The words might mean various other things—e.g., the kind of instrument to be employed, one with eight strings, or the musical mode to be chosen, the eighth. Probably there were various modes in use among the Hebrews, as with the Greeks. Some of the other superscriptions have been taken as indicating that a certain mode is to be employed—e.g., Pss 8. 81. 84, 'Upon Gittith,' which may be a mode called after Gath (Ewald, *op. cit.* p. 223), Ps 9, 'Upon Muth-labben,' Ps 56, 'Upon Jonath-elem-rechokim,' Ps 57, etc., 'Al-taschith,' in which cases we seem to have the opening words of songs which indicate either the melody or the mode to be employed. But the whole question of the superscriptions of

the Psalms is very obscure, and there is so little unanimity among scholars as to their significance that we can draw no conclusions from them as to the character of Hebrew music. From what we know of the music of kindred peoples we shall probably not be far wrong in concluding that Hebrew song was more or less a kind of musical declamation to a chant consisting of a few notes within moderate compass, the accompanying instruments being employed mainly in marking the rhythm. There is no evidence that the Hebrews had any knowledge of harmony. Their musical performances, both vocal and instrumental, would be all in unison. Some would cite 2 Ch 5¹³, 'the trumpeters and singers were as one, to make one sound to be heard,' as direct evidence to this effect. One might as well assign a technical musical significance to Chaucer's description of the singing of the birds, 'al of oon accorde.' The phrases in Chronicles are designed to indicate the unanimity of the performance. To regard them as proof of unison performance in the technical sense is to attribute to the writer an acquaintance with harmony, while at the same time we quote his words to prove that Hebrew music had no harmony. Probably the Temple music was, at first, at any rate, of a very noisy character. The root idea of the Hebrew verb 'to praise,' from which the word for 'psalm' is derived, is 'to make a noise,' and Cheyne finds a hint of 'the humble origin of the Hebrew *t'hillah*' ('psalm') in the shouting of the Arabs as they enter the sanctuary (*op. cit.* pp. 194, 460). To make a loud noise to Jahweh appears to have been the prominent feature in the Hebrew conception of praise. In La 2⁷ the noise made by the Chaldean soldiery in the Temple is compared to the sound of the worshippers at some festival.

7. Musical instruments.—The Hebrews had a variety of musical instruments. Almost no information is given in the Bible as to their construction or use, nor have any contemporary representations of them been preserved. But there are many such representations of the instruments in use among the neighbouring Oriental peoples to be found among the Egyptian, Assyrian, and Babylonian monuments, and we may safely assume that the instruments of the Hebrews were not essentially different. The instruments mentioned in the Bible fall into three groups: (i.) instruments of percussion, (ii.) wind instruments, and (iii.) stringed instruments.

i. INSTRUMENTS OF PERCUSSION.—These mark the rhythm, and would probably be first in the order of development, the rhythmical element in music being the feature which makes the strongest appeal to the primitive mind. The following are the instruments of percussion mentioned in the OT.

(a) The *tōph* (תוף, 'tabret' or 'timbrel,' LXX *τύμπανον*), a kind of hand-drum formed of a frame of wood with a piece of skin stretched over it. The usual shape is circular, but occasionally on the monuments we meet with a square shape also. It was struck with the back of the hand or with the fingers, and was usually played by women. It was employed on occasions of rejoicing, and served to mark the rhythm for song or dance, or for the other instruments. It does not appear to have been used in the Temple worship, but in religious processions it had its place (2 S 6⁵, Ps 68²⁵ 149³).

(b) The *mēsillatim* (מְסִילִים) or *selselim* (סִלְסִלִים), a term which occurs only in 2 S 6⁵, Ps 150⁵, 'cymbals,' LXX *κύμβαλα*. These were made of brass (1 Ch 15¹⁰) and were similar in shape to those in use among ourselves. They were reserved chiefly for religious purposes, and were used in the Temple worship by

the conductor to give the beat to the performers (1 Ch 15¹⁹ 16⁵). In Ps 150⁵ some have thought to find in the twofold designation of the cymbals (*šilšēl-shāma*, *šilšēl-thēru'ah*, 'loud cymbals,' 'high sounding cymbals,' AV) a distinction between two different kinds of instrument, regarding the former as castanets and the latter as ordinary cymbals. But it is questionable whether the distinction is more than a rhetorical device, and, even if this be not the case, whether *šilšēl-shāma* is a fitting designation of castanets.

(c) The *mēnā'anīm* (מְנַאֲנִים), which are mentioned in 2 S 6⁵, rendered 'cornets' in AV, 'castanets' in RV, and in RV marg. properly *sistra*. The *sistrum* was a kind of rattle, consisting of a handle supporting an oval metal frame, through which ran a number of cross bars with projecting ends, upon which rings of metal were placed. When the instrument was shaken, these rings jangled. The *sistrum* was derived from Egypt, where it was used in the worship of Isis.

(d) The *shālīshīm* (שָׁלִישִׁים). We meet with this term only in 1 S 18⁶. What instrument is meant is uncertain. AV and RV render merely 'instruments of music,' AV marg. 'three-stringed instruments,' RV marg. 'triangles or three-stringed instruments,' LXX κύμβαλα. The etymology suggests an instrument in triangular form, but whether a small triangular harp similar to the Greek *τρίγωνον* or a triangle such as we still have in our orchestras is uncertain. There is no representation of the triangle as an instrument of percussion in the ancient Oriental monuments.

ii. WIND INSTRUMENTS.—(a) The *hālāl* (הָלַל) or 'flute.' We meet with several varieties of flute on the ancient monuments, single flutes, double flutes, flutes with mouth-pieces, cross-flutes, flutes varying in length and in the number of the finger-holes. We have no means of deciding which of these were in use among the Hebrews. The flute was employed by them on various occasions: at feasts (Is 5¹²), at marriages (1 Mac 3⁴⁵), on occasions of mourning (Jer 48³⁸, Mt 9²³; Josephus, *BJ* III. ix. 5), in religious processions (1 K 1⁴⁰, Is 30²⁹). There is difference of opinion as to whether flutes were employed in the Temple service in OT times. If *nēhīlōth* in the superscription of Ps 5 be, as maintained by some recent commentators, another term for flutes, this would be strong evidence as to their use. But the interpretation of the term is very obscure. By the time of the Talmud, at any rate, they had a recognized place in the daily service. On twelve days in the year a flute was played before the altar to accompany the singing of the Hallel.

(b) The *ugāb* (עֻגָב). Some think that this term denotes 'wind instruments' in general. Where it is taken as signifying one instrument in particular, opinion is divided between the 'bagpipe' and the 'syrinx.' We meet with these two instruments in the list given in Dn 3⁵, the *šumphōniāh* (שֻׁמְפוֹנִיָּה, AV 'dulcimer') being generally taken to be the bagpipe, and the *mashrōkīthā* (מַשְׁרוֹקִיתָה, AV 'flute') the syrx or Pan-pipe. Neither of these instruments is mentioned in connexion with religious worship.

(c) The *shōphār* (שׁוֹפָר) or *keren* (קֶרֶן), 'horn,' was made of a ram's horn, and hence was crooked in shape, though in later times it appears to have been straightened. Its loud tone made it useful for giving signals. Thus it was used in war to summon the army (Jg 3²⁷), to give the signal of attack (Job 39²⁴) or of withdrawal (2 S 2²⁸), to announce important events—e.g., the ascension of the king (1 K 1³⁹), the approach of danger (Am 3⁶), the beginning of the year of Jubilee (Lv 25⁹), the New Year festival on the first day of the seventh month (Lv 23²⁴). The blowing of the *shōphār* on New Year's Day still remains an outstanding feature of the celebration in the Jewish Synagogue.

(d) The *hāšōšērah* (חֲשׁוֹשֶׁרֶת), 'trumpet,' is described by Josephus (*Ant.* III. xii. 6). It was made of metal, was not quite a cubit long, somewhat thicker than a flute, widening at the mouth to receive the breath, and bell-shaped at the lower end like the war trumpet. Like the *shōphār*, it was occasionally used to give the alarm (2 K 11¹⁴). It is seldom mentioned in the earlier history, but in later times it was appropriated to ecclesiastical use, and the blowing of it became the exclusive privilege of the priests. Trumpets were usually played by themselves, though occasionally we find them combined with other instruments (2 Ch 5¹²). Blasts of the trumpets were intercalated at various points in the daily service.

iii. STRINGED INSTRUMENTS.—Throughout the OT, with the exception of the book of Daniel, only two stringed instruments are mentioned, the *kinnōr* (כִּנּוֹר) and the *nebel* (נֶבֶל). In ancient times stringed instruments were played either with the hand or with a plectrum, the use of the bow being as yet unknown. We read of the *kinnōr* being played with the hand (1 S 16²³ 18¹⁰ 19⁹), and there is no express mention of the plectrum in the OT. But we are hardly justified in concluding that it was not in use among the Hebrews. The frame of the instruments was made of wood, and the string of gut, sometimes of twisted thread. The stringed instruments were those most generally in use among the Hebrews. Their music was of a bright character, and we find them present on occasions of festivity, at feasts (Is 5¹²), at domestic celebrations (Gn 31²⁷), at festal processions (1 S 10⁵, 2 S 6⁵), and the like. On occasions of mourning the sound of their music is silent (Is 14¹¹, La 5⁴, Job 30³¹). In their grief the exiles in Babylon hang their lyres on the willow trees (Ps 137³). Stringed instruments were used chiefly to accompany singing (1 K 10¹²). Hence they played a most important part in the music of the Temple, constituting, in fact, the main body of the orchestra (1 Ch 16⁶, Ps 33² 57⁸ 150⁴ etc.). Of the two instruments the *kinnōr* appears to have been the more popular. It was in the hands of all classes. The shepherd lad played upon it (1 S 16¹⁶), the harlot sang her songs to it (Is 23¹⁶), it was used on occasions of merry-making (Job 21¹²), mingling with joyful song and sound of the tabret (Gn 31²⁷). Scriptural allusions to the *nebel* mostly refer to its use in religious worship. But we do occasionally meet with it in scenes of revelry (Is 5¹², Am 6⁵). Whether the prophetic denunciations of such convivialities are to be taken as implying a reproof for the profanation of the sacred instrument (Weiss, *Die musikalischen Instrumente in den heiligen Schriften des AT*, p. 22; E. C. A. Riehm, *Handwörterbuch des biblischen Altertums*², Bielefeld, 1893-94, 1030ab) is open to doubt.

We are not in a position to decide with certainty as to the shape and character of the *kinnōr* and the *nebel*. *Kinnōr* (AV and RV 'harp') is usually rendered by the LXX *κithára* or *κινύρα*, on five occasions by *ψαλτήριον*, and once by *ὄργανον*. *Nebel* (AV and RV usually 'psaltery,' occasionally 'viol,' Is 5¹² RV 'lute') appears as *νάβλα* in certain books and as *ψαλτήριον* (once *ψαλύς*) in others. If the evidence of the LXX is of any weight, then we must regard the *kinnōr* as a kind of lyre. According to Josephus (*Ant.* VII. xii. 3), the *κινύρα* is a ten-stringed instrument with twelve notes, played with the fingers. It is expressly stated in the book of Samuel that David played the *kinnōr* with the hand. It is perhaps pressing the language unduly to insist that he did not use a plectrum (see editor's note, Wellhausen, in *PB*, 'Psalms,' p. 223). Whether Josephus is right or not in his contention as to the use of the fingers for the *kinnōr*, his statement regarding the number of

strings of the *nebel* is not in accordance with Ps 33² 92³ 144⁹, where we read of a ten-stringed *nebel*. The Greek and Latin Fathers find the distinction between *kinnōr* and *nebel* in the position of the resonance-box, in the former beneath and in the latter above the strings. This description of the *kinnōr* would apply to instruments of the lute family as well as of the lyro, the resonance-box in both types of instrument being beneath the strings. But against the identification of the *kinnōr* with the lute may be urged the fact that there is no evidence on the monuments of the use of the latter instrument among Semitic peoples, and the unlikelihood of Greek writers who were familiar with the *κithάρα*, or lyre, using the term to designate an instrument of an entirely different character. If we regard the *kinnōr* as an instrument of the lyro type, it is probable that the *nebel* was a kind of harp. We read of its being played as one marched along. It must then have been much smaller than the harp represented on the Egyptian monuments, which one played kneeling or standing. There is an Assyrian harp seen on the bas-reliefs which we may well conceive to have been somewhat similar to the Hebrew *nebel*. It is triangular in shape; above there is a curved frame which acts as the resonance-box, and below there is a horizontal bar or bridge, between which and the upper frame the strings are stretched. It is played with both hands without a plectrum. As we have said, we have no certain evidence upon which to base in attempting the identification of the two stringed instruments familiar to the Hebrews; but, if we are to decide upon any at all, we incline to instruments of the lyre and the harp type.

In addition to the stringed instruments to which we have referred, there is another mentioned in Dn 3³, the *sabbekkhā* (שַׁבְּכָה, LXX σαββύκη, AV and RV 'sackbut'). The sackbut was a kind of trombone, but the *sabbekkhā*, if we are to identify it with the Greek σαββύκη, was a stringed instrument introduced into Greece from the East. It appears to have been a small harp, not unlike the *τρυβανον* in shape and tone, and among the Greeks it was generally played by Oriental women.

LITERATURE.—A full list of the older literature will be found in J. N. Forkel, *Allgemeine Geschichte der Musik*, Leipzig, 1783–1801, I. 173 ff. In addition to the articles on the subject in the histories of music, the text-books on Hebrew archaeology, and the Bible dictionaries, the following may be mentioned: J. L. Saalschütz, *Geschichte und Würdigung der Musik bei den alten Hebräern*, Berlin, 1829; G. H. A. von Ewald, *Die Dichter des alten Bundes*, Göttingen, 1835 ff., I. 209 ff.; F. Deltzsch, *Physiologie und Musik*, Leipzig, 1868, *Bibl. Comm. über den Psalmen*, do. 1883, p. 25 ff., Eng. tr., London, 1887–89, I. 39 ff.; H. Graetz, 'Die Tempel-psalmen', *Monatshefte*, 1878, pp. 217–222, 'Die musikalischen Instrumente im Jerusalemlischen Tempel und der musikalische Chor der Leviten', *ib.*, 1881, pp. 241–259; E. Schürer, *HJP* II. i. 270 ff.; J. Weiss, *Die musikalischen Instrumente in den heiligen Schriften des Alten Testaments*, Graz, 1895; J. Wellhausen, Appendix on 'Music of the Ancient Hebrews', in *PE*, 'Psalms', London, 1898; J. Köberle, *Die Tempelänger im Alten Testament*, Erlangen, 1899; A. Büchler, 'Zur Geschichte der Tempelmusik und der Tempel-psalmen', *ZATW* XIX. [1899] 96–133, 329–344, XX. [1900] 97–135; T. K. Cheyne, *Origin of the Psalter* (BL, 1889), London, 1891; W. R. Smith, *OTJC*, do. 1892; J. Stainer, *Music of the Bible*, do. 1914.

G. WAUCHOPE STEWART.

MUSIC (Indian).—i. Introduction.—A great deal more is generally known of Hindu religion than of Hindu music. An account of the connexion between the two would be incomplete without an attempt to convey to the reader some idea of what Hindu music is.

The first thing one has to grasp is the immense antiquity of the art of music. The systems now flourishing in India and China have been transmitted without material change for so many centuries that we can point to no date as marking an advance or dividing one art period from another.

Of ancient Greek musical art the notation has been preserved, and we are able to piece together the actual scales upon which the music was founded. Beyond this, there are the writings of theorists, which do not always agree with one another, and a few relics in the shape of hymns with their notation. We can gather from the evidence available that the Greek and Hindu systems were elaborated on slightly divergent lines from a common source, and for that source we must look back far beyond the time when either Greek or Indian civilization came into existence.

A close parallel may be drawn between the theories of Aristoxenus (350–320 B.C.) and of Bharata, the earliest Hindu writer on music. Although the latter's treatise, the *Nāṭya Śāstra*, was written in the 5th cent. A.D., the system which it describes probably dates back many centuries before that time. Neither Aristoxenus nor the originator of Indian theory, whoever he may have been, could have had any accurate knowledge of partial tones. In attempting to formulate a classification of intervals they both took as their unit the smallest perceptible difference of pitch; to Aristoxenus this was known as the smallest enharmonic diesis, and to the theorist of India as the interval of one *śruti*. It is obvious that one cannot accept theories founded upon such a basis as literally accurate. The *śruti*, or diesis, cannot be regarded as a unit for the measurement of intervals. It is, however, a good working terminology to designate the just semitone as the interval of two *śrutis*, the minor tone as three *śrutis*, and the major tone as four *śrutis*. In drawing a marked distinction between the major tone and the minor tone the Indian theorist showed greater perspicacity than either Aristoxenus or Pythagoras. The Indian theorist had this advantage, however, that he confined his attention to the plain diatonic genus, instead of ranging over all possible 'colourings' of chromatic and enharmonic. Had the ancient theorists of Greece or India known of partial tones, they would have explained their intervals by working down from the greater to the less; as it is, we cannot be surprised at their attempting to synthesize them from the diesis or *śruti*.

2. Modes.—The world's earliest music was modal.

To obtain a rough idea as to what is meant by mode let us take a simple melody such as 'God save the King,' beginning on the note C with a pedal bass on the C an octave below, and play the air successively as modified by a key signature of one sharp, without sharps or flats, with one flat, two flats, three flats, four flats, and five flats. The result would be more in keeping with the mode in each case if suitable changes were made in the melody. It will be seen from this that every complete parent scale gives seven modes differing widely from one another in 'ethos.' If, instead of tempering the three chief major triads C E G, G B D, F A C, upon which the C major scale is based, we tune them in natural or just tuning, that is to say, without beats, we shall find that out of the five tones of the scale three are major and two minor. It will be found also that our parent scale can be made to assume four forms by varying the sequence of major and minor tones; the chief basis of the scale, the concord C E, will remain in every case; the three chords above-named will be present in some and absent in other forms of the scale.

With his usual thoroughness in point of classification, the Indian theorist noted these possibilities and grouped his parent scales under the category of *grāmas*. Let the figures 2, 3, and 4 denote the intervals of 2, 3, and 4 *śrutis*; the just major scale of Europe may then be represented thus:

C4 D3 E2 F4 G3 A4 B2 C.

Indian modes in which the sequence of intervals was in the same order as in the just major scale, that is, 4 3 2 4 3 4 2, or 3 2 4 3 4 2 4, or 2 4 3 4 2 4 3, etc., were said to be in the *madhyama grāma*. The other important *grāma* was the *śadja grāma* in which the order was 4 3 2 4 4 3 2, 3 2 4 4 3 2 4, etc. The corresponding C major scale would be

C4 D3 E2 F4 G4 A3 B2C. Here A is in tune not with F and C but with D.¹ The Indians did not regard the scales 3 4 2 3 4 2 and 3 4 2 3 4 2 as separate *grāmas*, as they could be formed chromatically from the *śaḍja* and *madhyama grāmas* (a chromatic change is effected by substituting 42 for 24). The Hindus use a tonic sol-fa system in which *sā, ri, ga, ma, pa, dha, ni, sā* take the place of *do, re, mi, fa, sol, la, si, do*, with this difference, that the same terminology is used whatever the mode may be.

Thus the bass note of the drone is always *sā*, and the second note of the mode is always sung as *ri*, whether it is a semitone, minor tone, or major tone above *sā*. To revert to our illustration of the formation of the modes by alteration of the key-signature, C would always be *sā*, and D, whether flat or natural, would still be *ri*. With a little careful study the table on p. 46 will give an idea of the scales of some of the representative modes of Indian music.

3. Main features of Indian music.—The musical instruments of ancient times, some of which have survived to the present day in India, were of poor tonal quality compared with those of modern Europe. The voice is usually accompanied by drums tuned to *sā*, and by the *tamburā*, a stringed instrument without frets, of rich and slightly nasal tone, which furnishes a drone consisting of *sā* and *pa*, or, occasionally, *sā* and *ma* if the mode requires it. The partial tones of this instrument are so powerful that it is a simple matter to sing the major third from the bass (known as *ga tīra*) in correct intonation. The four-*śruti ri* is also taken with the greatest of ease.

(a) *Rāgas and rāginīs*.—The Indian modes, owing to that genius for elaboration which the Hindu has shown in other arts, have been split up into a large number of melody-types known as *rāgas* and *rāginīs*. A *rāga* must begin with a certain note and end with a certain note, the melody must centre round a certain fixed note or pair of notes, certain well-defined melodic progressions must be prominently used, and the notes of the scale must be sounded in ascent and in descent according to fixed rules. The result is that composing a melody in a given *rāga* is like building a toy house out of bricks of a given pattern; improvisation is made easy. Each *rāga* has a specified time of the day at which it may be performed. Singers of the old-fashioned type are very strict on this point, and many are the traditions and superstitions which have gathered round the names of some of the *rāgas*. Thus the *rāga dipaka* (Skr. 'light' or 'illuminating') is not sung nowadays in Hindustan, as it is believed to entail terrible consequences to the singer. Hindu music, whether secular or religious, may be sung equally well by a Muhammadan or a Brāhman singer. If there is any difference of style perceptible, it may be said that the Muhammadan prefers music of a lighter as also of a more impassioned type, while the mood of the Hindu singer is more contemplative. The general feeling at a Hindu *jalsā*, or concert, favours music of a devotional or serious character.

(b) *Chants*.—The *sāman* chants of the Sāmaveda are the oldest extant music of the Hindus. The Hindu poet has always had at his disposal certain fixed chants or melodies which serve as moulds in which to fashion his song. Every metre has its own peculiar chant. Chants of this kind for religious hymns were known as *sāmans* and are mentioned in the Rīgveda. We may, therefore, conclude that the chants of the Sāmaveda are older than the Vedas themselves. We think that it can be demonstrated, however, that it is wrong to go further and regard the chant as the precursor of all music. The Sāmaveda gives directions as to rhythm corresponding closely with the practice of plain-song in Europe, coupled with signs to repre-

¹ A fifth to be in tune must contain 13 *śrutis*, and a fourth 9, a major third 7, and a minor third 6.

sent the *anudātta* ('not raised') and *svārīta* ('sounded'). More complete instructions are to be found in the *Brāhmaṇas* and in modern commentaries. It is quite clear that the chant made use of a complete tetrachord to represent the four chief positions of the voice known as *udātta* ('raised'), *anudātta* ('not raised'), *svārīta* ('sounded'), and *prachehāya* ('deep shadow,' precise meaning unknown, probably the same in pitch as the drum which invariably accompanies the chant). The intervals between the notes of this tetrachord and of other notes which may be added to it above and below are not now, and probably never were, rendered in the same manner throughout India. In this we can trace the workings of the 'Bharata mata' and 'Hanumant mata,' two rival schools of Indian music the origin of which is lost in antiquity. There is reason to believe that the musical systems of the 'Bharata mata' and 'Hanumant mata' were built up originally from pentatonic music.

4. Music and religion.—Hindu music is not merely the handmaid of religion, but an integral part thereof; it has grown up with the religion and has been subjected to the same influences. Thus the division into *rāgas* has its counterpart in the institution of castes, and *yoga* has affected music and religion alike. The Theosophical Society's treatise on *Thought-forms* (London, 1905) shows that there are people who entertain the belief that music has its mystical side, and that the impression which it conveys to the clairvoyant can best be described in terms of geometrical forms and ever-changing colour. For many centuries the belief has been held in India that each *rāga* has its appropriate picture. In old houses in Bengal a series of paintings of *rāgas* and *rāginīs* may frequently be seen adorning the walls, while numerous examples may be found in public and private collections outside India (cf. V. Smith, *Hist. of Fine Art in India and Ceylon*, Oxford, 1912).

Originally there were six *rāgas*, and each *rāga* had six *rāginīs*. Of the six *rāgas* five are said to have come from Śiva's mouth, and one from Pārvatī's. The names of the six *rāgas* are variously given; so far as can be ascertained, the Bengalis give the list as *bhairava* ('terrible'), *śrī* ('fortune,' 'beauty'), *megha* ('cloud'), *pañchama* ('fifth'), *vasanta* ('spring'), and *nāṭanārāyaṇa* ('dance of Viṣṇu'), while the musicians of Central India prefer *kauṭika* ('Kauṭika's *rāga*'), *hindola* ('swing'), and *dīpaka* ('light,' 'lamp') to the last three. It is worthy of note that of the nine *rāgas* named five are transilient and only four have complete scales of seven notes. The pictures of three of these *rāgas*—*śrī*, *nāṭanārāyaṇa*, and *bhairava*—are respectively the deities Lakṣmī, Viṣṇu, and Śiva. Lakṣmī is painted of a bright golden complexion, seated on a lotus, holding a lotus in one hand and a *chakra* (discus) in the other; Viṣṇu is repre-

NOTE.—The vertical columns marked 100, 200, etc., show the relative position of the twelve semitones of equal temperament.

sented as of dark complexion, dressed in yellow, holding in one hand a club, in another the conch-shell, in the third the *chakra*, and in the fourth the lotus; Śiva is represented as dancing while the universe is being destroyed, beating time on his *ṅṇḍima* (a small drum shaped like an hour-glass), and apprising humanity by a blast on his horn that destruction is not annihilation, but merely a prelude to a new birth. Other connexions between representations of Hindu gods and the art of music may here be conveniently noted. Śiva is often pictured holding a *tamburā*, the instrument the drone of which is identified with the mystic syllable *om* (q.v.), which is also believed to be inherent in Viṣṇu's conch-shell and in his rapidly spinning *chakra*. Sarasvatī is generally represented with the

Kinnara, from wall-painting.

vinā, and Kṛṣṇa carries the *murali*, or Indian flute. The accompanying illustrations taken from wall-paintings in the Buddhist caves at Ajanta (200 B.C. to A.D. 600) show the conch and the *murali*.

5. **Musical knowledge.**—Until recent times the knowledge of music was strictly confined to hereditary musicians. In order that the *rāgas* should be kept pure, singers were taught to reverence them and to contemplate with closed eyes the picture of the *rāga* before attempting to sing it; and special short compositions were learnt by heart in which the distinguishing features of the *rāgas* were made

Wall-painting, Cave II.

plain. Any one desirous at the present day of ascertaining the correct features of any *rāga* would turn to the *dhruvāda*,¹ the subject of which is invariably taken from the philosophy or the epics.

Latterly a change has come over the scene. As British sway has been extended, Court singers have been compelled to seek a livelihood in the native States which remain, or to lose touch with their old traditions. The general awakening of India has led to a desire on the part of the public for tuition in singing and playing. Musical education has been thrown open to the public and secularized, but the secrets of the 'Bharata māta' tuning have been withheld. Many Indian scholars have sought to grasp the problem of Indian musical theory, but with the means at their disposal it was impossible that they should succeed. In the British India of to-day many musical academies flourish, whose professors are entirely ignorant of the theory which they try to teach, and which grind out pupils who spread all over the land the vogue of the European harmonium, sometimes tuned in equal temperament, but often with no more tuning than is given by the graduated length of the vibrators as they come untouched from the hands of the manufacturers. On the Bombay side the popularity of the *saṅgīt* drama has further debased the music of this ancient land.

6. **Musical performances.**—Among religious and musical performances of a popular character at the present time may be mentioned the *kīrtan*, the *kathā*, the *bhajan*, and the chanting of the *Purāṇas*. The *kīrtan* in Bengal is generally confined to Kṛṣṇa and his amours, the performance being a combination of singing and chanting, generally accompanied by a drum. On the Bombay side no distinction is generally observed between the *kīrtan* and the *kathā*. The *kathēkārī* marks the time with two pieces of bamboo held between his fingers and clicked together; he marches up and down as he sings; he has a prompter to help him, and is accompanied by a drum mounted on a stand and of late years by the harmonium. His subjects are taken from the *Mahābhārata* and the *Rāmāyaṇa*. The performance is held in the courtyard of a temple and is attended by people of both sexes, to whom the *kathēkārī* explains his meaning between the verses of his song. The *bhajan* differs more in method than in form from the *kīrtan* or *kathā*. It may

¹ For derivation and meaning see Fox Strangways, *The Music of Hindostan*, p. 286.

deal with any devotional subject, and is generally sung by several persons in unison, and the audience are encouraged to join in. There is no explanation between the verses. All these forms of religious song are generally simple, i.e. of the hymn type. Occasionally a *kirtan* singer will indulge in free fantasia (*karana*) in the middle of the hymn. When the *Purānas* are recited, the reciter sits on a plank with the *tulsi*-pedestal in front of him, upon which he places his sacred books. The performance begins with an invocation and a short period of contemplation; the *paurāṇik* then gives out his subject, and both recitation and explanation are thenceforth chanted. In some parts, such as Bengal, the *paurāṇik* has a drum behind him and blows occasionally upon a conch-shell.

Performances which take one back to pre-Aryan times are not unknown. The *gambhīrā* of Bengal is a dance and song in which topical subjects are dealt with, and which appears to be connected with the worship of evil spirits. Among the lower classes there is an annual ceremony at which, after a period of silence and contemplation, one of the assembly becomes inspired. He is called the *gājan sannyās*, and upon him devolves the duty of singing the *gājan* song, which is similar to the *gambhīrā*.

Bengal differs from the rest of India in stereotyping certain tunes according to the manner of Europe. The usual Indian custom is to keep the *rāga*, or melody-type, permanent, but to allow the feeling or caprice of the moment full play in the matter of the actual details of the melody. One Bengali tune is known as 'Bāñl'; it is sung by a special class of ascetics, and its burden is the transitory nature of human life. The tune, 'Rāmp-rasādi,' another favourite in praise of Durgā Devī, was composed in the 18th cent. by a devotee of the goddess named Rāmp-rasād.

To turn from the religious to the ethical aspect of the subject, it is to be observed that ballad singers and bards whose verses touch upon epic or historical and genealogical topics or draw lessons of a moral character from the facts of everyday life are known throughout the length and breadth of India. It

will be sufficient to describe a recent performance of Marāṭhī ballads, or *pawadas*. The performers consisted of a drummer, a player on the *chhatārī* (an instrument with one string which emits a drone), a cymbal player, a *jilkarī* (whose duty it is to fill the pauses with a prolonged 'ee' sound oscillating in quarter-tones above and below the note of the drone), and the chief performer, who sang the ballads, which were set to perfectly simple music. One of the ballads recounted the exploits of a famous robber who began his career of crime exasperated at the tyranny and dishonesty of the village *savehar* ('money-lender'). It suggests that extortion has been encouraged by a strong government which enforces the decrees of the civil courts, and that the Mārwarīs have become so filled with pride that they may be described as having grown three tufts of hair (*shendi*) on the crown of the head in place of one. Another ballad recalled to mind the fables of La Fontaine, and pointed the moral that a friend in need is a friend indeed.

That view of life which distinguishes between what is sacred and what is secular was altogether foreign to the India of yesterday. Religious observances accompanied the smallest details of daily life, and music and religion went hand in hand. Nowadays many parts of India are coming under the sway of commercialism, and as a sign of the change which has supervened we may instance the fact that the *sūtradhāra*'s invocation to the deity at the commencement of a drama is frequently omitted. The *sūtradhāra*, or professional dramatic singer, is indeed not often to be seen. Singing parts are given to ill-trained boys, and, to fortify or even drown their voices when it is necessary to disguise a defective knowledge of the scale, one or two harmoniums and a set of drums which are vigorously banged are placed in front of the stage.

Explanation of bhajans.—*Intonation.*—The correct intonation will be obtained on a keyed instrument by tuning the keys of C major and D flat major as just major keys.

Time.—The figures 1, 2, 3, 4 show the four parts of the measure. The chief beat is at 1, the medium at 2 and 4, and the weak (or silent beat) at 3. There is no secondary beat at the middle of the bar as in 2/4 time.

Rāga.—Both *bhajans* are in a corrupt form of *rāga*.

MUSIC (Japanese).—1. Origin and history.—Native Japanese music finds its origin in prehistoric, mythological times. According to tradition, the offended sun-goddess hid herself in a cave so that the world became dark; then myriads of the gods, seeking to propitiate her, enacted amusing scenes before the cave, and the goddess Uzume danced and sang. Dressed in strange fashion, and playing

on the cords of six bows, she danced to the time of her singing, so that all the gods burst into laughter and the floor of heaven shook. Thereupon the sun-goddess in wonder opened the door of her cavel, and the world again grew light.

Approaching the period of actual history, the first emperor, Jimmu, is said to have sung songs of his own composition for the consolation and cheer of his soldiers upon the field of battle, words and music alike being original.

In primitive times also there was a dance called *utagaki*, in which hundreds of men and women moved in ranks in time to music. Unlike many Western dances, the movement was slow and solemn, the dancers executing the figures singly, not in couples. A vestige of this dance may be found in the still extant *bon-odori* as performed in country districts.

In the reign of Kimméi (A.D. 560) and of Suiko (A.D. 612) Chinese music, *kuregaku*, was brought to Japan through Korea; and from that time both music and dancing increased in popularity. About A.D. 700 the court established an imperial bureau of music with an official and many subordinates, those connected with it numbering perhaps over four hundred.

The old indigenous music, called *ôuta*, continued to be used at all grave and serious meetings of the court; and the old songs, *kumemai* and *azuma mai*, were sung at the *Dai josai*, or great harvest festival, held upon an imperial accession to the throne, whilst Chinese and Korean music was associated with Buddhist ceremonies and services, and with the more private gatherings of the court circle.

In the reign of Shomu (about A.D. 724) Indian abtots came to Japan and introduced the music of India to such effect that the old native forms gradually gave place to the more delicate foreign styles; and the *saibara* songs, once popular only among the common people, became favourites in court circles as well.

From the reign of Enyu (A.D. 970) and Kwazan (A.D. 985) famous Japanese and Chinese poems became current as songs sung in irregular time; and from the reign of Goshirakawa (A.D. 1156) *imayô*, of more modern style, in $\frac{3}{4}$ time, became popular.

The music introduced from China and Korea, slightly modified to suit Japanese taste, was long used in the court and on occasions of ceremony, suffering at times the vicissitudes of fashion; and the musical profession came to be regarded as hereditary with the descendants of those Koreans who first brought it into the country. Even to the present era of Taishô more than ten musicians of the court are their descendants, and the late Empress Dowager was especially fond of this music, frequently summoning before her those skilled in its production.

2. Musical instruments. — The playing of the *biwa*, a four-stringed instrument resembling the violin, by blind men became a custom as far back as A.D. 984; and their singing of *heike*, war-stories of the Hôike family, began in the reign of Gotoba (A.D. 1184) and continued to be popular even until the latter part of the Meiji era.

During the Middle Ages popular entertainments among the peasant class included the playing of the flute and the drum, together with dancing, rope-walking, sword-swallowing, and fire-spitting. From these crude amusements may have originated the *dengaku* and the *sarugaku*, which a little later developed into the original forms of the *nôgaku* and the *yôkyoku*, which are still popular. In the performance of this music, drums, both large and small, long hand-drums beaten with the fingers, and the flute are used as an accompaniment to

song, the whole slightly resembling Western opera.

The *kyôgen*, developed from the more comic *sarugaku*, is associated with the more serious *nôgaku*. Both were popular in *samurai* families. At the beginning of the Meiji era, through the abolition of the Bushi class, these forms suffered decline; but by the middle of that era, through the patronage of the court, they recovered their standing, and are now much favoured both by the nobility and by the common people.

In modern times the music of the common people has been largely confined to the *samisen*, a three-stringed instrument developed in modification of a two-stringed instrument introduced from Loohoo Islands. Its resonance-box is made of cat-skin, and its strings can be pitched as in the violin, while a plectrum is used instead of a bow. It is easily played, and its timbre and tone are very clear and penetrating. It is the king of musical instruments in Japan. The *samisen* is not used in connexion with the *nôgaku*, but is the chief instrument in the rendering of *jôryû*, *nagauta*, *tokiwazu*, etc. A small *samisen*, called *kokyû*, was played with a bow; but its use is gradually being forgotten in spite of the fact that its tones were very sweet.

The *chikushigoto*, which is also called *koto* for short, is a sort of harp with thirteen silk strings over a large resonance-box. It is a development of the *koto* used in the classical music. Since about A.D. 1650, when a blind man named Yatsushirô composed dozens of new *koto* songs, this *chikushigoto* has been regarded as more refined and elegant than the *samisen*, and in consequence has been much used by the upper classes. Now, however, it holds a place of importance in the music of all classes.

3. Characteristics of Japanese music. — Japanese music may be roughly divided into two classes: classical and modern; the former is used in ceremonies of the court and the latter in more popular ways. Each consists of five tones; but, as there are some differences between ascending and descending intervals, flats and sharps occasionally occur, so that the actual number of tones is increased to six or seven.

The classic scale had its origin in China, and was introduced into Japan through Korea. It has two scales, called *ryo* and *ritsu*. The derivation of the *ryo* scale is not unlike that of the Pythagorean scale, and is as follows:

A sound produced by a long string of the length '1' is regarded as the fundamental tone, and a sound produced by $\frac{2}{3}$ 1 as the fifth, and that of $\frac{3}{4}$ 1 as the second. Thus, by starting from the fundamental tone the following scale will be obtained by raising it to the fifth and lowering the latter to its fourth and so on alternately.

1, 2, 3, 4, 5, 6, 7, 8.

Besides these five sounds, if we add $\frac{3}{2}$ 1, $\frac{4}{3}$ 1, which are occasionally used, we have seven sounds as follows:

1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

c, d, e . . . being given, we can make a comparison with the natural scale; but a difference of about one comma, as in the case of the Pythagorean scale, is found when we compare the vibrating number with the exact natural scale.

In a similar manner the *ritsu* scale is found to be

1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 99

stringed instrument, may be taken as an illustration.

The order of tuning is as follows:

Taking *e* as the fundamental tone and then descending to its fifth, *a* is fixed; from *a* the following *e* is fixed, and from *e* descending to its fourth *b* is fixed. These three tones can be exactly fixed, but the half-tone from *b* to *c* must be judged by ear only, and therefore it is hard to tell whether it is $\frac{11}{12}$ or $\frac{24}{25}$.

Westerners seeing this scale have often passed the hasty judgment that all modern Japanese music is based upon a minor scale (A minor in the diagram); but, when examined closely, the tonic is found to be never *a*, but in some tunes the melody ends in *e* and in others in *b*.

The music ending in *b* is an abnormal style. As among the ancient Greeks, it ends on the dominant instead of the tonic; but in homophonous music, as the tonic does not govern the harmony, this does not produce any peculiar impression. There

is difference of opinion concerning its scale, but Uyehara is probably right in the following:

(*∪* indicates a half-tone, — a whole tone, 0 the absence of tone).

The peculiarity of modern music is its recurring use of half-tones and of frequent modulations. Because of the modulations, the scale seems to consist of seven tones, but in reality there are only five, and the descending and ascending tones are the same as in the minor scale of Western music.

Ancient Japanese music was of course homophonous; but the music received from Korea and China, called *gagagu*, 'classical,' formed a harmonic orchestra, the instruments being the flute, the flute with reeds, fifteen pipes with reeds, the drum, the

An example of *ritsu* scale songs.

An example of modern scale songs.

long drum beaten on both sides, a metal instrument like a triangle, a four-stringed instrument like a violin, and an instrument with thirteen silk strings like a harp. It is interesting to note that they were able to tune those fifteen reeds to a uniform temperament.

Of course, this harmonic music was very primitive and simple. Japanese popular music is mostly homophonous, even when many different musical instruments are used together. Because of the absence of fixed keys, like those of the piano, there is no necessity for (musical) temperament. Even the *shakuhachi*, which has fixed holes, can be controlled by the fingers and lips, and pure tuning attained as with stringed instruments. In general, the Japanese seem to dislike tempered tuning.

Yet Western music has not been entirely rejected. Since the accession of the late emperor (1868) Western music has been adopted in the army and navy; and since 1882 the Department of Education and the Imperial Bureau of Music in the Household Department have included it. Thus it is coming to have an increasingly dominant influence. In view of the vulgar and immoral character of much Japanese popular music, since the beginning of the Meiji era music in the *ryo* and *ritsu* scales has been adopted in common education; and now the natural scale is coming to be used, so that it is possible that harmonic music will dominate in Japan; but, on the other hand, one cannot believe that the time will come when the people will abandon their old, popular music. As the music from China and India was received and gained a place by the more purely native type, so doubtless will the Western be received.

HANICHI MURAOKA.

MUSIC (Jewish).—Art is the means by which man seeks to interpret the aspirations of the mind to the senses. The Jews appear in history already barred off by their rigid iconoclasm from the expression of feeling through the pictorial and plastic arts, nor had they settled habitation or surplus resources long enough to find such expression through the allied art of architecture. There remained only for this people the sister arts of poetry and music, in each of which they have contributed much to the treasure-store of civilization. But, little as Hebrew poetry has diverged from the original field of its art—the expression of religious emotion—even less has Jewish music, the forms and style of which had crystallized before the Jews came under the influence of modern musical development. This development reaches back only a few centuries; and the Jews have touched it only since their release from the Ghettos.

For the Biblical period see **MUSIC (Hebrew)**. It is probable that Jewish music at first displayed little original characteristic, being merely a provincial variety of the general art which spread, as the survivals show, from the Hellenic region to Dravidian India. It is evident from such allusions as those of Ps 137 that the Jewish musicians had a reputation beyond their own borders. The traditions of the First Temple were revived in the Second, if on a more modest scale. It is from the Hasmonean and Herodian epochs that we derive the Talmudic traditions of Temple music. The *shôphâr*, the rude bugle of ram's horn, sounded in conjunction with the straight silver trumpets as a signal for the Temple routine as well as in the intervals (*selah*) of the Psalm with

the daily sacrifice, is obviously the same instrument as is still sounded by the Jews on the Day of Memorial each September. Under the cymbal-beat (which took the place of the later cheironomy and the modern baton) of Ben Arsa, the last conductor, a small orchestra, resembling modern combinations more than anything else in antiquity, accompanied the Levitical singers, in the unison, with an occasional much-repeated melodic figure on the larger harps. The only thing approaching instrumental solo music, besides the blasts of the trumpets and horns, was a wailing flute melody, played twelve days a year before the altar. The last leader and trainer of the Temple choir was Hogras, whose described technical procedure confirms what analogy indicates, that the singing was nasal, shrill, and full alternately of intricate graces and of sudden pressures on emphatic notes, to an extent which would deprive it of melodious significance for a Western ear.

Yet this was the primal source of the music of the Diaspora, for, as R. Joshua ben Hananiah, himself a Levite and a chorister, afterwards told, the choristers went in a body on certain occasions from the altar to a synagogue within the Temple precincts, and sang in both services. The Synagogue took over from the Temple the silence of the women worshippers, the unison of boys and men in the singing, and its character as a cantillation rather than a melody—features still differentiating the worship-music of the Jew from that of his Western Christian neighbour. The dispersal of the Temple musicians made little difference, since it had been deliberately arranged that the voices could give adequate rendition without instruments. Though in the earlier centuries of the Diaspora many endeavours were made to check the Jewish tendency to songful utterance, no attention was paid to this ascetic principle where worship was in question. In those earlier centuries a desire is already evident to enhance the importance of song in worship. The officiant was required to have a clear enunciation and a pleasant voice, and the voluntary assistance of good vocalists in leading the chanting is repeatedly recorded with high approval. In prayer proper, 'Amen' and similar responses were all that the congregants added, and this was in a loud exclamation, without regard to tune or time. But the praises were, on the contrary, deliberately sung, at first in a responsive antiphony, to a chant possessing easily-remembered melodic features, and afterwards more and more in general unison; and the same rendition was followed as other passages beyond the Psalms and the earliest hymns were added to the ritual.

The intonations of the officiant known as the *zoreh* ('reader'), *sheliach shibbur* ('emissary of the congregation'), and later as the *hazzan* ('overseer,' originally rather a warden or beadle), were not tuneful in the modern sense. Among the Jews the desire to read the Scripture publicly in the manner described in Neh 8¹ had early resulted in all the proceedings in synagogue and school alike being carried on in a form of musical declamation. Early Jewish music, like much of their ritual music still, was cantillation, vocal movements depending not upon the rhythm and sequence of the sounds chanted, but upon the rhythm and sequence of the syllables to which they are chanted. In consequence, characteristically Jewish music, however melodious it may appear when sung with a text, loses its melodic meaning when played on an instrument.

The first portion of this antique cantillation to take definite shape was the intonation traditionally utilized for the reading of the Scriptural lessons. This was due to the early acceptance of the dia-

critical signs attached to the Biblical text as the Massoretic accentuation. A master of the 3rd cent. deprecates the ingratitude towards the Giver of their voice of such as 'read [the Scripture] without tunefulness and repeat [the Mishna] without chanting' (Talm. Bab. *Mcgillāh*, 32a; *Pesikta Rabbathi*, ed. M. Friedmann, Vienna, 1880, p. 127a; *Yalkut*, *Proverbs*, 932 [ed. Zolkiew, 1858]). Even the Mishna itself had diacritical points added for the chant later on; and a MS so pointed was available in the 15th century. The Talmud and the Codes are still studied in the academies of Jewry with a sing-song intonation, which is found considerably to assist in the prosodic comprehension of the unpointed text. Some such prosody or accent (both, of course, meaning 'singing to speech') was found necessary by all the ancients before the introduction of punctuation; and, precisely as with the plain-song of the Church, private *memoriae technicae* developed in the synagogue into a set system of accentuation and of musical interpretation of the accents.

The musical interpretation of the three 'poetical' books (Job, Psalms, Proverbs) has been lost since the 14th cent., the congregational recital of the Psalms having eventually turned the frequent repetition of an identical verse-accentuation into a fixed melody steadily recurring. But the 'prose' Scriptures (the remaining books) were recited by an individual; and here the accents are still followed in each case. From a very early period a musical principle has flourished in Jewish music, no doubt derived from the Babylonian art, as it still survives in the *rāga* of India. This is the specific association of some model melodic phrase, some particular mode or scale-form especially, with each mental attitude or an occasion associated with such sympathy. Not only is this principle in action in the interpretation of the Biblical accents, the same signs being sung on a similar melodic outline though in a different key or mode according to the occasion, but it also determines the 'prayer-motives' (as the writer terms the outlines of melody developed in chanting the devotions), which differ in tonality rather than in tune. All this is so reminiscent of the musical theory and practice of E. Asia, in Greek mode, Perso-Arab scale, and Indian *rāga*, that the writer would trace it back to the Temple, and see in the 'headings' of the Psalms, not bold shots of the Massoretes at a meaning, but geographical names (as in the Greek system, instruments tuned on which were actually in use in the Temple) of the respective scales in which the chief musician was to lead the rise and fall of intonation. This rise and fall was still found designated by the teacher's finger (the Greek *χεῖρουργία*) when Petahiah of Regensburg visited Baghdād synagogues in the 12th cent., and it has been quite recently noticed among Yemen Jews.

The Hebrew accents, like the *neums* of the Church plain-song, appear to have been originally rough diagrams of this movement of the teacher's finger. A trope (brief melodic phrase) is chanted on the tone-syllable marked by the accent, and the general reciting-note carries on to the next accented syllable. Here and there tropes are strongly reminiscent of similar phrases used in church or mosque, but in all the traditional uses this feature is prominent, that the outline of the trope varies not, whether according to the book being read or the service at which it is read, while the tonality, the mode or scale-form employed, does so vary.

The same modal feeling appears in the *hazzanuth*, or intonation of the prayers by the officiant. Here not only the well-known modes of the Church plain-song usually called Gregorian are utilized, but also others surviving only in the Byzantine

and Armenian Churches, as well as the Hungarian-Wallachian gypsy melody and the Perso-Arab system. Another very characteristic difference is the style of florid melodious improvisation which embroiders the outline traditional motive with elaborated vocal agility. The outline motives themselves, like the cantillation of Scripture, may have taken shape about the commencement of the mediæval period. But the intricate vocalization, which well-nigh fatally overlaid Jewish music later on, developed in recent centuries among the Jews of N. Europe, isolated in their Ghettos from the artistic awakening of the Western world. Only the last generation has seen the great work of reformation executed by the scholarly men, learned in modern music as in traditional Hebrew lore, who made the introduction of choral numbers into the Jewish services possible. And the tasteless, excessively florid style is not yet extinct; it flourishes among the Jews of E. Europe even when they migrate to Britain or America; and it is this vocal gymnastic which finds a large sale as 'Hebrew' gramophone records, and so is presented to the general world as the typical Jewish music.

The manner in which the traditional 'motive' (usually the concluding phrase of a prayer leading into a benediction with congregational response) is amplified into *hazzanuth* depends on the custom of the locality and the powers of the officiant, who accommodates the traditional strain to the structure of each sentence by embroidering it with melismatic ornament as the text suggests an emphasis warranting departure from the continuous reciting-note. No two transcriptions of this most characteristic Jewish music will therefore coincide in anything beyond tonality and broad outline of melody, becoming at last identical only in the fixed closing phrase of the passage. In the cantillation of Scripture, on the contrary, the earliest transcription printed (in J. Reuchlin, *De Accentibus*, Hagenau, 1518, bk. iii. *ad fin.*), when divested of quaint harmonization and reversal avowedly added by the transcriber, is found identical with the latest now in use in the synagogues.

At the same time, it is evident that the contemporaneous musical fashion of the outer world has been constantly finding its echo within Jewry. The adoption of the neo-Hebraic poetry in hymns for Jewish worship from the earliest mediæval days provided material for the imitation by Jews, or often direct utilization, of the folk-song of their European neighbours. From the 9th cent. these borrowed airs began to find their way into the synagogue, where they are still preserved, often with a Jewish flavour added in transmission. Such transmission has been, until quite recently, entirely oral. First came the chants for versicles, often strikingly similar to Gregorian intonations; then more definitely tuneful short melodies, quite a number of which were adopted by the Jews in Spain before 1492 and are still deservedly treasured among their descendants. Tunes of the Minnesinger period came into Jewish music with the increasing neo-Hebraic hymns of the later Middle Ages. In the 11th cent. in Spain, and in the 15th in Germany, allusion is made to the wideness of the practice of singing Jewish hymns, in synagogue and at home, to the tunes of secular folk-songs, even as was similarly done for the music of the Mass. Among the Spanish Jews the Hebrew text chosen often reproduced the opening words of the secular song to the same tune, as when the air of 'Señora' was sung to the hymn commencing 'Shem Nora' ('Name Sublime'). This resembles the change of the German drinking song, 'Innsbruck! I must leave thee,' into the hymn, 'World! I soon must leave thee.' Indeed, the very first

secular song of the many which Luther adopted for the tune of a chorale had already been so utilized by the German Jews for their still most popular hymn. A considerable number of the tunes occasionally used for domestic hymns have the name of the original song recorded. Those used in synagogue are of greater antiquity or, if of recent composition, usually by Jews trained in modern music.

From the 16th cent. on, and to a certain extent still, until the Jewish immigrants into emancipated lands become acclimatized, the stream westward of escape from the obscurantist conditions of E. Europe has coloured Jewish music with tints which differentiate it greatly from that of the modern world at large. Aspirants for positions as *hazzan*, or precentor, travelled about from congregation to congregation, bringing new melodies, synagogal or domestic, and fortifying and unifying the older traditional material. They even re-uscitated ancient Temple features, the accompaniment of the tenor by lads' voices in unison, while a bass hummed a figured re-inforcement below, the tenor adding runs and turns and grace-notes lavishly, supporting his jaw with his hand behind his ear like a London costermonger, or getting striking effects by inserting his thumb in his mouth, as did Hogras in the Temple (Talm. Bab. Yômā, 386) or the singers on the Nineveh slab depicting the capture of Susa.

The first musician, in the modern sense, who worked in Jewish music was Salomo de' Rossi, one of a school of Jewish masters who succeeded each other at the court of Mantua from 1542 to 1628. Leo of Modena induced other Italian Rabbis to join in a pastoral advocating the introduction of mensurate and polyphonic music into the synagogues. But little progress was made elsewhere until the Jewish Renaissance burst in Germany in the early 19th century. The progress since made has been rapid, and the Jew now officially utilizes all the wealth of scientific vocal music that his neighbour uses. But not instrumental: the organ has been made the test between 'orthodox' and 'reform'; and the instrument which was once objected to in the early Church as a form of 'Judaizing' is now considered by traditionalist Jews to introduce a 'Christianizing' tone into their own worship. Not even in Scotland has the 'kist o' whistles' been so wrangled about. Not that instrumental music is itself objected to; at Jewish weddings it has for ages been deemed indispensable, and ingenious stratagems are recorded in the Middle Ages to secure it in face of prejudice and persecution. The objection is to the use of any instrument needing tuning on the Sabbath, and to the introduction into Jewish worship of tones specially associated with the ritual of another creed.

Around the marriage ceremonies and the family table gathers the vast repertory of tuneful hymns and tender intonations which outside the synagogue ritual constitute Jewish music.

Transcriptions of the cantillation by the grammarians have been many, from Reuchlin onwards. Writers of instrumental music have transcribed many a tender Jewish air, strains having been even selected as subjects for orchestral writing. The greatest popularity to music presumably Jewish, though actually only to a small extent so, was given by Byron's *Hebrew Melodies* (1815), written for application to such airs in imitation of Moore's immensely successful *Irish Melodies*. In every country of Europe and in America collections of Jewish music, traditional and original, have appeared from the pens of precentors and choir-masters. The greatest of these precentors was S. Sulzer (Vienna, 1804-90), and of these choir-

masters L. Lewandowski (Berlin, 1823-94). De Sola, Hast, and Mombach, of London, Naumbourg of Paris, Consolo of Florence, also deserve mention; and especially A. Baer of Gothenburg, whose presentation of traditional Jewish intonations (Frankfort, 1878 and 1883) is monumental. Specimens are more easily available in E. Paner's *Traditional Hebrew Melodies* (London, 1896).

Cohen, in *Anglo-Jewish Historical Exhibition Papers*, London, 1887, pp. 80-185, *Proc. Musical Association*, xix. [1893], and artt. 'Cantillation,' 'Music,' in *J.E.* F. L. COHEN.

MUSIC (Muhammadan).—I. The chant.—In considering the subject of Muhammadan music, the attention of the student must primarily be drawn to the Arabic chant-song. The Arabs, as far back as their system of singing is known, always delighted in rhythm rather than in melody, following no fanciful system of tone-beats, but the natural quantity of their own syllables, from which they built their metre.

This phenomenon becomes apparent at once, if, quite apart from music proper, the metre of such characteristic Arabic poetry as the following stanzas be examined:

'La 'dmuka lida'a fāuqa 'lardi bāgi
wama tilmā 'i hādim gāru qātin
wala mimma fādhu 'lāhu wāgi
wadhābun fāuqahu 'aqdu 'inīdgi.¹

Here the art of the poet has grouped together words which are naturally so accented as to carry a distinct, although to our ear slightly irregular, metre. It was most easy and natural to intone such poems as these, and it was from inherent accentuation of this character that the chant-songs of the Arabs, scant indeed in melody, but strong in rhythm, originated. Melody in Muhammadan chanting is purely secondary to the rhythm of the language, and was really used only to avoid a too constant monotony. This will be at once apparent to any one who listens to a Muslim chanting his Qur'ān. Thus, the first accented stanza of the *Fatḥa* (the first *sūrah* of the Qur'ān)² should be

I.³

¹ Extract from poems of Shaikh Nāṣif al-Yazīgi.

² 'In the name of God the Merciful and Gracious; thanks to God the Lord of worlds,' etc.

³ None of the following musical examples has been published before. These specimens with many others were collected by the writer from native singers and represent current musical style.

compared with the Yemeni cantillations (pls. I. and II.) in which, it will be observed, the voice-stress corresponds precisely with that of the spoken words as given above, while the melody—what there is of it—is strictly adapted to the natural accentuation.

The Arab, unlike the Turk and Persian, has no deep-rooted antipathy to monotony, which, coupled with the powerful metre of the Arabic language, tends to fascinate and almost to hypnotize rather than to weary the listener. The following *adhān* ('call to prayer') of the *muaddhins* of Yemen (pl. III.) will serve to illustrate how little the pure

III.

Ad libitum.

IV.

Ad libitum.

Arab cares for melodious variation. It will be noticed that the only departure from the monotony of the dominant tone is a roulade of five notes, from which the singer immediately hastens to return to the monotonous cantillation on the dominant. There are many airs to the *adhān*, differing according to locality, but they are all essentially identical in principle. The Baghdadī *adhān* (pl. IV.), given here, is perhaps a little less monotonous than the Yemeni call to prayer, and yet the same roulade, with only a slight variation, is heard in both these chants, and, in fact, is the prevailing form of variation in almost every *adhān* among the Muslim peoples, changes being made chiefly in the tempo of the roulade and occasionally in a chromatic. It should be noticed that the roulade always occurs on the stress syllable of the most important word. It is probable that this style of chant is much more ancient than Islām, and dates from the earlier polytheistic religious chant-songs of the Arabs.

2. The song proper. — Strictly speaking, the above specimens do not constitute Arab music in the true sense of the word. When Muhammad appeared in a vision to Dinawāri¹ and stated that music was an acceptable art, provided that the reading of the Qur'ān attended its performance, the intention was probably not to refer to mere cantillations like the above, but to genuine songs or musical declamations of poems. It is clear that implicit approval of beautiful singing is found in the Qur'ān, xxxi. 18: 'Verily, the least pleasing of voices is the voice of asses!' Furthermore, there are many allusions to real song-music in the interesting treatise of al-Ghazālī (D. B. Macdonald, *JRAS*, 1901, p. 200 ff.).² This Arabic author alludes to the importance of correct rhythm, referring with approval to the practice of beating time on the hand-drum. He also essays to derive music from the noises produced by animals, stating that the human throat is similar to the animal throat. It is quite evident that the better class of Arabic authors understood very well the effect of music on the human brain. Thus, Abu Sulaimān³ most astutely said that singing does not put into the heart what is not already in it, but merely stimulates to action what is already in the soul. Al-Ghazālī divides Arabian songs into seven categories, viz. (1) pilgrims' songs (religious); (2) war-songs, stimulating the faithful to holy warfare; (3) verses sung at the moment of attack, forbidden, however, to be sung in warfare with Muslims; (4) lamentations; (5) songs of joy; (6) love-songs; (7) songs expressive of religious ecstasy. With the characteristic Semitic tendency to classify, al-Ghazālī goes on to enumerate what is unlawful in connexion with musical performance, viz. pipes, stringed instruments, and the *kuba*⁴-drum. On the other hand, the tambourine, with or without bells, he regarded as perfectly permissible as an instrument of accompaniment. Blasphemous and obscene poetry was, of course, barred, and equally objectionable were verses describing the charms of any particular woman. Only descriptions of the most general nature were allowed, so that the listeners might apply such rhapsodies to their

¹ Dinawāri († 896) was the author of the *Long Narratives*, ed. V. Girgas, Leyden, 1888.

² Muḥammad ibn Muḥammad Abu Ḥāmid al-Ghazālī (1058-1111) was a distinguished Arabic philosopher and theologian. He was professor in the college of Nizām al-Mulk at Bagdad in 1091 and the author of about sixty-nine works (C. Brockelmann, *Geschichte der arabischen Litteratur*, i., Weimar, 1893, pp. 421-426, and D. B. Macdonald, 'The Life of al-Ghazālī,' in *JAOS* xx. [1899] 71-132).

³ Alluded to by al-Ghazālī; probably Abu Sulaimān al-Darānī of Syria, who developed the doctrine of gnosis (*ma'arifa*).

⁴ *Kuba* means 'cup,' 'bowl,' from the stem *kāb*. This must refer to some round pottery drum like the Egyptian *qarabaka*, distinct from the tambourine.

wives or permitted slave-girls, and not adulterously. The rule is also laid down that a faithful Muslim must not listen to any music at all, if he finds that it stirs up in him thoughts contrary to the moral precepts of the Qur'an. Unless the Muslim truly loves God, he must never listen to music, as this would in such a case be an additional danger to his soul. It is proper to add that all Arabic authorities were not of the opinion of al-Ghazālī as to the lawfulness of music. Thus, Mālik ibn Anas al-Himyārī al-Madānī¹ distinctly states that no music of any sort is permitted to the faithful; but al-Ghazālī (*op. cit.* pp. 244-250) replies at length to such puritanical strictures, and goes so far as to lay down rules for ecstasy caused by the hypnotic influence of the Arabic rhythm. Thus, he warns the ecstasies never to weep, tear their garments, or dance, unless they are irresistibly compelled so to do. A listener to music must never strain for ecstasy, but, so far as possible, exert self-control. Here it should be noted that the conventional prolonged exclamation *a-a-ah*, so often interspersed by appreciative or polite listeners between the stanzas of Arabic love-songs, is an unquestionable survival of the earlier habit of falling into ecstasy on hearing a ravishing verse.

The Egyptian-Arabic love-song here given (pl. V.) is an excellent illustration of the more extended melodious development of the song proper among the Arabic-speaking nations, as compared with the religious chant. The metre of these songs is sustained with extreme regularity throughout, supported by the hand-drum, or *darabūka*,

keeping up the incessant tempo

against which the metre of the song often runs in syncopation. This tempo is without doubt the parent of that of the modern Spanish Bolero dance.² Inasmuch as all the verbs are in the masculine form in such productions as that given in pl. V., there can be little doubt that the tradition is correct which states that this sort of song was originally addressed to boys who were kept for the purpose of sodomy. Such music was therefore particularly offensive to sincere Muslims, and would certainly come under the category stigmatized by al-Ghazālī, although there is nothing obscene in the words themselves. A deeply religious Yemeni, on hearing one of these love-songs, remarked to the writer of this article that the truly faithful could have nothing in common with music of this character, but should confine themselves to the traditional religious chants alone.³

It may be interesting at this point to give also a specimen of a Turkish love-song of the ordinary Perso-Turkish type (pl. VI.) as a contrast to the above distinctively metrical Arab production. The Turks, like the Persians, have permitted a more extended melody to develop, and do not as a rule accompany their songs with a drum, but with the flute-pipe or with strings. They very frequently, however, sing without any accompaniment at all, as their songs, which are more of the recitative type, do not require the support of a steady tempo.

Turkish songs from the interior, such as the Diarbekr productions, are more metrical in character and also more melodious from the European point of view—a fact which is no doubt due to the

¹ The founder of the Maliki school of canon law (718-795), a conservative and dignified legal authority (I. Goldziher, *Muhammedanische Studien*, Halle, 1889-90, ii. 213 ff.).

² The Bolero melody is in triple time and generally syncopated to the same metre as the above style of song.

³ Showing that the ancient rigidity of rule still persists among the stricter faithful.

Kurdish influence of the region. Kurdish songs show generally a well-marked melody, although of limited range, almost Arabian in its regular rhythm, which is, however, more apt to be in three beats, instead of the Arabian four or five time. Many of the higher class Persian melodies are beautiful, judged even according to European standards, as they often combine a tender melodious strain, almost always sad, with a well-marked metre.

3. Musical instruments.—The instruments used in Muhammadan music differ, of course, according to nationality. Among the Arabs proper, the most common instrument of percussion is the *tabla*, or tambourine drum. The Egyptians have used from time immemorial the *darabuka*,¹ or large pottery hand-drum, which, as indicated above, marks the chief rhythm of the song. They also use a smaller drum, which is trilled constantly with little sticks for the purpose of producing an unvarying support to the *darabuka* tempo-drum. In Tunis the *ṭap-deba* is almost identical with the *darabuka*, and they likewise have the tambourine, as well as *seqâseq*, or cymbals. The most purely Arabian wind instrument is the seven-holed simple flageolet-flute, which is a great favourite, in spite of the earlier denunciation of 'pipes.' Of the flute there are many varieties, such as the N. African *magrâme*, or double-pipe, the Tunisian *gasba*, or flageolet, etc. The most primitive Arabic stringed instruments are the two-stringed violin and the *ūd*, or lute, whence the European lute (= *al-ūd*) and its descendant the mandoline are derived. It is strange that stringed instruments as well as wind instruments should have been forbidden by the earlier religions opinion (see above), but this was probably because of the association of these instruments with irreligious subjects. At the present day the Muslim peoples use very generally the guitar and mandoline, and frequently the ordinary European violin. They also delight in a native zither (*qanûn*). It must be remembered that all these instruments were primarily employed to accompany song, and rarely, if ever, to play independent melodies. An apparent exception to this rule is the funeral dirge-air often played on flutes without song, especially on the N. African coast.

¹ Evidently identical with the *kuba* (see above, p. 54, note 4).

The exception is only apparent, however, because the instruments play what was originally a conventional death-wail sung by the mourners. The omission of the song may be due to European influence.

4. Notation.—The Muslims use the European system of notation, especially in the larger centres, but there still exists in many corners the old traditional Persian tonic sol-fa system, according to which the tones were indicated by well-established signs, each representing a note of the scale and each bearing both Persian and Arabic names, as follows:

do re mi fa sol la si
 Persian: *yek dâk sîk chahâr'k panj'k šek'k hæftak*
 Arabic: *qil mîd sîk mazmûm ramî ḥasîn saḥsîn*

In the Persian terms the numeral element *yek*, *dâk*, *sîk*, 'first, second, third (tone),' etc., plays the chief part, while the Arabic terminology employs only the Persian *sîk*, 'third tone,' making use of arbitrarily applied native descriptives for the others.¹ The higher fa-sol register is called *alîn*, 'high'; the middle register, fa-sol-la-si-do-re-mi, is known as *wasfî*, 'middle,' while the term for the lower, do-re-mi, is *sdala(i)* (cf. Ali al-Ghaonthi, *Treatise on Music* [Arabic], Tunis, 1904).²

5. Characteristics of singing.—The Arabic method of singing, like that of all the western Orientals, is to use head-tones as much as possible. Chest-tones, such as are cultivated in European music, are very objectionable, even to the better educated Arabic-speaking people, who, like their nearer Oriental neighbours, the Turks and Persians, have also the greatest detestation of harmony in any form. Deliberate flattening or sharpening often takes place, especially when a pathetic effect is sought. This has given rise to the statement that quarter-tones are of common occurrence in Arabic songs. While this is literally true, it is a variable quantity in their music, as the same singer will often sing a stanza with, e.g., a flattened roulade and then repeat the same roulade in the ordinary manner. In spite of these un-European characteristics, a well-balanced Arab chorus—for they sing in chorus whenever possible—chanting in unison and accompanied by strings, wood-wind, and percussion, has a powerful effect even on a European listener, provided that he is sufficiently unprejudiced to lay aside for the moment his harmonic training, and allow himself to be swayed by the quavering yet never-varying movement of the shrill, but rarely untrue, voices and instruments, sustained by the ceaseless thrum of the hand-drums.

LITERATURE.—Ahmed Effendi Amin, *Comparison between Arabic and European Musical Notation*, Bulaq, 1902; *JA*, 8th ser., no. 5, xviii. [1891] 278-355; *Traité des rapports musicaux*, tr. from Saif al-Din Abd al-Mumin Baghdadî's letter to Sharaf al-Din (cf. also *JA*, 8th ser., no. 5, xviii. 270-355); A. Christianowitsch, *Esquisse historique de la musique arabe aux temps anciens*, Cologne, 1863; 'M. Collangettes, 'Étude sur la musique arabe' (*JA*, 10th ser., no. 5, iv. [1905] 385, 422, and viii. [1906] 149-190); S. Daniel, *La Musique arabe, ses rapports avec la musique grecque et le chant grégorien*, Algiers, 1863 and 1870; Muhammad ibn Muhammad al-Ghazâlî, *Iḥyâ 'Ulûm ad-Dîn*, tr. D. B. Macdonald, 'Emotional Religion in Islâm as affected by Music and Singing,' in *JRAS*, 1901, pp. 195-252, 705-748, and 1902, pp. 1-23; Ibn Khaldûn, *Extrait sur la*

¹ The *k* in Persian *dâk*, *sîk*, etc., is probably not the diminutive *k*, seen, e.g., in *mardak*, 'little man,' but rather a shorter form of Persian *gah*, 'time.' An aged Turkish teacher of music named the sol-fa notes to the writer as follows: *ek-gyah*, *dâ-gyah*, *si-gyah*, etc., which can only mean 'one time, two times, three times,' etc., conventionally applied to the tone-names and their signs (*gyah* is the Turkish palatalized pronunciation of Persian *gah*). The Arabic names for the notes may be rendered as follows: *qil* really = 'the train of a garment' and here 'lower part'; *mîd* possibly = 'mover,' from *mîd*, 'agitate,' 'move'; *mazmûm*, from *zamma* or *damma*, probably means 'tied,' 'joined'; *ramî* = 'a quick going' (it can hardly be *ramî*, 'sand'); *ḥasîn* is the Persian form of the Arabic stem *ḥasana* and = 'beautiful'; *saḥsîn* is a variant of *ḥasîn* with preformative *sa*, dubious in meaning in this case.

² *Sa'ala(i)* means 'clear the throat,' 'cough,' and was hence applied to the bass register.

MUSIC (Slavic).—The Slavs have always been renowned for their music. As early as A.D. 591 the Byzantine historians record that among the Avar captives there were three Baltic Slavs, who were untrained to arms and were employed as professional players on the *gusli* (see below, p. 58^b). In the 10th cent. a band of Slav instrumentalists performed at the Byzantine court. The Arabian historians of the same epoch speak of a Slav seven-stringed instrument (probably the *gusli*); and mediæval Russian Chronicles abound in references to the musical tastes of the princes, differentiating between the ecclesiastical and the popular style.

A fresco of the year 1073 at Kiev represents Russian musicians, dressed much like Western troubadours, and playing flutes, long horns, cymbals, a guitar-shaped instrument (possibly the parent-form of the theorbo), and a seven-stringed harp or psalter. The musical profession ranked so high that in the mediæval ballads such a hero as Dobrynya Nikitič was not disgraced by assuming the disguise of a *skomordkh*,¹ or wandering minstrel.

Slav countries are surprisingly rich in popular song. Apart from the traditional festival hymns and melodies (some of these very ancient, and pagan in origin) current history has been related in the *Byliny*, and the verse orally conserved. This democratic historiography survived down to the Napolconic era.

Such popular song and melody were secular, often semi-pagan, and, as such, fervently persecuted by Church and State. Progressively with the decay of the South Russian civilization and Kievan State (13th to 14th cent.), the Eastern Church became more ascetic; and, under the Tatar ascendancy and after, the minstrels who had been honoured by the princes of Kiev ultimately became strolling vagabonds.

The northern plains, however, were too vast for persecution to be able to extirpate popular customs. In the 'fifties and sixties' of the 19th cent. the ancient folk-songs were diligently and exhaustively compiled.

The Church had her own school of music, derived from Byzantine models. In the late 15th cent., after the Tatars had been subdued, the Moscovite princes cultivated foreign arts; thus, in 1490, Iván III. summoned an organist to Moscow; Iván IV. greatly favoured German musicians; and his son Theodore was presented by the king of England with an organ, a clavichord, and skilled players.

The end of the 16th and the beginning of the 17th cent. brought Russia under Polish influence, and new Western instruments were introduced (such as the pandora, the theorbo, and the violin), as well as the Western pentaline system of notation. In the 15th cent. chamber-music was performed at the Polish and Moscovite courts; and Sigismund I. of Poland imported Italian music.

i. The characteristics of primitive music.—The genuine popular music of the Slavs is probably an independent outgrowth of Aryan folk-song, akin to Indian and Greek melody, but not identical nor borrowed.

¹ Probably derived from σκώμματος.

Melodic development apparently falls roughly into three periods. The octave is divided diatonically into the intervals of our modern scale—not according to the Pythagorean fifths or like the Oriental scale, which has seventeen intervals (made up by differentiating between the sharp of one note and the flat of the succeeding note).

All primitive music was designed as an indispensable accompaniment to ritual or epic verse; thus, such music is a *récitatif* that follows the metre and the words, rising and falling with the natural variations of the speaking voice, the tempo and rhythm being determined by the phrases out of which the verse is built up.

Our modern diatonic scale admits of majors and minors, and also of accidentals within the strict limits of the twelve admissible semitones, whereas ancient scales have no majors or minors. The ancient Greeks could modulate from one of their eight scales into any other; the primitive Russian Slav scale in each stage of development was invariable, exactly as no modern musician could introduce a third- or quarter-tone.

Music without words—music as an art *per se*—evolved only very late, after the Middle Ages; verse or poetry as an art *per se* very much earlier. Furthermore, in primitive melody the spoken phrase which governs the rhythm can move only within a limited compass, very much less than that of the voice—e.g., within a fourth or a fifth. The whole melody is very short and repeated without variation; it is unharmonized, and based on unharmonical intervals.

(a) *First period.*—The first period in folk-song, and the most barbarous, is based on the interval of the fourth upwards and fifth downwards, and comprises only whole tones. To this class Highland and Chinese music are said to belong. This has been called the period of the triachord, i.e., only three notes were available in each limit of the fourth or the fifth—e.g., C D F.‡

(b) *Second period.*—The second stage added some new notes to the octave, and is styled the period of the tetrachord—e.g., C D F G—or the fifth. Ancient Greek, primitive Slav, and mediæval Western European music are said to belong to it. The octave is divided C—F, F—C', C'—F'. The music may now rise a fifth, as well as sink a fifth. The melody still has to follow the words in rising or falling phrases within these limits. As yet the leading note has not come into vogue; and the characteristic scale of this epoch impresses the modern ear as an irregular minor scale. The music still being a *récitatif*, the rhythm and tempo have to be strictly adjusted to the metre of the words. At this point, therefore, a brief account of the metre must be interpolated.

On the one hand, the ancient Greek hexameter was a strictly regular quantitative four-beat, or, again, the iambus and the trochee three-beats, the metrical stress determining the rhythm and the tempo. The length of the vowel formed the basis for the measurement of the beats. But even in ancient Greek and Latin the influence of the tonic accent was beginning to make itself felt, and to induce irregularities, such as lengthening in *arsis*, the shortening of unaccented long terminations. Quantity disappeared very early, however, in the development of the Slav languages; Serbians alone has retained a fixed distinction of long and short syllables, the length of which is unaffected by the stress. Modern metre in all the Slav languages, including Serbian, is stressed, or accentual. On the other hand, all modern poetry is strictly accentual.

The early Slav metre was in a transitional stage. Although quantity had disappeared, metre was still regulated by the long groupings of three or more syllables that had constituted the ancient quantitative foot; and the metrical—and therefore rhythmical—unit became a group of syllables with a dominating accent. Furthermore, when in the course of the 14th cent. the vowels *ѣ*, *ѡ* had become mute, whilst the old traditional songs and melodies were maintained, great irregularities of tempo were the natural result; it was as though we attempted to read as a melody and metrical scheme the verses of Chaucer, and systematically disregarded the final *e*'s, which in modern English have lost all phonetic value.

The scansion of early Slav folk-songs is closely akin to that of Vedic hymns; it can be analyzed into lines of twelve, sixteen, or twenty syllables; but, in Slav, quantity has vanished, the accent generally falls on the third syllable in each group of four, and the lines almost invariably terminate with a dactylic word. When the vowels *ѣ, ѓ* became mute, false accents had to be introduced so as to coerce the poem into conformity with the laws. It was a favourite device to introduce assonant terminations as well as alliterative words or repetitions as part of the style; highly inflected languages lend themselves very readily to this device. Gradually these assonant terminations became a regular system of rhyme, while alliteration and repetition were left as a mere embellishment. Thus the same influences as in Western Europe operated to convert syllabic alliterative metres into fixed accentual metre with short metrical feet. When this process was complete, words and melody, metre and tempo, could be combined without mutual violence. To sum up: a primitive pre-Slav Aryan metre *— — — — —* became the accentual *— — — — —*, and, through irregularities and deviations from the strict scheme and the partitioning of the four-beat, finally evolved into the modern *— — — — —*, or trochaically *— — — — —*, or anapestically *— — — — —*.

When, in the poem, these syllabic feet irregularly comprised more than four syllables, the bar corresponding to such a foot had to be lengthened, and thus the tempo varied.

(c) *Third period.*—From this consideration of metre we may proceed to what is regarded as the third stage of Slav music. This synchronizes with the development in Western Europe of the modern scale, thirds being introduced as a basic division of the octave, in addition to the fourths and fifths of the previous epochs; and thus part-singing and harmonization at last were rendered possible. The leading note had already made a first appearance in the south, in Little Russia (which up to 1654 belonged to Poland), together with chromatic augmentations and diminutions of the fourth and fifth—a change possibly due to Oriental influence or Polish permeation. Thus the styles of N. and S. Russia became differentiated, the south advancing long before the north.

(d) *Artistic growth.*—From this point forward Russian folk-melody had thirds, chromatics, the leading note, and consequently regular majors and minors with tonics and dominants. The artistic development proceeded apace. Music and poetry soon started on their separate paths as different and independent arts. We shall now briefly trace this artistic growth of Russian music.

Ivan IV. had a vocal unconducted choir at his court. This practice was continued by his successors. The most notable choirmaster was D. M. Bortnyanski (1751–1825), who was musically trained in Italy and reformed the Imperial Court choir. Francesco Araja (1700–67) was the creator of the first opera in Russia, in Italian and with an Italian troupe. A. N. Verstovski (1799–1863) introduced Russian opera in Russian; but it was M. I. Glinka (1804–57) who, with his *Life for the Tsar* (1830), created Russian opera in the national style and with Slav rhythm and harmony. Since then César Cui, Borodin, Musorgski, Rimski-Korsakov, etc., have acquainted the world with the great musical genius of Russia, with its strongly marked features and characteristic harmonies. It is noteworthy that Debussy and many of the modern French school derived some of their inspiration from the great Russian masters. And, withal, this great Russian school drew upon the native melodies for its thematic material. These are to our Western ear untuneful, for they are based on a cruder scale. They are unjoyous, like the steppes. Modern Russian opera often gives the impression of a richly orchestrated folk-song, with a strange and compelling beauty all its own; for, after the first Byronic effusions of the 'twenties' of the 19th cent., Russia in all of the arts turned to her national resources and built out of them a literature, an art, and a music second to those of no other people.

(e) *Church music.*—The music of the Church in Russia has had a history apart. After the conversion of Vladimir I. in 980 Greek schools of

singing were founded at Kiev. The Chronicles make a clear distinction between popular and Church music, stating of one prince that he loved the *gusli* and his wine, of another that he loved Psalm-singing. This ecclesiastical music was Ambrosian, and based on four of the ancient Greek scales, viz., the Phrygian, Dorian, Hypophrygian, and Hypolydian (see MUSIC [Greek]). Russian Church melody could modulate within the limits of these scales. Gregorian music was not allowed to penetrate into the realm of the orthodox Church.

Unlike the popular music, which was oral and traditional, Church music was written: the notes, indicated by signs, or 'semiographs,' were super-scribed above the words. The choir-leader conducted by cheironomy—a sort of deaf and dumb musical alphabet. This arbitrary and awkward method lasted down to the end of the 16th cent., and was for long championed by the conservative against the new Western pentatonic notation, which supplanted it by the end of the 17th century. For a time both systems were used concurrently. Tempo indications were abbreviations of Slav words.

All singing was at first in unison, as the harmonics of this music were, like those of the popular songs, based on fourths and fifths, and not on thirds.

2. The musical instruments.—In the mediæval Chronicles the names of the instruments are often loosely used, and it is difficult to define exactly what instrument is intended.

(a) *Stringed.*—The most ancient of the stringed and plucked instruments is the *gusli* (with the conventional epithets 'made of the plane tree' and 'sonorous'). It was a zither-like box, with seven or eight strings, plucked by the right hand, and damped by the left. A later development of the *gusli* was the psalter, with eleven strings and a rounded body, with one end narrower than the other. The player pressed the narrower end to his chest, and plucked the strings with his right hand. Later still we find the cymbals, a rectangular trapezoidal case on which metal strings were strung, to be struck with a hammer. It might have fifteen or more cords; it was introduced only in the 17th century.

Other stringed instruments were the *domra*, *balalaika*, *bandura* (or *koba*), *theorbo*, and *guitar*, all of which had long necks, upon which the strings were strung, admitting of fingering, and carried over a sounding-box; they were plucked with the fingers or a plectrum. The *domra* was common in Great Russia, the others in Little Russia; they were largely of Polish origin.

The *domra* had three strings tuned in fourths, and an oval body; the *balalaika* had a triangular body, with three strings tuned A E A', and a bent head. These instruments mark a great advance, for the cords were stopped with the left hand, so as to form the notes and intervals. The *domra* and *balalaika* were shrill and inharmonious. The *pandora*, or *bandura*, resembled a lute, and might have any number of strings—six at the least. The *theorbo* was a highly complicated bass lute, derived from Italy through Poland, with three separate sets of cords allowing of the playing of several parts at the same time.

Stringed instruments played with the bow came into use only in the 16th century. The earliest form is the three-stringed lyre, neckless, its body somewhat like that of a viol-da-gamba; the strings were sounded by a wheel, turned by a handle at one end. Another bowed stringed instrument, probably of Tatar origin, was the *gudok*; it had two strings, a pear-shaped body, and an Asiatic crescent-shaped bow. The Russians added a third string. The instrument was held downwards like

a 'cello. Two strings were tuned in unison, acting as pedal-points, and never fingered; the third was tuned a fifth higher and fingered. Very much later violins, violas, and 'cellos were introduced from abroad.

(b) *Wind*.—Trumpets are mentioned as early as the 11th century. Wood-wind instruments also occur early. The most ancient seems to be the *dudki*, or pipe, with the mouthpiece at the end. Double-pipes (*svirily*) are still used in White Russia; these are two pipes lashed together, one being shorter than the other; a development from this was the *tsévnitsa*, the Greek *σῦριξ*, seven pipes in one frame.

Reed instruments are also found quite early, and were specially used in funeral rites; they had seven intervals. A double instrument of this type was called the *surna*, a kind of hautboy.

(c) *Percussion*.—Drums came into orchestral use in the reign of Ivan IV.; the earliest form perhaps is the *nakry* (two clay pots with leather stretched over the top). Similar instruments were the *ložki*, or wooden spoons, or xylophone, first used in the 18th cent.; *taralki*, or timpani, are recorded as far back as the 11th cent., as well as the *bubny*, or tambourines.

From the middle of the 17th cent. Russian orchestration was enriched through communications with Italy, directly and indirectly, through Poland and Germany. This cultured elaboration of the rich primitive music of the Slavs has put Russian music in the first rank.

Maslov, *Opyt rukovodstva k izučeniyu russkoy nar. muzyki*, Moscow, 1911 (contains good bibliography); A. Pougin, *Essai historique sur la musique en Russie*, Paris, 1904; F. Sokalski, *Russkaya nar. muzyka*, Kharkov, 1888.

LEONARD A. MAGNUS.

MUSIC (Teutonic).—Teutonic mythology differs from classical in not ascribing a divine origin to music as distinct from poetry. Yet musical powers were often an attribute of gods and supernatural beings, as of Oðin, Bragi, and frequently the water-divinities, and in individual human beings song-craft was looked upon as a divine gift, or, indeed, as directly due to divine inspiration and intervention.

According to the earliest records, music, especially song, played a large part in awakening and in expressing religious and national feeling, as well as martial ardour and festive mirth. Tacitus says that the ancient songs of the Germans, 'which are their sole forms of chronology and history,' sing the praises of their divine progenitors (*Germ.* 2); this is borne out in historic times by the evidence of Jordanes for the Ostrogoths (*de Getarum Orig.* 4), and by the celebration in song of heroes of later days, such as Arminius (*Tac. Ann.* ii. 88), Alboin of Lombardy (Paulus Diaconus, *de Gest. Langobardorum*, i. 27), and Charlemagne. Song and the clashing of arms were the accepted means of inspiring to the fight, and of disheartening the foe, and the variety of sound ranged from 'a loud yell' (Ammianus Marcellinus, XXVIII. v. 6) to dissonant clamour, from a rhythmic battle-ery (*Olafs Saga hins Helga*, 92; *Forrnanna Sögur*, iv.) to heroic chants (*Tac. Hist.* ii. 22; *Amm. Marc.* XXXI. vii. 11). Triumphal songs after the battle are known in at least one instance to have been accompanied by dancing (Gregory, *Dial.* iii. 28). Although there is little evidence for the practice of merely festive music in the primitive Teutonic period, it is noteworthy that many of the later words for music are intimately connected with, if not actually derived from, roots denoting joy or bliss—e.g., *glêd*, *drêam* (Grimm, *Teut. Mythology*, tr. J. S. Stallybrass, London, 1882-88, p. 901).

During the period of settlement of the Teutonic

peoples after the great migrations all these uses of music became increasingly important, especially on the national and religious side, as might be expected in a race in which religious feeling was so closely identified with its strong national consciousness. In connexion with religion music assumed a twofold significance.

(1) It was an integral part of such ritual as was practised—e.g., singing and dancing were used by the Langobards in their worship (Gregory, *loc. cit.*). At Upsala the sacrifices were accompanied by 'unseemly' songs (Adam of Bremen, *Gesta Hammaburg.* iv. 27 [*MGH*, 'Script.' vii.]), and it would appear from the degenerate behaviour of 'the mimes on the stage, and the unmanly clatter of the bells,' which aroused the disgust of Starkaðr (Saxo Grammaticus, *Danish History*, tr. O. Elton, London, 1894, vi. 185), that this side of the ceremony was much developed. At funerals dirges were sung, telling the prowess of the dead; the account of the funeral lament for Attila (Jordanes, 49) can be paralleled by the fragmentary indication of the dirge (*geomorgyd*) sung for Bêowulf (l. 3151). At weddings songs were sung, but not necessarily of a religious character (*Saga Herrauðs ok Bosa*, 12; *Forrnaldar Sögur*, iii.).

(2) The second great religious use of music was in the magic art, in which the chanting of spells must always have been a chief element; and in the north, where this art was so much developed, we have ample evidence of the importance of vocal music as an adjunct of sorcery. The two main forms of incantation were the *galdr* and the *seiðr*, the beneficent and maleficent charms. The *galdr* must from its very name have been sung; the *seiðr* we know to have been performed with elaborate musical ceremonial. Thus in *Orvarodds Saga* (ch. 2) the *seiðr-kona*, or sorceress, appears accompanied by a choir of fifteen boys and fifteen girls, skilled in singing. So, too, in *Eiriks Saga Rauða* (ch. 4) the prophetess requires one of the women present to sing a certain spell; a Christian woman unwillingly complies, and sings so sweetly that the witch announces that many unwonted spirits have been lured thither. Elsewhere we again find the sweetness of the song apparently increasing its potency, as in the *seiðr* that lured the boy Kári to his death (*Laxdæla Saga*, 37). Music produced by an abnormal instrument can have a supernatural effect, as in the ballad of the minstrel whose harp, strung with three locks of a drowned girl's hair, sings of itself, and accuses the murderer. An inspired musician can, like Orpheus, charm animals by his song, as does Horant the Dane (*Kudrun*, 388).

Heroic traditions, from being celebrated in communal song (Jordanes, 4), passed into the keeping of the *scôp*, whose chief function was to commemorate national prowess, or, like the Northern *scalds* later on, to celebrate the deeds of hero patrons. The Old English poems *Widsôð* and *Dêor* afford glimpses of the wide-spread fame and the varying fortunes of these minstrels; their reputé was great, and the divine inspiration and supernatural powers ascribed to them appear in such tales as that of Horant, already cited, or of Sigurðr, who, at a wedding-feast, by his harp-playing caused not only the guests but even the very tables and dishes to dance (*Saga Herrauðs ok Bosa*, 12; *Forrnaldar Sögur*, iii.). The *scôp* and the *scald*, who were often men of good birth, catered for the courts, and provided the chief entertainment at feasts by chanting heroic lays, either traditional or improvised. Their skill redounded to the credit of the court, and keen interest was taken in their rivalry and their singing-contests. Popular tastes, on the other hand, were provided for by the wandering minstrel or glee-man, and how familiar and acceptable a figure he was is proved by the legend

of Alfred penetrating, thus disguised, into the Danish camp. The susceptibility of the Teutonic races to music is proved by the honours heaped upon the singer, and also by the wide diffusion of the lyric gift. Nothing is more striking in the Icelandic sagas than the facility with which men and women of almost all classes 'sing a stave,' i.e. improvise to suit all occasions. The Goths seem to have quickly fallen under the influence of Roman music, as in the case of the ex-emperor Attalus (cf. H. Bradley, *The Goths* ['Story of the Nations'], London, 1887, pp. 95, 101). Throughout the heroic poems and tales we can trace the enjoyment of courtly music, and the story of Cædmon illustrates the shame felt by the ungifted man at the exposure of his deficiency.

We have hardly any knowledge of the nature of pre-Christian Teutonic music, but the strong rhythm of the alliterative poetry presupposes a marked musical rhythm. It is practically certain that harmony was unknown in instrumental and in vocal music. Such technical knowledge as we possess can be deduced only from the instruments known to have been used, i.e. horns and harps. The first instrument of the primitive Teuton was probably the horn, originally the natural horn of an animal, later a reproduction in bronze. Then the shape was altered, as can be seen from the bronze horn found in Denmark, which is twisted somewhat into the shape of a G, and apparently is the prototype of the modern Scandinavian *lurs*. Expert judgment believes this horn to have been in the key of Eb, of which it produced the first eight harmonics. By far the more important and more characteristic instrument is the harp, for which the Teutons have a separate native name, and which, although here experts differ, the northern nations probably evolved for themselves independently of existing forms in the south; it is a moot point how much they owed to their Celtic neighbours, past masters of the harp. That bow-instruments were originally unknown to the Teutons is borne out by the fact that the word *hearpan* is used to translate *citharisare*, and therefore distinctly implies plucking or twanging the strings. Early contact with the Romans introduced them to such instruments as bells and bagpipes, and later to all the varieties of the *psalterium*.

After the advent of Christianity the history of Teutonic music is for centuries identical with that of Church music; the Church absorbed almost all musical interest, and certainly controlled all technical and artistic progress. Secular music was steadily discouraged; throughout the Merovingian laws the seductions of heathen songs are denounced, while in England the famous letter of Alcuin (*MGH*, 'Script.' xv. 'Epist. Carol.' ii. 124) and the pleasing anecdote of Aldhelm (William of Malmesbury, *de Gest. pontif. Anglorum*, v. 190) illustrate the Church's severe attitude towards secular music, but also its readiness to use Christian music as a means of attraction.

The Roman Church had a struggle to enforce its liturgical music upon the Teutonic churches, which seemed to realize the danger to their individuality in the adoption of the standard Church music, i.e. the Gregorian plain-song or unaccompanied unison chant. Once converted to the Roman usage, however, the Teutonic monks were active in spreading it, as did St. Boniface among the Germans; and the monastery of St. Gall can claim to have perfected in the 9th cent. the new liturgical chant known as the 'sequence.' Moreover, it is to Teutonic monks, such as Alcuin, Notker, and Odo, that we owe the chief literary evidence on the ecclesiastical modes.

In the development of the second great school of music, the polyphonic, Teutonic clerics again fur-

nish some of the most valuable evidence on theory. The *de Harmonica Institutione* of the Flemish monk Hucbald describes the first attempts at the forms of harmony later known as 'organum' and 'descant'; at the end of the following century comes the more advanced work of Otger of St. Pons, probable author of the treatise *Musica Enchiriadis*. After the death (c. 1050) of Guido of Arezzo, the chief exponent of the new system, the Teutonic monks—e.g., Berno of Reichenau, William of Hirschan, and Aribio Scholasticus—seem to have shared in the temporary reaction against polyphony. But Teutonic musicians soon recovered their progressive spirit, as is shown by the work of Franco of Cologne, and in the development of that contrapuntal art which has aptly been likened to a Gothic cathedral they led the way, through the English supremacy of the 12th to the 14th centuries, up to the 'Golden Age' of the Netherlands in the 15th century.

In the English period the chief names in theory are those of Walter Odington in the late 13th cent., and Simon Tunstede, who at the end of the 14th cent. describes the method of introducing *fauxbourdon* into the old descant. England has the distinction of preserving five early specimens of counterpoint, one of which, the famous *rota* or six-part canon, 'Sumer is i-cumen in,' dating from c. 1240, precedes any similar composition extant by more than a century; it is a secular song, but was probably composed by a cleric. By the end of the 15th cent. many English composers were at work, but produced less original music, because of their dependence on the Netherlands school; again, in the 16th cent., the influence of Palestrina was predominant.

The Netherlands school begins with Guillaume Dufay, and rises to its height in the 15th cent. with Johannes Okeghem, master of the canon, and his pupil, Josquin des Prés. The pupil soon outstripped the master, infusing into the latter's dry and intellectual style—in which it is perhaps not fanciful to see the influence of the northern land and of the Teutonic character—greater artistic and devotional feeling. An interesting point in the Flemish school is the novelty of basing its mass-themes on popular melodies. The influence of the school is shown by the fact that Dufay's contemporary, Willaert, founded the Venetian school, while Palestrina himself, the culmination of mediæval counterpoint before it yields to homophony, was taught by the Flemish master, Goudimel.

With the Reformation a great change came over music in the Teutonic countries. The main cause was the secularization of the art by freeing it from an enforced dependence on the Church and her requirements, while in Church music itself a change equally great appears, due first to its loss of symbolic significance, and secondly to the introduction of congregational singing in the vernacular. In England the 16th cent. saw a great secularization and diffusion of music, but the composers of Church music, such as Tallis, Byrd, and Orlando Gibbons, were still at the head of their profession, and the emancipation of English music was not completed until the Commonwealth.

The development of Church music in Germany during the Reformation is foremost in interest and importance. Throughout the Middle Ages there was a strong current of religious musical feeling, rising to flood-height, first, from the 13th to the 14th centuries, when the Minnesinger wrote religious as well as courtly lyrics, and then in the 15th and 16th centuries, when the Meistersinger accomplished their important work of popularizing sacred music; both schools based their music on the ecclesiastical modes, the Meistersinger, however, with little inspiration. The practice of fitting

popular melodies to sacred words had prevailed before the Reformation; but the contrapuntal treatment tended to obscure the melody, and Luther's work lay in the restoration of rhythm to Church hymns—a step important in ensuring their popularization. It is doubtful now whether Luther undertook much composition himself, yet the name 'Luther's hymns' is hardly a misnomer, so great was his encouragement to hymnodists to adapt tunes already familiar in Church or folk-song, and to develop the wonderful chorales now familiar to every Protestant country. Later, at the end of the 16th cent., these simple tunes were again obscured by contrapuntal treatment for choir-singing; but the influence of monody restored the simplicity of effect suited to express the exalted national and religious aspirations of the Reformed Church. Throughout the 17th and 18th centuries hymnody flourished under the Silesian and Pietistic schools. The same period saw in England also a popularization of hymnody—to which the Reformation had given little impetus—under the influence first of Watts and the Independents, then of Wesley and the Methodists.

The remarkable production in Germany during the 18th cent. of Church music of the highest order is a subject beyond the scope of this article (see MUSIC [Christian]); but it may be suggested that it was the result of individual genius, as of Bach, working on traditional forms and originating new ones, with an entire emancipation from ecclesiastical rigidity, yet with a restraint which kept the work, unlike much similar Italian production, within the bounds of religious propriety. This is illustrated by the growth of the new oratorio; starting, as in Italy, from the miracle-play, it was given a new direction in Germany by combination with the lately emancipated Passion music, and drew fresh strength from that peculiarly Teutonic form, the chorale. Thus in the later development of religious music in Teutonic countries we see that its greatness was largely due to its closeness to national tradition; and Germany perhaps owed her musical supremacy in part to the fact that, even after the secularization of the art, her greatest musicians were content to submit to the disciplinary forms of Church music.

MUSKHOGEANS.—The Muskhoceans constitute a sedentary and agricultural American Indian linguistic stock whose territory covered the major portion of the present States of Georgia, Alabama, and Mississippi, and the western part of Tennessee, the principal tribes being the Choctaw and Seminole (*q.v.*), Creek, and Chickasaw, besides the minor tribes of the Alibamu, Apalachee, Bayougoula, Chachehuma, Chatot, Chula, Hitchiti, Huma, Ibitoupa, Kasikta, Koasati, Mobile, Mugulasha, Naniba, Ofogoula, Tangipahoa, Taposa, Tawasa, Tohome, and Yamasee. The tribal organization and system of government were closely analogous to those of the Iroquois (*q.v.*). The number of gentes varied from 28 among the Creek to 12 among the Chickasaw, 10 among the Seminole, and 8 among the Choctaw. The phratry system is recorded among Choctaw and Chickasaw, the latter having 2 phratries of 4

and 8 gentes respectively: Panther-Wild Cat, Bird, Fish, Deer; Spanish (Ishpani)-Raccoon, Spanish, Royal (Mingo), Skunk, Squirrel, Alligator, Wolf, Blackbird. Intermarriage between members of the same gens was forbidden; descent was in the female line. As regards the designations of the gentes, we are expressly informed by Adair (*Hist. of the Amer. Indians*, p. 16) that the Muskhoceans 'bear no religious respect to the animals from which they derive the names of their tribes, but will kill any of the species, when opportunity serves.' Since, however, he repeatedly notes the decay of old custom and belief among the Muskhoceans, we cannot assume that the usual tabus regarding the totem did not originally prevail among them. As among the Iroquois, the civil chiefs were distinct from the war-chiefs; and, among the Chickasaw, the chieftainship was hereditary in the Mingo gens, and the chief religious official in the Wild Cat (Adair, p. 31). So far did the Muskhoceans carry the distinction between civil and military affairs that, notably among the Creek, there were 'white towns,' devoted to civil government and peace ceremonies, and 'red towns' for ceremonies of war.

The towns, which, when in strategic positions, were strongly walled, contained a public square, each of whose enclosing buildings comprised three rooms. The structure on the east side was for the chief administrative councillors, that on the south for the war-chiefs, that on the west for the principal religious paraphernalia,¹ and that on the north for the inferior chiefs. The square itself was the scene of public business and great religious ceremonies, such as the *busk* (for which see *ERE* iii. 507^a and *HAI* i. 176-178); and there such aliens as possessed no clan rights might sojourn as public guests. The house of the religious leader formed an asylum, and certain towns, notably the Creek Kusa, were veritable 'cities of refuge,' such a city being 'a place of safety for those who kill undesignedly' (Adair, pp. 112, 159).

Shamans underwent an initiation of sweating and taking emetics;² before and during the *busk* and other festivals, as well as in time of war, abstention from various foods and from sexual intercourse was required; menstruous women were obliged to retire to small huts constructed specially for them; and a widow was compelled to remain single for four years (three, among the Chickasaw), unless she could induce the eldest brother of her deceased husband to have relations with her. Among food-tabus particular interest attaches to that by which the Alibamu, after a white man had eaten, threw away all the food that he had left and washed everything that he had used.

The religious centre to which reference has already been made contained various figures, those among the Bayougoula, *e.g.*, being the bear, wolf, opossum, and birds (cf. also Adair, pp. 30-32), while the Mobile possessed clay images of men, women, and animals. Among the Muskhoceans, moreover, fire was sacred, and the flame kindled at the *busk* might not be extinguished until the following *busk*, when it must be put out as being no longer ritually clean.

Information regarding the Muskhocean morality is scarcely sufficient to afford a basis for judgment.

¹ Among these special mention should be made of five copper and two brass plates preserved at Tukabatchi and still in existence, though, according to tradition, they had formerly been more numerous. From the account given by William Bolsover (in Adair, p. 178 f.) it would appear that at least some of them are of European origin, two even bearing the stamp Æ (see, further, *HAI* ii. 194).

² Initiation may also be implied in the Alibamu usage of causing the children of both sexes to pass in procession at one of their festivals, and to be so severely flogged as to draw blood, after which they were required to listen to an address by one of their elders.

Among some tribes marriage is said to have been only for a year, though it was normally renewed if children were born, one of the signs of such renewal being the annual hoeing of the wife's maize-field by her husband's relatives.

'It was formerly reckoned adultery, if a man took a pitcher of water off a married woman's head, and drank of it. But their law said, if he was a few steps apart, and she at his request set it down, and retired a little way off, he might then drink without exposing her to any danger' (Adair, p. 143).

For the first crime of adultery the man was flogged and had his ears cropped, and the woman's hair was shorn; for the second offence the noses and upper lips were cut off; for the third death was the penalty. The Cherokee had, in virtue of their extreme matriarchal system, no punishment for the adulteress, although in very flagrant cases they, like the Choctaw, submitted the woman to the fate recorded in Jg 19²⁵. After a man's wife had proved false to him, he was forbidden to sustain further marital relations with her.

The burial customs of the Muskogean varied in different tribes. The Chickasaw and Creek interred the dead beneath his house. Among the Choctaw the corpse was placed upon a scaffold near the house, where it remained three moons. At the beginning of the fourth, it was dismembered, and the bones, after being denuded of flesh, were put in a chest and laid in the 'bone-house'—a covered scaffold with open ends. Each clan had its own bone-house, and it was held to be unlawful to mingle bones of strangers with those of kinsmen. Over one of these mortuaries Adair (p. 183) saw 'the carved image of a dove, with its wings stretched out, and its head inclining down.'¹ It was also customary, when passing the spot where a distinguished warrior had been killed, to cast a stone there.

Like so many other American Indian peoples, the Muskogean burned alive captives of war, so that the Yuchi even called the Creek Kópa ('man-burners' [A. S. Gatschet, quoted in *HAI* i. 365]), and they also practised ceremonial cannibalism, especially eating the heart of their enemy.

According to the general Muskogean tradition, their original home was west of the Mississippi, roughly localized around the Upper Red River, Arkansas; but the Kasihta believed themselves to be descended from the sun (*HAI* i. 661). Linguistically it is interesting to note that the Hitchiti and Creek had an archaic dialect known as 'woman's talk' (*ib.* i. 551; cf. also i. 759).

LITERATURE.—Summarized accounts are given in such works as T. Waltz and G. Gerland, *Anthropol. der Naturvölker* iii., Leipzig, 1892; H. R. Schoolcraft, *Hist. and statist. Information . . . of the Ind. Tribes of the U.S.*, Philadelphia, 1851-57; T. L. McKenney and J. Hall, *Hist. of the Ind. Tribes of N. America*, do. 1854; and especially the artt. on the various Muskogean tribes and towns in *HAI*. For the older sources see P. Margry, *Découvertes et établissements des Français dans l'ouest et dans le sud de l'Amérique septentrionale*, Paris, 1875-86; B. F. French, *Hist. Collections of Louisiana*, New York, 1846 ff.; J. G. Shea, *Early Voyages up and down the Mississippi*, Albany, N.Y., 1861; E. G. Bourne, *Narratives of the Career of Hernando de Soto*, New York, 1904; Gentleman of Elvas and L. H. de Biedma, in *Hakluyt Soc. Publications*, ix., London, 1851; A. G. Barcia Carballido y Zuñiga, *Ensayo cronológico para la hist. general de la Florida*, Madrid, 1723. Pilling, *Bibliog. of the Muskogean Languages* (= *9 Bull. BE*), Washington, 1889.

LOUIS H. GRAY.

¹ If this is correct—and there seems to be no reason to doubt it—we have here an American instance of the belief in the dove as a death-bird, for which see O. Schrader, *Sprachvergleichung und Urgesch.*,² Jena, 1907, ii. 141 f.; A. C. Kruijt, *ERE* vii. 243; N. W. Thomas, *ib.* i. 525^a.

MUSPILLI.—*Muspilli*, a Tentic word that has given rise to much debate, occurs in an O.H.G. poem of the 9th cent. relating to the end of the world, and in the O.Sax. *Heliand*. In the former we read that at the last day it is impossible for one relative to help another before the *muspille*; in the latter (v. 4358), that *mudspilli* comes like a thief in the dark night, and that at the end of the world its power passes over mankind (v. 2591). In both sources the word means the 'day of the sons'—the end of the world. It appears also in the Norse myth of Ragnarök, and would seem to have been brought to Iceland from Germany. In the Eddic songs the sons of Muspell are mentioned as adversaries of the gods (*Voluspá*, 51; *Lokasenna*, 42), and Snorri, on the basis of this text, tells of a realm of fire called Muspellsheimr, and governed by Surtr, the king of fire (*Gylfaginning*, K. 4 ff.). The northern sources, however, make no reference to Muspell as the father of these sons or the lord of that world.

Scholars are far from unanimous as regards the origin and literal meaning of *muspilli*. Some (e.g., Grimm, Müllenhoff, Kögel, Martin, Kauffmann, von Grienberger, Braune) regard the word as having originated in Teutonic heathenism, while others (e.g., Bugge, Golther, Detter, Dorff, Hagen, Mogk, Olrik, Grau, Sperber) take it to be a Teutonic Christian term which first appeared in Germany under the influence of Western Christian literature, and passed thence to the north. Similarly, there is great difference of opinion as to the interpretation of the word. Those who take the former view connect the second element with O.H.G. *spilden*, O.N. *spilla*, 'destroy,' 'annihilate,' and the first with *mū*, 'earth' (Kögel), or with *mud*, 'sward,' 'turf' (Martin), or *mūza*, 'heap of earth' (von Grienberger), so explaining the word as meaning 'earth-destroyer,' and as a poetic expression for fire. Most of those who argue for the Christian origin of the term trace in its first component the M.H.G. *Mund*, 'mouth,' in its second the O.H.G. *spel*, 'utterance,' 'word,' and explain it variously as 'oral announcement,' 'prophesying' (Detter), 'oral decision,' 'judgment,' 'Last Judgment' (Dorff), or as *oris-eloquium*, 'oracle' (Hagen). Sperber would trace the word to a conjectural A.S. compound, *mudes-bill*, 'mouth-sword,' and sees in this a poetic figure for 'sentence at the Last Judgment.' Finally, Bugge connects the first element with Lat. *mundus*, 'world,' and interprets the whole as 'discourse regarding the world's end,' 'what is announced about the end of the world.' What we actually know of the word *muspilli* is that it is found only in connexion with ideas relating to the end of the world, and that it occurs only in poetic works either based upon or influenced by Western Christian literature.

LITERATURE.—A synopsis of the literature is given in W. Braune, *Althochdeutsches Lesebuch*², Halle, 1902, p. 190 f.; cf. also J. Grimm, *Deutsche Mythologie*⁴, Berlin, 1876, ii. 674 ff. E. MOGK.

MUTILATIONS.—In the religions of an-

tiquity and the practices of modern savagery there is complete evidence of mutilation of the human body as a definite part of the ritual, the ceremony, or the action in which it takes place, and the only question which needs close attention is the relationship between religious rite and savage practice.

Examples of both rite and practice must be the starting-point, and it will be found that there is no clear line of separation by peoples, race, or in stages of civilization between religious rite and savage practice. Thus in Hebrew history the mutilation of Abraham is the beginning of a religious rite which has continued through all subsequent periods (Gn 17); the blood-letting of the four score men who came from Shechem, Shiloh, and Samaria was an offering to propitiate Jahweh (Jer 41^b); the marking by a burnt or incised sign was an indication of adherence to a centre of worship (Dt 32⁵, Rev 7², 13¹). These are all religious rites; and side by side with them are practices which may properly be termed savage. The story of Nahash the Ammonite offering to make a covenant with the men of Jabesh 'that I may thrust out all your right eyes' (1 S 11); the pursuit of Adoni-bezek the Canaanite, and after his capture the cutting off of his thumbs and great toes (Jg 16^a); the punishment by the loss of a hand (Dt 25¹¹); and the remarkable demand of Saul carried out by David for trophies of the Philistines (1 S 18²⁵) are all practices of ordinary life unconnected with ritual or religions. Herbert Spencer, who has examined these rites and practices so carefully,¹ would reduce both classes to a common denominator by the theory that the practices were for the purposes of securing and indicating the marks of subjugation of the conquered to his conqueror, the slave to his master, and that they were repeated as religious rites for the same reason—the subjugation of the worshipper to the god.

The difficulty of accepting this conclusion from evidence is that both rite and practice run in parallels, not in layers, or, if there is any evidence in the priority of record, it is, as in the case of the Hebrews, in favour of the religious rite having preceded the practice. Spencer's examples from savage life deal with rulers deified after death, survivals as sacred custom, practices which have a sacramental nature, and ceremonies performed by priests (p. 59); and it is difficult to establish from these the priority of practice over the ritual of religion. In the religions of Greece and Rome the relative positions of the two are equally indeterminate. If the reign of Constantine V. in the 8th cent. 'was a long butchery of whatever was most noble, or holy, or innocent, in his empire,' and included the offering of a trophy of noses from his mutilated enemies,² it may be that such barbarism is an inheritance from one of the destroyers of Rome; but in the ancient religions there are mutilation rites which, though perhaps adopted from aboriginal religions, were definitely incorporated in Greek and Roman religions. At the annual festival of the Phrygian goddess, Agdestis, young men made themselves eunuchs, and L. R. Farnell thinks that the rites of this cult may belong to the various stocks of Asia Minor who had been nursed in the older religion.³ There is no trace of such an origin in the Roman stories of Attis by Catullus⁴ and by Arnobius,⁵ and it is difficult to believe that the charge brought against the Romans by Arnobius was not a generally accepted part of their religious cult. A long note

by J. G. Frazer on the small mound of earth surmounted by a finger made of stone which Pausanias¹ describes as existing on the road from Megalopolis to Messene, and identifies with the story of Orestes biting off the finger of one of his hands, establishes the fact of mutilation of the fingers by various peoples, and concludes that 'a practice so wide spread' may well have 'left its trace in the legend about Orestes.'² One further point is to be made from the fact that religious mutilations are personal and voluntary in contradistinction to savage practice, where mutilations are imposed by compulsion upon conquered enemies or enslaved peoples or persons. This contrast is illustrated by two independent pieces of evidence. Arnobius³ relates that the daughter of a Gallus cut off her breasts out of devotion to Aphrodite the mother. A curious passage in the *Old Irish Treatise on the Law of Adamnan*⁴ says that before Adamnan's time 'it was the head of a woman or her two breasts which were taken as trophies.' The trophy and the sacrifice in those two cases do not seem to belong to the same plane of thought, and yet they belong to the same range of civilization.

Spencer⁵ finally produces a most fascinating argument in proof of his proposition that mutilations develop from savage practice into religious ritual, namely, that it would follow that 'some connexion must exist between the extent to which they are carried and the social type, and he then groups the facts presented by fifty-two peoples.

'Of peoples who form simple societies' they practise mutilation either not at all or in slight forms. 'Of societies practising mutilations that are moderate, the simple bear a decreased ratio to the compound,' while among 'societies distinguished by severer mutilations' these relations are reversed.

The argument would be unanswerable if the examples were complete, but it leaves untouched the complex problem preserved by the religions and practices of antiquity. Only if the gods of men are in all cases a development of the oppressions and tyrannies of one class over another, one dominant personality over the group, can Spencer's simple theory be accepted. As it is, it appears that there are two streams along which mutilations have travelled, no doubt reacting upon each other, but independent in origin. This conclusion is quite in keeping with the accumulating evidence that early religions owed much of their ritual to the practical necessities of life, in which they largely took the place of both political and police control in the societies to which they belonged.

A list of the several kinds of mutilations adopted is not a cheerful contribution to the subject, but it is nevertheless well to have them in this form for purposes of reference. It can easily be compiled from Herbert Spencer's researches already so extensively used in this article. It includes tails of hair, scalps, eyes, fingers, hands, thumbs, great toes, noses, ears, lips, jaws, teeth, hair, castration, circumcision, blood, cuts, and lacerations.

MYCENÆANS.—See ÆGEAN RELIGION.

MYRMIDONS.—The name of the Myrmidons is familiar as belonging to the Thessalian followers of Achilles at the siege of Troy (Hom. *Il.* ii. 684). Æschylus wrote a tragedy entitled *Myrmidons*, which seems to have contained the death of Patroclus as its principal incident (A. Nauck, *Tragicorum Græcorum Fragmenta*², Leipzig, 1889, p. 42), and the title, if not the plot, was appropriated by Accius. According to one account, they com-

prised all who had abandoned Ægina in company with Pelens when he emigrated to Phthia from his original home (Strabo, p. 433). It was generally believed in antiquity that their name was derived from *myrmex* (μύρμηξ), 'an ant.' Their origin was accounted for in various ways. It was said that Myrmidon, the eponymous ancestor of the clan, whose name appears more than once in the heroic genealogies (Hellanicus, frag. 17; Apoll. Rhod. i. 55), was begotten by Zeus, after he had assumed the form of an ant in his intercourse with Eurymedusa, the daughter of Cleitor (Clem. Alex. *Protrept.* ii. 39, p. 34 P.). That is, of course, a story of a very common type, but there is another more generally attested. Hesiod (frag. 76) related that Æacus, the son of Zeus and Ægina, whose name was given to the island previously known as Cēnone, when he was grown to man's estate, chafed at the loneliness of his home; and that Zeus accordingly transformed all the ants in the island into men and women. In consequence of their origin, they came to be known as Myrmidons (Hygin. *Fab.* 52; Lucian, *Icarom.* 19; Nonn. *Dionys.* xiii. 206 ff.). It is natural to infer from Hesiod's language that Ægina was removed by Zeus to the shores of an island which was previously uninhabited. But in other authorities (Strabo, p. 376; Ov. *Met.* vii. 520-660; Hygin. *loc. cit.*) the legend of the transformation, which is described by Ovid with a wealth of rhetorical detail, appears in a different setting. The cause of the desolation of Ægina is ascribed to the jealous malignity of Hera, who wreaked her vengeance upon the island called after her rival by destroying its inhabitants with a pestilence. Then Zeus answered the prayer of Æacus, who begged for a new population, by bringing the Myrmidons into existence. According to others, the transformation took place in Thessaly and at the bidding of Peleus (Lycophr. 176). Strabo has preserved a euhemeristic variant (p. 375), according to which the Myrmidons were so called from their ant-like method of life; for they were said to have excavated the ground in order to cover the rocks with soil fitted for agriculture, and to have dwelt in their underground workings to avoid the need of bricks.

If we allow that the derivation of the name is well founded, the legendary evidence justifies the conclusion that the ant was a sacred animal in Thessaly, or in Ægina, or in both. But the ultimate explanation of its sanctity is still to seek. The adoration of an animal from which descent is claimed, as in this case through Myrmidon, was formerly held to be 'an example of straightforward totemism' (A. Lang, *Myth, Ritual, and Religion*, London, 1899, ii. 197), and an exact parallel was discovered in the Incra stock or clan of ants among the Ashantees of W. Africa (*ib.* i. 69). Similar instances of the connexion of an animal with a god, or of an animal identified with the founder of a clan, were claimed as establishing that totemism was once prevalent in Greece (*ib.* i. 267; W. Robertson Smith, in *EB*⁹ xxi. 135). But most of them are capable of other and simpler explanations, such as the desire to propitiate and so to avert an agricultural pest in the case of the mouse-Apollo (W. Warde Fowler, in *CLR* vi. [1892] 413) and the fox-Dionysus (W. Ridgeway, *ib.* x. [1896] 21); and, since the existence of totemism is unproved for any Aryan race (J. G. Frazer, *GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, ii. 4, *Totemism and Exogamy*, do. 1910, iv. 12), it is now admitted, even by those who formerly advocated this solution, that it is uncertain whether a survival of totemism is to be recognized in Greek post-Homeric legends of animal descent (A. Lang, in *EB*¹¹ xxvii. 90). Other inferences which have been drawn from the

legend of the Myrmidons are equally insecure. Thus, whereas one investigator regards it as the expression of a belief that the ruling family was of separate origin from the masses (O. Gruppe, *Griechische Mythologie*, Munich, 1906, p. 441), another holds that it was invented to prove the autochthonous origin of the Æacids (K. Tümpel, in Roscher, ii. 3313). It has also been suggested that the story of the Myrmidons retains a trace of the Oriental belief in ants as protectors of hidden springs of water, on the ground that the legend of Æacus is to be interpreted in the light of the magical incantations used by rain-makers (Gruppe, p. 801; Tümpel, in Roscher, ii. 3314), and it is possible that the story of the ant-origin was a piece of popular etymology invented to account for the currency of the name (Lang, *Myth*, ii. 196). In that case, while we should have to look elsewhere for an explanation of the word, the folk-story would still continue to challenge investigation.

It should be added that the derivation of the name Myrmidon is not universally accepted.

LITERATURE.—The chief authorities have been mentioned throughout. The fullest collection of the facts is in K. Tümpel, art. 'Myrmidon,' in Roscher, ii. 3312-3314.

A. C. PEARSON.

MYSORE STATE.—1. Description.—Mysore is one of the principal native States in India, about the size of Scotland. It is situated in the south, on an elevated plateau, rising from about 2000 ft. above sea level along the northern and southern frontiers to about 3000 in the central parts, broken up longitudinally by lofty ridges of rocky hills. The surface is studded with many steep and isolated peaks, called *droogs* (Skr. *durga*), often crowned with the remains of old fortifications. The form of the country is that of a triangle, with apex to the south, where the mountain-ranges of the Western and Eastern Ghats, which form its sides, converge in the towering mass of the Nilgiris. Its chief river is the sacred Kāvērī (the *Χάβηρος* of Ptolemy, vii. i. 13), whose upper basin occupies all the south. Running from west to east and receiving many tributaries, it encloses in its course the island of Seringapatam (Srīrangapatna), and passes out of the State to the low country in the Niagara-like Kāvērī Falls at the island of Sivasamudram, the site of the first electric power installation in India. The north is drained by the Tungabhadra, which flows across the north-west into the river Krishna, beyond the limits of the State, receiving on its way its chief tributary in Mysore, the Haggari or Vedāvati. In the east is a system of three rivers rising near Nandidroog—the Pennēr, the Pālār, and the Ponnār, which find their way to the Bay of Bengal. In the extreme north-west the Sharāvati hurls itself down the Ghats towards the Arabian Sea in the Gersoppa Falls, with a leap of 832 feet.

The western portion of the State, called the Malnād or Malenād, the hill country, is a highland region of noble mountains and mighty forests, filled with the most diversified and picturesque scenery. The remaining and much the larger portion is known as the Maidān or Bayal-shime, the plain or champaign country. In its northern parts are open valleys of black soil, growing cotton or millets; in the south and west are extensive tracts irrigated by channels drawn from rivers, covered with plantations of sugar-cane and fields of rice, with gardens of coco-nut and areca palms. The high-lying lands of red soil in the east are cultivated with *rāgi* and other grain crops dependent on the rains, while in the central parts are stony and wide-spreading pasture grounds, covered with coarse grass and dotted with groves of trees.

A distinguishing feature of the country is the series or chains of reservoirs, called tanks (Kan.

Kere), formed by embanking at every favourable point the streams which gather from the hill-sides or higher slopes, in such a way that the outflow from one at a higher level supplies the next lower, and so on all down the course of the stream at a few miles apart. They vary in size from small ponds to extensive lakes, miles in circumference; and their number is not less than 30,000. Bountiful rain causes them to show up as smiling mirrors all over the landscape when viewed from a height. But in failure of the rains they often dry up, while in great floods many suffer damage from the bursting of the embankments, or *bunds*. Equally notable are the irrigation channels drawn from rivers, especially in the south. Immense dams, called *anicuts* (Kan. *aneṇṇaṭṭe*), built across the river, retain the upper waters at a high level and permit only the overflow to pass down stream. The channels, or *kālvē*, taken off from these dams are led over the country on either bank, winding round all the contour of the ground as far as the waters will flow. The total length of the channels amounts to over 1200 miles. They, as well as the tanks, are mostly works constructed by the old rulers, but have been improved by modern engineering science.

The importance of provisions for storing the water will be recognized when it is stated that the annual average rainfall ranges from over 360 ins. on the crest of the Western Ghats to as little as 19 ins. in the north centre. But these are extremes experienced only in limited areas. The excessive rains of the Malnad rapidly diminish eastwards, and from 20 to 37 ins. may be taken as the annual average for the greater part of the State. The heaviest rain falls in the evergreen belt of forest, the next in the belt of deciduous forest, and the least rainy parts are those in the dry belt.

The area of the State is 29,475 sq. miles, which includes that of the civil and military station of Bangalore, 13½ sq. miles, an 'assigned tract,' under British administration. The population, by the census of 1911, numbered 5,806,193, of whom 2,934,621 were males and 2,871,572 females. The mean density of population was 197 per sq. mile, but the south and east are more thickly populated than the west and north. The two principal places in the State are Bangalore, the administrative capital and seat of the British cantonment (population 189,485), and Mysore, the dynastic capital and residence of the Mahārāja (population 71,306). To these may be added the Kolar gold fields (population 48,635).

2. History.—In its history, which has now been brought pretty fully to light by a study of the vast array of its inscriptions,¹ the State has passed through many vicissitudes. The earliest period to which this can be traced with certainty is the time of the Maurya emperor Aśoka (3rd cent. B.C.). His edicts have been discovered incised on rocky hills in three places in the north—evidence that it was included in his empire. Many Buddhist coins of the first centuries have also been found to the west of Chitaldroog. The south there is reason to identify with the Mahisamandala to which Buddhist missionaries were sent in his time, as well as to the neighbouring Vannāsa or Banavāsi country on the north-west. But even previous to this his grandfather Chandragupta (the Sandrakottos of the Greek historians), contemporary with Alexander the Great, had, according to Jain traditions, abdicated the throne and accompanied the great Jain teacher, Bhadrabāhu the Śrntakevali, on the migration which he

led from the north of India to the south in order to escape the twelve years' famine which he had predicted. On arriving at Sravana Belgola in Mysore, Bhadrabāhu felt that his end was near. He therefore sent the Jain *saṅgha* who had accompanied him on to Punnāta in the south-west of Mysore, under Viśākha. He himself remained at Sravana Belgola and died there on the Kalbappu hill, now called Chandragiri, attended in his last moments by a single disciple, none other than Chandragupta, who also died there later as an ascetic.

To the Mauryas succeeded the Āndhras or Śāta-vāhanas in the north. The latter name took the form Śālivāhana, after whom an era, long known as the Śaka-kāla, but eventually and still as the Śālivāhana-śaka, dating from A.D. 78, was established. The north of Mysore has even in modern times been designated the Śālivāhana country. The kings of the dynasty generally bore the name Śātakarni. On their disappearance in the 2nd cent., the greater part of Mysore was taken possession of by the Gangas, a royal line of Jains from the north of India. They may be connected with the Gangaride, described by Roman authors as among the principal subjects of Chandragupta in the Ganges valley. The Gangas ruled over Mysore for 800 years, and from them it acquired the name of Gangavādi, the subjects of which are still represented by the Gangadikāras, the principal agricultural class of the State, their name being a contraction of Gangavādikāra. The Ganga capital was at first Kuvālā, or Kovalāla (Kolar), but in the 3rd cent. was removed to Talakāḍ on the Kāvēri, in the south-east of Mysore. In the north-west arose the Kadambas, a Brāhman family, who were kings over the Banavāsi country till the 6th century. In the north-east the Pallavas of Kānchi, of Parthian origin, were the overlords, the actual rulers being the Mahāvalis, or Bāpas. After the Pallavas were overthrown, they continued to be represented in Mysore by the Nonambas or Nolumbas, whose territory was known as Nonambavādi or Nolumbavādi. Their subjects survive in the existing Nonabas.

The Chalukyas (whose name suggests a connexion with Seleukeia), claiming to come from Ayodhya, appeared in the Deccan in the 4th century. At the end of the 6th cent. they subdued the Kadambas, and, having established themselves at Vātāpi (Bādāmi in the Bijapur District), entered upon prolonged struggles with the Pallavas. The Satyāśraya, or Western, Chālukyas long dominated the north of Mysore, where Belgāmi was their seat of government. But from the latter half of the 8th cent. there was a check to their power for 200 years from the Rāshtrakūṭas, or Rāṭṭas (progenitors of the Mahrattas of the Bombay country), whom they had on their advent overcome. The Rāshtrakūṭas seized the Ganga kingdom of Mysore, and appointed their own viceroys to govern it. But before long they reinstated the king, in conjunction with the Pallavas. The Western Chālukyas again secured the ascendancy in 973, and held it for 200 years more. They were then ousted by their general, who was a Jain and of the Kalachurya family.

But the Cholas from the Tamil country in the south had, in their career of conquest, overturned the Ganga power in 1004 and held possession of the south and east of the State till 1116. The Hoysalas, a Jain family from the hill country in the west, then expelled them and became rulers of the whole of Mysore and beyond, up to the Krishna river, till overwhelmed by the Muslim invasions from the north in the 14th century. They had previously acquired possession of the Chola country to the south, but were exposed to

¹ Published, with text and tr., in *Epigraphia Carnatica*, 12 vols., Bangalore, 1886-1905, of which L. Rice, *Mysore and Coorg from the Inscriptions* (London, 1909), is a compendium.

attacks on the north-west from their rivals, the Señas, or Yādavas, of Devagiri.

The Hindu empire of Vijayanagar was now established, and continued till 1664, although the capital was destroyed a century before. It was the overlord of all the southern kingdoms, including Mysore. But, after its power was broken in 1565, the Sultāns of Bijapur, with the aid of Mahratta forces, held the north and east, while in the south rose to independence the Mysore royal house of Wodeyars. Except during the Muhammadan usurpation of Haidar 'Alī and Tipu Sultān (1761-99), from which they were released by the British, they have held the sovereignty till now. But, owing to the deposition of the Rāja for misrule, the country was under British administration for 50 years till 1881.

3. Name.—The name of the State, properly Maisūru, is that of the capital, and may be explained as meaning 'buffalo-town.' The Sanskrit *mahisha*, 'buffalo,' becomes *maisa* in Kannada, and *ūru* is the Kannada for 'town' or 'country.' It derives its origin from the legend of the destruction of Mahishāsura, a minotaur or buffalo-headed monster, by Chāmūṇḍi or Mahishāsura-mardini, the form under which the consort of Śiva is worshipped as the tutelary goddess of the ruling family. The name may be traced in the Mahisha-maṇḍala, or Buffalo country, of Aśoka's time (3rd cent. B.C.). A possible ground for the appellation may be found in the fact that buffalo-worship was, and remains, a special cult of the Todas of the Nilgiris, the southern part of Mysore. The language of this interesting primeval tribe is that of Mysore in the old form. The earliest mention of them so far discovered is in a Mysore inscription of 1117, but they must have been settled there for ages before. They have orders of priests consecrated to the service of the buffalo; their temples are dairies where buffalo-milk is the holiest offering, and where the bell worn by the buffalo-cow is the most sacred symbol. Their affinity to hill tribes in Mysore is attested by the fact that their *pālāl*, or priests, who are chosen only from the Paiki, or highest clan, describe themselves as *Der Mokh*, i.e. *Devara makkalu*, or 'God's children,' which is also the case with the *mande* and *grāma patels* in Manjarabad. Then there are the well-known Hale Paiki in the Nagar Malnād. The *mand* of the Todas corresponds to the *mandu* of Coorg and the *mande* of Manjarabad. The buffalo is a sacrificial animal among the lower orders throughout the south of India, and is periodically slaughtered with special rites in the groves or before the shrines of the *grāma-devatā*, or village-goddesses.

4. Animism.—The worship of these deities gives expression to pre-animistic and hylozoist or animistic beliefs that probably had their origin in remote ages, long before any organized systems of religion. But they retain their hold on the multitude of the submerged, who are too low in the scale of humanity to count upon interest on the part of the great gods. Thus serpents and trees, or other objects, which are closer at hand and invested with mystery, are propitiated, with a view to good gifts and the warding off of portentous evils. The serpent venerated is the *nāga*, or deadly cobra, and its worshippers, called Nāgas, were a widely spread race in pre-historic times. Many minor royal families in the west claim to be of Nāga descent. Effigies of the cobra are set up to this day at the entrance of most villages or towns for the adoration of the public, and ceremonial offerings are made to the living cobra. Few natives will consent to kill one, and the body of one that has been killed is solemnly cremated. A cobra often takes up its abode in a deserted ant-

hill, which becomes its shrine. To embrace this was a recognized mode of taking sanctuary.

The sculptured images of serpents mentioned above generally consist of three slabs erected in a row, facing the rising sun, on a raised platform. The first bears the figure of a male cobra, with one or more heads of an odd number up to seven; the middle one shows the form of a woman from the waist upwards, crowned with a tiara, in the upper half, ending in a serpent in the lower half, sometimes holding a young serpent under each arm; the third slab has two serpents intertwined in congress, as in the Æsculapian rod or the *caduceus* of Mercury, with sometimes a *linga* engraved between them. The stones are worshipped by circumambulation, chiefly by women, with a view to obtaining offspring.

The *grāma-devatā*, or village-goddess, is familiarly spoken of as Amma, the mother, or in the honorific plural Ammanavarū, which is the Amnor of the Todas. Māramma or Māriamma is perhaps the commonest, and most villages have a Māri-guḍi; but she sometimes bears various local names combined with *amma*. Though emphematically styled 'mother,' she is more feared lest her wrath should be aroused than loved as a tender protector. In some respects she seems to correspond to Durga, or Kālī, also called Chāmūṇḍi, and is explained as one of the furies attendant on that goddess. She reminds one of the demon of love, anger, evil, and death, called Māra, who opposed Buddha and the spread of his religion.

The class of deities known as *bhūta*, demon spirits, or the occult powers of nature, are worshipped under the form of a few naturally rounded stones placed together either under a tree or in a small shrine, and smeared with oil and turmeric. Charms to avert the evil eye, engraved on stones, called *yantra kallu*, are often erected at the entrance of villages. Similar ones on medals or metal plates are hung round the necks or waists of children.

5. Jainism.—The adoption of primitive animistic beliefs into Jainism is regarded as one evidence of its antiquity. The view now held is that it did not originate with Mahāvira or Vardhamāna, but some centuries earlier, the 8th B.C., with Pārśva or Pārśvanātha, the Tirthankara who preceded him. For the Nirgranthas mentioned in the early records of Buddhism were followers of Pārśva. But Mahāvira was a reformer, who promoted Jainism and introduced new features into it. He lived a little before Buddha, but they were for some time contemporary. Mahāvira had three personal disciples who succeeded him as teachers and were styled Kevalis. The next succession of Jain teachers after them were the five Śrutakevalis. Of these the last was Bhadrabāhu. He it was under whose influence Chandragupta became an ascetic and journeyed in his company to the south, where both died at Śravaṇa Belgola in Mysore, in the circumstances related above. The story is met with in ancient records, and is repeated down to modern times. It is also supported by local memorials of antiquity at Śravaṇa Belgola and Seringapatam, in which the summit of the hill on which they died at the former place is described as consecrated by the footprints of the inseparable pair (*yugma*) Bhadrabāhu and Chandragupta.

Jainism no doubt already existed at that time in Mysore and other parts of S. India. Though its antiquity and its priority to Buddhism are now generally known, and it was freely distributed in upper India, it is singular that the first discovery by Europeans of the Jains as a sect should have been made in Mysore, and that not till so late as the beginning of the 19th century. The discovery was due to Colonel Colin Mackenzie, who at that period made the survey of Mysore. It is thus only in recent years that the Jains have received special attention and the distinction between them and Buddhists, of whom they had been considered an offshoot, has been established. Their creed is called

the Jina-śāsana, a leading doctrine of which is the *śyādvāda*. The Bhavyas is another name for the Jains in inscriptions.

There are two divisions of the Jains—the Digambara (sky-clad or nude) and the Svetāmbara (white-clad). Those in Mysore belong to the former, and there is reason to believe that the separation took place when Bhadrabāhu forsook the north for the south. They are composed of *yatis*, or clerics, and *śrāvakas*, or laity. Only the former now discard clothing and that only at meals; at other times they are covered with a yellow robe, becoming Pītāmbara. The Jain images of the Tīrthankaras, many of colossal size, are always nude. The priests claim to be of the Śrī-Mūla-saṅgha, which was formed by Arhaddali, it is said, into four, namely, the Sena, Nandi, Deva, and Simha *saṅghas*. The *saṅghas* are composed of *gaṇas*, and the *gaṇas* of *gachchas*. The seat of the chief *guru*, or high priest, in Mysore is at Śrāvana Belgola, and he claims jurisdiction also over the Jains in Delhi, and certain places in North and South Kanara. From the beginning of the 12th cent. the Śrāvana Belgola *gurus* have the distinctive title of Chārukīrti Panditāchārya. They are of the Kōṇḍakundānvaya, Nandi-saṅgha, Deśi-gaṇa, and Pustaka-gachcha. They had a subordinate establishment at Maleyūr, in the south of Mysore, which is now closed. Its *gurus* apparently had the name Bhaṭṭakalanka Deva. The other existing seat of a Jain *guru* is at Humeḥa, in the Nagar country to the west, dating from the 8th cent., but it is in a very reduced condition. The *gurus* bore the name Devendrakīrti Bhaṭṭāraka.

Jainism enjoyed royal patronage down to the 12th century. It was greatly promoted by Samantabhadra in the 2nd cent., and was the State creed in the time of the Gangas, of some of the Rāshtrakūṭas and Kalachuryas, and the early Hoysalas, also of the minor States of Pannāta, of the Śāntaras, the early Changālvās, and the Kōṅḍālvās. But the extinction of the Rāshtrakūṭas in 982, the Chola conquests in 1004, the conversion of the Hoysala king in 1098, and the assassination of the Kalachurya king in 1167 were severe blows to its influence. It had been opposed on its religious side by the Brāhman reformers Kumārīlabhaṭṭa and Sankarāchārya in the 8th century. Sectarian bitterness then became pronounced, and at about the same period the Jain leader Akalanka is said to have overcome the Buddhists in disputation before the royal court at Kānchi, in consequence of which the latter were banished to Ceylon. On the other hand, in 1368, in the reign of Bukka-Rāya of Vijayanagar, when the Jains or Bhavyas complained of being persecuted by the Bhaktas, or Vaiṣṇavas, the king summoned the leaders of both parties before him, and, after full inquiry, took the hand of the Jains (as the record graphically puts it) and, holding it in the hand of the Vaiṣṇavas, decreed that no differences could be recognized between them, and that each might freely carry on their respective religious ceremonies without interference. Even before this broader views had been spreading among the Jains, for we find Jina described in 1151 as the Universal Spirit who is Śiva, Dhātṛī (Brahmā), Sugata (Buddha), and Viṣṇu, while for a generation following there were chiefs who supported all four creeds.

The Jains were the earliest cultivators of Kannada, the language of Mysore, and created in it an extensive literature of great excellence and variety. Their numbers in Mysore were returned as 17,630 in the census of 1911, an increase of 28 per cent in the last decade. But they are not a proselytizing sect, and this accession is due to the Śāḍas, a class of Vokkaligas, or cultivators, in the central parts, having entered themselves as Jains.

Such they no doubt were originally, but at the present time only one section worship Jina, the other two sections being worshippers respectively of Viṣṇu and Śiva. All eat together and intermarry, the wife adopting the practice of her husband. A few Jains also have migrated from the Rājputāna States. These are Svetāmbaras, and are money-lenders or merchants. Most of the Jains are traders and landlords, some are workers in brass and copper, but few are farmers. There has been some movement among the Jains of recent years in organizing their members and opening communications with those in other parts, for which there are now so many facilities.

6. Buddhism.—Buddhism was, of course, the official creed in such part of the north of Mysore as was included in the Maurya empire in the time of Aśoka, the 3rd cent. B.C., towards the close of his life, though he is considered by some to have been a Jain in his earlier days, and was probably brought up as one. Be that as it may, Buddhism was carried in his reign by missionaries to Mahishamandala, the south of Mysore, and Vanavāsī (Banavāsī) in the north-west. These countries, which were beyond but bordering on the Maurya empire, were thus newly brought into connexion with the religion at that time. There is no evidence that it made much progress, but Rhys Davids has found mention in early Pāli writings of Buddhist scholarship in Karnātaka. Certain references also occur in inscriptions. One informs us that a Buddhist affixed a challenge to the main door of the palace at Talakād, the Ganga capital, in A.D. 247, claiming that no disputants would be able to stand up against him. But a Brāhman took up the challenge, and, when the Buddhist denied the existence of the soul, refuted and overcame him, making him crouch down like a vanquished elephant. The Bāna king in 338 is said to have been like Bodhisattva in compassion for all living things. A grant to a Buddhist by the Ganga king Maṭṭha (357-370) has been obtained, the site of which was apparently near the old religious centre Avani in Kolar District, and the donation was made for the benefit of a *vihāra*.

As Pāthak has pointed out, 'the Buddhist writer, the Jaina writer Brahmanasiddhanta, and the Brahmanical writer Mādhavāchārya are all agreed in dating the final failure of Buddhism from the time when the Brahman reformers Kumārīlabhaṭṭa, Akalanka-deva, and Sankarāchārya appeared in Southern India, i.e. the 8th century (JRASSO vol. 190, pp. 101).

The victory of Akalanka the Jain over the Buddhists and their consequent banishment to Ceylon have been already mentioned. Still, even as late as 1055, a Buddhist *vihāra* was erected in Belgola in the north-west, and a Buddhist *śrāvaka* or monk was living there in 1098, while a Jain *śrāvaka* town named Kalavati is mentioned even in 1100.

It is of interest to note that an effort has been quite recently made to revive Buddhism in Mysore by missionaries connected with the Buddhist of Burma and Ceylon. Two branches of the Sakya Buddhist Society have been started, one in the civil and military station of Bangalore in 1904, and one at the Kolar *śrāvaka* town in 1911. They were at the time of the 1911 census 111 in number, though only 19 were returned in 1901. The increase is due to converts. The religion seems to appeal especially to the Śūdras, and to the lower and middle classes in the Kolar region. There are no Jains at the *śrāvaka* town.

7. Saivism and Vaishnavism.—Hinduism is principally a mixture of the worship of Śiva and Viṣṇu. It is a religion which can be assigned for the most part to the period which existed from the earliest times. The gods were generally represented by images. They found a place in the popular imagination, and their counterparts, or avatars, of the gods were the

They were sometimes combined under their names Hari and Hara. Hindus in 1911 numbered 5,340,908, or 92 per cent of the population.

The common symbol under which Śiva is worshipped is the *līṅga*, or phallus, a solid, round, stumpy pillar, fixed in the centre of a flat circular slab representing the *yonī*, but there is practically no consciousness of their significance, and the worship is free from anything indecorous. Facing the *līṅga* is the recumbent bull Nandi, the vehicle of Śiva. But the god is also sculptured in anthropomorphic forms, bearing certain emblems, or posing in particular attitudes. The spread of Śaivism in the south seems largely due to a teacher named Lakulīśa (also written Nakulīśa), who can be traced to the 1st cent., and was believed to be an incarnation of Śiva. He was born in Kārohana (Kārvān in the Baroda State), and is mentioned in the *Vāyu* and *Līṅga Purāṇas*. His system was that of *yoga*, or asceticism, which was followed by the Pāsupatas, so called from Pāsupati, a name of Śiva. It was known as the Lākula-siddhānta, Lākulāmnāya, and Lākulāgama. His being sculptured as Śiva with a club, which is the meaning of his name, suggests comparison with Hercules and his club. He had four disciples—Kūṣika, Gārgya, Kauruṣa, and Maitreya—who gave rise to four branches of the sect. The Lākula system was established at Mewar in Rajputana and other places in the north. In the south the Pallava kings of Kānchi had the bull, or Nandi, as their crest, and the *khatvāṅga*, or Śiva's club, on their banner. The Mahāvali, or Bāpa, kings in the east of Mysore claimed to have made Paramēśvara (or Śiva)—worshipped by all the three worlds, the lord of gods and demons—their door-keeper, which probably means that they had erected a notable temple of Śiva at the entrance of their capital. A Bāpa queen built the Śiva temple at Nandi, at the foot of Nandidroog, before 806, and the Kālāmukhas, adherents of the Pāsupata system, were at that period established on the hill and parts around.

In the 8th cent. arose the great Śaiva reformer Sankarāchārya, who recognized the Pāsupatas. He was the founder of the Smārta sect, and established his principal *math*, or monastery, in the west of Mysore, at Sringeri, the head of which is styled the *jagad-guru*, or priest of the world, and is widely acknowledged as a pope in the south.

On the north-east of Mysore we have a record of the Nonambas or Nalambas, who were descendants of the Pallavas, dated in 943, which brings to notice a *muninātha* named Chilluka, in whom Lakulīśa is said to have been born again, fearing lest his name and works should be forgotten. This points to a fresh revival of the system after some decline. In 1020 a Lakulīśa appears at Melpādi in N. Arcot. He may be the same as the one to whom a grant was made in 1035 at Belgāmi, in N.W. Mysore, by the Chalukya king Jayasimha, for the Pancha-Linga temple, which is described as the Kālāmukhi-Brahmachāri-sthāna. The Kālāmukhas (or black friars) were exponents of the Lakulīśa system, and they are explained to be a branch of the Sakti-parshva, of the Mūvarakoneya-santati of the Parvata-vaṇi. At the end of the 11th and during the 12th cent. there was a wider adoption of the Lakulīśa system, under the Hoysala kings. The principal centres were Dorasamudra (Halebid), Arsikere and its neighbourhood, but especially Belgāmi. Here an eminent line of learned *gurus* who were Kālāmukhas is mentioned in connexion with the Koḍiya-maṭha attached to the Dakṣiṇa-Kedāreśvara temple. In 1162 it was visited by Bijjala, the Kalachūrya king, who was a Jain. So impressed was he by the erudition of the high priest and the unstinted charities dispensed by the institution—food and medicine being given freely

to all comers—that he added to its endowments. And, among other extensive praises, it is said to be a place where commentaries were made on the Lākula-siddhānta, the Patañjali, and other Yoga systems. Towards the close of the 13th cent. we are informed, in a record in Tiptur taluq, of apparently a new Lākula-samaya, which perhaps refers to some fresh features introduced into the system. At the same date grants were made to the Pancha-Linga to the west of Chitaldroog. Below the Anki-maṭha at this spot is a series of subterranean caves with special arrangements for *yogāsana*.

Though in this form more a philosophic than a popular creed, it doubtless had its influence on the people in general. But in the middle of the 12th cent. took place the revival which resulted in the establishment of the Lingāyat, Jangama, or Vira-Śaiva religion. This was a revolt against Brāhmanism, and it still persists as the popular faith of the Kannada-speaking people. Basava, the prime minister at Kalyāna of the Kalachūrya king Bijjala, whose sister the king had married, was the moving spirit of this reformation. He was an Arādhya Brāhman of Bāgevaḍi in Bijapur District. He had refused to be invested as usual with the sacred thread, which involved adoration of the sun, and had then retired to Sangamesvara, where he was initiated in the tenets of the Vira-Śaiva creed. This, according to one account, was originally founded by five sages—Ghaṇṭakarna, Gajakarna, Renuka, Dāruka, and Viśvakarna—who, in the present Kali age, acquired the names Ēkorāma, Paṇḍitārya, Revanasiddha, Marulasiddha, and Viśvārya. Their seats are at Kedarnāth (in the Himālayas), Śrīśaila (Karnūl District), Bālehalli (in W. Mysore), Ujjini (on the Mysore-Bellary frontier), and Kāśi (Benares). Channa-Basava, the son of one of Basava's sisters, is considered a joint promoter with his uncle of the Lingāyat faith. Ēkorāma is no doubt identical with Ekāntada-Rāmāyya, who, in a record of the end of the 12th cent., is related to have signally defeated the Jains. He was a Śaiva Brāhman of Alande in Gulbarga District, and settled at Ablūr in Dharwar District, where, by means of a miracle, he gained his victory, certified by the king Bijjala, who was himself a Jain. The epithet before his name signifies that he had only 'one aim,' the worship of Śiva. Finding Basava freely spending the public funds for his religion and putting his own adherents into all offices, the king interfered, and incontinently ordered two pious Lingāyats to be blinded. This cost him his life, for he was poisoned or assassinated. His son resolved to avenge his death, and Basava fled to Ulavi on the west coast. It was besieged, and, when the place was reduced to extremity, Basava in despair threw himself into a well and was drowned. But, according to the Lingāyats, he disappeared into the Līṅga at Sangamesvara.

The new faith, however, rapidly spread, and within 60 years after Basava's death, or by 1228, it was embraced from Ulavi, near Goa, to Sholapur, and from Bālehalli (in Kadūr District) to Sivaganga (Bangalore District), superseding that of the Jains, many of whose images and temples were adapted for Śiva-worship. Virtually all the States in Mysore professed it, especially those in the north and west.

The *sthāvara*, or fixed *līṅga*, as an object of worship in a temple, was by it brought more home in the *jaṅgama*, or movable *līṅga*, attached to the person. This is a small acorn-like black stone, enshrined in a silver reliquary suspended from the neck or bound on the arm. It is worn throughout life and buried with the body at death. The *karma-mārga*, or way of rites and ceremonies, especially animal sacrifices, which promised salva-

tion in three births, gave place to the *jñāna-mārga*, or way of wisdom, by concentration on the *linga* in one's own hand, which promised salvation in one birth. The sect was originally recruited from all castes, and observances of caste, pilgrimage, fasts, and penance were rejected. Basava taught that all holiness consisted in regard for three things, *guru*, *lingam*, and *jangam*—the guide, the image, and the fellow religionist. But caste distinctions are maintained in regard to social matters, such as intermarriage. Initiation is by a priest of their own sect.

Since the decline of the Jains, the Lingāyats have to some extent preserved and cultivated the Kannada language. Their sacred books—the *Basava-Purāṇa* and *Channa-Basava-Purāṇa*—dated 1369 and 1585, are written in it. The number of Lingāyats in Mysore was returned as 729,431 in the 1911 census, but they also exist in larger numbers in the south Bombay Districts (1,339,248) and in the adjoining Districts of Madras (134,592) and Haidarābād (over 750,000), as well as some in other parts. They have numerous *maths* all over the country, but the chief one seems to be the *Murigi math* to the west of Chitaldroog.

For the worship of Viṣṇu the earliest incident met with is his appearance before Bali in his incarnation as a Brāhman dwarf. Begging for only three paces of ground, on this being granted, he assumed his own proportions and in three strides compassed heaven, earth, and the lower regions. In the time of Bāna, Bali's son, Kṛṣṇa is said to have invaded his territory and overcome Siva, who fought for Bāna. The thousand arms of the latter were cut off, except two, with which he was compelled to do homage. Perhaps, in other words, all Bāna's battalions were destroyed except two, which surrendered. These stories, whatever basis they may have, clearly point to a supersession of the Siva-cult by that of Viṣṇu, and refer to an early period. The Ganga king Viṣṇugopa, of about the 4th cent., was devoted to Nārāyaṇa (Viṣṇu). From this god the Chalukyas obtained their crest of the boar, another of his incarnations. But the tendency was to harmonize the two. Thus, the Vijayanagar kings had the boar crest, though they signed themselves after Virūpākṣa, a name of Siva. The Mysore kings claim descent from Kṛṣṇa, and, along with devotion to Sri-Ranganātha, worship Chāmnṇḍi.

An undoubted historical event is the arrival of the Vaiṣṇava reformer Rāmāṇjāhārya, also called Emberumānar, at Tonnūr in Mysore, whither he had fled for refuge from persecution by the Chola king, who was a Saiva. About 1098 he converted the Hoysala king Bitti-Deva, who was a Jain, and who now took the name Viṣṇuvardhana. Rāmānuja also established the sect of Śrīvaiṣṇava Brāhmanas, but records show the existence of Śrīvaiṣṇavas more than a hundred years before. He set up the *Yatirāja math* at Melkote and received large grants of land from his royal convert on both banks of the Kāvēri. Under the Hoysalas temples were erected for both Viṣṇu and Siva. And in subsequent periods they were jointly recognized in the combined form of Harihara, composed of Hari (Viṣṇu) and Hara (Siva). The fine temple of Hariharesvara at Harihara on the Tungabhadra was erected by a Hoysala general in 1224. But a record of 1130 says, with reference to their special symbols:

'Whether holding the *śankha* (conch) or the *kapāla* (skull), why make a difference? Whether the *chakra* (discus) is in the hand or the *triśūla* (trident), why distinguish between the weapons? In token of which they assume one form with separate hearts—the joyful Hari and Hara.'

One of a century later says:

'The celebrated Siva acquired the form of Viṣṇu, and Viṣṇu acquired the great and famous form of Siva, in order that the

saying of the Veda (that they were one) might be fully established.'

In the 14th cent. Keśava or Viṣṇu is identified as follows:

'Ho whom the Saivas worship as Siva, the Vedāntins as Brahmā, the Bauddhas as Buddha, the Naiyāyikas as Karta, the Jainas as Arha, the Mīmāṃsakas as Karma.'

8. Brāhmanism.—Brāhmanas are said to have been introduced into Mysore from the north of India in the 3rd cent. by the Kadamba king Mukanna in the west, and the Pallava king Mukuntī in the east. There are now three principal sects—the Smārtas, 63 per cent, founder Sankara in the 8th cent.; the Śrīvaiṣṇavas, 10 per cent, founder Rāmānuja in the 12th cent., forming two branches, Vaḍagalai, or northerners, and Tēngalai, or southerners; and the Mādhyas, 23 per cent, founder Mādhyāhārya in the 13th cent.; there are also a few Bhāgavatas, 4 per cent, whose origin seems to be very ancient. A non-Brāhman sect of Vaiṣṇavas are the Sūtānis, followers of Chaitanya, who worship Kṛṣṇa and are priests to the Holeyā and other lower orders.

9. Muhammadanism.—The Muhammadan religion came in with the Muslim conquests of the 14th cent., and the domination of Bijapur and the Mughals in the north and east after the overthrow of Vijayanagar. During the usurpation of Mysore by Haidar 'Alī and Tipu Sultān at the end of the 18th cent. vast numbers of captives taken in war were transported wholesale, with their wives and families, from their native countries to other parts of the kingdom and forcibly converted to Islām, the boys being trained for military service in Chela battalions. The number of Muhammadans in the 1911 census was 314,494, or 5 per cent of the population. Nearly all are Sunnis, settled in the country for some generations. Mappilas, or Moplahs, are immigrants from the Malabar coast, and Labbai from the Coromandel coast.

10. Christianity.—Christians in the 1911 census were returned as 59,844, an increase of 19½ per cent on the previous decade. They include 42,543 Roman Catholics, 6656 Anglicans, and 9050 other Protestants. The great majority of the Indians and Anglo-Indians belong to the first, and of Europeans to the second. Some stray Dominicans apparently visited the country in the 14th cent., followed by Franciscans in the 16th. But it was in the middle of the 17th that Jesuits began regular work. That order was suppressed by the pope in 1773, and, soon after, Tipu Sultān razed all the churches except two to the ground. J. A. Dubois became head of the Mission at the beginning of the 19th cent., and spent many years in Mysore. There is now a bishop in Bangalore, and stations are established in many of the principal parts. There are several Protestant missions at work, the oldest being the London Mission, which began in 1820, and the Wesleyan in 1835. Some years before this a Wesleyan missionary from Jaffna, named Elijah Hoole, seems to have visited Mysore, where he had an interview with Dubois, who is said to have expressed the opinion that the conversion of the heathen was a hopeless task. Both missions have a number of stations and institutions, the former in the east and the latter in the south and west, each with head-quarters in Bangalore. The London Mission were pioneers in female education, in 1840. The Wesleyans started the teaching of English to the natives; also a printing press for vernacular works. More recently they have established hospitals. The American Methodist Episcopalians began work in 1880, and minister chiefly to the Anglo-Indians in Bangalore, but also have an Industrial School for Indians at Kolar. The Church of England Zenana Mission have hospitals for women in Bangalore and Channapatna, and visit Musalmān families in

their homes there and at Mysore. A United Theological College was opened in Bangalore in 1914, to which the various missions in South India send selected students to be trained as preachers to their countrymen. The ideal of a Nationalist Indian Protestant Church seems to be in the minds of a few Indian Christians, but its realization has yet to come.

The Brāhma Samāj is represented by 65 members of the Sādhāran section in Bangalore. Theosophy has also been brought to notice in the same place. The Y.M.C.A. and the Y.W.C.A. have made very substantial progress there, and the Salvation Army has taken over the silk farm started by Tata under Japanese management. A Social Service League has recently been established in Mysore.

11. Conclusion.—With so much religious activity in the past, and so many different agencies in operation at the present, Mysore has proved itself a favourable meeting-place for many creeds. And in view of the long predominance of Jainism, immediately followed by the establishment of the still popular Vira-Saiva or Lingāyat faith, it might perhaps on good grounds be described as a home of dissent. On the other hand, on the side of orthodoxy, two chief Hindu reformers made it their abode. The State, as it now exists, has not been blind to the drawbacks of a purely secular education, while still desiring to maintain the neutrality in religious matters which has been the policy of the British Government. Private agencies have, of course, as far as they were able, supplied a counterpoise. But the State was in favour of more public recognition of religion in the educational system. Arrangements were accordingly made in 1908 for the introduction of moral and religious teaching in the colleges and schools. Suitable

books for the purpose were published by Government and by private agency, and it was hoped that an abiding impression for good would be made on the boys and girls receiving the instruction. After a time it was found advisable in colleges to adopt weekly lectures by professors and pandits in place of daily half-hour religious and moral lessons. In the higher schools teaching was based on the *Sanātana Dharma* text-books and prescribed books on morals. In the lower classes instruction was imparted by the narration of simple stories containing moral precepts, with the help of wall-pictures. In the village elementary schools a short prayer in Kannada was recited both at the beginning and at the close of the day's work, followed by verses relating to daily conduct from the *Dharmabodhini* and other books. The latest official statement on the subject was to the following effect: after five years' experience it is still difficult to say what real advance has been made, and whether any of the desired results have been achieved. In the higher institutions, where the subject is in the hands of capable teachers, the lessons are instructive. But in the lower schools the want of trained teachers to handle the subjects and the paucity of suitable text-books have made the teaching to lack in interest and to become more or less stereotyped. It is a question whether in the long run it is not wiser to leave this branch of education to the parents and communities concerned. But, after discussing the matter, the Representative Assembly of 1915 has voted for the continuance of religious instruction.

MYSTERIES (Babylonian).—Since the belief in life after death held no important place in Babylonian religion, and their conception of existence in the nether world was gloomy and foreboding, they necessarily evolved no mystic rituals and doctrines to provide the soul with immunity when it descended to Arallū. The precautionary measures for those who died consisted in providing them with bread and water for their journey, continuing the celebration of the breaking of bread and pouring out water for their souls at sacred family feasts or in the official cult. But these simple measures to secure the soul repose in the lower world were known to all and concealed from none. If the Babylonians possessed any cult-mysteries, we must look for them in connexion with the celebrations of the death and resurrection of the nature-god Tammuz. There is no doubt that the liturgies sung at the midsummer wallings for the young god of vegetation who had died and was sought for by his weeping mother and consort were accompanied by a mystic pantomime. It is very probable that the celebrants made an image of the young god, and clothed him in some sacred garb, adorned his bark with flowers and grain, and cast him upon the waters of the canals and rivers. His descent beneath the waves symbolized his transportation to Arallū by demons. In the celebration of this festival the celebrants probably chose one of the priestesses to play the part of the

weeping mother Innini (Ishtar), who sighs for the departed lover and finally herself descends to Arallū to seek for Tammuz. She rouses him from his sleep and returns to earth bearing him in her bosom. The liturgies of this festival consist largely in dialogues and monologues uttered by Tammuz and Innini, and it is difficult to understand how the celebration could have been performed unless a priest acted those parts in which Tammuz appears as a young god shepherding his sheep, becoming the bridegroom of Innini, and reposing in Arallū, where he utters dialogues with the descended goddess. It is possible that, as in certain Greek mysteries, only women were admitted to some parts of this pantomime. The doctrine inculcated by this ceremony explained the mystery of the death and revival of vegetation. Undoubtedly the priests taught the people that the mystery consisted in the death of a god, in the consequent disappearance of the mother-goddess, in his resurrection, and in the return of the mother-goddess; finally, the reviving life of the earth depends upon the marriage of these deities. During the Sumerian cults of emperor-worship which thrived from the age of Dungi, second king of the dynasty of Ur, to the end of the Sumerian dynasties of Isin and Larsa the king himself was regarded as Tammuz. This identification was based upon an ancient belief that some mysterious connexion existed between the king and nature. Not only do the

liturgies of the cults of these deified emperors speak of the kings as controlling the beneficent life of the earth and bestowing rains, sunshine, and harvests, but, after the belief in the deity of kings was abandoned, the Semites continued to attribute this mystic power to their kings. In the earlier period we possess Sumerian hymns which celebrate the marriage of the divine king with the mother-goddess; the ceremony of the marriage of a nature-god with one of the married types of the mother-goddess at the spring equinox characterizes Sumero-Babylonian religion. This mystic rite, in fact, seems to have been severed from the Tammuz-Innini cult and attributed to married types of the nature-gods, as Ninib and Gula, Nebo and Tashmet, Marduk and Zerbant, and performed at the New Year festival in the spring. Although the doctrines concerning life and death in nature were not concealed from the people, it is probable that the actual ceremonies were regarded as mysterious and sacred acts. Tammuz is the only important god who is never represented in art, and we have also no representations of the marriage ceremonies. It is practically certain that only priests and priestesses were allowed to perform in these celebrations, but no references to initiation have been found.¹

In the later periods of pessimism and philosophic speculation this cult was brought into connexion with the life beyond the grave in so far as their conceptions of that life permitted human worship to send aid to departed souls. We possess a Semitic composition known as the 'Descent of Ishtar,' which probably represents mystic speculation on this point and a ceremony to comfort the dead.² According to the last line, 'May the dead arise and smell the incense,' the priests chanted this hymn to comfort those who had gone to Arallū. Here we have a long description of how Ishtar descended by the seven gates of hell to the lower world. No reason for this perilous journey is given, but from the liturgies of the Tammuz-Ishtar cult we know that the descent was made to rescue the young god. Her disappearance from earth is marked by the cessation of plant and animal activity. She is imprisoned by Erishkigal, queen of the lower world, and afflicted with bodily disease. The gods interfere and send a messenger (*Ašû-šunamir*, 'His going forth is glorious') to Erishkigal to secure the release of the goddess of all life. By his pleasing appearance he overcomes the wrath of the under-world deity and causes her to swear in the name of the great gods (to release Ishtar).³ The hymn here introduces a ruse by which Ea the water-god prevented his messenger *Ašû-šunamir* from attaining immortality. This is an old motif in the Sumero-Babylonian theory of the fall of man to show how man (on this theory) lost eternal life by the jealousy of the water-god, patron of all knowledge. The motif is worked into this mystic

hymn to emphasize the condition of the dead, who cannot hope to attain the water of eternal life. Having thus sworn under the persuasive influence of the comely messenger, Erishkigal orders the spirits of the lower world to wash Ishtar with the 'waters of life,' by which she is healed; she is then conducted by the seven gates to earth. The water-god also commissions his messenger to try another method to bring back Ishtar in case the queen of Arallū refuses to give her up.⁴ The hymn implies here that Tammuz is also in the lower world. The last lines (46-58) run as follows:

'If she grant thee not her deliverance so to her repeat thy effort.
Tammuz, the husband of her maidenhood,
Wash with clean water, anoint with good oil.
Clothe him in a radiant garment and let him play² the flute of Iopis-lozuli.
May the whores³ reel their bodies.
[Then] Belili⁴ had completed her precious things,
She whose lap was full of jewels;
She heard the wailing of her brother; Belili smote her precious things,
And her chamber was filled with jewels.
'Oh mine only brother not shouldest thou bring me to shame.
On the day when Tammuz plays for me the flute of Iopis-lozuli, and when on that (day)⁵ with him they play to me on a flute of porphyry,
Yea with him the men wailers and the women wailers play to me,
May the dead arise and smell the incense.'

We have here a cryptic hymn whose composition is illogical in places, many ideals being abruptly introduced, and the whole composition bears the impress of a mystic cult. The real object of this hymn, which was probably accompanied by a pantomime, was to comfort the souls of the dead and assist them to arise for the *parentalia*. The flute-playing of Tammuz, who knows the sorrowful abode in Arallū, has a powerful effect upon those who sleep in that shadowy and silent land. Like Orpheus, whose music on the lyre appeased the deity of Hades and secured the release of Eurydice, so the music of Tammuz secures the release of his consort Ishtar. At the same time on earth the sacred women celebrate the myth of Tammuz and Ishtar, while the divine sister Belili wails for his return to earth. It is improbable that this composition belongs to the ordinary Tammuz liturgies sung at the midsummer wailings, for these were invariably said in Sumerian and were composed in liturgical style.

The adaptation of this cult to mystic purposes was probably more widely spread in the late period of Babylonian and Assyrian history than has commonly been supposed. This seems to be the only trace of a mystic cult in Babylonia.

On the other hand, their world views were wholly under the influence of the doctrine concerning mystic wisdom revealed only to the initiated by divination. All events in the world are regarded, not as results of natural causes or the exercise of the free will of man, but as the 'decision' (*piristu*) of the gods. This word is often replaced by the word *niširtu*, 'treasure,' 'secret knowledge,' and both have been rendered by 'mystery' in Assyriological works. These mysteries (this secret knowledge concerning the future) were revealed by the gods to the priests of divination (*barā*, 'diviner,' *barātu*, 'divination'), who were initiated into the study of divination. The principal subjects of this extensive discipline consisted in interpreting the divine secrets by hepatoscopy, astrology, lecanomancy⁶ (especially the method of pouring oil upon water in a bowl), terastocopy, and oneiromancy. According to Berossus,

¹ So the present writer understands a disputed line Rev. 46.

² Read *im-tal-lai*?

³ Prostitutes in the temple-services of Ishtar who took part in Tammuz celebrations.

⁴ Sister of Tammuz.

⁵ *HAR=šutu*.

⁶ Only these three are referred to in the official directions for the initiation into the mysteries of divination (H. Zimmern, *Ritualtafeln für den Wahrsager*, Leipzig, 1901, no. 24).

¹ The liturgies of the Tammuz-cult were sung in Sumerian by the Semites, who borrowed the entire ceremony. These liturgies were provided with an interlinear Semitic version; therefore the words of the ceremonies were certainly public property.

² The text will be found in IV Rawlinson 2 (Piches), London, 1891, plate 31. The colophon does not say that it is a copy from a Babylonian source, but part of a Sumerian original has been found. An Assyrian duplicate of Obv. 33-45 has been recovered by L. W. King (*Cuneiform Texts*, xxxiv. 18, Ki. 1904-10-9, 159+k. 7600, London, 1914). We have here in all probability a mystic composition from the late Sumerian period.

³ The objects of the oath are not given. Here Rev. 18-20 follows a passage showing how Ea deceived his messenger *Ašû-šunamir* by telling him to ask for the mystic water-vessel in order to drink the water of life and obtain immortality. He asks for this and instead he is told that he has asked for what no man should ask for. Wherefore she curses him with disgrace and poverty. This is a repetition of the ruse which Ea invented for Adapa, whom he advised to refuse the water of life. Both *Ašû-šunamir* and Adapa are mortal protégés of Ea, who fears that in their missions before the gods they will obtain the gift of immortality and hence he will lose them in his worship.

the seventh pre-diluvian king was *Eēdēwāpaxos*,¹ in whose reign arose a fish-man from the Erythraean Sea and revealed the mysteries to this king. At any rate such must have been the nature of the revelation to this king, for in historical times the gild of diviners recognized Enmeduranki, a mythological (?) king of Sippar, as the founder of this art. Only descendants of this king were admitted to this gild and taught the principles of divination, and this secret knowledge was transmitted from father to son. Physical and mental soundness was required of all applicants for initiation. The technical books for each department of divination are extensive and are written in a peculiar mixture of Semitic and Sumerian which must have obscured their meaning. These books were probably the sacred possession of the gild of diviners. Kings not infrequently publish in their historical inscriptions a full copy of the report of the diviners on certain royal undertakings.² We possess a very large number of letters and reports³ from astrologers to the kings of Assyria concerning the events about to occur, as they were revealed by the conjunctions and positions of the planets, constellations, and atmospheric conditions. These reports are really extracts from the mystic book of astrology which gave instruction on every possible astral condition. It seems, therefore, that the diviners had no hesitation about publishing the results of their prognostications, even when in certain cases (as in dreams) similar data might be used by laymen and the proper results inferred from published reports. The oracles of Arbela, upon which the kings of Assyria particularly depended, were all published and became common property.⁴ Nevertheless the *barā* priests certainly guarded the books of divination as mystic treasures. At the end of tablets of this class we find the literary note, 'The secrets of divination; the instructed shall teach the learner and the uninstructed shall not read.'⁵ Tablets containing the mysteries of divination were called the 'sacred possession' of the gods.⁶

The Babylonians believed that Ea the water-god in several successive revelations had communicated to the pre-diluvian kings all knowledge useful to man, and 'since that time nothing material has been added by way of improvement to his instructions.'⁷ The various reports (by Berossus) of

their beliefs concerning the revelation of the sciences and arts and of the origin of the world and of man are confused. In some sources the being which arose from the sea was Ea (Oannes) in the reign of the fourth king. The revelations to later kings were made by mythical fish-deities sent by Ea and similar in form to him. The Greek sources of Berossus generally recognize four revelations under the first, third, sixth, and seventh kings (Alorus, Amillarus, Daos, and Euedoreschus). Berossus also reports that 'Ea (Oannes) wrote concerning generation and civil polity,' and that Cronus (*sic!*) appeared to the tenth and last pre-diluvian king, who is the hero of the Flood. Cronus commanded him 'to engrave in writing the beginning, the middle, and the end of all things, and to place it in Sippar.' After the Flood Xisuthros the king was transported to the land of the blest to dwell with the gods, and he instructed those who survived the Flood in a ship to return to Sippar, excavate these writings, and make them known to all men.¹ From this we infer that the Babylonians did not regard the sciences or the knowledge of the beginning of things as mysteries. The hero of the Flood has the title *hasisatar* (Xisuthros), 'the extremely wise,' and Adapa, a mythical hero and creation of Ea, has the same title, but they are not connected with mysteries in any of our known sources, although Adapa became symbolical with 'sage.' According to the Semitic Babylonian version of the fall of man, Anu the heaven-god cursed mankind with disease because Ea had revealed to him 'the things of heaven and earth and given him a wily heart.' This most probably refers to knowledge of good and evil and not to the mysteries of divination. A historical inscription of Asurbanipal describing the education of that king has the following much disputed passage:

'The . . . of the sage Adapa I learned. The hidden secrets of all writing, the tablets of heaven and earth,² I read, and disciplined myself. In the assembly of scholars I busied myself with the decrees (of the gods). The mysteries³ of heaven with the wise masters of oil-divination (!) I . . . The dreadful secrets which are not to be revealed I read.'⁴

From this passage we may infer that this king was admitted to the gild of the *barā* priests.

LITERATURE.—A. Jeremias, *Handbuch der altorientalischen Geisteskultur*, Leipzig, 1913, pp. 10-20. For the cult of Tammuz, S. Langdon, *Tammuz and Ishtar*, Oxford, 1914; H. Zimmern, 'Der babylonische Gott Tamūz,' *ABAW* xxvii. (1900). For mysteries of divination see *Literature under DIVINATION* (Assyrian-Babylonian), to which add E. G. Kianber, *Politisch-Religiöse Texte*, Leipzig, 1913. See also a suggestive art. by A. Boissier, in *Archives suisses d'anthropologie générale*, Geneva, 1914, nos. 1 and 2. S. LANGDON.

MYSTERIES (Christian).—I. The problem.—In Hellenic and Hellenistic usage the terms *τὰ μυστήρια* and (far more frequently) *τὰ μυστήρια* describe a secret cult, initiation into which presupposed a course of special preparation. It was sacrilege for an initiate to divulge anything that he had seen, heard, or experienced in the solemn esoteric ritual (see MYSTERIES [Greek, Phrygian, etc.]). The same terms occur in the NT, more especially in the Pauline Epistles, and the question has arisen whether, in those early Christian documents, Christianity is ever regarded as a mystery-religion. We know that the first Christian missions to the pagan world were carried on in an environment in which mystery-cults were influential. It can scarcely be doubted that many of St. Paul's converts would be drawn from the religious associations which those cults had brought into being.

¹ Cory, *Ancient Fragments*, p. 29.

² This probably refers to the books of astrology and perhaps also to those of hepatascopy.

³ For *AD-SAD* read *AD-HAL=piristu*.

⁴ O. F. Lehmann, *Samasumukin*, Leipzig, 1892, pl. xxxiv. 13-16.

¹ Variants, *Eēdēwāpaxos*, *ʾAēdēwāpaxos*, Eboranchus.

² For such reports of liver omens published in the historical inscriptions of Nabuna'id see S. Langdon, *Neubabylonische Königinschriften*, Leipzig, 1912, pp. 266-270 and 286-289. The same king publishes a dream and its interpretation (ib. p. 279), and a dream of Asurbanipal with its interpretation occurs in the historical inscriptions of that king.

³ R. Campbell Thompson, *Reports of the Magicians and Astrologers*, London, 1900. A number of letters to Assyrian kings contain such reports (R. F. Harper, *Assyrian and Babylonian Letters*, 14 vols., Chicago, 1892-1915).

⁴ The mysteries of Arbela stand apart from those of the *barā* priests, and appear to be unique in Babylonian and Assyrian history. The prophets and prophetesses of this oracular spot do not appear to have employed any of the ordinary means of discovering the will of the gods but to have replied from inspiration solely. Besides Arbela Aššur also was recognized as an oracular spot (see Langdon, *Tammuz and Ishtar*, Oxford, 1914, pp. 128-141).

⁵ So the colophon K. 7628 in the British Museum. K. 9736 has *la mūdū-u la immar*, 'the uninstructed shall not read.' Agumkakrime, a Cassite king, adds the same colophon to a historical inscription which was obviously intended for public information (V. Rawlinson, 33). The scribe was probably a Cassite who did not understand the colophon and added it as evidence of pedantic learning.

⁶ *Ikkibu* of Nebo, god of writing and learning (Zimmern, *Ritualtafel*, pp. 156, 2; 118, 46); *ikkibu* (*nig-gig*) of Nebo and Lugai (i.e. Marduk) (K. 7628); *ikkibu* of Nabu, Lugai, Shamash, and Adad (V. Rawlinson 33, viii. 30-32). *Ikkibu* is a loan-word from Sumerian *nig-gig* > *ig-gig* and generally means, 'abomination,' an act which one is forbidden to do, and hence by metonymy came to mean, 'object which one is forbidden to touch.'

⁷ Berossus, in Syncellus, *Chronicon* (I. P. Cory, *Ancient Fragments*, London, 1832, p. 23).

Did the early Christian missionaries assimilate their gospel to the esoteric doctrine and ritual which made so powerful an appeal to Graeco-Roman society?

2. Use of *μυστήριον* in NT.—An examination of the significance of the term *μυστήριον* in the NT must start from the usage of the LXX. There are about a dozen examples of *μυστήριον* in the LXX, and, except for two passages in the characteristically Hellenistic *Wisdom of Solomon* (14^{12, 23}), in which its technical significance is obvious, it seems usually to mean 'secrets' or 'secret plans' either of God or of men. The single instance found in the Gospels (Mt 13³⁵=Mk 4¹¹=Lk 8¹⁰) follows the LXX, as denoting the secret plans of God concerning His Kingdom which are being revealed in the words and deeds of Jesus. This meaning fits a considerable number of the Pauline examples, e.g., Ro 11²⁵, 1 Co 15⁵¹, etc., in which *μυστήριον* stands for a 'secret purpose' of God, revealed to the Apostle, shedding light on problems which would otherwise remain wholly perplexing. For St. Paul the Christian prophet is the man who knows all *μυστήρια* (1 Co 13²; cf. 1 Co 4¹), i.e. the secret mind of God. For his thought, however, one secret Divine purpose overshadows all others, the admission of the Gentiles to a full share of Christ's salvation on equal terms with the Jews. This he designates *μυστήριον* in various important passages, all belonging to the Imprisonment Epistles (e.g., Eph 3^{10, 610}, Col 1^{25a, 43}). It is noteworthy that in several other instances (e.g., Ro 11²⁵, 1 Co 2⁷ 15⁵¹, Eph 1⁹, Col 1²⁶, 2 Th 2⁷) the term has a distinctly eschatological outlook. But enough has been said to indicate that St. Paul's use of *μυστήριον* has no suggestion of an esoteric cult or ritual. As a matter of fact, it is generally associated with verbs of revelation (*ἀποκαλύπτειν*, *γνωρίζειν*, *φανεροῦν*).

One example stands by itself, and deserves attention because of its relation to later Patristic usage. In Eph 5³², when dealing with the bond between husband and wife, St. Paul adduces Gn 2²⁴ as enforcing their unity, and adds: 'This *μυστήριον* is far-reaching: I interpret it of Christ and the Church.' As the result of an exhaustive examination of the use of *μυστήριον* by Justin Martyr, H. von Soden has shown that he constantly uses it as equivalent to *παραβολή*, *σύμβολον*, and *τύπος*. Here, therefore, the OT passage is regarded as pointing forward to the relation between Christ and the Church. This explanation covers the four occurrences of *μυστήριον* in the Apocalypse. Von Soden further points out that Justin is the first Christian writer who employs *μυστήριον* to describe the Christian faith, which he compares with the pagan *μυστήρια*. Even more significant for the drift of Christian thought is the fact that Tertullian regularly translates *μυστήριον* by the Latin *sacramentum*. We must, nevertheless, guard against forming hasty conclusions from these data. For, as von Soden observes, 'sacramental conceptions and theories do not link on to the terms *sacramentum* and *μυστήριον*, but to ritual acts which had no such designations originally, and even later did not in the first instance receive them on account of their form' (*ZNTW* xii. 224). Indeed, this terminology was a very gradual adaptation to an already established practice.

3. Relation of St. Paul to mystery-religion.—In one of the passages cited above (1 Co 2⁷) St. Paul makes a distinction between the usual theme of his preaching, 'Jesus Christ and him as crucified,' and a 'wisdom' (*σοφία*), a 'Divine wisdom' *ἐν μυστηρίῳ*, which has been hidden, a more advanced stage of Christian instruction intended only for the 'mature' (*τοῖς τέλει*). His language in this

context might certainly suggest that he has availed himself of mystery-terminology in writing to people who must have been already acquainted with it. Would this imply that he was in sympathy with mystery-conceptions? Some scholars have laid emphasis on the occurrence in the Epistles of terms and ideas which they regard as definite evidence of a direct kinship between St. Paul and the mystery-religion. Let us briefly examine some typical examples.

(a) *Terms*.—St. Paul's favourite antithesis between *πνευματικός* and *ψυχικός* has been explained from Hellenistic religious usage. There can, indeed, be little doubt that within the sphere of mystery-cults *πνεῦμα* and *νοῦς* have become religious terms. But it is also plain that the contrast between *πνεῦμα* and *ψυχή*, so fundamental for St. Paul, is exceedingly rare in Hellenistic religion, since *ψυχή* is apt to retain its significance as the higher element in human nature in opposition to *σῶμα*. The present writer has attempted to prove that St. Paul's religious use of *πνεῦμα*, *ψυχή*, and their derivatives has its genuine roots in the soil of the OT (*St. Paul and the Mystery-Religions*, pp. 155-158). To take another instance: in the mystery-documents *γνώσις* seems usually to mean that immediate apprehension of God which results in salvation or, more strictly, deification (e.g., *Poimandres*, ed. Reitzenstein, p. 336, line 24 f.). It is a practical experience rather than an intellectual process. Without question St. Paul regards *γνώσις* as a supernatural gift (e.g., 1 Co 12^{8, 13}, etc.). In one of his profoundest utterances (Ph 3¹⁰) it describes the most intimate fellowship conceivable between the soul and Christ. But here also account must be taken of the prophetic conception of the 'knowledge of God,' which is a revelation to the inner being. We may therefore speak of a striking affinity between the OT idea and that of Hellenistic religion, while admitting that, in the employment of the term and the conception which it embodied, St. Paul presupposed his readers' acquaintance with these through the medium of the mystery-religions. A somewhat similar conclusion may be reached as regards his use of *μεταμορφοῦσθαι* and cognate expressions (e.g., 2 Co 3¹⁸, Ro 8²⁹, Ph 3²¹). There are probably points of contact here between St. Paul's thought and the mystery-idea of transformation by the vision of God. But in the latter the chief emphasis falls on a quasi-magical transmutation of essence. The nature of the Apostle's conception of the *πνεῦμα*, which is the instrument in the process, sets in the forefront its moral significance.

(b) *Conceptions*.—Perhaps even greater stress is laid upon alleged parallel conceptions in St. Paul and the mystery-cults. Thus, e.g., the death and restoration to life of such mythological personages as Adonis, Attis, and Osiris, which, in the mystic drama, so affected the initiates as to produce a certain consciousness of entrance through passionate sympathy upon a life which the grave could not quench, are compared with St. Paul's teaching of redemption through the crucified and risen Jesus. But evidently this affinity did not appeal to the Greeks themselves, for the Apostle mentions that to them the preaching of the Cross was folly (*μωρία*). As a matter of fact, no real comparison is legitimate. The Greek legends of these so-called redeemer-gods have no hint of the forgiveness of sins. This forms the core of St. Paul's gospel. In the one case an imposing ritual excites the emotions. In the other, men, as constrained by the love of Christ, surrender their lives to His obedience. They assent to that estimate of things which is involved in the Cross. That implies a new moral attitude to the world and to God. A similar distinction may be traced between the idea

of salvation (*σωτηρία*) in the mystery-religions and that proclaimed by St. Paul. In the former salvation has mainly in view the pressure of Fate, Necessity, and those ills which belong to the limitations of earthly existence. It is invariably conceived as a *character indelebilis*. For St. Paul its atmosphere is the love of God revealed in Jesus Christ. From the very nature of the case it is charged with moral implications. It is mediated to the believer by the Spirit, and the Spirit is the Divine response to faith.

It is natural that St. Paul's conceptions of Baptism and the Lord's Supper should be investigated with a view to the discovery of affinities with mystery-ritual. It is highly probable that baptismal rites and sacramental meals, in so far as we can interpret the meagre and obscure data, were conceived in Hellenistic religion as working *ex opere operato*. No such idea is discernible in the utterances of St. Paul. In the case of both sacraments faith is for him the indispensable postulate of all that possesses spiritual value. Bartlett's definition of a sacrament (*ERE* ii. 377) is essentially true to the Apostle's standpoint: 'a symbol conditioning a present deeper and decisive experience of the Divine grace, already embraced by faith. But all is psychologically conditioned, being thereby raised above the level of the magical or quasi-physical conception of sacramental grace.'

The attempt of R. Perdelwitz (*Die Mysterienreligion und das Problem des I. Petrusbriefes*, Giessen, 1911) to find echoes of mystery-religion in 1 Peter is ingenious but quite unconvincing.

LITERATURE.—On *μυστήρια* in NT: H. von Soden, *ZNTW* xii. (1911) 158-227; J. Armitage Robinson, *St. Paul's Epistle to the Ephesians*, London, 1903, pp. 234-240. In favour of an intimat relation between St. Paul and the mystery-cults: W. Bousset, *Kyrios Christos*, Göttingen, 1913, pp. 125-186; A. Dieterich, *Eine Mithrasliturgie*, Leipzig, 1910; R. Reitzenstein, *Poimandres*, do. 1904, *Die hellenistischen Mysterienreligionen*, do. 1910. Against the foregoing view: C. Gardner, *The Religious Experience of St. Paul*, London, 1911; H. A. A. Kennedy, *St. Paul and the Mystery-Religions*, do. 1913; A. Schweitzer, *Die Geschichte der paulinischen Forschung*, Tübingen, 1911, pp. 141-184. H. A. A. KENNEDY.

MYSTERIES (Egyptian).—I. Introductory.—Herodotus and Plutarch tell of the existence of 'mysteries' in Egypt, and explain them thus:

'At Sais is the burial-places of ons whom I scruple to name [Osiris]. . . . On the lake [of the temple], the Egyptians represent by night the sufferings undergone by Him (τὰ δεικνύει τὸν πάθων αὐτοῦ), and this representation they call Mysteries (τὰ καλῶσι μυστήρια). All the proceedings in these Mysteries are well known to me; but my lips shall piously refrain from mentioning them' (Herod. ii. 170f.).

'Isis would not that her own woes and grievous journeyings, that the deeds of his wisdom and heroism should fall into oblivion and silence. She therefore instituted holy, sacred Mysteries (τελεραί) which would afford an image, a representation in mimic scenes of the sufferings he endured (εἰκόνας καὶ ὑπονοίας καὶ μίμημα τῶν τότε παθημάτων) that they might serve as a pious teaching and a consolatory hope to the men and women who passed through this same hardships' (Plut. *de Is. et Osir.* xxvii.).

From such statements we may infer the following definition: the Egyptian mysteries are rites in which recitation and mimic action are associated, i.e. dramatic performances of mystical character. Such dramas enact the Osirian legend; they teach a lesson and hold out consolation to the men who view them; the latter, being bound to observe secrecy upon those mysteries, are 'initiates.' It has been alleged that Herodotus and Plutarch, influenced by the Orphic and Eleusinian rites, transposed them to Egypt, and applied the name of 'mysteries' to ceremonies having no kind of analogy with the rites of initiation (C. Soudille, *Hérodote et la religion de l'Égypte*, Paris, 1910, p. 284), but the author of such an assertion makes light of the Egyptian sources themselves, which,

on the contrary, confirm the statements of the Greek writers on every point.

2. The Osirian mystery.—The most explicit Egyptian text is a *stela*, dated from Senusret III. (XIIIth dyn., c. 1875 B.C.): a high official, Igernefert, tells how he conducted a ceremony called 'the ceremony of the golden chamber for the mystery (*sēsta*) of the lord of Abydos (Osiris)'; it has been published by H. Schaefer, *Die Mysterien des Osiris in Abydos*, Leipzig, 1904.

Let us briefly recall the Osirian legend.

The Good Being (Unnefer) reigned over Egypt, and, with the help of his sister and spouse, Isis, he taught his subjects agriculture and all the arts and crafts; he also conquered the rest of the world in order to civilize it. His brother Seth (Typhon), however, murdered him, and launched the coffin containing the body into the Nile. It drifted away to Byblos, and was discovered there by Isis, who took it back to Buto in Egypt. Seth again found the corpse, and cut it into pieces, which he cast into the Nile. Isis resumed her mournful quest, searched for and found the fragments, and wherever she found a piece she raised a tomb over it. Then Horus, the son of Osiris, Thôth, and Anubis, his friends, came to Isis' help in order to 'avenge' Osiris; they justified him before the court of the gods, and restored his mummified body to life and immortality. Thus could Osiris hand over his realm to his son, Horus, who became the patron and ancestor of the Pharaohs (cf. A. Moret, *Kings and Gods of Egypt*, Eng. tr., London, 1912, p. 77f.).

Such was the subject of the mystery (*sēsta*) of Osiris. Igernefert, to whom Senusret III. has committed the preparations for the performance, attends first to the properties and requisites for scenery. He procures a barge which is to stand for the solar bar, a statue of Osiris adorned with lapis-lazuli, electrum, and precious stones, and also movable shrines in which to place the statue. In his capacity of 'head of the mystery,' Igernefert conducts the process of fabrication, and appoints sets of 'hourly priests' to execute the rites. When the action begins, he plays the part of Horus (*samer-f*, 'the beloved son'); after him, the principal parts are those of Anubis and Thôth, played by other high officials. The drama has several acts.

(1) It opens with a procession (*perjt*) of Anubis (*Upuaut*), who comes to protect (*nednu*) his father Osiris, and, with the help of Horus, defeats the adversaries of the barge (*nesmet*), and overthrows the foes of Osiris. Those adversaries are figured by supernumeraries who come to blows with the subjects of Osiris, and the fights are sometimes pictured (A. Moret, *Mystères égyptiens*, Paris, 1913, p. 15); Herodotus alludes to them (ii. 61, 132). We may suppose that now Osiris was shown sailing out in his barge, in order to conquer and civilize the world, after his triumph over his adversaries.

(2) The death of the god is treated next. No less reticent than Herodotus (ii. 170) and Diodorus (i. 21), Igernefert only points to this second act with a periphrasis: 'I conducted the great outing and I followed the god upon his steps.' Now, the expression 'great outing' (*perjt āat*) means the 'great mourning.'

Was, then, the murder of Osiris represented? We do not know. The texts in the Pyramids (Vth-VIth dyn., c. 2600 B.C.) describe the quest and discovery of the sacred corpse:

'They found Osiris such as his brother Seth did tell him (*nedj*) on earth, at *Nedj*' (N, 1263), and further: 'Isis embraced his body after she found him, stretched upon his side, on the shore of Nedj' (N, 863f.).

Other texts recall the woeful lament that rose up then to the throne of Rā:

'O Rā, hast thou not heard the voice that hath risen on an evening upon the shore of Nedj, the moaning cry of all the gods and goddesses' (W. Golenischeff, *Die Metternichstele*, Leipzig, 1877, l. 461f.).

It may be that the procession of the *perjt āat* would carry out realistically the search for and finding of Osiris's body while reciting the lamentations. At any rate the body of the god, richly adorned, was carried in a barge to his tomb at

Peker (the archaic cemetery of Abydos, where E. Amélineau claimed to have found the 'tomb of Osiris' within the enclosure of the tomb of King Chent [*Le Tombeau d'Osiris*, Paris, 1899]). The calendar of festivals at Medinet-Habu places the *perj'at* on 22nd Thôth (H. C. Brugsch, *Thesaurus*, Leipzig, 1883-91, p. 224); other texts assign to it different dates, and Plutarch places the funeral festivities of Osiris in the month of Athyr (Schaefer, p. 25, n. 4).

(3) After the burial we witness the resurrection and triumph of the god. Igernefert says:

'I have avenged Unnefer (Osiris) on this day of the great fight, I have smitten all his foes upon the river of Nedit' (l. 21).

Amid the cheers of his people the god sailed back in his barge to his city of Abydos; he re-entered his palace as a king (ll. 21-24), and received there his 'purification,' i.e. the rites which would ensure his life and triumph, at least until the next panegyrics. Here again the same circumspection as above is observed; the process of Osiris's resurrection, though it must necessarily be understood, is no more clearly alluded to than his death. Igernefert reveals only the outward pomp of Osiris's pageant; the fight against the adversaries of the god corresponds to the spectacle witnessed by Herodotus at Papremis (ii. 63): around the image of the god and on its way to the temple a battle is fought, but the god enters his temple despite his opponents.

This is the most complete account that we possess of an Osirian 'mystery,' but other documents preserve descriptions of festivals which include certain episodes of a mystery. Thus the feast celebrated on 1st Pakhon, when the king is seen cutting a sheaf with his sickle and sacrificing a white bull, seems to actualize the death of Osiris, god of vegetation (Moret, *Mystères*, p. 7f.). Another ceremony, the erection of the *ded*, the Osirian pillar, symbolizes the resurrection of the god and is associated with fighting and shouting (ib. pp. 12-15); the *Sed* festivities bring before our eyes the coronation and victory of resuscitated Osiris (ib. p. 16). Still more valuable are the rituals in the temples which describe the secret ceremonies of the passion and resurrection of Osiris. They were celebrated in small temples or in chapels erected for the special use of the god, such chapels being found in all large Egyptian temples. Of these ceremonies some would take place daily, others only at certain festivals; doubtless their rites formed the secret part of the 'mystery,' the part which Igernefert piously refrains from explaining and in which the death and resurrection of Osiris are acted.

We must remember that Igernefert, in order to celebrate the Osirian mystery, had appointed sets of 'hourly priests' (*wmo-tio*), and 'he had taught them the rites of every day,' in his capacity of 'head of the mystery.' Now, the Ptolemaic temples have preserved in their Osirian chapels texts and pictures illustrating the rites which the hourly priests recited and acted during each of the twelve hours (*wmo-t*) of night and of day. It is a sacred drama played by priests who assume the different parts of the Osirian family; we see Shû and Geb, the father and grandfather of Osiris; Horus, his son; Anubis and Thôth, his brothers or relatives; the four children of Horus; the goddesses Isis and Nephthys, wife and sister of Osiris; and, lastly, reciting and officiating priests. The scenery given by the reliefs consists of an image of Osiris swathed in the funeral shroud, a bed upon which the divine mummy is stretched, and several requisites, such as crowns, sceptres, weapons, libation vases, paint and incense boxes. The drama opens at six p.m. and closes twenty-four hours later; it falls into twelve hours of night (from six

p.m. to six a.m.) and twelve hours of day (from six a.m. to six p.m.). Its subject is the passion and resurrection of Osiris. From the first to the last hour the rites lead, step by step, towards the triumph of the god; yet this gradual advance is hardly felt because each hour is scenically treated as forming a complete little drama in itself, in which the god passes from death on to resurrection. At the beginning of each hour Osiris is led back to his initial state of distress, from which he is wrenched irresistibly by the power of rites and formulae, only to be brought back anew at the close of the hour (texts of Philæ, Edfu, Denderah, published by H. Junker, 'Die Stundenwachen in den Osirismysterien,' *SWAW*, phil.-hist. Klasse, liv. [1910]; the author makes a mistake in beginning with the hours of day, as the rites, as in any other festival, begin at six p.m.; the right order is twelve night hours followed by twelve day hours; for the bas-reliefs showing the scenery cf. A. Mariette, *Denderah*, Paris, 1880, iv.; E. A. W. Budge, *Osiris*, London, 1911, ii. 21 ff.; Moret, *Mystères*, pp. 20-36).

If we group together the actions and recitations during the course of these twenty-four hours, the scheme runs as follows:

(1) Isis and Nephthys have searched and found the body of Osiris upon the river of Nedit; woe and prolonged lament (cf. the papyrus of Berlin published by J. de Horrack, *Les Lamentations d'Isis et Nephthys*, Paris, 1866; Moret, *Kings and Gods*, p. 81f.).

(2) On hearing the cries, the gods come in haste; Horus, Anubis, and Thôth carry magical implements and vases filled with fresh water; Osiris is cleansed of all stains by four libations and fumigations.

(3) Divine magic effects a series of miracles: (a) the dismembered body of Osiris is restored; (b) by unctions with oil and paint and by the agency of the adze of Anubis mouth, eyes, and ears in the Osirian body are 'opened'; (c) the members are put into motion, and each organ recalled to life (these rites are more elaborately developed in a special ritual called 'Opening of the mouth' (*trap-re*; cf. E. Schiaparelli, *Il Libro dei funerali*, Turin, 1879)); (d) other methods are used to revive Osiris's body: it is buried in the earth that it may germinate and give forth sprouts, as tokens of the rebirth of the god; these proceedings of resurrection by plant-growth are fully developed in rites celebrated in the Choniak festivals (text of Denderah; V. Loret, *RT* iii. [1882], iv. [1883], v. [1884]; Moret, *Kings and Gods*, p. 85; on sprouting Osiris cf. Moret, p. 94 and pl. xi); (e) Osiris is also revived by simulating an animal rebirth; the priest who plays Anubis lies in a recumbent position—which is that of the fœtus in the mother's womb—under the skin of some sacrificed animal. He symbolizes Osiris being conceived anew, being reborn in the hide, and issuing, as if from the matrix, after assimilating to himself the life of his sacrificed adversary, Seth (fourth hour of day; Moret, *Mystères*, pp. 31-34).

(4) About mid-day, as the result of all these various rites, Osiris is alive. He is fed with offerings, adorned, and crowned; he also recovers the privilege of 'creative voice' (*maâ brw*) or 'just of voice' (*Maaspero*), by which he is able to baffle all dangers, and to create instantly whatever in any emergency necessity demands.

Such, in brief, were the proceedings when the 'great mystery' (*sesta wr*) or other great rites (*lahw wrw*) were celebrated. We may conclude that the 'purification' (*âbu*) of Osiris mentioned by Igernefert (l. 21) as complementary to the mysteries celebrated at Abydos was also in itself a sacred drama; it actualized the resurrection of Osiris and his rebirth to a life eternal, by a process which remained a secret to the majority of men.

3. Application to men.—We have fairly precise information, therefore, regarding the rites, secret or otherwise, which were celebrated in those sacred dramas for the benefit of Osiris. Yet such ceremonies can deserve the name of mysteries only when, spreading beyond the precincts of the temple, they extend their efficacy from the god down to a certain class of men whom we call 'initiates.' Did the mysteries of Osiris possess an operative power for the man 'well informed' of them? The author of *De Iside et Osiride* answers categorically:

'Isis instituted those mysteries that they might serve as a lesson of piety and consolation for the men and women who should suffer the same trials' (xxvii.).

Gods, pp. 179, 192). For the Eleusinian also 'to die' (*τελευτᾶν*) was the same as 'to be initiated' (*τελειοθῆναι*) (P. Foucart, *Les Mystères d'Eleusis*, Paris, 1914, p. 56). The course of 'trials' was connected with processions, dramatic scenes, and revelations disclosed by the hierophant. Is it overbold to find in this scheme the outlines of the old Egyptian initiation? The Isiac baptism corresponds to the purifications with water and incense; the simulated death and 'imperilling of life' to the ritual death and rebirth 'under the hide' in the Osirian worship; the descent into hell to the journeyings of the barge into the west (Amenti); the glorious reappearance to the final transformation of the Osirian dead into the sun Rā, or into a 'follower' of the god Rā, who is borne through the firmament in the solar barge. Egyptian 'initiation' is described in no text as yet known, but the successive episodes mentioned above are all quoted here and there in funeral formulæ. Under the Ancient Empire the dead hope to 'wander on the lovely paths of the west where the *maḥw* are wandering'; the *stelæ* from the XIIth and XVIIth dynasties (Louvre C 3, C 55) describe the admission of the 'consecrated' (*lahw*) into the solar barge, his sojourn among the gods, and his bliss in paradise; the *Book of the Dead* and the *Book of Hades* reveal the ways to Hades and the passages which open the gates. A *stela* from the XIIth dyn. (Munich, n. 40), the interpretation of which given by E. Lefébure (*PSBA* xvi. [1894] 31) may be accepted, states that certain privileged men could 'pass under the hide,' i.e. simulate in their lifetime a mimic rebirth (cf. Moret, *Mystères*, p. 88 ff.). Besides these ritual trials, the postulant would attend processions (the funeral *stelæ* speak of 'beautiful festivals of the gods which the defunct yearns to witness'; cf. Schaefer, *Mysterien*, p. 22); he would also be taught a lesson and learn a script:

'I am a *lahw*, perfect and well equipped, whose mouth is learned' (Sethe, *Urkunden*, I. 122); 'I know all the secret magic of the court' (ib. p. 143).

The king in Egypt was indeed the great magician, the head of the mysteries (Moret, *In the Time of the Pharaohs*, Eng. tr., London, 1911, p. 302), and he was obliged to be, in his lifetime, initiated to the mysteries. We know that in the course of the *Sed* festivals, celebrated by every king, the rites of ritual death and rebirth were executed for his own personal benefit (Moret, *Mystères*, pp. 73-84). Even the foreign kings received initiation: when Cambyes entered Egypt, he asked to be initiated to the great mystery of Neit at Sais (Naophore statue in the Vatican; cf. K. Piehl, *Inscriptions*, Paris, 1897, i. pl. 32 f.). Now, the king in Egypt is the type of the superman, made divine by the rites, whom men resemble after death, and whom all living try to imitate. The initiate (*maḥw*), or 'devotee of the king,' would probably receive initiation in his lifetime, by a special favour of the Pharaoh.

5. Conclusion.—In brief, the Egyptian mysteries, like the Eleusinian and Isiac mysteries, claim to prepare for a 'good death' and to reveal the way to re-enter upon a 'new, blissful life.' Every notion that we have of them is connected with the cult of Osiris, who is, in the Egyptian pantheon, pre-eminently the 'dead and resuscitated' god. But we must not forget that every god in Egypt had his own mysteries, though we do not know them, possibly because the essential theme of these various secret rites was the Osirian practice, which summed up all the Egyptian knowledge on the problem of death and resurrection.

LITERATURE.—This is sufficiently quoted throughout; on the *titenu* see G. Maspero, 'Le Tombeau de Montouherkhepeshef,' *Mémoires de la mission française au Caire*, v. 3 [1893] 435-463; N. de G. Davies, *Five Theban Tombs*, London, 1913, plates II.-xvi.

A. MORET.

MYSTERIES (Greek, Phrygian, etc.).—In the present article we shall give a brief account of the mysteries which were practised in Greece and the Greek lands, both in the earlier times of Greek dominance and in the Hellenistic age. First we shall set forth the facts, so far as they can be recovered and established, in regard to the actual religious practices which come under this head; afterwards we shall consider what is the general character of the mysteries, their tendencies, and their influence on thought and life. The more systematic and intellectual teachings of pagan writers influenced by the mysteries on such subjects as cosmology and astronomy come under other headings; see COSMOGONY AND COSMOLOGY (Greek), SUN, MOON, AND STARS (Greek). Our exposition is confined to the main outlines and what is tolerably clear. The subject lends itself to almost limitless speculations, in which, as a matter of fact, those who have written on the mysteries have usually indulged. It is very tempting to proceed from the known to the unknown, and to use the key of the mysteries to explain a vast deal of ancient thought and belief. However legitimate such speculations may be, they would be out of place here.

We refrain from speculation with the more satisfaction because the only basis on which it can be built—the statements of ancient writers—is of a most flimsy description. All our knowledge has to be gained from fragmentary statements by writers of late period and little critical power. They usually have some point to prove, and do not hesitate to colour their statements accordingly. As it was of the very essence of the mysteries that they were rites done in secret, the nature of which it was strictly forbidden to the initiates to reveal, it is clear that a number of baseless and worthless accounts of them would be in circulation. And even the archaeological material which in some departments of Greek life and history furnishes a clear and objective test of statements made by the writers almost fails us in this field. Inscriptions mention at most the public and outward rites of the mysteries, not those which were professedly secret. And such monuments as Greek vases, though they sometimes give us useful hints as to ceremonies of initiation and the like, do not reveal any secrets. The Christian Fathers, who tell us more about the mysteries than pagan writers, are perverted by strong prejudices, and lay bare only the more repulsive aspects of the rites which they mention.

1. Religious practices.—(a) *Eleusinian mysteries*.

—By far the best known, and the most characteristic, of the really Greek mysteries were the rites celebrated at Eleusis in honour of Demeter and her daughter Persephone. We also know more about them, as their seat was within a few miles of Athens, and the Athenians took the most prominent part in their celebration. The view maintained by P. Foucart,¹ that they were imported from Egypt, has met with little acceptance. They have a long history. Their origin goes back before the arrival in Greece of the conquering tribes from the north who were called Hellenes. There can be little doubt that originally the people of Eleusis, whose land is specially adapted to the growing of corn, celebrated on the spot some of those rites supposed to increase the fertility of the soil of which we find traces in many parts of the world, and which were especially at home among the primitive populations of Asia Minor. How far such simple agrarian rites could be regarded as mysteries—i.e., how far their details were regarded as the property of particular families or clans, and kept from the view of their neighbours—we have

¹ *Les Mystères d'Eleusis*, Paris, 1914.

little means of judging. But it was natural that, when Greece was overrun by more warlike and less civilized tribes from the north, the local clans should tend more and more to keep to themselves the sacred proceedings on which, as they supposed, the fertility of their land depended.

Then by degrees the old vegetation ritual of Eleusis was dragged into the current of the anthropomorphic religion of Greece. Whatever may be the meaning of the first syllable of the name Demeter, which does not seem to be a mere variant of γῆ ('earth'), the latter part of the word, μήτηρ ('mother'), is pure Greek, and marks the incorporation of the worship in that of the Attic deities. At the same time the deeds and ritual, the original object of which had been merely the furthering of the fertility of the soil, became charged with a higher meaning, and became an acted parable of the relation of the spirit of man to the divine basis of the world, and assured to the *μύσται* the protection of Persephone in the world beyond the grave. In the *Homeric Hymn to Demeter* poetry takes over the main events of the mythology of Eleusis, and works them into a pleasing and artistic form. In Greek sculpture and vase-paintings the forms of Demeter and Persephone, with their favourite Triptolemus, appear continually in the most charming art-representations, and the ritual of Eleusis, while retaining some of its strange archaic guise, was moulded into an Athenian holiday. Later still the philosophers and the reflective poets of Athens found in the Eleusinian rites a body into which they could introduce such ideas as divine retribution and the immortality of the soul.

In the *Homeric Hymn to Demeter*, probably dating from the 7th cent. B.C., there is narrated the story of the carrying away of Persephone, while she gathered flowers in a meadow, by Hades, ruler of the world below; and it is told how Demeter refused to be consoled for her loss, and, to punish gods and men, refused her aid in the production of corn from the soil. Earth became unfruitful, and the human race would have perished but for the interference of Zeus, who arranged that Persephone should be restored for a time to her mother, and should every year pass eight months of the twelve on the green earth. The parable of the growth of corn is transparent. In this hymn we see a purely agricultural festival shot through with poetry and human interest by the literary genius of the Greeks. But the element of mystery is almost eliminated. The hymn does not really reflect the local worship of Eleusis, which at the beginning was probably very crude, but which underwent great modifications under the influence of Athenian religion. It was probably in the 6th cent. that Dionysiac and Orphic elements made their way into the cultus and again modified it. Iacchus, who was a form of Dionysus, became thenceforth a chief person in it, though exactly how he was related to the original two goddesses is not altogether clear. But the general result of his interposition is manifest. The mysteries of Eleusis ceased to be a mere agricultural rite, and became more closely concerned with the life beyond the grave, in which the initiated had great advantages over those who failed to partake of the rite.

Certain inscriptions¹ which survive help us to reconstruct in a great measure the external semblance of the rites. Unfortunately the most important of these dates from the age of Hadrian. But, since that age was conservative and antiquarian, just before the transformation which ancient religion underwent in the time of the Antonines and the Severi, we may regard it as enabling us to recover at least a picture of the

external ordering of the Eleusinian festival in the great time of Athens.

On the 13th day of the month Boedromion, the young men (*ἐφῆβοι*) of Athens were mustered and went in procession to Eleusis, to bring thence in sacred procession what are called *τὰ ιερά*, sacred objects required for the solemn procession from Athens to Eleusis which took place a few days later. On the 15th of the month those who wished to become initiates of the goddesses assembled, in order to be ranged under the guidance of experts called the *μυσταγωγοί*, and to receive instruction as regards their behaviour at the festival. Those only were admitted who were free from crime or ignominy; and purity of heart and life was enjoined on the votaries. Absolute secrecy as to all that they might hear or see was imposed on them.

Next took place the ceremonial purifications. These were of two kinds—on the 16th of the month was proclaimed the ceremonial bathing in the sea (*ἐλάσε μύσται*), which was a form of purification. Later took place the sacrifice of purification, in which each of the *μύσται* brought to the goddesses their favourite offering, a young pig.

On the 18th took place the solemn procession of the *μύσται* and the officials from Athens to Eleusis. The cavalcade started with the dawn; but it moved slowly. It conveyed the sacred statue of Iacchus; and at many points on the road, according to cherished traditions, halts were made and sacred dances performed. The *μύσται*, as they moved, sang hymns in honour of Iacchus. They reached the sacred precinct at Eleusis by sun-down, and there had to find shelter and rest in preparation for the doings of the next day. Of course, the sacrifices and the processions could be seen by all. It was only when Eleusis was reached that the veil fell, and thenceforth for four days the secret rites, the nature of which we can very imperfectly recover, took place.

The sacred site at Eleusis has been thoroughly excavated by the Greek Archaeological Society, and is familiar to visitors to Athens. Its centre was the great hall of initiation, in which beyond doubt all the rites took place; the mere plan of this hall gives us some evidence, though mostly negative, as to the character of the rites. At the beginning of the 5th cent. a smaller hall was destroyed by the Persians; and after their retreat it was rebuilt on a more magnificent scale. It was almost square in form, 170 ft. in length and in breadth, with two entrances on each of three sides. Round the walls inside ran series of stone seats eight ranks high, capable of seating about 3000 people. The roof, or possibly an upper storey, was supported by rows of columns, 42 in number. There is no appearance of a raised stage, or of underground passages, or any possibility of those stage-effects, mysterious appearances and disappearances, visions of Hades and of future rewards and punishments which the earlier modern writers on the Greek mysteries commonly assumed to have existed. All that took place must have taken place out in the midst, with the view of the *μύσται* greatly impeded by the columns.¹

At the season of celebration there was no moon in the evening. The *μύσται* fasted by day, and in the evening penetrated into the hall through the surrounding gloom. Their religious feelings had been greatly stirred, and they were prepared to receive strong religious impressions. But how those impressions were made we can only conjecture. Sacred movements were performed, while the voice of the hierophant gave utterance to brief statements of an enigmatic kind to which the *μύσται* had to attach such meaning as they could. It is almost certain that Mystery-plays were acted, the subjects of them taken from the myth of the carrying away of Persephone, and probably from some of the more obscure tales in regard to the birth of Iacchus, his death, and his revival.

Besides the attendance at sacred dramas the *μύσται* went through other rites. They solemnly partook of a draught called *κυκεών*, made of meal and water; they also handled certain sacred objects, transferring them from basket to box, or from box to basket, according to a fixed ritual; and at the end of the festival they emptied of water some vessels called *πλημοδαί*, calling on the sky to give rain, and the earth to yield her increase. The last action was probably very early in origin, being obviously a relic of sympathetic magic, according to

¹ For an account of the sacred place and a plan of the 'hall of initiation' see P. Gardner, *New Chapters in Greek History*, London, 1892, ch. xiii. A full and judicious account of the cultus and festival will be found in CGS iii. ch. ii.

¹ W. Dittenberger, *Sylloge Inscriptionum Graecarum*², Leipzig, 1893-1901

which the pouring of water, when accompanied by the proper spell, has a tendency to produce rain.

The return to Athens, like the setting out, was public. The people of the city came out to meet the returning procession, and with dance and song, and with contests in wit and scurrility, the *μύσται* returned to their homes.

Readers may naturally think that a ritual so simple and so wanting in depth of teaching could not have justified the tone in which some of the great Greek writers have spoken of the mysteries of Eleusis. The poet Sophocles and the painter Polygnotus confine happiness in the next world to those who had been initiated in the mysteries of Eleusis, that is, probably, so far as their fellow-citizens were concerned. The Christian Fathers evidently look on the mysteries as in a measure rivals of the Christian hope. And that there was an ethical element in them we may judge from the speech of Andocides to his judges: 'You are initiated, that you may punish impiety, and save those who defend themselves from injustice.' Cicero, in his *de Legibus*,¹ expresses the view that Athens had produced nothing better than the mysteries of Eleusis, not only in regard to the ordering and civilizing of life, but in regard to the furnishing of a good hope in death. But it is of the very nature of the mysteries, as we shall presently see, to produce effects out of proportion to their obvious outward show.

(b) *Andanian and other mysteries.*—The Eleusinian mysteries were the most notable of those of distinctly Greek type. But in the pages of Pausanias and of the *Corpus Inscriptionum Græcarum* we come on the tracks of many others. In fact, it is not possible to draw a rigid line between the public cults of Greek cities and the mysteries, since with many of the former there were connected rites which had to be performed in secret.

E.g., at the Arrhephoric festival at Athens, the two Arrhephoric girls, who had an abode on the Acropolis, 'place on their heads objects which the priestess of Athena gives them to carry, the nature of which is known neither to the giver nor to the bearer. The maidens go down by a secret underground passage leading through a precinct near the temple of Aphrodite in the Gardens. Below they leave their burdens; and take up in exchange something covered up.'²

In the same way, though the Attic Thesmophoria were among the most noteworthy public festivals, there were as part of the festival certain rites which could be performed only by burgher ladies, who had to prepare themselves by sexual chastity, and were not allowed to reveal them.

At Andania in Messenia there were celebrated mysteries in honour of a group of deities, Demeter, Hermes, the Great Gods, Apollo Karneios, and Hagna. Hagna ('the pure one') is doubtless Persephone. Who the 'Great Gods' were may be doubted; it is conjectured with probability that they were the Kabeiroi (q.v.). In that case, the mysteries of Andania must have been a combination; yet Pausanias tells us that they were very ancient, having been celebrated by the Messenians before the coming of the Laconian conquerors. Of the public or visible phenomena of these rites we have a very full account in an inscription³ which has come down to our time. Its date is 91 B.C., late in the Hellenistic age; but, as all the rites which it prescribes are taken from sacred books, they are probably of considerable antiquity.

The mystery (*τέλεσις*) is to be celebrated by male and female votaries chosen from among the citizens. There are very stringent regulations as to the dress to be worn, which must be simple and not adorned with gold. A procession is to be arranged, headed by a benefactor named Mnasiestratus, the priest and priestesses of the deities, the president of the festival, with other officials, and sacred virgins conducting the cars in which are arks containing the objects of the mysteries. The victims for sacrifice follow. Tents are to be set up for the visitors, but they are to be of the simplest kind. Next follow

regulations as to finance, and as to the sacrifices to be offered, which are on a large scale, including, as one item, a hundred lambs. After the sacrifices what remains is to be consumed at a sacred banquet partaken of by the *μύσται* of both sexes, with the priest and priestesses, the musicians, and the assistants. Finally, the male votaries are to draw up and submit to the magistrates a report of the proceedings and the names of the transgressors whom it has been necessary to punish.

This long and minute inscription enables us easily to follow the visible course of the mysteries; but it omits precisely the things which would most interest us—the course of the secret rites and the doctrines which they taught or embodied.

At Andania, as we have seen, the Kabeiroi had a share in the local mysteries. But the most important seat of the cultus of these deities was the island of Samothrace, where in full summer their rites were celebrated. Lemnos was also a seat of their worship; and in recent years a Kabeirion has been excavated at Thebes, where have been found Greek vases painted with scenes connected with the cult, the interpretation of which presents great difficulties. It is very difficult, from the scraps of information which have come down to us, to reconstitute the character of the Kabeiric mysteries. A few points are regarded as made out. In the first place, the rites seem to be in origin pre-Greek, whether Phœnician or Pelasgic, but they were afterwards Hellenized. The deities themselves were known as Axiokersos and Axiokersa, a pair, with a child Axieros, and a fourth being, called Cadmilos. If we subtract the affix 'Aξίος,' which is doubtless the Greek word meaning 'venerable,' we have Kersos, Kersa, and Eros. But Eros here is not, as has often been supposed, the Greek deity of love; the word may be merely the Greek *τέλεσις*, 'sacred.' By the Islanders two male figures of the group were identified with the Dioscouroi, Castor and Pollux; and the mysteries certainly had a nautical character, the gods to whom they belonged guaranteeing to sailors a safe passage through the sea. At Thebes, on the other hand, the Kabeiric mysteries seem to have taught some lore as to the origin of man and the productive powers of nature. But it is of little use to try to recover both the dream and the interpretation. The matter is fully discussed by L. Bloch, in Roscher's *Lexikon*, s.v. 'Megaloí Theoi.'

(c) *Dionysiac mysteries.*—Besides the Greek mysteries which belonged to definite places and to particular deities, there were others which were practised by societies which sprang up in various places, and admitted of something like a religious propaganda. These appear to have originated, or, at all events, to have spread, in the 6th cent.—a time of great mental progress and unrest. An important part in their spread is attributed to Pythagoras, a native of Samos, but a great traveller, whose influence spread as far as Italy, and to Onomacritus, an enigmatic personage who dwelt at Athens in the time of Pisistratus, and has been regarded as the author of poems which passed under the names of Orpheus and Musæus. The deity with whom these mysteries were specially concerned was Dionysus, although Æschylus in his *Bassarids* boldly says that Orpheus was not a worshipper of Dionysus but of Helios or Apollo.

None of the Greek deities was so important in the festivals of Athens as Dionysus. And no deity takes so many aspects in Greek religion. His original seat was in Thrace; and he seems to have been the vegetation-spirit of some of the tribes of the north, who worshipped him with rude orgies in the mountains Rhodope and Pangæum. In a sort of reaction against progressing civilization these rites spread over Greece, and found a second home in Boeotia. From the *Bacchæ* of Euripides we may gather their general character, which is marked by wild ecstasy, by wandering in the

mountains, by the tearing and devouring of sacred animals, and by sexual irregularities. They were largely confined to women, and were secret. But so far we may regard them as a mere survival of barbaric cultus. It is when they are associated with the name of Orpheus that they take another and a more important aspect.

(d) *Orphic mysteries*.—Orpheus was regarded as a native of Thrace; and it seems strange that so gentle and attractive a figure should be associated with so wild a country. But two things may be noted: (1) that on the southern shore of Thrace there lived from very early times a population gentler and more Hellenized, whom the Greeks called Pæonians; and (2) that Orpheus did not harmonize with the Thracian religion, and was finally done to death by raging Thracian women. It would seem that Orpheus, whether an actual person or the mere personification of a tendency, represents a Greek revised version of the worship of Dionysus, in which the savage elements were, at least in the better times of Greece, eliminated, and religious and philosophic elements implanted in it. Some modern writers, misled by the analogy of Gnostic and heretic sects in the early Christian Church, have regarded the Orphics as an organized sect with leaders and special rites and doctrines. But this is a delusion. The best account of the Orphic teachers occurs in Plato:¹

'There are quacks and soothsayers, who flock to the rich man's doors, and try to persuade him that they have a power at command, which they procure from heaven, and which enables them, by sacrifices and incantations performed amid feasting and indulgence, to make amends for any crime committed by the individual himself or by his ancestors . . . and they produce a host of books, written by Musæus and Orpheus, which form their ritual. . . . Their Mysteries deliver us from the torments of the other world, while the neglect of them is punished by an awful doom.'

The special form of Dionysiac worship to which these people were attached is connected with the name Zagreus, which was applied to the chthonic Dionysus. The legends which told the story of the birth, death, and resurrection of Zagreus are of a particularly revolting kind, and Clement of Alexandria, who dwells on them, wins an easy victory over heathenism. Zagreus was the child of an amour of Zeus and Persephone. While still an infant he was entrapped by the Titans, who attracted him with toys and then tore him to pieces and devoured him. Only the heart survived, which was rescued by Athene and carried to Zeus, who slew the murderers with his thunderbolts, and produced from the heart another Zagreus. It is not hard to understand how this unsavoury story may have been moralized, as other unpleasant stories in the sacred books of many nations have been. A myth is often interpreted in the light, not of history, but of inner experience. In all of us, the Orphic teachers maintained, there is a divine element not wholly overwhelmed by the wickedness of which the Titans are the emblem. By innate impurity men are condemned to a cycle of births and deaths, the *κύκλος τῆς γενέσεως*, from which they can escape and be made fit for communion with the gods only by purification and initiation in the mysteries.

A special feature of Orphism was the careful instructions which it gave as to the route to Hades. Certain inscribed gold tablets found near Sybaris in Italy, and dating from about 200 B.C.,² were placed in tombs, and furnish to the dead a guide to the happy part of the world of shades, telling him with what words he must address the guardians of the spring of memory and other servants of Persephone.

The death and revival of the deity of the mysteries is a feature of the cultus not only of Zagreus,

but of Isis and of Cybele. Osiris was slain by Typhon, and Isis searched long before she discovered his body. The death or self-mutilation of Attis, the young favourite of Cybele, and his rebirth were recorded in a drama yearly enacted in the spring.¹ A pine-tree was selected as a symbol of Attis, and the identification was completed by fastening to the tree an image of the deity. The tree was cut down and carried into the sanctuary of Cybele, whereon great wailing ensued, and the *μύσται* gashed themselves with knives to signify their participation in the suffering of their patron. On the next day Attis was restored to life. In this case we see clearly that the original meaning of the rite was sympathy with the death of vegetation in the winter and its revival in the spring. But from that rite of purely naturalist religion to the death to sin and revival to a better life the spirit of man passed by a gradual enlightenment; the events in the world of nature became a reflexion of the life within.

Our knowledge of Orphism has been considerably increased in recent years through the discovery at Athens of a precinct of Dionysus which was the seat of the worship of a *θλασος* called the Iobacchi, and in it a long inscription which reveals to us the constitution of the *θλασος* and the character of its cult.³ A great part of the inscription deals with the necessary, if not inspiring, subject of finance. But we have also record of a curious sacrifice performed in the month Elaphebolion. Persons selected by lot from among the Iobacchi personated various deities and heroes, Dionysus, Kore, Palæmon, Aphrodite, and Proteurhythmus, and received portions of the flesh of the sacrifice. It is conjectured that under the name Proteurhythmus we must suppose Orpheus to be intended; it was quite a custom of the mysteries to celebrate gods and founders under names peculiar to the special cult. But in this inscription again it is the visible acts of cultus that are mentioned, not the meaning attached to those acts.

Maass, in his *Orpheus*, maintains that the Orphic societies were not always attached to the worship of Dionysus; sometimes other deities, such as Kore or Hekate, took his place. Any chthonic cult might have an Orphic aspect. And the Orphic writings were accessible to persons outside the *θλασος*. The Orphic hymns which have come down to us are of late origin, but it may be that in character they reproduce early ones. These hymns, with their fantastic cosmogonies, cannot be treated here.

Approaching the time of the Christian era, we find Orpheus in literature and art taking the place of a shepherd of souls, who had himself descended into the realm of Hades in his search for his wife Eurydice and so was able to guide others through its perils. Thus we are not surprised to find that he often appears in the paintings of the Christian catacombs as a symbol of Christ.

(e) *Spread in the age of Hellenism*.—The age which immediately followed the great conquests of Alexander and the establishment of the Greek kingdoms of Asia seems to have witnessed the low-water mark of religion in Greece and Asia. The breaking up of nationalities in the Persian empire necessarily involved the abasement of the national religions; and the victorious Greeks and Macedonians had little to put in their place. In the new-founded and enlarged cities which arose everywhere in S. Asia from the Ægean Sea to the Ganges, the conquerors introduced the cult of their own gods; temples of Zeus, Apollo, and Artemis sprang up, and festivals on the model of those in Hellas were instituted. But these cults had little vitality; they were encouraged by the rulers for

iii. [1892] 111-118.

merely political reasons, and they took no hold on the people. The only forms of worship which had any force were the cultus of the *Tύχη*, or Fortune, of cities and the deification of the reigning monarchs, which were not religion at all in the sense of an approach to the unseen spiritual powers, but only a glorification of outward success and prosperity.

Hence we need not be surprised to find that before long, especially in the 2nd cent. B.C., the stronger religions of W. Asia revolted against the Hellenic influence. In India the Greek deities were driven out by Buddhism and Hinduism. The religion of the Magi in Persia and Media revived, and was adopted by the conquering Parthians. In Egypt Isis, with her new consort Sarapis, recovered lost ground. In Judea took place the notable revolt under the Maccabees, which placed the religion of Jahweh in an unassailable position. It was natural that at the same time the mystery-religions should have issued from obscurity and gained converts in crowds; for religion is like a plant which, when it dies down, sends out from the roots fresh shoots. And, as these religions embodied a profound tendency of the age to transfer the stress of religion from the State-cults to private beliefs, they gained from that general instability of States which made place for the rise of Rome.

In the Hellenistic age there took place in the great cities of Hellenic origin the same process which is notable in our own days. The population flocked into them, and became more and more cosmopolitan. Phœnicians and Jews, Ionians and Italians, followed trade wherever it led. At the same time the trade in slaves settled in the country districts swarms of captives, Phrygians and Thracians, Syrians and Greeks. All these incomers brought with them their deities and the traditional rites with which they were worshipped. From Phœnicia came the cult of Baal and Astarte; from Phrygia came the worship of the great goddess Cybele, with whom were associated the effeminate Attis and the more majestic figure of Sabazius, who combined the functions of the Greek Zeus with those of Dionysus. The cult of Sarapis and Isis, which had its origin in Egypt, spread in the course of the last three centuries B.C. into all the great commercial towns. And somewhat later, at the beginning of our era, the religion of Mithra, which was a curious outgrowth of the old religion of Persia, spread westward from Cilicia, and became a formidable rival to Christianity, having a great hold of the Roman legions. The Jews also made many proselytes; and their worship, which was regarded by the historians of the time as in the same class with the other cults which have been mentioned, attracted especially the women of the wealthier classes.

It would be a long and difficult task, and, in fact, impossible, to disentangle the complex threads of the religions of the age; we do not know enough of the peculiarities of each. There was a constant influence of one on another. For example, the repulsive rite called *taurobolium* (*q.v.*), which consisted in bathing votaries in the blood of a newly slain bull, seems to belong primarily to the worship of Cybele and Sabazius, but it became a feature of the cult of Mithra. Apuleius, in his curious work, *The Golden Ass*, is evidently anxious to show that the rites of Isis are of a higher and better kind than those of Cybele, Hecate, and other deities; but he altogether fails to impress on the reader wherein this superiority consists, or wherein his hero Lucius becomes the better when he forsakes other deities to become a votary of Isis. The Mithraic religion has been studied with the most minute care and good judgment by

F. Cumont,¹ who has set forth views in regard to it which have been generally accepted by scholars; but, in the absence of any extant literature to enlighten us, we have only the vaguest notion of the real attractions of the cult. See art. MITHRAISM.

2. General character and tendencies.—All these religions, by the very necessity of circumstance, were not local or civic, but appealed to men as individuals and in groups. All of them were proselytizing, and offered to mankind, in competition with one another, a better way of life. All that we can attempt is to sketch the general tendencies which were common to them all, so that they made a definite class.

From the point of view of this article, their most important characteristic was that they were *mysteries*. One and all belonged to those only who were initiated, and had secret practices and doctrines which it was not lawful to reveal. The secrecy of the cults carried with it the necessary consequence that their principles were handed down, from generation to generation, by a set of priests or hierophants, who usually claimed extensive powers, and offered themselves as the only legitimate way by which the deities could be approached. They held the keys of the gate, and by their aid only could the would-be votaries attain to a divine communion. We find in later classical writers—Apuleius, Lucian, Juvenal—very unattractive pictures of these hierophants, who were frequently eunuchs, and made a shameless trade with sacred things.

But what constituted the attraction of these societies? Why were the priests able to attract the men and women who were dissatisfied with their lives and anxious for a better hope? What could they offer to the votaries? The best answer may be given in a single word. The great need and longing of the time was for salvation, *σωτηρία*. Men and women were eager for such a communion with the divine, such a realization of the interest of God in their affairs, as might serve to support them in the trials of life, and guarantee to them a friendly reception in the world beyond the grave. To attain peace of mind, a position of confident hope amid the blows of circumstance, they would make trial of any secret cult which came their way, perhaps of one after another, until they found one to satisfy their needs.

The communion with some saving deity, then, was the end of all practice of the mysteries. And those of the Græco-Roman world had in common certain features, as to which the best modern writers have come to a general agreement. These features, briefly, are the following.

The entry into any of the societies, or *θλαστοί*, was through certain rites of purification. We have already seen that this was the case at Eleusis, and it seems to have been so in other instances. Sometimes the purification was accomplished by baptism in water; sometimes there was a more repulsive baptism of blood. The blood-purification of which we hear most was the *taurobolium*. A more ordinary purification in Greece was that by the blood of a sacrificed pig. We must not suppose that, in origin, these ceremonies arose out of a sense of guilt or unfitness for converse with the gods. At first the uncleanness from which they liberated men was only formal, and the rite partook of the nature of magic. But by degrees more lofty conceptions made their way into men's minds; and it is to be supposed that many a votary of Cybele or Mithra may have looked back on the blood-bath as marking his entry into a better state of existence.

¹ *Textes et monuments figurés relatifs aux mystères de Mithra*, 2 vols., Brussels, 1896-99.

a sacred stone which represented the Phrygian Mother-goddess was brought from Pessinus to Rome, and her worship thus gained a footing in the city. Private societies, even among the higher classes, were formed to carry on her cult. Not long afterwards, in 186 B.C., nocturnal festivals attended by many irregularities, held in honour of Dionysus, spread rapidly over Italy. The Roman Senate regarded the matter in the severest light, and many men and women who were denounced as having taken part in such rites were put to death; but the movement was too wide-spread to be trampled out. The natural attitude of a patriotic Roman towards such religious developments is exactly expressed by T. Mommsen:

'Of course all rational men were agreed in the condemnation of these spurious forms of religion, as absurd as they were injurious to the Commonwealth.'¹

It is characteristic of Mommsen that he would not recognize that the mixed people of Lower Italy might have religious needs which the stiff old religion of Rome could not satisfy. The age of Augustus saw some revival of the old Roman religion, which, however, could not be galvanized into real life. In the age of the Antonines, and still more in that of the Severan emperors, Rome and Italy were inundated by a great variety of Oriental religious cults—private cults which had no connexion with the State, but were kept up by *thiasoi*, small coteries of votaries. The ladies of the Severan dynasty, Domna, Mæsa, Mamaea, and Soæmias, were natives of Emisa in Syria, and closely attached to the worship of the Baal there venerated—a cultus which Elagabalus, the son of Soæmias, introduced as the imperial religion. These ladies had talent and character; and the Semitic rites which they favoured became fashionable. But, apart from that, their age was an age of syncretism in religion and the *superstitio* which goes with it. Many high-born women became Jewish proselytes. In the later age of Aurelian and Diocletian the religion of Mithra, which had, for reasons which it is hard to discern, become the ruling cult of the Roman army, was spread to all the confines of the empire, especially

Gaul and Germany. Mithraism and the worship of the Phrygian Great Mother, which was somehow blended with it, were essentially mystery-religions. The seats of Mithraic worship were caves and underground shrines; and the rites were so secret, so secret that we know very little about them, though many Mithraic shrines have been discovered, and sculptured remains abound. To show the prevalence of the ideas of the mysteries in this age, we need only appeal to two writers: Plutarch¹ says that it is from the mysteries that we gain our best knowledge of the dæmonic element in life; and Clement of Alexandria, though he makes a bitter attack on the pagan mysteries as rivals of Christianity, yet chooses to express his own faith in phrases borrowed from them:

'O truly holy Mysteries, O light undefiled. I am led by the torch-bearer to be initiated into heaven and God. Through initiation I become holy; the Lord is my hierophant, and as photogogos seals the votary for himself.'²

This brief statement is sufficient to show that in the Roman empire the prevalence of the mystery-religions is not a Roman development, but represents the suffocation of the Roman spirit. As J. Strzygowski expresses it,³ the West expires in the embrace of the East. It is a process parallel to, and contemporary with, the conversion of the Roman empire to the Christian faith. In the 'Greek' section (p. 82) Apuleius is quoted; and what is there said as to the influence and character of the pagan mysteries and their relation to Christianity in the eastern part of the Roman empire, applies also in the western part, though the difference always subsists that in Greek-speaking countries more was made of the intellectual aspects of the mysteries, in Latin-speaking countries of their rites and practices.

LITERATURE.—Four good books serve to guide the student through the confused medley of religions in the Roman empire: W. W. Fowler, *Rel. Experience of the Roman People*, London, 1911; T. R. Glover, *The Conflict of Religions in the Early Roman Empire*, do. 1909; S. Dill, *Roman Society from Nero to Marcus Aurelius*, do. 1905; J. Réville, *La Religion à Rome sous les Sévères*, Paris, 1886. P. GARDNER.

MYSTICISM (Introductory).—'Mysticism,' in common speech-usage, is a word of very uncertain connotation. It has in recent times been used as an equivalent for two characteristically different German words: *Mysticismus*, which stands for the cult of the supernatural, for theosophical pursuits, for a spiritualistic exploitation of psychical research; and *Mystik*, which stands for immediate experience of a divine-human intercourse and relationship. The word 'mysticism' has, furthermore, been commonly used to cover both (1) the first-hand experience of direct intercourse with God and (2) the theologico-metaphysical doctrine of the soul's possible union with Absolute Reality, i.e. with God. It would be conducive to clarity to restrict the word 'mysticism' to the latter significance, namely, as an equivalent for the German word

Mystik, and as designating the historic doctrine of the relationship and potential union of the human soul with Ultimate Reality, and to use the term 'mystical experience' for direct intercourse with God.

First hand, or mystical, experience is primarily a psychological question; the doctrine of mysticism is essentially a metaphysical problem. Mystical experience is as old as humanity, is not confined to any one racial stock, is undoubtedly one of the original grounds of personal religion, and does not stand or fall with the truth or falsity of the metaphysically formulated doctrine of mysticism. Mystical experience is marked by the emergence of a type of consciousness which is not sharply

MYSTICISM (Primitive).—Religions mysticism in the higher sense of the word, as an intuitive and ecstatic union with the deity obtained by means of contemplation and other mental exercises, is very rarely found among primitive races. They lack, as a rule, that idea of God as a spiritual and universal being which is the theoretical presupposition of this elevating of the mind; and their lower stage of reflexion does not allow them to pass through the series of abstractions and psychological analyses ordinarily involved in the practices of the mystics.

Nevertheless, as the idea of gods or ghosts as spiritual powers which take possession of man is current among the primitive peoples, and in so far as the sorcerer's art actually aims at inducing a possessed state of that sort, we very often meet with a 'mystical union' in the lower sense of the word, and, in fact, must regard it as typical of primitive religion.

1. Mana, etc.—This is seen most clearly in the earlier stages of primitive religion—nowadays termed 'pre-animistic'—where there is as yet no mention of gods or personal spirits, but holiness is conceived simply as a number of unpersonal or undifferentiated powers reigning over mankind and nature, but abiding in some elected persons (chiefs or sorcerers) whose nature fits them to be the instruments of these powers—the *mana* of the Melanesians, the *orenda* of the Iroquois, powers which, on the one hand, make the chiefs and their property tabu, and, on the other hand, enable them, without any consecration or other special ceremony, to exercise strong influences not only on the members of the tribe but even on nature, procuring rain and fertility, or, on the contrary, provoking thunder, hurricanes, etc.

In so far as *mana* is identical with the tabued man's nature itself (his special soul), we can hardly speak of a possessed state or of mysticism at all. But in some cases the *mana* is considered not merely as a faculty in the individual, but as a power *in se* of a certain superhuman character which partially takes up its abode in favoured persons. As to the Great Spirit of the Algonquins, we do not know whether it signifies only the powerful human soul or an independent being. At any rate, when the inward power in chiefs or sorcerers is conceived as a partaking of a superhuman power working through their actions, the phenomenon must be designated as a case of mysticism. And what is especially to be noted is that the type of holiness realized by these persons is essentially the same as is shown in all mystics of the world, viz. a holy man is endowed with certain gifts (a higher nature) that make him godlike—according to the ideas of the godhead—or at least enable him to exert influences which surpass the ordinary human faculties.

2. Shamanism.—Most forms of shamanism come within the sphere of mysticism. The ceremonies of the Yakuts in Siberia, as described by W. Radloff (*Aus Sibirien*, Leipzig, 1893, ii. 1 ff.), exhibit the manifold endeavours of the shaman to communicate with the deity and to penetrate into the heavens, in whose highest region Ulgūn Bai ('the heavenly god') resides. The trances of the shaman, produced by means of ecstatic dancing, reduce him to a state of unconsciousness in which his soul has left the body to unite with the god or at least to dwell in his immediate presence. The most characteristic moment is the 'shamanizing' itself. The medium or instrument of this process is the shaman's drum, which he, as a result of the magical faculties acquired by his trances, fills with demoniac forces; the ghosts of the lower world now reside in the drum, by aid of which the shaman is able to provide himself and the people

present with new vital force, to heal disease, promote fertility, etc. The mystical element in this process is the presence of the divine essence in the shaman and his distribution of it to others.

These shamanistic phenomena are found in Arctic Asia and America, and seem to be confined to this ethnologic and climatic zone; but, as shamanism, at least in its Siberian shape, is largely influenced by the great Indo-Iranian religions of Asia, especially in regard to mythological figures and cosmology, we cannot regard it as a genuine type of primitive mysticism.

3. Fetishism.—A truer illustration is afforded by African fetish-priests (*gangas*, etc.). According to the record of A. Bastian (*Deutsche Expedition an die Loango-Küste*, Jena, 1874-75, i. 55 f.), the natives of the Loango Coast, in cases of grave sickness, send for two priests, who, by means of dances round the fire, jumping, and whirling, fall into a trance and enter into a state of possession during which the voices of the demons inspiring them are heard through these skilful ventriloquists.

4. Medicine-men.—The medicine-men of the Indian tribes in many cases also assume the powers of demons by dressing in fantastic garb—hides, skulls, masks—and imitating the actions of the impersonated demon or animal, its movements, its howling, etc. In this way the medicine-man directly represents the spirit whose help is wanted. He even tries by means of trances, intoxications, or sweat-baths to induce a state of unconsciousness in order to lay himself open to the approach of the spirit.

Higher ideas of the godhead, such as have arisen among several Indian tribes, endow this relation to the spirit with a noble character. C. A. Eastman, a born Indian, bears witness to spiritual experiences of a wider range in describing a young man's religious initiation, broadly interpreted indeed, in modern Christian language:

"That solitary communion with the Unseen which was the highest expression of our religious life is partly described in the word *hambeday*, literally "mysterious feeling," which has been variously translated "fasting" and "dreaming." It may better be interpreted as "consciousness of the divine."

The first *hambeday*, or religious retreat, marked an epoch in the life of the youth, which may be compared to that of confirmation or conversion in Christian experience. Having first prepared himself by means of the purifying vapor-bath, and cast off as far as possible all human or fleshly influences, the young man sought out the noblest height, the most commanding summit in all the surrounding region. Knowing that God sets no value upon material things, he took with him no offerings or sacrifices other than symbolic objects, such as paints and tobacco. Wishing to appear before Him in all humility, he wore no clothing, save his moccasins and breech-clout. At the solemn hour of sunrise or sunset he took up his position, overlooking the glories of earth and facing the "Great Mystery," and there he remained, naked, erect, silent, and motionless, exposed to the elements and forces of His arming, for a night and a day to two days and nights, but rarely longer. Sometimes he would chant a hymn without words, or offer the ceremonial "filled pipe." In this holy trance or ecstasy the Indian mystic found his highest happiness and the motive power of his existence.

When he returned to the camp, he must remain at a distance until he had again entered the vapor-bath and prepared himself for intercourse with his fellows. Of the vision or sign vouchsafed to him he did not speak, unless it had included some commission which must be publicly fulfilled. Sometimes an old man, standing upon the brink of eternity, might reveal to a chosen few the oracle of his long-past youth' (*The Soul of the Indian*, Boston and London, 1911, pp. 6-8).

LITERATURE.—The facts of primitive mysticism must be sought for in the special ethnological works. For American shamanism, e.g., see W. J. Hoffman, 'The Midé'wiwin of the Ojibwa,' in 7 *REBW* [1891], p. 156, and the works mentioned above. General aspects are treated in E. Lehmann, *Mysticism in Heathendom and Christendom*, Eng. tr., London, 1910, ch. i. f.

E. LEHMANN.

MYSTICISM (Buddhist).—There is no mysticism in Buddhism, if the word 'mysticism' is understood quite strictly: immediate, non-discursive, intuitive, relation with the Absolute, whether personal (Christian, Muhammadan, Bhāgavata

mysticism) or impersonal (Neo-Platonism, Vedānta proper). The relations of the mystic with the Absolute, in contradistinction with the mediate relations of the devotee through faith, prayer, and liturgy, are merely quiescent or passive; they aim at absorption, at the merging of individual thought and being in the Absolute; and the process is carried on under the impulsion, the guidance, the grace, the essential attractive power of the Absolute.

There is no Absolute according to all the 'orthodox' forms of Buddhist thought—whether Little or Great Vehicle—and, therefore, there is no Buddhist mysticism.

But the word 'mysticism' may be, and as a matter of fact often is, employed with less accuracy, and it frequently covers the whole field of extra-rational intuitions and practices by which some supra- or extra-rational aim is obtained, as well as the fantastic cosmological theories of the stages by which the soul ascends to the Absolute.¹ Methods of concentration of thought, trances, ecstasies, are, in fact, usually found along with a thoroughgoing mysticism, the auxiliary and preparatory part of the *śravis*, or attainment of knowledge; and, where such practices are found, there is 'mysticism,' even where the essential characteristic of mysticism, immediate, intuitive relation with the Absolute, is wanting.

(1) It should be observed that, if Buddhism ignores every positive and real Absolute, it has an absolute aim, viz. the destruction of the 'contingent,' of the 'caused existence' (*samskṛta*); the obtaining of the 'uncaused' (*asamskṛta*). Merging into nothingness is, in Buddhism, the counterpart of the 'merging into the One' of the Vedānta or Neo-Platonism. Buddhism agrees with monism so far as the relative or contingent is concerned. The difference is evident enough: no immanence, no attractive power, can be asserted of the 'not to be reborn'; and, when the texts say that 'there is an Unborn (*ajāta*), an Uncaused, an Immutable,' they mean only that there is a way leading to the death without rebirth. But the fact is important that *nirvāṇa* is described in 'mystic' phrases—borrowed from Brāhmanism.

(2) To realize its aim, the 'most orthodox' Buddhism relies on rationalistic devices. It cannot be too much emphasized that Buddhism pretends to be rationalistic and 'scientific,' though it need hardly be said that the reason and science of India in the 6th cent. B.C. are not in every way our reason, our science.

Many of the current Indian theories of cosmology and science, especially medical science, are treated as accepted facts in all the Indian philosophies. But on the basis of their own standard of scientific knowledge—transmigration, e.g., is a scientific fact—the Indian philosophies developed consistent and logical systems, using legitimate methods of evidence and proof, and (excepting the purely orthodox ritualism) rejecting sacrifice as a means.

Primitive Buddhism, like the orthodox systems, was entirely rationalistic, differing only in method, in that it refused to give any answer to certain ontological questions which it considered useless, and in more rigid accuracy, at least sometimes, putting blame and ridicule on the people who endeavour to be reborn in Brahmā's heaven. Nobody has ever seen Brahmā, not even the *ṛṣis* of old. Buddha condemns the principle of authority, and explains in so many words that the Truths are of no avail, when they are accepted on his

authority, when they have not been ascertained and realized by personal effort. Buddha knows only observable facts: 'given the colour and the visual organ, there is visual knowledge, . . . there is desire, there is act, there is rebirth,'¹ and he will be satisfied when he has found the therapeutic of desire—as a good physician who does not care for metaphysics: physics are a large enough field, when the patient is suffering.

But, in the Indian systems, beside the rationalistic method was the method of trance, devices intended to produce ecstasy in which the Truth is realized. In Buddhism the goal is not reached by this means. The practice of trance, however, may form a part of the training in winning the detachment necessary for realizing the Truths, and thus it may have its place in the therapeutic of desire. Trances are therapeutically indifferent: when undertaken with desire, in order to obtain advantages in this life or reward in another birth, they are bad—from the point of view of the aim to be obtained, i.e. *nirvāṇa*. When undertaken in order to strengthen the power of thought, the power of will, or to confirm the knowledge obtained by discursive means, trance is good; and some Buddhists willingly admit that it cannot be dispensed with. There have been monks addicted to *dhyāna*, who were opposed to the partisans of the rationalistic study of *dharma*, as we know by a single reference.

The knowledge which liberates from rebirth is not a gnosis; it is the deliberate and true appreciation of the natural impermanency of things, of the natural painfulness of life. It is a 'correct act of attention' (*yoniso manasikāra*). Such knowledge cuts the roots of desire and, therefore, of life.

Trances do not confer on the ecstatic an increase of knowledge, a more accurate or a more extended intelligence of the nature of suffering.² They confer a firmer knowledge, which enables the ecstatic to look always at things as they are, without being ever deceived by their apparent stability or pleasantness. After again and again practising the *asubhabhāvanā*, the beauty and the flesh of a woman are no longer seen, but only the skeleton and the following putrefaction. When a man has practised the concentrations of 'the realm of non-matter' (*ārūpyasamāpatti*), he forgets how to see colours, how to hear sounds, how to smell odours, and becomes inaccessible to the desires which are born from the senses: through such concentrations he may obtain the privilege of remaining for centuries in the highest heavens; but a Buddhist looks at them as useful steps towards *arhat*-ship. Moreover, concentration, whatever its object, gives to the mental organism a special vigour: to look at something blue till one sees the 'blue' with the closed eyes does not, by itself, eradicate desire; but it is an excellent device, because it makes the beginner fit for better and more specific exercises—the contemplation of the Truths. But trances, as they are of no avail when they are not guided and dominated by the 'correct act of attention,' are by no means indispensable. To obtain deliverance, it was enough for Gantami the Meagre to understand that 'death is the end of life,' and to realize, merely by the sight of the dying out of the lamps of the convent, the universal rule of decay.

(3) It may be observed that the position of penance (*tapas*) and devotion (*bhakti*) is parallel to the position of concentration or ecstasy; like the latter, both penance and devotion are secondary.

A certain amount of asceticism (*brahmacharya*), in the sense of abstinence from physical pleasures,

¹ *Sathiyutta, passim*.

² See, however, C. A. F. Rhys Davids, *Buddhist Psychology*, London, 1914, p. 125 f. (on the *prajñā* and the 'supernormal' consciousness). There is in the attainment of the four Truths a mystical element. They must not merely be known (*viññāta*) but realized (*sākṣātkṛta*).

is indeed necessary, and there cannot be hope of eradicating desire if a man lives in the very fire of passion, i.e. in secular life, or transgresses the moral rules (*śīla*); but *śīla* and penitential observances (*vrata*) are by themselves not merely of no avail, but form one of the bonds (*samyojana*) broken by the converted. Nevertheless, Buddha does not reject penance, and some of his disciples are indeed very good ascetics, living in cemeteries, eating just enough not to starve, and keeping similar rules (*dhuta*-precepts), which, according to tradition, Buddha permitted, but refused to make compulsory.

On the other hand, devotion to the Master is utterly meaningless and deceitful to one who does not know the Truth: 'Anyone who sits near me, and even touches my garment, if he does not see the Law, is indeed very far from me'; but, when the theoretical and rigid Udayin rebukes the simple-souled Ananda: 'Why do you care for the cosmical power of the Master?',¹ Buddha rebukes Udayin: 'If Ananda were to be reborn, he would obtain, owing to his confidence in my power, seven heavenly births, seven births as a king; but he will be in this life liberated from existence.'

The consistent adherence of historical Buddhism to its rationalistic tenets, coupled with its comprehensiveness—Buddhism makes allowance for the mysticism, asceticism, and devotion which are permanent features of Indian life and thought—explains the longevity of the True Law. From the earliest times to the rising of Amitābhisma and Tantric Mahāyāna there has been no transformation of the essence of the True Law, the whole of which is summarized in the four Truths; but there has been a large development of all the subsidiary elements.

L. DE LA VALLÉE POUSSIN and E. J. THOMAS.

MYSTICISM (Chinese).—The theories of Lao-tse (Laocins) bear many resemblances to the Brāhmanical philosophy, and present many parallels to the teaching of the Greek mystics. His theme is *Tao*, a term already familiar to Chinese thought long before his time (6th cent. B.C.), but which he informed with a new and transcendental meaning, so profound as to render any comprehensive definition of it impossible. *Tao* is the Ultimate Reality, anterior to and higher than heaven, existing before time began, and precedent to the manifested God. It is the principle or law of nature, eternal, unchanging, and all-pervading, and as such must have existed prior to any personification, which can only be regarded as a development and corporate expression of that principle. It is the First Cause of all existence, manifesting itself in the creator and the visible universe. The idea of the creator, as expressed by theists, is, almost inevitably, influenced by anthropomorphic conceptions, but Lao-tse attempted to go a stage backward, and to picture a condition of things when the only existence was that of *Tao*, the principle or law which is the root of all phenomena, and by which all nature is ordered and controlled. No name or title was adequate to describe this principle, and Lao-tse was forced to content himself with the ambiguous term *Tao*, i.e. 'the way,' or the principle in operation, as reflected in the course of nature, a term which later exponents of the Taoistic school applied in a somewhat different manner. This principle is devoid of personality, and is without any of the attributes which are associated with humanity, including that of consciousness; in other words, its action is represented as necessary and

automatic. It can be defined only in negative terms, such as 'colourless,' 'soundless,' 'immaterial,' for the reason that it is invisible, inaudible, intangible. Lao-tse was most anxious, it would seem, to avoid the possibility of his *Tao* being regarded as, in any sense, comparable with the various deities which were supposed to preside over the several departments of nature and those which were associated with the names of deceased individuals, producing that very element of division and decentralization which was the antithesis of his idea of centrality and unity. His conception of creation was that out of *Tao*, the eternal ultimate principle, came the One, i.e. the Great Monad, or material cause of the universe; the One produced the two primary essences, the *yang* and the *yin* (=positive and negative), representing and embracing all the great antinomies, male and female, light and shade, etc., and these gave birth to the three powers of nature—heaven, earth, and man—whose co-operation resulted in the production of all creatures. *Tao* is not only the ultimate source of all existence, but it pervades, influences, and harmonizes all the phenomena of nature, and its quiet but all-effective operation is the exemplar upon which all human activities should be modelled, in contradistinction to the bustling officiousness and blustering self-assertiveness which were characteristic of his times, and which had wrought such havoc in national and social conditions. This is the groundwork of Lao-tse's philosophy, and supplies the motive of his theory of inaction, or non-interference, which occupies so prominent a place in the *Tao-Teh King*, and which is intended to inculcate the importance of attaining that complete vacuity and extinction of desire which alone can induce to the possession of *Tao*, and the entire surrender of man's being to its all-potent influences, with the result that the advanced scholar becomes exempt from the trammels of matter and the limitations of space and time. The line of argument thus faintly sketched was the natural reaction of Lao-tse's despondency at the political chaos of the period of the Chow dynasty in which he lived; the internecine struggles of the petty States which composed the empire; the race for advancement which characterized the official classes; and the abandonment to pleasure and licentiousness which was almost universal in the case of those who had the opportunity of indulging themselves.

There is little or no theological element in Lao-tse's philosophy, and the place which he gives to heaven is subordinate and secondary, contrary to the earlier usage which represented *Tao* as an attribute of heaven. The conception of God was of little consequence, since he did not anticipate the possibility of approach to or affinity with Him, but, since his aim is to glorify *Tao* as the supreme principle, and model, he naturally decided on giving it the paramount position. His disciple, Chnang-tse (Sancius), however, approximates more closely to the orthodox opinion, regarding T'ien, or God, as the great First Cause, and *Tao* as the virtue or manifestation of the divine First Principle, which he, in one passage, describes as the 'happiness of God.' It would seem that *Tao*, with Sancius, was equivalent to the *Teh* of Lao-tse, i.e. the virtue, or transmitted energy of heaven, whilst *Tao* is its inherent principle. The verdict of posterity was in favour of Chuang-tse's interpretation, and later Taoism was developed on the theological side, until its final concretion in a Taoist pantheon.

Tao is the natural heritage of man, but, in the majority of cases, that inheritance has been set aside by other interests. The quest of *Tao* may, and must, be undertaken, if men are to regain that tranquillity, that complete contentment,

¹ *Anguttara*, i. 227; the voice of a Tathāgata goes through the complete universe of 1,000,000,000 worlds.

before the beginning of the Christian era Taoism had already degenerated into a system of magic. Later developments witnessed the worship of Lao-tse, with sacrificial accompaniments; and succeeding generations betrayed an ever-descending scale of deterioration and degeneration. At the end of the 5th cent. temples and monasteries were established, in imitation of Buddhist institutions, and the approximation of the two systems continued until it became a matter of difficulty to distinguish between them, and Buddhist and Taoist 'priests' are employed at the same time for the conduct of funeral ceremonies, etc.

The foregoing outline of Chinese mysticism, as represented by its most characteristic exponents, will suggest many points of contact with Western systems, notably that of Plotinus, with which it is in agreement on (a) the subject of the ultimate unity, which is inaccessible to knowledge and can be apprehended only by an intuitive instinct, illuminated by occasional lapses into a state of ecstasy, such as are illustrated in various passages in the writings of Lieh-tse and Chuang-tse; and (b) the view that the Ultimate Source of all existence cannot be identified with the whole or any part of the material universe, being itself above existence, and, from a material point of view, non-existent. The idea of the immanence of the deity in creation, which was upheld by the Confucian school, is condemned by the Taoists.

The doctrine of relativity, suggested by Lao-tse, is developed with great freedom and boldness by Chnang-tse, who argues from this standpoint the utter illisiveness of sense-knowledge. The so-called 'contraries' are all, in a sense, identical, because of the 'all-embracing unity' which is behind them. The inference from this doctrine is that 'virtue implies vice,' and that they are inseparable, so that to aim at being 'virtuous,' in the conventional phrase, is less admirable than to remain quiet and unaffected by external things.

The four characteristics of mysticism which are outlined in W. R. Inge's *Christian Mysticism* (London, 1899) are faithfully portrayed in the system with which we are here dealing, viz. (1) esoteric knowledge, based upon the deposit entrusted by Lao-tse to the Warden of the Western Pass, and the mystic principles which can be learned only in silence and subordination at the feet of an expert; (2) quietism, which underlies the whole teaching of the *Tao-Teh King*, and is the logical application of nature's principles to human conduct; (3) introspection, which alone can produce that mental vacuity which induces to the full possession of *Tao*, and which excludes the intrusion of the material objects of sense and desire—a persuasion which contributed, in the later developments of Taoism, to a great increase of asceticism and renunciation; (4) contempt and neglect of material things, which is reflected in the paradoxes of all the great Taoist teachers; in their disdain of pomp and riches, their condemnation of governmental methods and of education, and their depreciation even of the conventional 'virtues.'

W. GILBERT WALSH.

MYSTICISM (Christian, NT).—The mystical aspect in the NT is the best available illustration of the position taken above (MYSTICISM [Introductory]). The NT contains a very slender show-

ing of mysticism in the technical sense. Hellenic influence, so far as it is in evidence here at all, is of a Stoic tendency rather than a Platonic. The finite human spirit is conceived, especially in the Pauline writings of the NT, as environed by the divine Spirit and as capable of being flooded and filled to all fullness with God. No sacred 'mystic way' is indicated, but all souls lie open-windowed to God and may have a revelation of Him, 'the eyes of the heart being enlightened.'

Christ's own personal experience, as it comes to light in the Gospels, is the supreme model of true mystical experience. All His words and acts are penetrated with an infinite depth of experience and are fused with a warmth and intimacy of direct fellowship with God. He reveals an interior *sense of life* which explores and possesses new depths of reality and which releases for Himself and others new energies by which to live. The active forces of His will appear always to spring from a life-conjunction with the Beyond. His ethical ideals—in the Sermon on the Mount, e.g.—are inherently bound up with His prayer-experience. The kingdom that is to come is the growing sway of the will of the Father to whom He prays, and it is possible only through expanding correspondence with a world of higher forces and of perfect conditions. The 'altered fashion of countenance,' the transfigured form and face, which marked His prayer-experience before the journey to Jerusalem, is such an experience as might well attach to a supreme crisis of personal decision. Prayer of illumination, altered face, changed form, glorified figure, the radiation of light, have marked many mystics, and these features seem to have characterized the Master as He adjusted His soul to the unseen realm, as He formed His momentous decision to be faithful unto death in His manifestation of love. The agony of sweat as He rose, in the shadow of the Cross, to the experience of communion and fellowship of suffering with His Father, and was enabled to cry 'Abba,' is psychologically true to nature and bears the genuine mark of mystical experience.

The most important fact of this personal life, which ever since has poured streams of power into the life of the world, is its complete adjustment to a realm of unseen reality, and its consciousness of correspondence with a personal heart and will, constituting the essence of that unseen realm. Through all the story and behind all the teaching is the inner fact of personal experience of God. In great moments of intercourse there is a flooding consciousness of sonship rising even to the adoration, 'This is my beloved son,' and in times of strain and tragedy the onward course is possible because the Abba-experience is absolutely real. A synoptic writer has reported a saying, which may indeed be coloured by later theology, but which declares a central truth: 'No man knoweth the Father save the Son' (Mt 11²⁷). Only a son knows a father; the way of inner love-experience is the only way to the secret. This primary feature of mystical experience seems to be the very warp and woof of Christ's inner life.

Our accounts, even in the Synoptics, indicate that it was the consciousness of a divine Presence that built the apostolic Church. Such sayings as 'Lo, I am with you always,' 'Where two or three are gathered together in my name, there am I in the midst,' are saturated with group-experience, and the early account in Acts of meetings 'in the upper room,' and of 'the Agape,' shows the richness and inner power of an invisible fellowship. Even when we allow for a legendary strand in the early narratives, we still find ourselves confronted in Acts with unmistakable evidences of the extraordinary revelation of spiritual forces in the early

faith once delivered. The idea of teaching by women was ridiculed by their opponents, and it was pointed out that the phenomena were those of 'possession.' It is interesting to notice that these prophets prepared themselves for ecstasy by emptying their mind of all thought (*ἐκένωσαν ἀνάστα*), and this state was succeeded by an uncontrollable frenzy (*ἀκόσμιος παρά ψύχης*) (Apollinarius, *ap. Eus. HE* v. xvii. 2). Tertullian tells us (*de Exhort. Castitatis*, x., one MS) that placing the head downwards was a preparation for hearing voices. An adversary of the Montanists, Miltiades, wrote a book, *How a prophet ought not to speak while in ecstasy*. Tertullian's defence, *de Ecstasi*, in seven books, is lost. The theory originated by Ritschl, and at one time popular, that Montanism was a recrudescence of primitive 'enthusiasmus,' has no support in extant sources. See art. MONTANISM.

Clement of Alexandria († c. 215) is the first Christian writer on mystical theology. Against the gnostic lecturers, who pretended to teach a secret doctrine handed down to them by disciples of the apostles, the recipient of which was raised to a higher level than the ordinary Christian, and became a 'knower' or 'gnostic,' Clement delineates the true 'gnostic' or ascetic, whose elevation above others is not acquired by human learning but by mortification and contempt of the world, and implies a life of self-conquest and of contemplation of God. From Philo Clement has borrowed the idea that God is to be sought, as Moses sought Him, in the darkness (*Strom.* ii. 2 and v. 12)—a saying which paves the way for the Areopagite and St. John of the Cross. God is to be reached by faith and by abstraction:

'Going forth by analysis to the First Intelligence,' taking away depth, breadth, length and position, leaving a monad, then abstracting what is material, 'if we cast ourselves into the vastness of Christ, thence if we proceed forward by holiness into His Imensity, we may in some fashion enter into the knowledge of the Almighty, recognising not what He is, but what He is not' (*ib.* v. 11).

This is the familiar *via negationis* of reasoning; but Clement means more than the attainment of an abstract ideal. The search, he goes on, is unseen and invisible; the grace of knowing (*γνώσις*) is from God through His Son. For God has no shape or place or motion or state or seat or right or left; the First Cause is not in space, but above space and time and speech and thought. The first stage of the quest (which corresponds to the three days of Abraham's journey) is the perception of beauties; the second is the desire of the good soul; in the third the mind sees spiritual things, 'the eyes of the understanding being opened by the Teacher who rose again the third day.' But this is not to see God as He is, which cannot be in this life (*Strom.* v. 11-13). In vii. 3 the contemplation of the gnostic is again spoken of (see also vii. 13), and vii. 7 deals with his continual prayer. This high contemplation is a special gift:

'Whether it is the Father Himself who draws to Himself every man who lives purely, and has gone forward to the intuition (*ἐννοια*) of the blessed and incorruptible Nature, or whether our own free will, having arrived at the knowledge of the good, leaps and jumps over the boundaries (as the gymnasts say), at any rate it is not without a special grace that the soul wings its way and is raised above what is above it, putting aside all that has weight' (v. 13).

In contemplation (*θεωπία*) the divine image is sealed upon the soul, which was made in God's image, by the Son, who is the perfect Image,

'so that the gnostic becomes a third image (*εἰκὼν*), as far as may be, being made like unto the Second Cause, unto that which is truly Life, by which we live the true life' (vii. 3).

Origen († 251) frequently refers to contemplation, and many times distinguishes the two lives, the active and the contemplative, which he was possibly the first to compare with Martha and Mary as their types (frag. 80 in *Joann.*, ed. E. Preuschen, Berlin, 1903, p. 547). He often speaks of rising above

sense and figures and shadows to one mystical and unspeakable vision (*e.g.*, in *Joann.* xiii. 24, *Celsus*, iii. 56). He lived with his disciples a life of asceticism, resembling that of the monks later on (cf. F. W. B. Bornemann, *In investiganda monachatus origine quibus de causis ratio habenda sit Origenis*, Göttingen, 1884), and he claims that, by abstinence and discipline, communion with God and prophecy and other 'spiritual gifts' can be attained. In an interesting passage he quotes the pagan Celsus's taunt, that no Christians would understand his mysticism, when he announced to them: 'If you close up the senses and look up with the mind, and if you turn from the flesh, and awaken the eye of the soul, thus, and thus only, shall you see God.' Origen replies that this is just what the true Christian does. When the eyes of Adam and Eve were opened (Gn 3^d), their inner eye was closed, but Christ came that those who see not may see, and that those who see may be made blind; and, in fact, by this shutting of the eyes of sense and opening of the better eye, God and His Son, who is Word and Wisdom, are contemplated (*c. Cels.* vii. 39).

A new period opens with the development of monachism in the 4th century. Thousands fled from the world, not merely to avoid temptation, but in order to attain perfect purity of mind and body and, in particular, purity of prayer, the prayer without images, which is so often mentioned in the Lives and apophthegmata of the Fathers. Retirement was necessary for contemplation (Basil, *Reg. fus. Tr.* 5 f.), and contemplation was the one thing necessary for the monk (Cassian, *Coll.* i. 8, x. 7; Basil [?], *Const. mon.* 1). The founder and model of Egyptian monachism, St. Antony, sometimes remained all night in ecstasy ('in excessu mentis') and complained when sunrise interrupted his prayer (Cassian, *Coll.* ix. 31):

'And he also delivered this celestial and more than human judgment as to the end of prayer: "That prayer is not perfect in which the monk understands himself or his own prayer"' (*ib.*).

This famous sentence applies in some measure to all mystical prayer, even its inchoate degrees. St. Athanasius tells us practically nothing of St. Antony's contemplation, but dwells upon the attacks made on the saint by devils (these remind us of many later instances, including the Curé d'Ars), and diabolical appearances in every form. Antony's power over demons is paralleled by many subsequent saints—*e.g.*, St. Benedict and St. Ignatius.

The Conferences of Abbot Isaac on prayer, reported by Cassian († c. 435), have had enormous influence. He teaches that monastic life tends to uninterrupted prayer and purity of thought (*Coll.* ix. 2). Prayer is multifarious, and its kind depends on the degree of purity attained, as well as upon accident and industry, so that it is not uniform (ix. 8). Out of any form of prayer most fervent and fiery prayers may surge up, so that the soul, after the manner of an incomprehensible and devouring flame, flies forth beyond all things, and pours out unspeakable prayers, which the Holy Ghost supplies, so that not only the mouth cannot speak them all, but the mind cannot recall them afterwards (ix. 15). This fiery prayer, known to few, and ineffable, transcends all human sense, and is described by no sound of voice or movement of tongue; but the mind is illumined by a celestial light (ix. 25). Tears are a grace, but not when they are forced (ix. 28-30). The means of attaining to continual prayer, so far as this is possible, is by short but fervent prayer. The most useful ejaculation is 'Deus, in adiutorium meum intende; Domine, ad adjuvandum me festina' (x. 9 f.). It is wrong to have any imaginary form of God before

than any writer; and the desire is joy: 'for he who desires, though his tongue is silent, yet sings in his heart' (on Ps 86). St. Augustine's description of the active and contemplative lives, typified by Peter and John (in *Joann.* tract. cxxiv. 5), and his long discussion and classification of visions—corporal, spiritual (i.e. imaginary), and intellectual (*de Genesi ad litt.* bk. xii.)—are classical.

St. Benedict († c. 543), whose Rule for religious life was to be almost universal in the West until the 13th cent., says but little about contemplative prayer (*Prol. in Regulam*, fin., 52, etc.). He insists upon the conditions for it—separation from the world, obedience, silence, and, above all, humility, which will lead the monk to perfect charity (*Reg.* 7). He continues the tradition that prayer should be brief and 'pure' (29). He would have sent an inquirer in the first place to Cassian and the *Sayings of the Fathers* (cf. 42, 73).

The two writers within the Patristic period whose influence was greatest upon the Middle Ages are incontestably pseudo-Dionysius, and St. Gregory the Great, the former at the end of the 5th cent., the latter at the end of the 6th. Dionysius is first quoted by Monophysites; but he became an authority in East and West, and was long regarded as the chief of the Apostolic Fathers. His works form a system, of which the tiny treatise *Of Mystical Theology* (PL cxxii. 1171) is the climax. He carries on the tradition of the Greek Fathers, and probably knew the passage of St. Gregory of Nyssa referred to above; but he is influenced mainly by the Neo-Platonist, Proclus, from whom he has been shown by J. Stiglmair to borrow largely (*Das Aufkommen der pseudo-Dionysischen Schriften, und ihr Eindringen in die christliche Litteratur bis zum Lateranconcil 649*, Feldkirch, 1895; also *Byzantinische Zeitschrift*, vii. [1898] 91, viii. [1899] 263; *Katholik*, xc. ii. [1910] 55). He asserts the transcendence of God with extreme expressions, exaggerated from the Platonic *ἐπέκεινα τῆς οὐσίας*: God is *ὑπερούσιος, ὑπεράγαθος* (*Myst. Theol.* 1), *ὁ πάντων ἐπέκεινα, ὑπὲρ θαρξῆαν καὶ ὑπὲρ ἀγαθαρχῶν* (*Ep.* 2). This is the *via eminentiæ ad Deum*, and is beyond the assertive theology (*καταφατικὴ θεολογία* [*Myst. Theol.* 3]) which describes the Trinity. But a yet higher way is the *via negationis*, by which not only all that is sensible (*ib.* 4), but all intellectual notions (*ib.* 5), are denied of God. Elsewhere (*de Div. Nom.* vii. 3) he enumerates in order the ways in which our intellect forms the idea of God: first, from the order of the universe, which came forth from Him, and contains likenesses of which He is the exemplar, then by abstraction and eminence (*ἐν τῇ πάντων ἀφαίρεσει καὶ ὑπεροχῇ*, i.e. we abstract all the perfections of nature, and attribute them to God in a higher sense, because He is their Cause):

'Wherefore God is in all things, and apart from all things; and God is known by knowledge, and by ignorance, and there is intuition and consideration and science of Him, and touch and perception and opinion and imagination and name, and all the rest, of Him; and He is neither conceived, nor spoken, nor named; and He is none of the things that are, nor is He known in any of them. And He is all in all things, and nothing in none; and He is known to all through all things, and through none of them to none.'

And yet all this is but reasoning up to a paradoxical but necessary ideal—it is philosophy, not mysticism—and Dionysius goes on:

'And there is, besides, that most divine knowledge of God, which takes place through ignorance, in the union which is above intelligence, when the intellect, quitting all things that are, and then leaving itself also, is united to the super-lucent rays, being illuminated thence and therein by the unsearchable depth of wisdom.'

Thus the philosophical process of abstraction and negation which justifies the mystic in transcending reason is emphatically distinguished from the mystical operation of rising above the world and self to God. The former results in an abstract idea; the

latter carries the soul away above all intelligence into union. Clement of Alexandria had somewhat slurred over this difference, numerous later writers, mediæval as well as modern, have neglected it, and the dogmatic theologians eventually denied it. But the very existence of the mystic faculty depends upon this fundamental distinction.

The mystical ascent is described by pseudo-Dionysius in a celebrated paradox, as the entry into the night which is brighter than light:

'The super-unknown, the super-luminous and loftiest height, wherein the simple and absolute and unchangeable mysteries are cloaked in the super-lucent darkness of hidden mystic silence, which super-shines most super-brightly in the blackest night, and, in the altogether intangible and unseen, super-fills the eyeless understandings with super-beautiful brightnesses' (*Myst. Theol.* 1).

This literal translation reproduces the neologisms of the original. The next sentence is the only one which gives practical advice, and it was cited throughout the Middle Ages as the *locus classicus* for the method of contemplation:

'And thou, dear Timothy, in thy intent practice of the mystical contemplations, leave behind both thy senses and thy intellectual operations, and all things known by sense and intellect, and all things which are not and which are, and set thyself, as far as may be, to unite thyself in unknowing with Him who is above all being and knowledge, for by being purely free and absolute, out of self and of all things (τῇ ἐαυτοῦ καὶ πάντων ἐκστάσει), thou shalt be led up to the ray of the divine darkness, stripped of all, and loosed from all.'

Every mystic has recognized his own experience in this striking passage: the strange intuition, which is only impeded, not assisted, by the senses and the reason, which is utter darkness to the mind, yet floods it with incomprehensible knowledge. There is nothing new in the doctrine; just below we encounter the familiar reference to Moses in the darkness of Sinai; and the notion of God's transcendence and immanence, extravagantly worded by Dionysius, can be found rhetorically polished in St. Basil's *Hom. x., de Fide*, and frequently elsewhere. But the 'ray of darkness' is a fine expression, and so vivid a summary was of real service to clench tradition. Dionysius, however, was obliged further to elucidate his own paradox, and to explain (*Ep.* 1) that 'ignorance' and 'darkness' are not to be understood 'privatively' (*κατὰ στέρησιν*) but 'by excess' (*ὑπεροχικῶς*), as darkness by excess of light (*Ep.* 5):

'Do thou super-truly deny that the Light that is, is not known to those who possess it. Ignorance about God is truly knowledge [read: ὅτι οὗτος γινώσκει τὴν κατὰ Θεὸν ἀγνοσίαν] . . . and if any one, seeing God, understands what he has seen, he has not seen God, but something of those things of His which exist and are known' (*Ep.* 1)—another famous assertion, which has been precious to after ages.

There are only a few lines of Dionysius which speak of mystical theology and its method (viz. *de Div. Nom.* vii. 3, *Myst. Theol.* 1, and *Epp.* 1 and 5). As to the preparation for it, especially the moral purification on which other writers insist, he has not a word, nor as to its degrees, variations, or difficulties. The writer himself is far more a speculative theologian and philosopher than a mystic.

St. Gregory the Great († 604) offers a sharp contrast. In place of a short, scholastic statement, he sets before us many beautiful and diffuse descriptions of his personal experience. These are to be found chiefly in the *Morals on Job* and the *Commentary on Ezekiel*; those on *Kings* and *Canticles* are less to be trusted, as they were made up from stenographic notes of lectures and were disowned by St. Gregory. As a theologian, the great pope sums up the doctrine of the Latin Fathers, especially St. Augustine. Naturally he teaches that there are two lives, the active and the contemplative, symbolized as usual by Martha and Mary, Rachel and Leah (*Mor.* vi. 61, in *Ezech.* ii. ii. 9f.). The contemplative life is the higher; it may be dangerous for some (*Mor.* vi. 57), yet it

truth to itself, by much discussion and reasoning, and makes it comprehensible to itself, by drawing it down into the ordinary intelligence, by bringing reason to bear upon it, and adapting images to it (*Benjamin major*, iv. 11). Among other mystical writers of the period, Guigo the Carthusian and especially Gulielmus of St. Thierry, near Rheims, deserve notice.

The 13th cent. saw a great wave of mysticism which passed over Europe, together with the rise of the mendicant orders; it was followed immediately by the maturity of Scholasticism, the converse, though not the contradictory, of mystical theology. Many of the great theologians were also mystics, yet the great commentaries on the *Sentences* and the *Summa* of theology did not include mystical theology in their field. In the discussions of 'the two lives,' which invariably form part of the course, contemplation is understood as the conclusion of rational discourse, not as intuitive experience. The Franciscan, St. Bonaventura († 1274), has been entitled 'the prince of mystical theologians' in a large sense, on account of his pious meditations on the Passion and his ascetical writings. He makes a few rare references to mysticism (e.g., *de Triplici Via*, iii. 7). The following declaration is of first-rate importance:

'I admit, however, that the mind's eye can be fixed on God in such wise that it looks at naught else; yet it will not perceive nor see the glory of the Light itself, but will rather be raised up into the darkness; and to this knowledge it will be elevated by the removal of all things, as Dionysius says, and he calls this knowledge "learned ignorance." For this knowledge it is, in which the affection is set on fire, as is well known to those who are accustomed to ecstasy ("ad anagogicos excessus"). In my opinion, this manner of knowledge is to be sought by every just man in this life. If God shall perform aught beyond this, it is a special privilege, not the common law' (*Comm. in Sent.* ii. dist. 23, art. 2, qu. 8, concl.).

Thus mystical experience is declared to belong to the *lex communis*, and not to be an exception, a privilege, a miracle. Another passage explicitly refuses to formulate any theory as to mystical knowledge:

'If you ask how this [repose to the reason, when the whole affection goes forth to God, as Dionysius describes] takes place, inquire of grace, not of learning, of desire, not of intelligence, of the groaning of prayer, not of the study of understanding' (*Itinerarium*, ad fin.).

In the famous opusculum *de Adhaerendo Deo*, ascribed to the Dominican Albertus Magnus († 1280), the traditional method of prayer is lucidly set forth: internal recollection, the mind stripped naked of all phantasms and images, simplified and tranquillized in God (ch. 5; cf. his *Paradisus animæ*, 33).

St. Thomas Aquinas († 1274), though an ecstatic, has left us no disquisition on mystical theology, and there are only a very few casual references to the subject in the whole of his voluminous works. It is just possible, however, to discover his view, which depends on his Aristotelian theory of cognition. This theory teaches that, just as our senses perceive objects by means of an impression on the sense-organ (e.g., the image on the retina, communicated to the brain), which impression is not itself perceived but is the 'medium by which' we perceive the objects, so our intellect knows by means of impressions (*species impressæ*) which are the 'medium by which' it knows ideas (*ideæ, verba mentis, species expressæ*).

i. In man's present state the only *species impressæ* that he receives are conveyed to the mind through the senses ('nihil in intellectu quod non prius in sensu'); they are but attributes of material objects 'abstracted' (i.e. considered apart) from the objects. Hence, by means of these impressions, the mind (a) directly knows abstract qualities (*quidditates*) which exist individually in material objects, but it knows them, not as existing individually, but as potentially universal. Further, (b) our intellect

knows the individual things themselves indirectly by their qualities, and (c) it can arrive at some kind of knowledge of non-material things by reasoning from its abstract ideas (*Summa Theol.* I. lxxxv. 1). Thus it cannot know God directly, but can argue to His existence and His nature from creatures by abstraction and negation. But intellectual ideas thus formed in the mind are not really understood by the mind unless it represents them by the imagination; it 'turns to images' ('convertit se ad phantasmata') so that it may behold the universal in the particular, wherein alone it has real existence (*ib.* lxxxiv. 7).

St. Thomas points out that 'each man can experience this in himself, that when he tries to understand something, he forms for himself some *phantasmata* (imaginings) after the manner of examples, in which he can inspect, as it were, what he wishes to understand; and hence it is that likewise when we wish to make someone understand something, we set examples before him, out of which he can form *phantasmata* for himself in order to understand.'

We can represent to ourselves spiritual truths and spiritual substances (God and angels and souls) only by images, which we know to be inadequate, but yet in which we behold something more than the phantasma:

'Intellectualis cognitio non sistit in phantasmatibus, sed in eis contemplatur puritatem intelligibilis veritatis' (*Summa*, ii. li. qu. cxxx. art. 5 ad 2, according to the best text).

ii. But a disembodied soul or an angel is an intelligence independent of a bodily organ; hence it understands spiritual things as they are, without 'turning to phantasmata.' As it cannot get impressions by the bodily senses, since it has none, its impressions (*species impressæ*) must be 'infused' in some way, natural to it, but unknown to us; these *species* will not be abstractions from matter, but purely non-material; they will not be multiple and complex representations (as ours are) of objects which are unities, but one and total. Such pure intellects, instead of knowing the universal in the particular, know the particular in the universal in one glance; they do not argue from fact to fact, from premiss to conclusion, but in one act know the conclusion and the premisses in it. Thus the angelic cognition resembles the intuitive perceptions of sense rather than the analytic and synthetic process of reason. Its knowledge is direct, immediate, intuitive, in comparison with the abstracting and reasoning of a mind which is in partial dependence on the brain; but still it is mediate, indirect, in so far as an 'impression' is needed as the 'medium by which' it knows. It is possible in this angelic manner to know God intuitively instead of by reasoning, but impossible to know Him 'as He is'; for an impression in a finite mind must be finite, and cannot adequately represent the infinite; and, however much the *species* representing God be increased in clarity and splendour, they must infinitely fall short of His ineffable glory.

iii. But angels and men have as their reward the 'beatific vision' of God 'as He is,' in which God is seen by means of Himself, He Himself being united immediately to the human intellect as *species impressa*, so that He is both the thing seen and the 'means by which' it is seen—this divine impression is called the *lumen gloriæ*. Thus the blessed participate in their measure in the act in which God knows Himself without medium, and are united to Him as Act (God is *actus purus*) in so far as may be, without losing their own individuality, which retains all its former powers and activities; they are transformed into God without ceasing to be themselves. They see God wholly, yet in varying degrees; as He is, but not completely, 'totum non totaliter, clare non comprehensive.'

As this is the end for which man is made, and his reward, it is not given to man in his state of probation.

ance. This lofty angelic knowledge is utter ignorance (until it is perhaps symbolically and tentatively translated) to the intellect itself, but it inflames the will with intense love and desire. The soul loves and desires without understanding; it longs for and partially enjoys it knows not what. This is the 'ray of darkness' of Dionysius, the wisdom which is ignorance, the 'cloud of unknowing,' the obscure night of the spirit, the analogical way to the unseen and incommunicable.

Are we to brush aside this theory as founded upon an obsolete epistemology? Let us note, at any rate, (1) that our employment of phantasmata in order to understand is simply a fact of experience; (2) that the distinction between the lower and the higher powers of the soul, though neglected or denied by many moderns, is more vividly experienced even in quite inchoate mystical states than it ever is by our ordinary consciousness, and ought to be accepted as one of the facts to be explained rather than as a theory to account for the phenomena; (3) that the possibility of cognition by purely intellectual species, while it may seem a somewhat wild hypothesis of Scholasticism and, from the philosophic point of view, nothing more, is in reality less a tradition from Patristic days or a deduction from a ready-made theory of cognition than an explanation of real mystical experience. It seems extremely probable that the origin of the theory was not so much the attribution of a supposed angelical faculty to contemplatives as the ascription of mystical intelligence to the angelic nature.

It would seem that theologians, themselves mystics, evolved the idea of spiritual intelligence from their own experience, and attributed it in a yet higher and purer form to the spiritual substances with which they seemed to be in communion as well as to read of in Holy Scripture. We may safely take the large lines of the Scholastic theory as a working hypothesis: that the human mind in its natural and ordinary operation is cognizant of spiritual things only indirectly, by abstraction from sensible images, and then by the way of 'eminence' and of negation, whereas mystical knowledge is a different operation of the same faculty, whereby it knows spiritual things directly by means of purely non-material impressions received from them in some unknown manner.

3. Post-Scholastic mystics.—This hypothesis will suggest an explanation of the phenomenon of visions so common at all periods, but particularly remarkable in the case of the 'revelations' published by many female saints of the Middle Ages. Many of these were mystics of a high order, but mystics whose impressions are easily and regularly translated into imagery. The revelations of St. Catherine of Siena († 1380) become profound instructions on the spiritual life; those of St. Catherine of Genoa († 1510) contain dogmatic theology of extraordinary beauty and value. St. Gertrude impresses us with the vastness of her theological horizon, in spite of the pictorial nature of her conceptions, like those of the two Mechtildes (St. Mechtilde of Hackeborn [† 1298]; Mechtilde of Magdeburg, whose visions were written in old German [† 1280 or 1285]), but these are narrower and more 'devotional.' St. Bridget of Sweden († 1373) heads the long list of ecstasies who receive 'revelations' about the details of our Lord's Passion (the most read of these is perhaps Catherine Emmerich [† 1824]); the accounts given by these various seers are impossible to reconcile with each other. St. Hildegard († 1179) and St. Elizabeth of Schönau († c. 1165) were prophetesses, who attributed to a divine source much curious information which they published. The writings of Angela of Foligno († 1309), Juliana of Norwich (living

1412), and many others are interesting and edifying documents. It would seem that the value of all these revelations varies according to the intellectual power of the recipient of the mystical light, and her power of 'translating' what she has experienced, as well as according to the amount of light received. Delusions are always exceedingly common in such cases, even in real mystics of holy life, and may occur in the case of saints who have insisted that all their words came from God (see Poulain, *Grâces d'oraison*, ch. xxi.). When the Church 'approves' the published revelations of a holy person, this only means that they contain nothing contrary to the Faith, and may be read without harm. It is not necessary to regard revelations as mere imagination (though, of course, they often are no more than this), with no spiritual light behind them, simply because they are mistaken or even absurd; they are sometimes mingled imagination and badly-interpreted light.

The English group of mediæval mystics has been neglected until recently: Margerie Kempe (c. 1290?); then the hermit Richard Rolle of Hampole († 1349), whose writings, both in English and in Latin (the latter translated by Richard Misyn), have a peculiar charm. The form of his mystical experiences is less picture than music and song. Walter Hilton († 1396), a Carthusian, was much influenced by Rolle; his best known work is *The Scale of Perfection*; his other works have never been published. At the end of the 14th cent. an unknown mystic published some wonderful tracts, of which the chief is *The Cloud of Unknowing*, a marvellously clear and practical little treatise, an admirable guide for contemplative prayer. It seems to sum up the doctrines of St. John of the Cross two hundred years beforehand.

In Germany Master Eckhart of Cologne († 1327), a Dominican, was suspected of Quietism, and, though he submitted to censure with all humility, some propositions attributed to him were proscribed by John XXII. in 1329. False mysticism, such as that of the Beghards (condemned at Vienne, 1312), was rejected by his followers, the great Dominicans Henry Suso († 1366), a mystic of poetical temperament and extraordinary austerity, and J. Tauler († 1361), the great preacher, whose instructions are still of great practical value. The *Theologia Germanica* appeared about 1350; the *Neun Felsen* of Rulman Merswin of Strassburg was long ascribed to Suso (see also F. Pfeiffer, *Deutsche Mystiker des XIVten Jahrh.*, Leipzig, 1846); the Flemish Ruysbroeck († 1381) was a follower of Tauler; his writings rank high as personal documents, and are on fire with love, though somewhat lacking in logical sequence. They were much used by the Franciscan Henry Herp or Harpius († 1478) in his *Theologia Mystica*. From the congregations founded by Ruysbroeck at Grönendaal came the famous Thomas à Kempis.

The chancellor of Paris University, Jean Gerson († 1429), in his *Mystica Theologia*, places the mystic faculty in the 'synderesis' (or habit of first principles of action), which he calls the 'apex mentis.' There are passages on mysticism among the eursions and somewhat paradoxical treatises of the pious Cardinal Nicholas of Cusa († 1464). The Benedictine Blosius (Louis de Blois, † 1565) wrote admirable ascetical works for cloistered religious. He continues the tradition that the practice of continual aspirations is the best means of attaining pure prayer and 'union with God without any medium.' His *Instructio Spiritualis*, composed for his own use, is one of the best books of direction for contemplatives.

4. The Discalced Carmelites.—The great saints of the 16th cent. were largely engaged in reforming the Church; but in the tranquillity of Spain arose

tration; and intense involuntary concentration on the most absorbing and delightful vision is commonly held by theologians to be a sufficient explanation of most ecstasies, which are commoner in women than in men, and are more frequent in persons of feeble intellect like St. Joseph of Cupertino than in the strong-minded like St. Francis de Sales or St. Vincent de Paul. All this tends to show that it is safest to regard St. Theresa's original four degrees as psychological varieties which are not always successive stages nor always signs of definite degrees of perfection.

Some of the many confusions and apparent contradictions in St. Theresa's writings may be explained by her having subordinated her own views to the dicta of some of her confessors. For example, she herself suffered grievously for about eighteen years from inability to meditate; yet in her latest work (*The Interior Castle, or the Mansions*, 6th mansion, ch. vii.) she declares that it is a delusion when people think that they cannot meditate, however sublime their prayer may be, and in her *Way of Perfection* she describes meditation as quite easy; yet in the same chapter of the 6th 'mansion,' her experience and common sense induce her to correct this astonishing doctrine, and she adds:

'Souls led in supernatural ways, and raised to perfect contemplation, are right in declaring that they cannot practise this kind of meditation; as I said, I do not know why, but as a rule they are unable to do so. Yet they would be wrong in saying that they cannot dwell on these mysteries, nor frequently think about them, especially when these events are being celebrated by the Catholic Church.'

This is, of course, quite accurate, if we understand that, *in the time of prayer*, contemplatives are utterly unable to think about mysteries without detaching themselves at least partially from the prayer, whereas *out of prayer* they can think about the mysteries of religion even more easily and more fruitfully than can the ordinary Christian. But St. Theresa does not make this distinction. She is even less convincing when she thinks that contemplatives cannot meditate 'because they see the mysteries of Jesus Christ with a simple gaze.' She herself had so many intellectual and imaginary visions of definite facts or mysteries that she does not appear to realize that others receive only a pure intellectual light, without differentiation or definition. No one would gather from her writings that the mystic in general aims simply at union with God, above all sense and imagination and feeling. She belongs really to the same category as the great St. Gertrude or St. Bridget, not to that of St. Gregory, St. Bernard, and St. John of the Cross. Her matter-of-fact Spanish character desired definite knowledge, and she astounds us by the statement:

'When imaginary visions are divine, they seem in a manner more profitable for us than others, as being more suited to our nature—with the exception of the visions sent by our Lord in the seventh mansion, which far surpasses all others' (6th mansion, ch. ix.).

St. John of the Cross, a disciple of St. Theresa, refers his readers to her admirable descriptions of mystical phenomena, but he will give none himself; and he refuses to estimate prayer according to its effects upon soul and body, bringing peace, joy, terror, and longing to the one, and sharp pain, dislocation of the bones, raising from the ground, insensibility, or apparent death to the other. He tests all such manifestations, on the contrary, by their influence on union with God; none of these psychical and psycho-physical phenomena is a proximate means of union, and the same is true of every sort of vision, locution, etc. None of these things is to be desired or prayed for; and, if they occur, they must not be attended to. It is not necessary even to decide whether visions and locutions are from God, from the imagination, or from

the devil; they are merely to be set aside and never thought of; by this means they can do no harm if they are not from God, while, if they are divine, they will produce their due effect without our attending to them. All our effort is to be to attain union with God, i.e. with His will. The 'purer' the rays of infused contemplation, the less they are perceptible, and the less their effect on the imagination and the sensible affections. No one is to desire the joy of the 'prayer of quiet' or the inebriation of the next degree, but merely the dry and pure contemplation, which produces joy and inebriation only in the highest part of the soul. Aridity is not to be feared, for it is the thirst of the soul for God. St. John is drawn to treat of the ascetical side of the contemplative's life in a manner which is disconcertingly austere in *The Ascent of Mount Carmel*, an unfinished work. But it should be recollected that the utter renunciation and self-abandonment which he preaches would be as imprudent to attempt as they would be impossible to practise for an ordinary Christian, whereas for the mystic this entire stripping of all is accomplished readily and with interior relish.

But who is to be started on this ascent? The ancients had usually left undetermined to whom was applicable the advice to leave all forms and shadows and to grope for God in darkness and renunciation; but they had recommended universally the practice of aspirations, which would lead men insensibly to the heights of prayer. But in the 16th cent. formal 'meditation,' by the use of the imagination, together with elaborate thinking out of a subject, was becoming common. When is it right to renounce meditation of this kind, and to follow the ancient and contradictory rule of ceasing imagination and thought, in order to unite the will alone to God? St. John of the Cross gives a plain and categorical reply, which has been persistently neglected ever since his day. His first statement of the rule is in *The Ascent*, ii. 13; he repeats it more clearly in *The Obscure Night*, i. 9, and sums it shortly, with further remarks, in *The Living Flame*, iii. 34 f. Many people in the world, he says, and most (though not quite all) who enter a contemplative order develop an inability to meditate when they pray, accompanied by anxious aridity, in which they constantly think of God, yet can get no consolation either from God or from creatures; this is the 'night of the senses,' caused by the commencement of infused contemplation, which is as yet imperceptible because weak and unaccustomed, but is sufficient to wean the soul from the pleasure that it once took in meditation and sensible devotion, and to cause a desire of solitude and repose, together with the loss of the power of fixing the imagination. In this state the soul is to abandon itself to God, and be content in prayer with a loving attention to Him, without attempting to comprehend its own state or to possess any particular knowledge; and it will find itself marvellously sustained by the interior nourishment which all-unconsciously it absorbs in this fervent but arid prayer. (Indeed, the one sure proof that the soul is doing right is to be found in its swift progress in virtue.) If the soul attempts to act with the imagination, it spoils God's work; and St. John of the Cross indulges in violent objurgations of the directors of souls who insist upon imaginative and discursive meditation, because the mind seems to be doing nothing, wasting its time, and mooning away in laziness; such false guides are painting their wretched daubs where God is limning with His own delicate touch (*Living Flame*, loc. cit.). After the 'night of the senses' follows the 'night of the spirit,' with its terrific interior (and usually also exterior) trials

thought to be mainly the sensible tasting of mysteries, especially of the Passion. Art began no longer to represent the saints as kneeling calmly in adoration, but as waving their arms and stretching their necks and rolling their eyes, in ecstasies of sensuous longing, while they tear aside their clothes to relieve their burning bosoms; the Roman and Bolognese schools of painting and the Berninesque school of sculpture join with baroque architecture in emphasizing the 17th and 18th cent. conceptions of devotion.

This is the popular side, though the true teaching was never lost, and St. John of the Cross was honoured, if not read. The 18th cent. writers were chiefly compilers—e.g., Reguera († 1747), who followed Godinez, and the Benedictine Schram († 1797), who followed Reguera. The tendency of the period is to enumerate all the extraordinary manifestations that can be found, and to classify them in a theoretical scale which bears no relation to facts. Some short but valuable practical instructions occur in the *Homo Apostolicus* and the *Praxis confessorii* of St. Alfonso di Liguori († 1787). The *Manuel des âmes intérieures* of Grou (a Jesuit until the suppression [† 1803]) is one of the best guides for contemplative souls. The best known author of the 18th cent. is Scaramelli († 1752). His *Direttorio mistico* is a valuable summary. He closely follows the views of Suarez. Like the rest of this school, he explains away the traditional advice to reject imaginations in prayer, as referring to the formation of an abstract ideal of God by the reason, by the *via eminentiæ* and *via negationis*—the very confusion which pseudo-Dionysius has so carefully avoided. Hence Scaramelli can agree with Suarez that supernatural contemplation is but the crown of a process of reasoning; the contemplation of God in *caligine* is the contemplation of an intellectual abstraction; hence its vagueness, hence it cannot be described! But one wonders how it can cause burning and ecstatic love, and this is left unexplained. This abstraction is all that is perceived in almost all the degrees of mysticism. The intuition of God by 'infused species' is given to a few, but probably only in the highest degree, that of 'spiritual marriage,' and this grace is not to be wished or asked of God. The only mystical state which may be desired (and only if God has already raised the soul to the mystical state) is the contemplation of the abstract idea of God!

The 19th cent. was singularly barren. The most remarkable publication was *Die christliche Mystik* (Regensburg, 1836-42) by J. J. von Görres; it is mainly a dissertation on the external phenomena of mysticism (such as stigmata, prolonged fasts, bilocation, etc.), a repellent treatise, founded to some extent on doubtful sources. Yet it is not to be denied that this psycho-physical side demands scientific investigation. It seems certain that St. John of the Cross is justified in his view that the body is somehow 'spiritualized' by contemplation. Such facts as the power of saints over the animal world and the power of reading thoughts, e.g., are proved beyond cavil; whether to some extent some of these phenomena are the results of mystical graces, or wholly independent of them, is a question to be examined. Levitation seems to occur apart from ecstasy in states of prayer which are not very advanced. J. Ribet's *La Mystique divine* (Paris, 1879-83) is a creditable work for its day.

6. Recent Roman Catholic writers.—Saudreau and Poulain have abandoned the false road taken by their predecessors, though they have chosen different paths. The many volumes of the former are valuable and helpful. While it is easy to criticize many details in his work, the whole of it is in general devoted to the restoration of the older tradition and to the justification of the prayer of

aspirations and of loving attention to God. Poulain has accumulated a great store of information, admirably arranged, and he gives excellent counsels. His classification has been criticized above; it must be added that for traditional contemplative prayer he has substituted a new 'prayer of simplicity,' which differs from it very little, but is said to be wholly non-mystical, and is placed before, instead of after, the 'night of the senses.' Lehodey follows Poulain. Zahn has stereotyped the popular 18th cent. view, described above, to a degree which no serious author of that date had ventured. He takes the view of Suarez and Scaramelli as to contemplation and infused prayer, but goes further in that he even throws doubt upon the existence of 'intellectual visions' (*Einführung in die christl. Mystik*, p. 509 f.). Lamballe regards contemplation as merely the exercise of faith, with the help of the 'gifts of the Holy Ghost,' which (against the theologians) he seems to regard as extraordinary graces; he teaches the traditional method. Putting Zahn aside, it may be said that all recent Roman Catholic writers are agreed that it is permissible and proper to desire mystical prayer, though not its extraordinary by-products and psycho-physical effects.

LITERATURE.—Useful bibliographies will be found in Poulain and in Maréchal (below). The following is a brief list of select Roman Catholic works: P. Lejeune, *Manuel de théologie mystique*, Paris, 1897, *Introduction à la vie mystique*, do. 1899, Eng. tr., *An Introduction to the Mystical Life*, London, 1916, *L'Oraison rendue facile*, Paris, 1904; see also his art. 'Contemplation,' in A. Vacant and E. Mangenot, *Dict. de Théologie*, do. 1906-09; Anon. (Abbes of Solesmes), *La Vie spirituelle et l'Oraison*, do. 1899, Eng. tr., *The Spiritual Life and Prayer*, London, 1900; H. Joly, *Psychologie des saints*, Paris, 1897, Eng. tr., London, 1898; A. Saudreau, *Les Degrés de la vie spirituelle*, 2 vols., Paris and Angers, 1896, 1897, Eng. tr., London, 1907, *La Vie d'union à Dieu* (chiefly citations of earlier writers), Paris, 1900, *L'Etat mystique*, do. 1903, *Les Faits extraordinaires de la vie spirituelle*, Paris and Angers, 1908; C. Sauvé, 'Etats mystiques,' app. to *L'Homme intime*, Paris, 1901; J. Pachen, *Introduction à la psychologie des mystiques*, do. 1901, *Psychologie des mystiques chrétiens: 'Le Poème de la consécration'*, do. 1909, *L'Expérience mystique et l'activité subconsciente*, do. 1911, 'Les Mystiques Interprétés par les mystiques,' in *Revue de Phil.* xiii. [1913] 616; A. Poulain, *Des Grâces d'Oraison*, Paris, 1901, 1908, Eng. tr., *The Graces of Interior Prayer*, London, 1912, *La Mystique de St. Jean de la Croix*, Paris, 1893; see also *Revue des sciences eccl.* x. [1904] 67, 209, and *Revue de clergé français*, liv. [1908] 694; A. Bossuet, *Le Quatrième, lettres inédites du frère de Bossuet*, Paris, 1902; A. Devine, *A Manual of Mystical Theology* (mainly taken from an abridgment of Scaramelli), London, 1903; H. Brémont, *La Province mystique au XVII^e siècle*, Paris, 1908; A. Baker's Teaching thereon*, do. 1914.

J. CHAPMAN.

MYSTICISM (Christian, Protestant).—Protestant mysticism was born out of the mysticism of the Roman Catholic Church and has been profoundly influenced by it throughout its entire course of development; but other influences besides the old mysticism came into operation in the formation of Protestant mysticism, and the new forces helped to give a new direction to it. The most important new influence was the NT, now freshly alive in the 16th cent. in the tongue of the common people, and felt to be the master model of all religious experience and of all true piety. The great classics of medieval mysticism, especially the anonymous *Theologia Germanica* and the *Imitation of Christ*, still spoke to the hearts of all serious seekers for inward religion. All early Protestant mystics either read these

books or got from others the substance of the message which they contained. At the same time the re-discovery of the gospel, with its concrete revelation of God and man and life, brought a new spiritualizing power to bear on the minds of men, and, as a consequence, the new mysticism was far less negative in its way of approach to God, more practical and social in its outlook, and more eager to minister to the entire life of man.

Luther himself was an intense admirer of the *Theologia Germanica* and of John Tauler's sermons, and there is a mystical depth always in evidence in Luther's accounts of his own religious experiences and in his spiritual insight into the meaning of faith as the way of personal salvation. The mystical element is, however, much more marked and emphatic in the contemporary so-called 'spiritual' reformers towards whom Luther early took up an antagonistic attitude—a group best represented by Thomas Münzer, Hans Denck, Johann Bunderlin, Christian Entfelder, Sebastian Franck, and Caspar Schwenckfeld. All these men were mystical in the primary sense. They found a religion which had its main roots in personal inward experience. They all exalted the inward, living, invisible word of God above the outward, written word, the Scriptures, and they insisted that salvation is the formation of a divine life in man himself—a life which re-creates human nature and produces in its direct operations a nature saturated with love both in its upward relation with God and in its outward relations with men.

The Anabaptists, of whom Balthazar Hübmaier (b. 1480) may be taken as a typical representative, often began their religious activity as a result of direct experiences, and they strongly emphasized the importance of a religion of life, but in most respects they were non-mystical. They treated the gospel as a new law to be literally followed and obeyed. They held that the true Church is a visible church of adult believers, formed on the apostolic model. They sometimes exalted visions and indulged in prophecy, but in these matters they believed that they were merely following, as in all matters of their faith, the Scriptural models. The Familists, or Family of Love, founded by Henry Nicholas of Münster (b. 1501), were a strongly mystical people. The founder was a sensitive recipient of 'openings' and what he believed to be 'communications,' and he believed himself chosen to be a 'revealer of the divine Word.' The type of religion which the Familists promulgated, and which became wide-spread in England during the first half of the 17th cent., was marked by an intense purpose to rise above everything outward and to exhibit in worship and in daily practical life the actual spirit and love of Christ. They highly valued silence as a way of worship, and they endeavoured to live so obedient to the 'Light' and 'Seed' of Christ within them that they should become perfect and complete, what they called 'godded men.'

The greatest of all early Protestant mystics was Jacob Boehme (born a few miles from Görlitz in Silesia, 1575, died 1624). Though an uneducated man, a shoemaker by trade, Boehme read much, and gathered into his meditative and original mind many strands of previous thought-systems. Apart from the Bible, he was influenced most by the writings of Caspar Schwenckfeld (1489-1561) and those of Valentine Weigel (1533-88). Through Weigel, and Weigel's master, Paracelsus (1493-1541), he absorbed the alchemical aspirations of the time, and inherited the baffling terminology of alchemy, astrology, and theosophy. This inheritance largely determined the fundamental form of Boehme's universe and also his conception of man as an epitome of the universe, i.e. a micro-

cosm. The living and permanent core of Boehme's message, however, sprang out of his own deep experience and his own vivid apprehension of the meaning of Christianity as a way of life. In the year 1600, as in 'a flash of lightning,' he felt that 'the gate of his soul was opened' and that he saw and knew what no books could teach. Under much persecution and struggle and with frequent successive 'openings,' he slowly matured his message and gave it in a long series of books, hard to comprehend but, nevertheless, containing much real insight.

The main ideas are these. Behind the visible, material, temporal universe there is an invisible, immaterial, eternal universe, which is the *mother* of the one that we see. This unoriginated matrix, ground, or abyss eternally evolves, or differentiates, into divine Personality within, and differentiates outwardly into visible and invisible worlds of matter and life and consciousness, through which the principles of darkness and light are revealed in temporal forms. Both root principles—a no and a yes—are present in every person, and the destiny of every soul is settled by its choice of principle. The light, or love principle—the heart of God—has been perfectly revealed in the incarnation of Christ. To be 'saved' is to be united with His life, to live in His love, to die to the isolated self, and to rise by a new birth into His Spirit and power and become a branch of Christ's life-tree. Salvation is not the result of opinions, of belief in creeds, or of the performance of outward sacraments or of membership in an outward Church, but rather it is the result of an inward union of heart with the revealed life of God, of an Abba-crying spirit in the soul; in short, salvation is the life of God brought to a personal conscious expression in the life of a man, so that 'the Lily-Twig' blossoms in a new individual form. See, further, art. BOEHME.

Boehme's entire writings were translated into English by John Sparrow and John Ellistone during the years 1647-61. They became a powerful influence in England, and contributed largely towards the formation of the inner life of the religious societies of the Commonwealth. A minor mystical group, owing its organizing life directly to Boehme's influence, was 'the sect of the Behmenists,' the leaders of which were John Pordage (b. 1607), Jane Leade (b. 1623), and Francis Lee (b. 1661). This movement, which culminated in the formation of 'the Philadelphian Society' (1697-1703), was visionary, confused, and devoid of the spiritually robust characteristics of the great Teutonic mystic himself.

George Fox (1624-91), the founder of the Quakers, plainly showed the influence of Boehme, gave the mystical movement a strong social direction, and is one of the most impressive and typical of Protestant mystics. Like Boehme, he went through a long period of baffling search, ending in a great mystical experience, which opened the gate of his soul and gave him remarkable religious insight and power. The main religious ideas which formed his message—delivered with marked success in England and America—were the following. There is a 'Light' or 'Seed' of God in the soul of every man. The soul obedient to the divine endowment increases its measure of light, triumphs over the innate tendencies to sin, and becomes a spiritual instrument or organ of the present, living, inward Christ, who is the only Head of the true Church. The best preparation for worship, as also for public service of any kind, is inward hush or silence, the suppression of self and selfishness, the inward reception of grace, and an attitude of waiting for a clear intimation of the Spirit's guidance.

From the opening of the 18th cent. Protestant mysticism in Europe, especially in England and

Holland, was strongly influenced by Quietism as expressed in the works of Molinos, Mme. Guyon, and Fénelon. This Quietistic influence is most noticeable in the ministers and leaders of the Society of Friends (the Quakers) of that century, who greatly admired the writings of this group of mystics. For fully a century the social aspirations of Friends became subordinated to the intense desire for quiet inward communion (see, further, FRIENDS, SOCIETY OF).

In William Law (1686-1761) Protestant mysticism in the 18th cent. attained its most perfect expression. He shows throughout his life the influence of the English Platonists, Whichcote, Smith, More, and Cudworth, but he early formed his mind directly upon the great models of mystical piety. In his first creative period, in which he produced *Christian Perfection* (1726) and *A Serious Call to a Devout and Holy Life* (1729), he strongly follows the lines of classical, mediæval mysticism, with much emphasis on self-denial and negation. These two books represent the culmination in England of the type of Christianity embodied in the sermons of John Tauler, the *Theologia Germanica*, and the *Imitation of Christ*, though with less of a metaphysical cast and with more practical adjustment to life.

In the second period, which dates from 1733, Law was not so influential upon English thought, but he became far deeper in life and insight and more conscious of direct inward relation with a universe of invisible reality. In the group of writings of this period, of which *The Spirit of Prayer* (1749), *The Spirit of Love* (1752), and *The Way to Divine Knowledge* (1752) are representative, we have the noblest English interpretation of Jacob Boehme's mystical message.

From the beginning of the English Reformation to the present time British poets have shown deep sympathy with and clear appreciation of mysticism. John Donne, George Herbert, Thomas Traherne, and Henry Vaughan in the 17th cent. were strongly influenced by Platonism and by classical mysticism, and they all gave expression in their poetry to the intimate inner relation of the soul with God. In the 19th cent. Wordsworth, Coleridge, Tennyson, and Browning, foremost among English poets, were mystical both in their own personal experiences and in their interpretations of the soul's deepest life. William Blake (1757-1827), deeply versed in the writings of Boehme and possessed of a peculiarly marked psychical disposition, was the most distinctly mystical poet of the 19th cent. in England, as Ralph Waldo Emerson was in America.

The closing years of the 19th and the opening years of the 20th centuries have been marked by a wide-spread popular revival of mysticism among Protestant denominations, which has found expression in an extensive body of religious literature. The present return to mysticism is, however, in marked contrast to the great flowering periods of mysticism. In all those characteristically different movements the leaders and exponents were themselves luminous mystics who interpreted their own experiences, while to-day, on the other hand, very few first-hand prophets of mystical religion have appeared and the present movement has been in the main confined to the historical and psychological interpretation of mysticism as revealed in the autobiographies and expositions of dead prophets, though this may be, and probably is, the necessary preliminary stage to a far profounder return to a religion of the inner way.

MYSTICISM (Christian, Russian).—The idea that the mysticism of the Byzantine Church found its direct continuation in Russian mysticism is at variance with historic fact. At first sight this seems strange; for the Russian cast of mind, with its predominantly emotional bent, could not but provide a most excellent soil for mysticism. Moreover, the religious spirit of the Russian people is certainly in great measure of a mystical character, while the mystagogical worship of God in the dimly-lit Russian churches is adapted to foster mystical feelings. Nevertheless, mysticism, in the sense of a mystical theory, does not exist in the Russian Church. The worship of God is there a sacred ritual, and the mystagogical theory underlying it is no longer understood. The devotional literature of the Russians is not really mystical, but ascetic; the theological literature, again, is stringently orthodox, i.e. it sets forth the sacred doctrines of the divine Trinity and of Christ's divine humanity; and the ecclesiastical censorship takes care that views of an alien kind shall not intrude. Mysticism, on the other hand, is in its inmost nature indifferent to matters of ritual and logical distinctions regarding God. Its aim is rather to apprehend God in feeling as the all-embracing Unity. It thus very naturally seems heretical, and in reality it has an undesigned tendency to heresy; in point of fact, certain heretical sects, as the Khlysti and the Skoptsi, are stigmatized in Russia as mystical, but, while they are genetically connected with sectarian movements in the ancient Byzantine Church, they, like these, are not mystical in the proper sense, but ecstatic. Their aim is not to become one with God in emotion, but, by the use of all kinds of nerve-stimulating devices, to bring down the spirit of God upon themselves, and so become organs of the spirit's influence upon the world. In all religious emotion, however, there is a strong impulse to gain a clear comprehension of itself in an adequate theory; but, as neither the Russian Church itself nor its sects could provide the people with a theory that would correspond to their highly developed religious emotion, and as, further, the people, being at a relatively low stage of intellectual development, were unable to construct such a theory for themselves, it is quite intelligible that, when they came to adopt the culture of Western Europe, they would take over its mysticism as well. In Russian literature the Masonic Order and the British and Foreign Bible Society are usually referred to as the channels by which the mystical pietism of Western Europe found its way into Russia. In reality, however, the process cannot be rightly attributed to these bodies; all that we can say of them in this respect is that they were used in part by W. European mystics, or by Russians who through W. European influence had become mystics, as media for the introduction of mystico-pietistic views into Russia. In the present article, accordingly, our object will be to narrate the history of mysticism in Russia by treating

in chronological order its outstanding representatives.

1. Grigóri Sávvitch Skovorodá.—The series¹ opens with the Little-Russian philosopher Grigóri Sávvitch Skovorodá (1722–94). He was a man of broad sympathies, and in his lifetime made a powerful impression upon the narrow circle of his countrymen in which he moved, while, after his death, his numerous though not voluminous writings—principally in dialogue form—continued to exercise a growing influence upon Russians who laid stress upon the subjective side of religion. His writings, notwithstanding all their learned phraseology, are composed in popular style, and his rather frequent use of ecclesiastical Slavic modes of expression does not detract in Russia from their popular character. Their profound religious contents are expressed in a highly original form. Skovorodá was a thorough mystic, as appears even from the visions ascribed to him in the biography written by his friend M. Kovalinski (1796; Charkov ed. [see Lit.], containing many of his writings, i. 1–40). In the vision connected with his conversion he attained to oneness with God, feeling that he was no longer an organism with bodily parts, but an undivided being burning with the fire of God's love and circling around in space (p. 28). The leading principle of his writings is that the one true way to the knowledge of God is the knowledge of self, which is found in the ancient heathen world no less than in Christianity (ii. 94, 105), and, just as he thus makes no real distinction between the heathen and the Christian knowledge of God, so—in conformity with the general trend of mysticism—his conception of God shows a pantheistic tendency (e.g., ii. 123, where he identifies God with nature). For him, as for all mystics, the letter of Scripture is a matter of indifference, since he searches the word for its inner sense; and he is similarly unconcerned about the ceremonies of the Church (i. 34, quotation from MS in Ern's work, p. 245; ii. 57). This explains why he was always falling into disputes with the clergy, and why he lost his position as a teacher in the clerical schools of Perejaslavl and Charkov.

If what has been said regarding Skovorodá might suggest that he was a mystic dependent upon himself alone, there are other elements of his thought which point distinctly to the influence of other minds. Such elements are his conception of the ideal spiritual world as the basis of the material world, and of the ideal spiritual man as the prototype and final cause of man in his earthly state (e.g., ii. 256, 258, 51–54, 17). As regards the former, Skovorodá himself refers to Plato (p. 256), while the latter is in the first instance a synthesis of the Platonic idea of man with man as depicted in certain OT passages and as used to typify Christ in the exegesis of the early Church; as a matter of fact, Skovorodá was well versed both in the classics and in the Church Fathers (i. 14). His conception of the ideal man, however, as not only the prototype, but also the moral pattern, of man as he now is—whose task it is to transform himself into the ideal—points to the influence of W. European mysticism and theosophy as operative from the time of Jacob Boehme, though we have no direct evidence of the connexion. Still, we know that, while Skovorodá spoke and wrote Latin with ease (cf. his Latin letters, i. 41–109), he

was equally a master of German. He had travelled widely over Western Europe, and had visited many of its savants; in particular, he had formed (1773) a close friendship at Lansanne with one Daniel Meinhard, with whom he felt himself so much at one that subsequently he sometimes signed his letters and writings with his friend's name (i. 29 f.). Such were in all likelihood the channels by which he came into touch with the ideas of W. European mysticism.

2. Johann Georg Schwarz.—While Skovorodá was in some sense an isolated figure, it was Johann Georg Schwarz (1751–84), a native of Transylvania, who, though not himself the author of any religious work, inaugurated a vast influx of mystical-pietistic literature from Western Europe into Russia. In that capacity he was of more importance to Russia than in his brief period of personal activity in Moscow, profound as were the effects of his work there; moreover, this activity was rather on the lines of the Enlightenment and only incidentally religious. The spread of W. European mysticism in Russia is usually ascribed by native writers to the Order of the Rosy Cross, and, when the process is associated with an individual, the name of Nikolai Ivánovitch Nóvikov stands first, that of Schwarz occupying only the second place. It was not till 1781–82 that Schwarz, then travelling in Germany, became acquainted with the Order of the Rosy Cross in Berlin, and was made a member of it by F. C. Wöllner, a minister of State, who was head of the order in that city. But, in point of fact, Schwarz was even then a mystic—an adherent of Jacob Boehme and of St. Martin (who himself had at one time been in personal intercourse with Russians, as, e.g., Prince Alexe Golizün)—and as such had exercised no small influence in Russia before his journey to Germany.¹ As regards his work from 1782 onwards, again, he explicitly denies that the order was in any way responsible:

'It is true that I am a freemason; and so are some of my friends . . . but the Society (of Learned Friends) is not a masonic one. . . . How can any one in the 18th century come to believe that freemasonry is a religious communion and can be taught from a chair?' ('A Note of F. G. Schwarz,' printed in *Yearbooks of Russian Literature and Antiquity*, v. ii. 110).

It is also true that Nóvikov, who certainly exercised a greater influence upon the rise of the Enlightenment in Russia than did Schwarz, had, even before he came to know the latter (1779), already published translations of Pascal's *Pensées* and several of Jung Stilling's shorter compositions in *The Dawn*, the journal edited by him in Petrograd in 1777–79. But these few writings of mystical tendency were as nothing compared with the mass of W. European works of other kinds which the journal published in translation. Nóvikov's later journals, which he issued under various titles in Moscow until 1785, make it quite clear that he did not become a mystic even after he had made the acquaintance of Schwarz. He was undoubtedly a religious man, but his predominant interest lay in the union of science and faith—a tendency which is quite foreign to mysticism, and, as a matter of fact, his journals contain a large number of articles directly opposed to mysticism in their general purport. While he certainly did his utmost to support Schwarz's efforts to disseminate mystical literature in Russia, yet, when he was subsequently (after Schwarz's early death) summoned to answer for his conduct in a court of law, he made an explanation which there is no reason to discredit:

'At first we printed books of various kinds; but afterwards, as we came to see that the religious books were in greater demand, we printed them in greater numbers' (from the records of his trial, in 'Fresh Information regarding N. I. Nóvikov and the members of the Typographical Company,' communicated by D. J. Ilovaiski, *Yearbooks of Russian Lit. and Ant.* v. ii. 110).

¹ Schwarz had gone to Russia in 1776, and became a professor in the University of Moscow in 1779.

¹ The well-known German mystic Quirinus Kuhlmann, who arrived in Moscow on 28th April 1669, and was there burned as a heretic on 1st Oct. of the same year, does not really belong to the series, and needs but a passing reference. He had no command of the Russian language, and his influence in Russia was confined to the German residents of Moscow. It was for his aspersions upon the Lutheran clergy that he was arrested and condemned.

Schwarz had learned Russian, and in his very effective educational work in Moscow, where he soon exhausted his strength, was sincerely concerned with the religious development of his pupils, though he treated their creed with all respect; for mysticism, making little of confessional differences, is always tolerant. While his work at the University and at the Gymnasium (which he recognized by introducing a new educational scheme) was restricted to giving instruction in the German language and literature, he gave on his own initiative and in his own house a course of lectures on the history of philosophy (1782), in which, from the religious as well as the philosophical point of view, he dealt critically with Spinoza, Rousseau, and the Encyclopædists (then greatly in vogue among the Russian youth); he also delivered a lecture on the three species of knowledge—the zetetic, the pleasure-giving, and the useful, interpreting the last as religious knowledge, and extolling the Bible as its most trustworthy source. He exerted an even more direct influence upon the younger generation through the seminary for the training of teachers and professors which he instituted in 1779, and through the school of philology and translation which he opened in 1782 with sixteen students. Under his direction these students translated numerous works by W. European mystics and pietists, as well as writings of the Greek Fathers, and in this work he gradually secured the help of his personal friends, whom in 1782 he united in an association known as the 'Society of Learned Friends.' The foundation of the Moscow Order of Rosienicians was purely incidental; the order had a membership of only nineteen (of whom Nývikov was one). In 1782 and the year following the association executed Russian translations of works by Tauler, Arndt, Bunyan, and St. Martin, and of hundreds of other writings by anonymous or less known German and English religious authors of mystical or pietistic leanings. In the work of publication Schwarz was assisted by Nývikov, who placed at his disposal the University Press leased by him from 1789. Religious books printed there were still subject to the clerical censorship, but this obstacle was removed when, in consequence of a new enactment, the Society of Learned Friends was enabled to open a number of independent printing establishments. In 1784 the society gave place to the 'Typographical Company.' The works thus published were sold not only in Moscow, but also in Smolensk, Kiev, Tula, and other towns. In the same year Schwarz died, in a village near Moscow, of an illness due to overwork. While Schwarz's religious activities had led to troubles with the government—troubles which, among other things, caused him to resign his chair—the bitter animosity of the empress Catherine II. against the Freemasons broke fiercely over Nývikov in her last reactionary period. As early as 1787 such books as had been issued without the sanction of the clerical censorship and were still lying in the booksellers' shops had been confiscated, and in 1792, at the commencement of his trial, 18,000 of the 23,000 copies still held in stock were burned, and the rest made over to the academy. For his share in the publication and distribution of the books Nývikov was sentenced to rigorous confinement in the fortress of Schlüsselburg, from which he was liberated, in shattered health, at the accession of Paul I. (1796). But the numerous copies already in the hands of the public were beyond the reach of the persecution.

3. Alexander Feódorovitch Lábsin.—The second great influx of W. European mystical literature into Russia was pre-eminently due to the energies of Alexander Feódorovitch Lábsin, a man of unassuming and deeply religious character. He had

no desire to court public attention, preferring to do his work in the background; thus, *e.g.*, his signature on the title-page of his translations was simply 'U. M.', i.e. Utchenik Múdrosti, 'pupil of wisdom.' This explains why the publication of such literature was ascribed by its enemies to the Russian branch of the British Bible Society—an idea that still persists among Russian writers. But Lábsin, who was a follower of Schwarz and a member of the Society of Learned Friends, and who had already, under Schwarz's directions, been engaged in the translation of mystical works, had resumed his labours as soon as the greater freedom granted by the government of Alexander I. opened a way for the publication of such writings, i.e. even before the formation of the Bible Society in Russia (1812). Lábsin's activities in this direction fall into two periods, the first extending from 1803 to 1806, the second from 1813 to 1822. The latter, however, owed its inception not so much to the Bible Society (which, in Russia as elsewhere, maintains its principle of issuing the text of Scripture without annotations of any kind) as to the religious awakening which, arising out of the wars of freedom, spread to Russia too. In his first period Lábsin translated and published many of the writings of Jung Stilling and Eckartshausen, his favourite authors.¹ In 1806 he issued his journal, the *Messenger of Zion* (*Sionski Věstnik*), in which he called for a more inward and spiritual grasp of religion. Nearly all its articles were from his own pen, the rest being furnished by like-minded friends; he also reprinted in it a number of Skovorodá's works. Though the journal had a very small circulation—93 subscribers, including 33 clergymen—it met with opposition on the part of the Church, and, when the authorities demanded that not only the journal but all further translations should be brought under the clerical censorship, Lábsin simply stopped the paper and for the time abandoned his translation work. In a few years, however, he resumed the latter in consequence of the growing support extended to him by Alexander I. and many officials of State, who, after the wars of freedom, had themselves come under the influence of the religious awakening. In this period Lábsin issued new editions of the works of Jung Stilling and Eckartshausen already published by him, and he translated a number of other writings—*e.g.*, the former's *Siegesgeschichte der christlichen Religion in einer gemeinnützigen Erklärung der Offenbarung Johannis*, and the thirty numbers of his popular periodical, *Der graue Mann*. To these he added renderings of Jacob Boehme's *Der Weg zu Christo*, the more important works of Francis of Sales, Ambrosius Lombaise, Dousetan, and Adam Sigismund Fleischner, and anonymous writings of a similar character. Here he also secured the help of friends: F. Lubjanóvski translated Jung Stilling's *Heimweh*; W. M. Popóv, an adherent of Madame de Tatarinova (see below), translated Lindl's *Sermons* and Gossner's *Geist des Lebens und der Lehre Jesu Christi in Betrachtungen und Bemerkungen über das ganze Neue Testament*, i. 'Matthäus und Markus'; Sophie Meshitchérskaja, sister of the chief procurator to the Holy Synod, executed Russian versions of English tractates exhibiting the same trend of thought. The translations of works by Tauler, Arndt, and St. Simon which had been published under Schwarz's direction were once more given to the public, while fresh work was done in translating A. Kempis's *Imitatio Christi*, selected writings of Madame Gnyon, and Dutoit's *Philosophie chrétienne*. In 1816 the

¹ Another book greatly prized by Lábsin was the compilation of mystical thoughts from the Byzantine Church entitled *Φλοκαλία*, which he read in the Ecclesiastical Slavic edition. The first Russian tr. of this by Feophan († 1804) appeared at a much later date.

emperor bestowed an order upon Lábsin 'for the publication of religious books in the native language,' and rewarded the editor of Madame Guyon's works with a large gift of money. In 1817, at the instance of the emperor, Lábsin resumed the issue of his *Messenger of Zion*, which now attained a vast circulation throughout Russia, although, as it could not permanently evade the spiritual censorship, it was discontinued in the following year. Translations of mystico-pietistic works, however, were now subject to the secular censorship only, not to the clerical—a privilege which Lábsin and his collaborators owed to Prince Alexander Golzün, minister of public instruction and a devoted adherent of mysticism. Golzün, in fact, had these writings sent in vast quantities—to a maximum of 2000 copies for each eparchy—to the schools under his department, using the Commission for Clerical Schools as the distributing agency; and he also sent them to the bishops and provincial governors. The writings by which the orthodox clerical party sought to counteract this literature he did not allow to pass the censorship, and he even reprimanded the censor for having sanctioned Stanewitch's *Discourse at the Grave of a Child upon the Immortality of the Soul* (Petrograd, 1818), which was directed mainly against Jung Stilling's *Stiegesgeschichte*. At first, however, Lábsin was countenanced by some of the higher clergy with whom he had been associated in the Bible Society—notably by the metropolitans Michail, Seraphim, and Philaret, of whom the first two had in their youth belonged to Schwarz's circle, while the third subsequently (1834) published a new translation of the *Imitatio Christi*, which had all along formed his favourite reading, and which he called the 'book of sweetness.' Few original works of a mystical character in the Russian language, apart from the articles in the *Messenger of Zion*, appeared at this time; such, however, were the *Fruit of the Lover of Truth*, and *Features of the Spiritual Church*, by Lopuchin, a privy councillor, and Krülov's *Reflection upon the True Religion*, all of which were published without clerical censorship, and distributed by Golzün.

The second influx of mystico-pietistic literature, however, was soon brought to a standstill by the reactionary policy adopted by Alexander I. in the closing years of his reign, just as the first had been stopped thirty years previously by the empress Catherine. In 1822 Lábsin was sent to Sengilé in the government of Simbirsk in consequence of an outspoken declaration over the emperor. The real champion of the reaction, the thoroughly unscrupulous Count A. A. Arakchejev, by whom the emperor latterly suffered himself to be ruled in all things, made use of the clerical party, which had been roused to action by Stanewitch's book, as a means of overthrowing Prince Golzün. The movement found a pretext especially in the work of Gossner already mentioned, which Arakchejev stigmatized as at once impious and revolutionary, and more generally in the mystico-pietistic literature disseminated by Golzün. As the latter was also president of the Bible Society, he was deprived of his office as minister of public instruction (1824), and the society itself was prevented from carrying on its work—on the ground that it was responsible for the circulation of the literature in question, whereas, in fact, Golzün had worked here quite independently of the society; and, moreover, if he and his mystically disposed group, which was held together chiefly by the conception of the 'inward Church,' belonged to the society, its membership included likewise many high officials of State not greatly concerned with religious matters, and even the chief representatives of the Orthodox, as well as of the Roman Catholic and Protestant clergy.

Golzün's successor in office, Admiral A. S. Shishkov, ordered many of the mystical books found in the schools and booksellers' shops to be confiscated, and sent to the clerical academy of Petrograd in order to be examined by a commission appointed for the purpose. This commission, however, did not begin its work till 1830, and finished it only in 1843. In 1846 the Holy Synod gave orders that all surviving copies found in the dioceses should be sent to it. To what extent, if at all, this injunction was obeyed is not yet clearly known, but it is certain that many volumes remained in the hands of the public, and are to this day greatly prized, more especially among sectarians.

4. Madame de Krydener, Lindl, Gossner; Madame de Tatarinova, Kotélnikov, Dubovizki. —While Lábsin had exercised an extraordinary influence upon those around him by personal contact, he had not stood forth publicly as the herald of the new faith, seeking rather to disseminate it by the written word only. Even in Russia, however, the religious awakening of Western Europe did not fail to find impassioned preachers and strenuous organizers of devotional meetings. Although Madame de Krydener (1764-1824) exercised her pietistic ministrations mainly in foreign countries, and, as far as the Russian Empire is concerned, laboured only in her native province of Livonia and for a very short time in Petrograd, she nevertheless played a great part in the movement by which the awakening was carried from the west to the east of Europe, winning for it the favour of Alexander I., in whose personal circle she lived during 1815 in Heilbronn, Heidelberg, and Paris, and upon whose entourage—notably Prince Golzün (see above)—her influence was likewise very great. From 1819, again, the Roman Catholic preachers Lindl and Gossner (1820-24) laboured successively in Petrograd as apostles of Pietism. The former obtained the use of the Maltese church near the Pagenkorps, while to the latter the emperor assigned a large hall, in which he addressed audiences of about 2000 persons.

While the ministrations of these three leading representatives of mysticism were attended by Russians who were familiar with German and French, it is obvious that no far-reaching or permanent result could be secured except by persons who were able to address Russians in the Russian language. This advantage was possessed by another Livonian lady of rank, Catherine von Buxhövdén, who married the Russian lieutenant-colonel Tatarinov, and in fact almost became a Russian herself, even leaving Lutheranism for the Greek Orthodox Church. Having been deeply stirred by the W. European revival, she founded in 1815 her 'Brotherhood in Christ' in Petrograd. In that association she endeavoured to furnish the new spiritual religion with distinctively Russian forms, borrowing these from the ascetic and ecstatic Skoptsi ('self-mutilators'), though rejecting their fundamental demand of sexual mutilation. Her devotional gatherings in the residence assigned to her in the Michael Palace—and from 1822 in other places—were conducted on the lines of the Skoptsi meetings, and were devoted partly to delirious dancing in fantastic dress, and partly to prophetic discourse. In the latter she had the services of prophets whom she had won from the Skoptsi community in Petrograd, but she also took part in it herself, using it as a means of propagating the deepened spirituality of Pietism, while at the same time she took upon herself the benevolent work of the Pietists among the sick and the poor. But, as she gradually cast off the people of humbler rank who had rallied to her from among the Skoptsi, she came at length to form a sort of religious focus for the bureaucratic, military, and hereditary aristocracy.

crazy of Petrograd. Among those who took part in her devotional gatherings were Prince Golftzin, W. M. Popov, the director of his department, General I. A. Golovin, Prince I. Engalytchev, and Princes N. and S. Kropotkin. She was befriended by the emperor Alexander I., and, together with her chief prophets from the Skoptsi sect, was repeatedly called to his presence for the purpose of conversing on religious themes; he also granted her a large pension, and even in his reactionary period his protecting hand shielded her and her circle from the attacks of Arakchejev and Shishkov. It was not till a much later time, in the reign of Nicholas I., that she and her chief adherents suffered arrest, she herself being confined in a remote monastery (1837-47). Her followers, however, still continued to hold religious meetings in Petrograd, though now in secret, and she even found ways of advising them from her distant abode (in Moscow from 1847); nor was her circle dissolved until her death.

While it was only at the outset that Madame Tatárinova sought to extend her influence to the common people, the Esa-ul (Cossack officer) Ievlampi Kotelnikov, who founded another sectarian community of similar nature, confined his labours entirely to that class. Having been deeply moved, in the early twenties of last century, by his reading of the Russian NT published by the Bible Society, and of mystical books, especially Lopuchin's *Features of the Inward Church*, he proposed to institute a truly spiritual Church in contrast to the external Orthodox Church, which he stigmatized as the 'Babylon' and the 'harlot' spoken of in Revelation. He devoted his mind largely to the study of that book, which he interpreted in a very fantastic way, following here the characteristic ideas of the Khlysti. He claimed to be the forerunner, John, and asserted that Christ had been spiritually born in the emperor Alexander I. The latter was at the same time the second of the apocalyptic angels, the Bible Society being the first. He won numerous adherents in his native stanitsa of Verechnkurmojárskaya, in the neighbouring Cossack stanitsas on the Don, and in the town of Novotcherkask. In his devotional meetings it was the practice to read the Russian Bible and mystical works of the kind circulated by Lábsin, but these gatherings were otherwise of an ecstatic type like the religious services of the Khlysti (see MEN OF GOD); Kotelnikov's adherents, in fact, called themselves Duchonosti, 'Vehicles of the Spirit.' He expounded his ideas in a number of writings, and it was the fact of his having sent copies of these to the higher clergy that led to his arrest in 1824. In 1826 he was sent to confinement in the Solovézki monastery on the White Sea, where he died in 1852. Nothing is known of the further history of his community.

That it was possible, however, to propagate the more inward type of religion in the forms of the Orthodox Church is shown by the labours of Alexander Petróvitch Dubovízki († 1852). Dubovízki, a landowner, had been spiritually awakened by an employé of Madame de Krydener who had entered his service after taking part in her devotional meetings in Switzerland and Livonia (1816-20). In 1822 Dubovízki began to hold similar meetings in the settlements of Lepégi and Górovo in the government of Rjasán, where he had an estate, and at these gatherings he not only expounded the Scripture to the peasantry, but distributed copies among them. To those who took part he gave the name of 'true inward worshippers.' In Górovo he erected a chapel which was open to all, though in it he used to urge the peasants to be diligent in attending the Orthodox Church for

the worship of God and the observance of the Lord's Supper. In 1823 he removed to Petrograd, where in his own house he assembled his servants for devotional services of a similar character. Here he made the acquaintance of Madame Tatárinova, but took an attitude of decisive opposition to her schismatic ecstasy. Then, as a result of the reaction, he was sent to a monastery in 1824. Here, however, he threw himself so zealously into the religious life of the monks that he was liberated in 1826 on the recommendation of the monastic authorities and of Philaret, as also on the ground that his orthodoxy was recognized by the metropolitan Scraphim, who had been mainly instrumental in procuring his condemnation for preaching without authority. In 1829, after brief periods of residence in Petrograd, Lepégi, Górovo, and other places, Dubovízki settled in Moscow, where he arranged his large domestic establishment, consisting of sixty-eight persons, wholly on monastic lines. He wore iron chains upon his body, and the entire household lived on lenten fare. Here, too, he instituted a school for the education not only of his own children, but of those of the congenially minded archimandrite Platón, as well as peasant children from his estates. The foreign teachers, both male and female, whom he engaged for this work were one after another converted by him to Orthodoxy. As it was one of his leading convictions that in the Church of Christ, besides the public services, there might be, and had in fact once been, more private gatherings for mutual edification, he used to assemble his household in a special oratory for devotional exercises. It was on account of these domestic services that he was again arrested in 1833; he was confined in various monasteries, and, stricken in years as in health, died in 1842.

5. Vladimir Sergéjewitch Solovjév.—Since the period of the Napoleonic wars, Russia, like W. Europe generally, has had no further revivals of religion; nor can we speak of another large influx of W. European mystical literature into Russia. The explanation lies not only in the growing religious indifference of the educated classes in Russia during the latter half of the 19th cent., but also in the increasing disinclination of these classes to depend wholly upon W. Europe for the satisfaction of their spiritual needs—in a word, the endeavour to realize a distinctively Russian type of culture. Within recent times, no doubt, a sense of religious need has been awakened among Russians of every class by the popular philosophy of Tolstoi. While Tolstoi, however, as regards his own personal experience, interprets the religious relation in the sense of a mystical pantheism, and while his writings are pervaded by a general strain of mysticism, yet in these writings the strictly religious interest rather gives way to the interest of an ascetic morality and of social problems. Although the asceticism preached by Tolstoi associates him more closely than he supposed with the Orthodox Church, to which, in his criticism of its doctrines, he stood sharply opposed, the longing of the Russian people for a theory of life corresponding to its mystical religion of emotion has found its fulfilment in the views of Vladimir Sergéjewitch Solovjév (1853-1900), a thinker who stood forth as a genuine Russian and a loyal son of his Church.¹ On a superficial view, indeed, Solovjév might be regarded as one of the long succession of philosophical theologians and theological philosophers who in Russia have sought to provide a theoretical justification for the teaching of the Church; thus he finds a rationale not only for the doctrines of the Trinity and the Two Natures, but also for the Seven Sacraments and the conveyance of the

¹ Cf. his *La Russie et l'Eglise universelle*, Paris, 1889, 21906.

priestly character by the laying on of hands. On a closer view, however, his mysticism, like mysticism generally, shows a certain unconformity with the doctrines of the Church. Though he frequently seems to speak in terms of theism, his idea of God is essentially pantheistic; he teaches the eternity of the world, speaks of an ante-temporal fall, and sometimes denies the personal immortality of the individual. Such departures from the teaching of the Church, however, do not seem to have impaired the influence of his writings¹—an influence which has been constantly on the increase since his death; in certain circles, indeed, they may even have added to it. The joint-editor of his works, E. L. Radlov, who writes the biographical sketch, has justly said (*Collected Works*², vol. x. p. xxxv) that his mysticism is always the central and fundamental element of his teaching. Here he not only shows the influence of such Western mystics as Scotus Erigena, Jacob Boehme, and Swedenborg, but has also drawn upon Neo-Platonic mysticism, which is much more closely allied to his Church. Thus the union with God which is attained by attenuating self-consciousness to a mere sense of existence he describes precisely as do the Neo-Platonists (see below). Still, this dependence does not preclude his having experienced and reflected upon the mystical form of religion in a way peculiarly his own. His mysticism is indeed of so decided a kind that he assigns the most important place in his theory of knowledge to mystical faith. His leading ideas are as follows:

The reality of the external world cannot be apprehended by reason, but is to be grasped by faith alone, faith finding the ground of phenomena in the same reality as is directly experienced by the believer in his appropriation of faith ('Criticism of Abstract Principles,' *Works*, ii. 326, 330 f.). The object of this faith is therefore the absolute existence of objective reality. The interaction between the ideal essence of the ego and the ideal existences of all other objects is called 'presentation,' and this produces in our reason those durable, definite, self-consistent, and self-identical images of objects by means of which we combine and organize the whole indefinite mass of single impressions (p. 336). We perceive these images, in the first instance, immediately, and prior to all our sense-perceptions, to which we then transfer them (p. 338). Our knowledge of nature, if it is to be genuine and objective, must be brought into relation with this mystical knowledge (pp. 346, 349 ff.).

In conformity with his theory of knowledge Solovjov deals specially with the knowledge of God. Human personality, he says, is in a sense itself divine, or, more precisely, it participates in deity. It has the negatively unconditioned quality of aspiring after perfection, and this aspiration carries with it the claim of being realizable ('Lectures on the Divine Humanity,' *Works*, iii. 19); in other words, man will not consent to be a mere phenomenon, and this very refusal indicates that he is something different, something more (p. 21). But the ultimate truth lies in the fact that he is also positively unconditioned, i.e. he has the power of appropriating to himself the fullness of being. Faith in himself is at the same time faith in God. Deity belongs to God in His eternal reality; man aspires to and yearns for it, and finally reaches it (p. 25). The reality of God, however, cannot be logically demonstrated, but can be apprehended only by faith, exactly as the reality of the world and each separate object (p. 32 f.). When we abstract from all definite manifestations of our outward and inward life—not merely from our sense impressions, but also from our feelings, thoughts, and wishes; when we concentrate all our capacities in the one focus of our immediate spiritual existence; when we let ourselves sink into the silent and motionless calm from which the turbid stream of our present being wells forth without disturbing its purity and its peace—then in the source of our own spiritual life we are inwardly in touch with the source of universal life, and we know God as the principle or substance of the All (p. 87). We cannot doubt the reality of that which operates palpably within us, and the operation of which is given in our very perception ('Justification of the Good,' *Works*, viii. 191, 193 f.). Feeling its reality in ourselves, we realize that we are already united with that supreme reality, and we posit the (inward, subjective) beginning of the coming union of the world with God (p. 196). This may be expressed in the form of a behest: 'Have God within yourself; do not sever yourself from the All, but associate yourself with the All' (p. 202 f.).

If Solovjov, in these developments of his thought, reminds us of the fundamental principle of Skovorodá (with whom he was connected on his mother's side), viz. that the true path to the knowledge of God is self-knowledge (cf. § 1), he resembles him also in the fact that between man as he now is and God he

places the ideal man, though with a peculiar and much broader basis of argument. The material side of nature, existing as a part, strives to be transformed into the All, into God ('Criticism of Abstract Principles,' *Works*, ii. 318). Nature is the second Absolute, which attains its ideal reality in man (p. 319), and, as nature strives to rise to the human stage, there are at bottom only two realities, viz. the absolutely existent, God, and that which is absolutely becoming, man (p. 323). Man is the connecting link between the deity and the world of nature; by 'man,' however, is meant here not man as known to us, but ideal and perfect humanity—the Sophia, which was eternally consummated in the plenary divine entity, i.e. Christ ('Lectures on the Divine Humanity,' *Works*, lii. 121). This humanity, accordingly, is co-eternal with God Himself (p. 122). Man in his present state presupposes the eternal humanity, or ideal man (pp. 123, 126). The organism of this universal humanity consists of the body of God and the eternal soul of the world (p. 127). The earthly individual man, just as he did not exist before his birth, passes away at death (p. 128). The evil in man in his phenomenal state lies in the fact that he usually feels himself isolated, and only in rare moments of clarity realizes his unity with all other things, with God (p. 130 f.). This evil impulse towards isolation he shares with all empirically existing things (p. 132). In reality, however, ideal humanity, or the world-soul which unites in itself all individual souls, had already, in the cycle prior to the present, broken away from its unity with the All and tried to find itself in its separation; for otherwise evil could not have appeared in phenomenal man and the phenomenal world (pp. 140–142). In that empirical world everything has fallen asunder into parts and particles seeking to assert themselves in opposition to one another. God, however, desires to bring the world-soul back to Himself by a gradual process. To begin with, the world-soul in phenomenal man, as prepared for it by the long process of religious history, comes to know itself again in its unity with the divine Logos, i.e. the pure form of the universal unity; moreover, it recognizes itself also in all nature, of which phenomenal man feels himself to be the concentration (p. 150 f.). Such is the philosophical rationale of the union of deity with a human soul in the person of Jesus Christ (p. 162), and this union becomes a continuous process by the gradual voluntary transformation of phenomenal man to the divine. Thus from the God-man there comes at last the man-God (i.e. man as having assimilated Deity), or universal humanity, the universal Church or spiritual humanity (p. 180 f.).

K. GRASS.

MYSTICISM (Hebrew and Jewish).—Ever since the Pauline antithesis of law and faith stamped Judaism as a religion of unrelieved legalism, the possession of anything approaching the nature of a mystical element has been steadily and strenuously denied to the religion of the Jew. Formalism—which, truly enough, pervades and colours Judaism through and through—is taken to be the irreconcilable enemy of mysticism, whose fundamental axiom is the freedom of the human spirit to seek out, in all ways possible to it, the means of union with ultimate reality—God. But this attitude towards the question only shows how, like many other psychological concepts, mysticism, no matter of what brand, scarcely admits of rigid definition. Its phenomena are so complex, its elements so intermingled with other elements in the mental and spiritual make-up of men, that it is impossible to lay down any law as to where it may or may not be found to exist. Thus, if one wonders how mysticism can be a feature of Judaism, one can equally wonder how a Christian theologian

¹ These have already appeared in two collected editions, of one of which there has been a second issue.

like St. Augustine could be called a mystic. Was he not a rigid upholder of an iron system of dogma and authority in the early Church? And yet his *Confessions* are thoroughgoing mysticism, showing him to have gained the core of his religion from certain 'first-hand' experiences which, to him, implied direct intercourse between the soul and God. A similar argument can be applied to Aristotle. Cold, analytic philosopher as he was, positing an utterly transcendent God who 'thinks his own thoughts' and who dwells in the peace of his own completeness, Aristotle's 'active reason' possesses a decidedly mystical turn, and must have exerted no small influence on many a type of mysticism in the succeeding centuries. One is drawn to the irresistible conclusion that religion, in order that it should not be barren and lifeless, must give prominence to something more than historicity and tradition. It must lay stress on the element of personal inward experience, on the great fact of the soul 'athirst for God, yea, even for the living God.' Judaism amply fulfils these conditions.

The beginnings of Judaism lie, of course, in the OT. In fact, everything in Judaism seeks to find its confirmation in some expression, whether clear or veiled, in the OT. Hence the OT is pivotal for any consideration of Jewish mysticism in all its phases and developments. The mysticism of the OT clusters mostly round the visionary experiences of the prophets. Isaiah's vision of a God whose 'train filled the Temple' points to the all-inclusiveness of Deity. Ezekiel's fits of ecstasy are characteristic of the mood of many a mystic in all ages. The prophet's higher insight into the will of God and his satisfaction at the attainment of this insight are an example of the 'illumination' which is always one of the steps on the mystic's ladder. Some of the other books of the OT show forth other constituents of the mystical consciousness. Thus, the Psalmists often brood on the divinity manifested in the beauteous world of nature. 'Who layeth the beams of his upper chambers in the waters; who maketh the clouds his chariot; who walketh upon the wings of the wind. Who maketh winds his messengers; his ministers flaming fire' (104³⁴). The universe is one uninterrupted revelation of the divine. Ps 139-15 portrays the mystic sense of the boundless, and the human aspiration to reach it as the goal of the truest safety from the ills and anxieties of the normal finite experience. Other passages paint the 'nearness' of God and the joys of intimate converse with Him. The treatment of prayer and the specimens given of individual prayers are fine examples of what one might call 'erotic mysticism.' The soul passionately yearns for God, and God reciprocates the yearning in terms of the love between man and woman. 'Whom have I in heaven but thee? and there is none upon earth that I desire beside thee' (Ps 73²⁵). Here is the insatiable craving of the mystic, the infinity of love's desire. 'Yea, I have loved thee with an everlasting love; therefore with loving-kindness have I drawn thee' (Jer 31³). It is doubtful whether the intensity of intimacy connoted by the Hebrew *ahabbāh* ('love') and *hesedh* ('loving-kindness') is ever done justice to in a translation. Finally, there is the angelic lore of the OT. The sight of an angel or the hearing of its voice brought about a feeling of being environed with God. It had the effect which every mystical experience in all ages had, viz. it flooded the seer with a new power.

Upon these mystical strains pervading the OT was built the variegated edifice of the two separate schools of mystical thought which followed on the close of the OT canon, viz. (a) the Palestinian, or Rabbinic, or Talmudic Midrashic, and (b) the Jewish-Hellenistic, which had its chief centre in

Alexandria—then the intellectual capital of the world.

Let us consider (b) first. The theology of Judaism was studied side by side with the works of Plato and Aristotle, and thus was produced that curious blend of Jewish and Greek thought the most famous monuments of which are the writings of Philo, the apocryphal Wisdom of Solomon, and fragments (preserved only by Eusebius, in *HE* vii. 32. 17 and *Præp. Evang.* viii. 10, xiii. 12) of an Alexandrian peripatetic philosopher Aristobolus, who, according to Schürer (*GJV*³ iii. 391 f.), was a contemporary of Ptolemy Philometer in the middle of the 2nd cent. B.C. Aristobolus develops a mystic cosmogony in which the Pythagorean theories of the influence of numbers play a part. His conception of divine creative activity is drawn from the Stoic idea of *πνεῦμα*, God's power penetrating and permeating all things. He has references to the *νοῦς* ('reason') of Plato. The main trend of his thought, however, is Aristotelian; but—and here he is the precursor of the Philonic method—in spite of his devotion to Greek thought, he is an upholder of the Jewish doctrine of God in so far as he believes that the Deity is at once transcendent and immanent. God is greater than the universe, outside it, and separated from it. But God works in the universe by means of His 'wisdom,' which is an emanation from Him but yet has no separate existence apart from Him. God is 'in heaven,' i.e. in distant isolation, but yet 'the earth is his footstool,' i.e. the world is permeated with the divine traces. The apocryphal Wisdom of Solomon is characterized by a similar fusion of Greek and Jewish mystic notions of the divine relations to the cosmos. The Stoic conception of an immanent *πνεῦμα* comes out in vii. 25:

'For she is a breath of the power of God,
And a clear effluence of the glory of the Almighty.'

The same thought is continued in 26 f. In viii. 19 f. we have a hint of the Platonic theory of pre-existence:

'For I was a witty child
And had a good spirit,
Yea, rather, being good, I came into a body undefiled.'

In xviii. 14-16 wisdom becomes a personality and seems to have affinities with the 'Word' in the Prologue of the Fourth Gospel. But—and here the essentially Jewish side of the case comes out—wisdom, although a potency *outside* God, is yet at the same time wholly *in* God. The author, as a Jew, and therefore deeply concerned with safeguarding what he and his predecessors understood by the unity of God, is obviously at pains to make this vital point clear. Philo elaborates all these concepts with the hand of the master—and adds many new ones too. He makes a sharp distinction between God in Himself and God revealed. The reconciliation between these two views is never effected, and this defect is one of the flaws in his mystic philosophy. On the first view, God is pure being, unknowable, outside the material universe. On the second view, God is immanent in man and the universe, and is all-penetrating, all-filling. Philo's Jewish sympathies are apparent in his treatment of this branch of his subject. The Jewish idea of God as creator and sustainer of the universe held a foremost place in his mind, and many an interpretation given by Palestinian Rabbis of the first centuries of Christianity and incorporated in the Talmud and Midrashim (particularly in the early sections of *Br'eshith Rabba*) is a reflexion of Philo. It is in the presentation of his Logos idea that Philo is most important for an understanding of Jewish mysticism. Whatever extraneous teachings may have gone to the making of the Logos, there can be no doubt that it was much influenced by the OT notions of angels. There is a wide gap between God the infinite, the

all-holy, and man the finite and imperfect. How is the chasm to be bridged? The OT writers and, after them, the Rabbis of the Talmud and Midrashim overcame the difficulty by the introduction of the angel. Pure God did not really come into contact with impure man, but His angels did. And who were the angels? They were emanations of the divine, offshoots of deity, part and parcel of God's own being. Reading his OT in some such light as this, Philo laid it down that the universe was filled with divine potencies (*δυνάμεις*). These potencies, while they are in one sense attributes and self-revelations of God, are in another sense personal beings of a spiritual kind, 'incorporeal souls,' who 'report the injunctions of the father to his children and the necessities of the children to the father' (*de Somniis*, i. 22). There are various gradations of these potencies, but at the head of them and constituting the principle of unity among them all is the Logos. Heaven and earth subsisted in the Logos before their material creation—an idea voiced by the Rabbinical literature in many curiously naive ways (see *Brēshith Rabbā*, i.-iv.). It is from the Logos that there emanate the potencies which are the real creators of matter. Hence God is the ultimate creator of all, but never through direct contact. He works through the Logos, who again works through these potencies (called Logoi). Platonic and Stoic elements are apparent throughout, but so also is Rabbinic angelology. Thus in *Brēshith Rabbā*, viii. 3f., the grammatical plural in the words, 'And God said, Let us make man,' is explained by the statement that, when God was about to create the first man, He took counsel with the ministering angels. Hence the blame for the evil in man is partially removed from the Deity and placed upon the shoulders of the angels. The Rabbinic interpretation of the Hebrew word *Amōn* in Pr 8³⁰ gives to the Tōrah very much the same rôle as Philo attributes to the Logos. It is God's workman or servant in the work and administration of the universe. The human soul is an emanation from the Logos, and makes man akin to the 'incorporeal souls'—the angels, *i.e.*, not those who have descended upon earth to become bound up in mortal bodies, but those who, 'having received greater and more divine intellects,' shun earth altogether in order to be 'lieutenants of the Ruler of the universe as though they were the eyes and ears of the great being beholding and listening to everybody' (*de Somn.* i. 22). Christian mysticism is a greater debtor to Philo than is Jewish mysticism, which betrays Philonic influences only in spasmodic passages in the cosmological sections in the Talmud and Midrashim as well as in the philosophic systems of two great mystic theologians of the Middle Ages, viz. Solomon Ibn Gabirol (c. 1021-1058) and Abraham Ibn Ezra (1092-1167) (*qq.v.*).

We shall now consider (a) the Talmudic and Midrashic mysticism. Teachings essentially Jewish in their origin are found in combination with doctrines belonging to Mithraism, Gnosticism, and Neo-Platonism. Essentially Jewish is the *sh'khināh* mysticism. The *sh'khināh* is the universally diffused Divine Presence which forms the idealized environment of the Jewish nation in all the lands of the latter's dispersion. But in order that the individual Jew should, in himself, realize the *sh'khināh* he must be 'healthy, wealthy, and wise,' *i.e.* he must lead a life of religious and moral purity, he must be self-reliant and self-conquered, he must be intellectually great in the knowledge of the highest lore—the Tōrah. Sin and *sh'khināh* are mutually antithetic. 'God is the dwelling-place of the universe; but the universe is not the dwelling-place of God' is a prominent Rabbinic dictum. Essentially Jewish is the doctrine of the two opposed divine attributes—the *middath had-din* and the

middath hā-rahāmīm—which operate upon man for good or for evil in ways very much resembling the powers of the angels; and Jewish too is the enumeration of the ten agencies through which God created the world, viz. wisdom, insight, cognition, strength, power, inexorableness, justice, right, love, and mercy (*T. B. Hāgigāh*, 12a; cf. *Mishnāh Abhōth*, v. 1, where it is said that the universe was created by 'Ten Words'; cf. also *Brēshith Rabbā*, iv. 6, based on Ps 33⁹). Rabbinic angelology is by no means of pure breed, but owes much to Zoroastrian and Mithraic influences. Man's prayer, his recovery from sickness, his safety from danger, his fortunes after death are all under angelic domination—there being two main divisions of angels which are named respectively *familiā shel mādālāh* and *familiā shel mattā*, *i.e.* the heavenly host above and the heavenly host below, both of which figure largely in the Jewish Prayer Book. The counterpart to the personified Logos of Philo is found, in Rabbinic mysticism, in the angel Metatron, who is often styled 'Prince of the Presence' (*Sar-hap-pānim*) as well as 'Prince of the world' (*Sar-hā-ōlām*), and who, like Enoch in the Apocrypha (see *Jub.* iv. 23; *2 En.* liii. 2), is often described as the heavenly scribe. He plays a principal part in the cosmic processes, being a personified emanation of the Deity, an ever-present guide and instructor of mankind, taking up the divine work at points where its omnipotence cannot, if one may so speak, reach. In *Brēshith Rabbā*, v. 4, it is stated that 'the voice of God became Metatron over the waters.' One great formative influence acting on Rabbinic mysticism came from the direction of the Gnosticism current in the first centuries of the common era. Gnosticism owed much to the Apocrypha and the Jewish Apocalypses; hence—strangely enough—the influences of the latter literatures were brought to bear upon Rabbinism through an alien medium. The prohibition against discussing the first sections of Genesis and Ezekiel (known as *Ma'aseh Brēshith* and *Ma'aseh Merkābhāh* respectively) is an echo of the secrecy which hedged round the doctrines of the Gnostics. Thus in the *Mishnāh (Hāgigāh*, ii. 1) it is said:

'It is forbidden to explain the first chapters of Genesis to more than one person at a time. It is forbidden to explain the first chapter of Ezekiel even to one person unless he be a sage and of an original turn of mind.'

To belong to the inner circle of discipleship among the Gnostics presupposed an exceptional amount of self-discipline. 'A certain youth,' says *T. B. Hāgigāh*, 13a, 'was once explaining the Hashmal [Ezk 1⁷, translated 'amber' in the AV] when fire came forth and consumed him.' When the question is asked, 'Why was this?' the answer is, 'Lāw mātī zimnēh,' *i.e.* his time had not yet come. His youthful age had not given him the opportunities for the mature self-culture necessary to the mystic apprehension. It was a dangerous knowledge for the uninitiated. An extraordinarily weird anecdote in *Brēshith Rabbā*, ii. 4, attributes mortal injury to Ben Zoma (Rabbi of the 2nd cent. A.D.), who was once 'contemplating the creation.' The words of Pr 25³, 'it is the glory of God to conceal a thing,' were quoted in support of their opposition to these Gnostic attempts at unravelling the secrets of the divine relation to the cosmos. But, paradoxically enough, the great ally of Gnosticism—magic—received countenance from many a Rabbinic mystic of the most orthodox type. Thus a passage in *T. B. Sanhedrin*, 67b, says that R. Hanina and R. Hoshaiah (Palestinian teachers of the 3rd cent. A.D.) used to engage themselves with the laws of creation every eve of Sabbath and used to create a calf of three years old and eat it. The magic potency resident in the permutations and combinations of the letters of

the Hebrew alphabet—and more especially the letters comprising the Tetragrammaton—is a more prominent theme of this branch of Rabbinic mysticism. *T. B. Brākhōth*, 55a, says that 'Bezalel knew how to combine the letters by which heaven and earth were created.' *T. B. Qiddushin*, 71a, speaks of a Divine Name composed of twelve letters, the secrets of which were at one time revealed to every one, but, after a time, only to the 'most meek among the priests.' The reference is obviously to a manipulation of the letters of the Tetragrammaton. *T. B. Makkōth*, 11a, relates the legend of King David, who, on making excavations for the Temple and finding that the waters of the ocean were moving upward and threatening to destroy the world, asked for permission to stop its rising by inscribing the name of God on a potsherd and throwing it into the sea. According to *T. B. Yōmā*, 73b, the information given by the Urim and Thummim was through the medium of the Hebrew letters either thrusting themselves bodily forward (*bōltin*) or combining themselves in different ways (*mīstārfin*).

All the above-mentioned elements of Rabbinic mysticism are the prelude to the great mystical books which comprise the mediæval Kabbālā, whose most famous manual is the *Zōhār*—although there is one book whose importance for Jewish mysticism is only second to that of the *Zōhār*, but which in all probability dates from the time of the Mishnāh (according to Reitzenstein, it is a product of the 2nd cent. B.C.). This is the *Sēfer Yēšārā*. Both the mediæval Kabbālā and the *Sēfer Yēšārā* elaborate some or all of the following elements of Rabbinic mysticism: (a) the *sh'khināh*, (b) the Holy Spirit (*rūah ha-kōdesh*), (c) angelology, Metatron, Mēmrā ('word', 'logos'), (d) mysticism of the Genesis cosmogony and of the chariot of Ezekiel, (e) the magic powers of the Hebrew alphabet, (f) emanation from the Deity, (g) the conception of *simšim*, or divine self-limitation, (h) the conception of erotic relations between the Deity and the cosmos, (i) the re-incarnation of the soul, the ecstasy of the soul's union with God, (j) the Tōrāh as the material embodiment of the divine and as the only 'mystic way' towards the realization of the divine. The *Sēfer Yēšārā* is grounded upon (e). It gives us a mystical philosophy drawn from the sounds, shapes, relative positions, and numerical values of the letters of the Hebrew alphabet. Hebrew phraseology expressing essentially Jewish thought is put into a framework unmistakably Gnostic. The world was brought into being by means of 'thirty-two wonderful paths of wisdom.' These are (a) the ten cardinal numbers from 1 to 10, (b) the twenty-two letters of the Hebrew alphabet (divided into the three 'mother' letters, viz. *āleph*, *mēm*, *shin*; seven double letters, viz. *bēth*, *gīmel*, *dāleth*, *kaph*, *pēh*, *rēsh*, *tāv*, and twelve 'simple' letters). Concerning these twenty-two letters, the book says:

'God engraved them, hewed them, weighed them, interchanged them one with another, combined them, and formed by them the soul of everything which has been created and of everything which will be created.'

Herein is contained the book's philosophy of the cosmos, which is explained in something like the following way: in the beginning God created the three primordial substances, air, fire, and water (the initial letters of each are the three 'mother' letters mentioned above). Just as there could be no form in any script which did not contain these three 'mothers' (all the other letters being in the naive imagination of certain early Kabbālists 'born' from them), so there could be no form in the world of sensible objects without these three primordial elements. But in reality these three are emanations from three still more previous

elements, viz. heaven, wind, and earth; and the natural opposition (represented by an opposition of sex) of these two sets of three keeps the equilibrium of the universe. The seven 'double' letters (*i.e.* according as they have *dāghesh* or not) are emblematic of the seven world-forces, each of which has its opposite to combat—thus (1) wisdom, whose opposite is folly; (2) riches, whose opposite is poverty; (3) seed, whose opposite is sterility; (4) life, whose opposite is death; (5) dominion, whose opposite is servitude; (6) peace, whose opposite is war; (7) beauty, whose opposite is ugliness. The world of nature as well as the world of morality is kept in order by the right interplay of these forces. The twelve 'simple' letters represent twelve attributes of the First Cause—the idea being based upon twelve different terms or phrases by which the OT designates the nature and activity of the Godhead. S. D. Luzzatto in his *Wikkūah 'al ha-Kabbālāh* (Göritz, 1852), following the opinions of Judah Halevi in the *Kūsārī*, iv. 25, has given a fine elucidation of the philosophy of the *Sēfer Yēšārā*. Form (typified by the three 'mother' letters), matter (typified by the seven 'double' letters), and number (typified by the cardinal numbers, one to ten) are, in prototype, aspects or emanations of the divine. Hence we are led on to the consideration of (f), viz. the treatment of emanation in Jewish mysticism. Professed by the early Gnostics, the theory of emanation reached its highest development in Plotinus, from whom it passed, through the medium of Avicenna, to the philosophers and Kabbālists of the Middle Ages. Solomon Ibn Gabirol (*q.v.*) based his philosophy upon the belief in emanation. God is the essence of all existence, the life of the world, and in Him substance and form find their complete unity. But how is God, then, differentiated from the world? By the fact that substance and form are the products, not of God; who is, in Himself, incomprehensible, but of the will of God, which is the first emanation from the divine and which is a sort of intermediate link between the great Unknowable and the cosmos. This will is immanent everywhere and is compelled by its very nature to be eternally creative. From it emanated matter, form, spirit, and soul, all of which are eternally creative by reason of the powers emanating from them. Gabirol's influence told deeply upon the numerous Kabbālists in France, Spain, Germany, and Italy during the succeeding centuries. A mystic work termed *Bāhār* ('Brightness'), composed by a French Kabbālist of the 13th cent., develops a doctrine of emanation which differs considerably from that of Gabirol. While the latter maintained that the world existed in God potentially from all eternity (God having called the actual world into being by a *creatio ex nihilo*), the *Bāhār* holds the eternity of the actual world. What, then, was creation? It was an emanation of the 'hidden light' from God. This the *Bāhār* calls the 'first *sfirāh*,' which gave birth to the second *sfirāh*, viz. 'wisdom,' from which emanated the third *sfirāh*, viz. 'intelligence.' These three form the primary principles of the universe, and from them emanated, in succession, seven lower *sfirōth*, which gave form to all material things. There is a transition from the infinite to the finite, and conversely, the finite reacts upwards upon the infinite. But the philosophy of the book is markedly inconsistent. Greater consistency combined with a deeper philosophic insight is to be found in the work of Azriel, a Spanish Jew (1160–1238), who is, however, overshadowed by Isaac ben Sheshet of Gerona, the author of the mystic work *Shār hash-shamayim* ('Gate of Heaven'), and Nahmanides (1194–1270) (*q.v.*). According to the latter, ten powers emanated in succession from the

Deity in the creation of the cosmos. These he calls 'ten *sṣfirōth*.' The first emanation was 'wisdom,' which is likewise termed *rēshīth* (i.e. 'beginning') or *n'kuddāh* (i.e. 'point'). It is from 'wisdom' that all the other nine *sṣfirōth* emanated, in just the same way as a point is really the beginning of a line, i.e. it becomes a line when prolonged in both directions. Nahmanides is extremely vague in his characterization of the relations between the several emanations. But he differs from most of his predecessors in so far as he gives a high place to the spiritual side of man, viz. prayer, communion with God, the soul. In this respect he may be regarded, in conjunction with Abraham Abulafia, as the forerunner of the *Zōhār*—the chief of all the Jewish mystical text-books of the Middle Ages. Abulafia emphasized the necessity of the ascetic life and of contemplation. To him the various combinations of the letters composing the Tetragrammaton and the names of angels meant the revelation of secrets otherwise unknowable and leading to an ecstatic state of union with the divine and a deeper knowledge of the depths of the *Tōrah*. In the *Zōhār* the latter branches of Jewish mysticism are elaborated with an exceptional wealth of detail. While purporting to be but a commentary on the Pentateuch, it is in reality quite an independent compendium of Kabbalistic theosophy. Criticism has long ago demonstrated the untenability of the view which ascribes its authorship to a Rabbi of the 2nd cent. A.D., viz. Simeon ben Yohai. It is a syncretism of Jewish and foreign elements. The former consist of doctrines taken from the Talmudic and Midrashic literature. The latter are 'naturalized' products of Neo-Platonism, Gnosticism, and (according to a newer theory) Sūfi mysticism. The *Zōhār* is also indebted to Solomon Ibn Gabirol and Abraham Abulafia. According to the *Zōhār*, the soul of the *Tōrah* is its mystical sense; and man, having the privilege to behold everywhere the divine image—the world being an embodiment of God—can make his way to union with the divine reason by an understanding of, and a life led in accordance with, the mystic sense of the *Tōrah*. The universe is a series of emanations, and man may, through the instrument of the *Tōrah*, recognize the divine hand everywhere and ascend to the 'Cause of Causes.' God is styled *En Sōf* ('No End'), a being utterly void of attributes, who can only be postulated negatively. The world can come into contact with the *En Sōf* only by means of intermediaries. These intermediaries are the 'ten *sṣfirōth*,' or ten emanations. The first *sṣfirāh* was latent in the *En Sōf* as a dynamic force and is called *kether* ('crown') or *n'kuddāh pshūtāh* ('a simple point'). The first manifestation of the divine is a point, i.e. a unity, unanalyzable, and yet possessing the All. It is the Hegelian idea of 'das reine Sein.' The starting-point of everything is the thought as it existed in God. It is in this 'thought' that everything was originally embraced. The first of the *sṣfirōth*—the 'crown'—is the primordial divine thought or will which, emanating from the *En Sōf*, contained within itself the plan of the universe in its infinity of time and space, in its endless variety of form, colour, and movement. 'Wisdom' and 'intelligence' are the second and third of the *sṣfirōth*, and are parallel emanations from the 'crown.' There is a sexual relationship between them. Wisdom is the 'father,' i.e. the masculine active principle, which engenders all things and imposes on them form and measure. Intelligence is the 'mother,' the passive receptive principle. Out of their union comes a 'son,' who is 'reason,' and reflects the characteristics of both parents. The *Zōhār* elaborates this sexual idea, applying it to the relations between the deity and the *sh'khināh* as well as to the elucidation of

Biblical references to persons and events. The remaining seven *sṣfirōth* are mercy, justice, beauty, victory, glory, foundation, and royalty (or kingdom). The last *sṣfirāh* is the sum of the permanent and immanent activity of all the other *sṣfirōth*. A pervading element of the *Zōhār* is the emphasis laid on the deep spirituality of prayer and upon its effects in bringing about many a change in the material world. In fine, every good act done by man, every good thought of his, leaves its impress upon the 'upper' as well as upon the 'lower' world. These two worlds are really but one, and are equally an emanation of divine spirit. There is a *sh'khintā 'ilāā* ('upper Divine Presence') as well as a *sh'khintā tatāā* ('lower Divine Presence'), and every time man utters a prayer or performs an act of benevolence, a union between the two 'worlds' is effected. The idea is expressed uniquely by a constantly-recurring phrase about the patriarchs of the Jewish race as being 'the upper chariot' (*rtikhā 'ilāā*) on which the deity ascends to heaven and descends to earth. The *Zōhār* influenced the view of many a mediæval Christian scholar who claimed to find support for certain dogmas of Christianity in the abstruse and occasionally ambiguous *Zōhāric* terminology. In the Jewish domain its influence on mediæval Hebrew poetry and liturgy is inestimable. Although many of its devotees were in later ages led away into moral and religious extravagances, which were anything but creditable to religion and morals, it nevertheless conferred upon Judaism a service of imperishable worth. It rescued it from the dead hand of formalism by revealing the eternal spiritual treasures concealed beneath the words of the Law and the Prophets and the Hagiographa. The whole subsequent course of Jewish mysticism—a powerful revival of which took place among the Jews of Poland in the 18th cent.—consists mainly of developments and elaborations of *Zōhāric* doctrines.

A word is due to the Hebrew poets and theologians of the Middle Ages who, quite independently of the recognized text-books of Jewish mysticism, were temperamentally steeped in the feeling of the unity which lies at the root of all things, and who taught that there is a Soul in the universe to whom man ever longs to give his worship and adoration. The secular poems and, more particularly, the liturgical compositions of Ibn Gabirol are instinct with mystical sentiment. The *Kether Malkhūth* ('Royal Crown') is one of the most beautiful descriptions ever penned of the truth of the Divine indwelling. The universe is composed of spheres one within the other; and the author's wealth of Biblical knowledge combined with his education in the philosophy of Plotinus is expended in showing how the glory of God is the secret of the universe, how all the elements of earth and 'every common sight' arouse the human heart to the feeling of the one central all-sustaining life. (M. Sachs, *Die religiöse Poesie der Juden in Spanien*, Berlin, 1845, has given a fine poetic rendering into German. Extracts have also been translated into English verse by Mrs. Henry Lucas in *JQR* viii. [1896] 239.)

The theological treatise of the Spanish-Jewish sage Bahya Ibn Pakuda (first half of the 11th cent.), written in Arabic and known in its Hebrew translation as *Hōbbhōth hal-L'bhābhōth* ('The Duties of the Heart'), expresses the rapture of ultimate communion with the Divine, the joys of beholding the beauty of a higher world accessible only to the choice spirits of mankind, in language of rare passion and intensity. The true Jewish life is, to Bahya, a continual advance, a ceaseless aspiration; and the goal is reached only when the intellect has come to 'know' God and the heart to 'love' Him. Hence Bahya's mysticism has a twofold

foundation. God must be 'experienced' both intellectually and emotionally. But God in His essence is really unknowable. He is 'more hidden than anything which is hidden, further away than anything which is far.' Hence how can He be known? Only, answers Bahya, by man's reflexion upon His greatness and goodness as manifested in the wondrously accurate workings of the natural world. To this end man must go through all the stages of a life of purgation and purification. Guided in this aim by the laws of the Tōrah and the prescriptions of the Rabbis, he will finally reach that pinnacle of faith and love when he will be able to say, as did one of the saints, 'Oh! my God, Thou hast caused me to suffer hunger, Thou hast left me naked, Thou hast set me down in the darkness of the night, . . . even though Thou burn me with fire I shall but continue to love Thee and rejoice in Thee.' But Bahya, while favouring a certain measure of asceticism, felt, like the best mystics of all nations, the beautiful necessity of man co-operating with his fellow in all true works of goodness and use. Man realizes the Divine Presence all the more when many share the vision.

The Spanish-Jewish poet and theologian Judah Halevi (c. 1085-1143) rises to rare heights of mystic perception in his religious poetry as well as in certain portions of his philosophical treatise *Kūṣārī*. (A new and complete edition of the poetry under the title of *Diwan des Abū-l-Hasan Jehuda Ha-Levi* was brought out by H. Brody, Berlin, 1911, for the Mekizé Nir-Damin Society.) Spiritual love has never been more rapturously sung in the Hebrew language. The wooing of God by the soul, God as the friend to whom the soul turns when the hour is darkest, the sense of both body's and soul's complete subjection to God—all these and many kindred outpourings of the mystic are prominent throughout. But the poet had another ideal besides God. This was the rehabilitation of Zion. Isaiah's striking pictures of Jerusalem as the bride of God, as well as the Rabbinic-mystic interpretations of 'dove,' 'my beloved,' 'love,' and similar words and phrases in the Song of Songs are the foundations on which the poet builds up the edifice of his mystic vision concerning the new Jerusalem and an Israel restored thereto. In the *Kūṣārī* the idea is philosophically applied to the *sh'khināh*. In ii. 14-18 it is said that only Palestine could be the land of prophecy, the land where the first germs of religion grew, because only there could the *sh'khināh* exist—the *sh'khināh* which ever waits and yearns to become joined with the men who have rendered themselves morally and physically fit to receive the gift.

The poet and theologian Moses Hayyim Luzzatto (born at Padua 1707; died 1747) claimed to have received divine revelations from a heavenly genius (*maggid*), and his numerous mystical works, written in Hebrew and Aramaic—in some of which he imitated the language of the *Zōhār*—fell under the ban of the religious leaders of his day. His ethical treatise *Meṣillath Yeshārīm* ('Path of the Upright') is based on a saying of a famous miracle-working Rabbi of the 2nd cent. A.D., Phinehas ben Jair. It details the steps by which man renders himself worthy to receive the Holy Spirit. To follow out the full spiritual content of the Law is, to Luzzatto, the goal of him who is at once gifted with *hōkhmah* ('wisdom') and *yirāh* ('fear of God'). The road lies through 'carefulness,' 'diligence,' 'cleanliness,' 'abstemiousness,' 'purity,' 'piety,' 'humility,' 'fear of sin,' 'holiness.' The result is the incoming of the Holy Spirit. After such an exercise man becomes a true 'disciple of the wise,' a 'sanctuary,' an 'altar.' The *sh'khināh* 'rests upon such a one just as it rested upon the real Temple in Jerusalem.'

VOL. IX.—8

The mystical spirit is alive in many a Jewish poet and theologian to-day; but the mystical life is absent. Modern conditions are unfavourable to the cultivation of the quietude and introspection which are, and always were, an indispensable ingredient of mysticism.

J. ABELSON.

MYSTICISM (Hindu).—Mysticism has been defined by Edward Caird as 'religion in its most concentrated and exclusive form,' as 'that attitude of mind in which all other relations are swallowed

up in the relation of the soul to God' (*The Evolution of Theology in the Greek Philosophers*, Glasgow, 1904, ii. 210). This is, perhaps, in view of the variety of forms that mysticism has assumed in different ages and among different peoples, as near as one can approach to a definition of the content of the term. It is a temper, a spirit, rather than a clearly definable attitude to the universe, but it is a temper and spirit that under various aspects appears among all races and in all periods whenever religion and the relation of the soul to the unseen powerfully occupy the attention of men. There are no peoples who have been more powerfully and continuously affected by the thought of a spiritual world than have been the peoples of India, and it is accordingly to be expected that among them the mystical temper of mind should be found. Again and again in long tracts of sterile formalism or from the midst of the grossest superstition groups of earnest seekers discover themselves whose insight and desire pierce to the heart of things. They are not Hindus, but super-Hindus; they are of the true mystic brotherhood. But, while the sense of the reality of the spiritual creates this temper among Hindus no less than among earnest souls elsewhere, we find that Hindu thought possesses two characteristics which are closely related to each other and indeed complementary, and which at the same time belong to the very nature of mysticism. Those are its doctrine of *māyā* and its monism. That occupation with the spiritual world which is of the essence of mysticism inevitably involves a view that at the least lightly esteems the world of sense. It is true that in much Hindu thought this has been carried further, and a doctrine has been formulated that denies any positive reality to the world at all. This may be a step beyond the requirements of the mystic attitude, but in its contempt of the finite Hindu thought is in fullest accord with the mystic spirit in almost all its manifestations. So also in its determined quest for an ultimate unity Hinduism discovers itself as at one with mysticism, since, as William James affirms, 'mystical states of mind in every degree are shown by history, usually tho not always, to make for the monistic view' (*Pragmatism*, London, 1907, p. 151). The 'four marks,' indeed, which James has propounded as distinctive of the mystic state and which are certainly applicable to many phases of mysticism, viz. ineffability, noetic quality, transiency, and passivity, are to be found upon much of Hinduism, and demonstrate its kinship with that type of reflexion. The ineffability which is here placed first among the marks of mysticism is no doubt a characteristic of any deeply felt and vivid experience of the divine nearness, and it is to be found alike in the theistic religion, which is overwhelmed with a sense of the love of God, and in the pantheist, which cannot use the discourse of reason or of speech since it has reached the bourne where difference is lost. Both these types of mystical experience are found striving to express themselves in Hinduism. The religion of the *Upaniṣads* in its possession of 'noetic quality' also betrays undoubted kinship with mysticism, while passivity, or 'the mystic vice of quietism,' is an obvious characteristic of a great part of the Hindu religious attitude and life.

In Hinduism, indeed, in nearly all its manifestations, in its most philosophical flights as well as when it approaches pure shamanism and magic, there are to be found indications of the mystical temper of mind. One reason for this appears to lie, as far as we can pierce the secret of the soul of a race, in the intense preoccupation of the Indian people from the earliest or at least from the

immediately post-Vedic times with the desire to escape from self-hood (*ahamkāra*) as the one way to ultimate peace. The passion of this pursuit was, perhaps, intensified by the accompanying belief, wherever it may have been obtained, in the power of *karma* and in the long travail of transmigration. The only deliverance from the endless revolution of the wheel of *samsāra* was realized to lie in an escape to a region which, because there is no consciousness there, must necessarily be a barren and an empty land. Thus the quest of Hinduism is impelled onward by two allied impulses which at the same time strengthen and contradict each other. It is an escape and an attainment, but in the escape from the bondage of the self the union with the ultimate One is emptied of all sense of realization and, in the words of Bāhva to Vāskali, 'That *Ātman* is silence' (*Saṅkara on Brahmasūtra*, III. ii. 17). It is this contradiction that gives to so much of Indian thought that 'troubled intensity' which Caird (ii. 233) finds also in the writings of Plotinus, justifying the claim for it, as for them, that it is among the highest expressions of the mystic spirit.

1. Vedic period.—In the Vedic period the indications of the mystic attitude are as yet few. The religion of the hymns is for the most part objective in its character, and in the hymns to Varuna, where it is most deeply felt and most spiritual, it seems to display more affinity with the unmystical attitude to God of the Hebrew prophets than with the pantheism to which ultimately it was transformed. There are some signs, however, in hymns that are supposed to belong to the close of this period that pantheistic and mystical speculation was already beginning to cast upon the Indian spirit the spell that ever since has held it fast. In the great Hymn of Creation (X. cxxix.) two agents are seen at work calling forth being from non-being, and with their discovery Indian thought seems to be setting its face towards at least the possibility of that union or identification of the spirit of man and the spirit of the universe which is the goal of mystic aspiration. These two agents are *tapas* and *kāma*. To these early thinkers the distinction of the material and the spiritual was not yet clearly formulated, but this *tapas*, or heat, which in another hymn (X. exc.) is said to produce the order of the world (*ṛta*), has in it as truly the seed of mystic speculation as had the fiery breath from which Heraclitus and the Stoics saw all things evolve. With this word and the ideas that it suggests is connected the long history of Indian asceticism as proceeding from belief in the power over things of the ardour of a mind restrained and concentrated. The thought of the creative power of *kāma*, or desire, has proved no less influential in the development of Indian religious ideas. If we may take this, 'the primal seed and germ of mind (*manas*)' (X. cxxix. 4), as representing the idea of an *élan vital* in the universe, the source and spring of the continual flux of things, then we can see why the aspiration to escape to the region of peace, to the final unity, has impelled so much of the mystic thought of India towards the overcoming of desire. Round *tapas*, on the one hand, with its suggestion of a way to obtain power over the outer world have gathered often methods of magic rather than of pure mysticism, while, on the other, the more spiritual path to a more ethical goal, which we find in Buddhism, and in such teaching as that of the *Bhagavad-Gītā* (g.v.), appears to have its starting-point in the clue to the change and movement of the universe that these ancient thinkers sought in *kāma*.

These hints, whether of a primal undifferented unity, which seems indeed to be nonentity but

which grows by its own mysterious operation into manifoldness, or of some inchoate Logos or mind stuff presiding over the development, are full of mystic affinities. Of a different kind is the mysticism of the famous *Puruṣa sūkta* (X. xc.). In this hymn we are told that from the body of a primeval giant, *Puruṣa* ('man'), the world is fashioned. The primitive mythological conception that is here made use of is enwrapped in mystic and pantheistic thought, for the *Puruṣa* is 'this whole (universe) whatever has been and whatever shall be,' and the act of creation is the offering of him as a sacrifice by the gods. Further, it is one of the axioms of mysticism that there is a correspondence between the microcosm and the macrocosm, the seen and the unseen worlds. It appears to be some such thought that is behind the crude symbolism of this hymn. 'The created universe,' says Swedenborg, 'is man in an image.' 'From that universal sacrifice,' says the *Puruṣa sūkta*, 'sprang' the universe. 'The *Brāhmaṇa* was his mouth. . . . The moon was produced from his soul; the sun from his eye' (X. xc. 12 f.). 'Albion or man,' according to William Blake (*Jerusalem*), once contained 'all the starry heavens.' Thus one mystic voice calls to another across millenniums.

2. The *Upaniṣads*.—When we pass to the *Upaniṣads*, we are definitely in the midst of Indian mystical speculation. From this period onwards the thought of India seldom lacks the marks of this type of reflexion. There are two dangers that beset it on the right hand and on the left, tempting it aside from the middle path of mysticism proper, i.e. of the religious goal of oneness with God, reached by the way of immediacy. These dangers—of what is merely metaphysics on the one hand, and of what is no better than magic on the other—are about the path of the Hindu thinker and the Hindu seeker from this time onward throughout the whole course of their religious history. The former danger is most apparent in the *Upaniṣads* and the systems that are built mainly upon them; the latter in the popular worships. Yet it is possible to find what is of the very stuff of mysticism in its various forms alongside of both of those counterfeits.

The *Upaniṣads*, according to Royce, 'contain already essentially the whole story of the mystic faith' (*The World and the Individual*, p. 156). In the first place, they seek undeviatingly the changeless One, the reality of all that is; and, in the second place, they find him, as has so often been the experience of mystic thinkers, in a region beyond the reach of finding, a place of contradictions and negations.

'All this is Brahman (neuter) . . . He (It) is myself within the heart, . . . smaller than a mustard seed, smaller than a canary seed, or the kernel of a canary seed. He also is myself within the heart, greater than the earth, greater than the sky, greater than the heaven, greater than all these worlds' (*Chhândogya Up.* iii. 14). 'Thou art woman, thou art man; thou art youth, thou art maiden; thou art an old man tottering along on thy staff; thou art born with thy face turned everywhere. Thou art the dark-blue bee, thou art the green parrot with red eyes, thou art the thunder-cloud, the seasons, the seas. Thou art without beginning; thou art infinite, thou from whom all worlds are born' (*Svet. Up.* iv. iii. 4). And yet at the same time 'He, the Self, is to be described by No, no.' 'He is incomprehensible, for he cannot be comprehended' (*Bṛhad. Up.* iii. ix. 26, iv. iv. 22).

This *ātman*, in a word, in the later phrase which we have already quoted, 'is silence.'

These passages, which could, of course, be multiplied, could at the same time be closely paralleled from the mystic literature of all periods, Christian and non-Christian. The ineffable One to whom or which they journey is often for them all 'the divine dark,' 'the still wilderness where no one is at home.'

'The *Nescio*, *nescio* of Bernard is identical in meaning with the *Neti, neti*, it is not so, it is not so, of the sage Yājñavalkya.

In the very contrast of the finite with the ineffable this mysticism lives, whether it be Hindu or Christian mysticism' (Royce, p. 172).

The ultimate One in the *Upaniṣads*, as in the Neo-Platonists and in so many mystics, is at once everything and nothing—everything because it includes all the universe in itself, and nothing because as such it transcends all speech and thought. This contradiction is deeply wrought into mystical reflexion, so that it seems ever reaching after large utterance, but reaching vainly. It is present on many pages of the *Upaniṣads*. They seem to hover on the brink of revelations which they just fail to attain. They would pass beyond the 'dyke,' the boundary.

'That Self is a dyke, a boundary . . . when that hank has been crossed, night becomes day indeed, for the world of Brahman is lighted up once for all' (*Chhândog. Up.* viii. 4).

But the question arises whether this monism is not so thoroughgoing that, while it may supply what we may call mystic speculation, it does not leave room for religion. This is a charge that especially lies against Śaṅkara's interpretation of the *Upaniṣads*, which is usually called the Vedānta, though there are other and less completely monistic interpretations than his. An evidence of the mystical character of the *Upaniṣad* religion is to be found in its tendency towards certain classic heresies and vices to which the mystic has always been liable. One of these is the arrogant and complete identification of the soul and God, with the consequent disappearance of anything that can be properly called religion.

Uddālaka Āruṇi says to his son, 'That which is that subtle essence, in it all that exists has its self. It is the True. It is the Self, and thou, O Śvetaketu, art it' (*Chhândog. Up.* vi. 11. 3). Would he cast his son into the abyss of unconsciousness? It is because Śaṅkarāchārya's doctrine led to this goal that the theist and mystic, Mahārṣi Devendranath Tagore, rejected its interpretation. 'What we want,' he says, 'is to worship God. If the worshipper and the object of worship become one, then how can there be any worship?' (*Autobiography of Devendranath Tagore*, p. 72).

This *advaita* doctrine may agree with some passages of the *Upaniṣads*, but other passages indicate that to many of those seers this was not apparent as the conclusion of their reflexion. The peril of this view is recognized more than once. They were not, indeed, as mystics seldom are, governed in their thinking by the rules of logic. At first in the case of one inquirer in the *Chhândogya Upaniṣad* it was satisfying to his heart to know that the goal was like a dreamless sleep, but on further consideration the prospect seemed less pleasing, and he returned to his teacher saying that such a one 'is gone to utter annihilation.' 'I see,' he said, 'no good in this' (VIII. x. 4). So Maitreyi protests against such a 'bewildering' prospect (*Bṛhad. Up.* ii. iv. 13).

In the case of many mystics there is this vacillation between a goal of complete peace and silence and one in which communion and the intercourse of love and trust are possible. On the one hand, the mystic cries with the Sūfi saint, 'Lo, I am debarred by plurality from the vision of unity'; on the other, he says with Yājñavalkya, 'How, O beloved, should he know the knower?' There is a continual struggle between the desire for a complete absorption which cannot be conscious at all and the need to realize what is attained. The intellectual character of so much of *Upaniṣad* teaching obscures the sense of the latter need. That it was not absent is indicated by the use, e.g., by Yājñavalkya himself in one passage of the favourite mystic symbol of a spiritual marriage to represent the final union with the Absolute.

'As a man, when embraced by a beloved wife, knows nothing that is without, nothing that is within, thus this person, when embraced by the intelligent (*prājña*) Self, knows nothing that is without, nothing that is within' (*Bṛhad. Up.* iv. iii. 21).

This is not a condition of unconsciousness. It is what the mystics call 'the orison of union,' what

Ruysbroeck describes as 'the dim silence where all lovers lose themselves' (*L'Ornement des noces spirituelles*, new ed., Brussels, 1900).

Mysticism is in most danger when it is most intellectual. It is true of much in the *Upaniṣads* that it is seeking to discover the relations of man with the universe rather than his relation with God. It is often concerned with the relation of the knower and the known rather than with that of the worshipper and God. It gives a metaphysic rather than an ethic or a religion. In the broad lines of its aspiration, however—its craving for an ultimate unity, a craving often filled with deep emotion, its discontent with the finite, its conviction that what is deepest within is nearest akin to what is highest above—its value as mysticism is unchallenged. The more theistic *Upaniṣads*, such as the *Kāṭha*, are those in which the mystic emotion is most present.

'That Self cannot be gained by the Veda, nor by the understanding, nor by much learning. He whom the Self chooses, by him the Self can be gained' (*Kāṭha Up.* i. ii. 23). 'The Self-existent pierced the opening (of the senses) so that they turn forward: therefore man looks forward, not backward into himself. Some wise man, however, with his eyes closed and wishing for immortality, saw the Self behind' (*ii. iv. 1*).

This combination of introversion and desire is the mystic's path to God. There is a passage in Plotinus, curiously parallel to this one, where he compares men under the influence of the discursive reason to 'a number of faces which are turned outwards, though inwardly they are attached to one head.'

'But if one of us, like one of these faces, could turn round either by his own effort or by the aid of Athens, he would behold at once God, himself and the whole' (quoted in Caird, *ii.* 298).

3. The *bhakti* school.—It must never be forgotten that the differentia of all Indian thought lies in the fact that the doctrine of *karma* and *saṁsāra* is for it an axiom. The goal of all mysticism is the same, namely the 'unitive life,' but its conception of that goal and of the path to it is largely influenced by its thought of that from which it seeks escape, whether sin or *saṁsāra*. The law of *karma* and rebirth is so largely a physical law that the moral elements in the way of deliverance are not so prominent as in Western mysticism. With the *Bhagavad-Gītā*, however, the moral element is strongly emphasized, and along with this goes in this Scripture an acknowledgment of the value of *bhakti* ('loving faith') in bringing about the desired union, which marks it as belonging less to the philosophical than to the emotional mysticism of the Hindus. The soul, being 'a portion' of the Lord (xv. 7)—what other mystics might call an 'uncreated spark' of the divine—returns to its home in God.

The seeker, becoming 'free from the thought of an I,' 'recognizes by devotion (*bhakti*) in verity who and what I am,' says Kṛṣṇa; 'then becoming me in verity, he speedily enters into me' (xviii. 55). 'Surrendering all the laws come for refuge to me alone. I will deliver thee from all sins; grieve not' (xviii. 66). 'In (Kṛṣṇa) seek refuge with thy whole soul; by his grace thou shalt win supreme peace, the everlasting realm' (xviii. 62).

These words give the keynote of the emotional mysticism which centres chiefly in the names of Kṛṣṇa and Rāma, and which is described by the general name of *bhakti* (see BHAKTI-MĀRGA). While the mysticism of the *Upaniṣads* was sometimes too cold, that which we find here is sometimes warm with a too earthly passion. The method of all mysticism is love, and in the whole *bhakti* movement this is the accepted means by which the worshipper and the object of his worship are brought together.

'*Bhakti* leans to love very perceptibly, even to erotic passion, but it expresses affection of a pure sort as well as that of a sensual nature; which latter aspect, however, is to be found and cannot be ignored. In fact the danger of *bhakti*, become too ardent and lapsing into mystic eroticism, is apparent in the mediæval expression of this emotion. It is not intellectual, yet the play of meaning between faith and love (perhaps trust) is

generally present' (Mopkins, *JRAS*, July 1911, p. 733). The object of this worship is Bhagavat, the Blessed One, 'who makes blessed his *bhaktas*, those who have made him theirs and are devoted to him' (*ib.* p. 733).

The history of this school has been dealt with in detail in the art. BHAKTI-MĀRGA. It will be enough to indicate here some of the more distinctively mystical elements in its religious practice and belief. The strength of the emotion is seen resulting in something like hysteria in Chaitanya (1486-1534) and his followers, and in sensuality in the Vallabhas. In the *Chaitanya-charit-amṛt*, which is said to be a contemporary Bengali biography of the saint, we read of tears of rapture, swoons of love. Chaitanya on one occasion is said to have 'manifested a marvellous power; everyone who danced around him saw that the master was gazing only at him.' The climax of this *bhakti* is the *mādhura rasa* in which 'the votary serves Kṛṣṇa as a lover offering his or her own person' (*Chaitanya-charit-amṛt*, p. 244). The peril of such unbridled emotionalism is seen in those practices of the Mahārājas of the Vallabha sect which were exposed in the Bombay courts in 1863. This *mādhurya* is expressed by Mīrābāī, who was queen of Udaipur in the 15th cent., in these words which are attributed to her: 'There is but one male in existence, namely my beloved Kanaī Lāl (Kṛṣṇa), and all besides are females.'

Other and higher aspects of mystic aspiration are to be found in Rāmānanda and Tulsī Dās in the north, in Tukārām and the Marāṭha saints in the west, and especially in Mānikka-vāsagar and the Śaiva saints of the south. The note of all those saints is the desire to draw near to God, to find Him in a personal, inward experience. 'The worship of the impersonal,' says Tulsī Dās (*Rāmāyaṇa*, tr. Growse, Allahābād, 1883, vii. 106), 'laid no hold of my heart.' The comparison of the seeker to a child who has lost his mother occurs frequently; or, again, God is the element in which the soul lives.

'Devotion to Rāma,' says a sage in Tulsī Dās's *Rāmāyaṇa* (*loc. cit.*), 'is like the element of water and my soul—which is, as it were, a fish—how can it exist without it?'

So Tukārām in one of his *Abhāṅgas*:

'As the bride looks back to her mother's house
And goes, but with dragging feet;
Even so it is with my soul, O Lord,
That Thou and I may meet.

As a child cries out and is sore distressed,
When its mother it cannot see,
As a fish that is taken from out the wave,
So 'tis, says Tuka, with me.'

The desire for nearness to God is the characteristic of all this movement of devotion:

'But now where'er I sit,
Or stand or walk, Thou art forever near'
(Śivavākyaṁ, in L. D. Barnett, *Heart of India*, London, 1903, p. 92).

Kabīr († 1518) and the group—Nānak and the Sikh *gurus*, Dādū, etc.—that are associated with his modes of thought differ from those named above in the fact that Muhammadan teaching has had an influence upon them by the side of Hinduism. Whether Kabīr was by birth a Muhammadan or a Hindu, he not only was associated with Rāmānanda but also probably came under Śūfī influences. He says, like the rest, 'Thou art the ocean; I am the fish of the water.' He tells the Yogī, 'Your Lord is near, yet you are climbing the palm-tree to seek him.' 'When I lie down I lie prostrate at his feet.'

It is the faith of these saints that the God who is very far off and 'whose name is unutterable' has drawn near to men, whether by an *avatāra* (see INCARNATION [Indian]) or by means of a *guru*, or even by the medium of the divine name. 'Without the *guru*,' says Nānak, 'none has found God.' Behind all the thought of the *bhakti* school there is the idea of God as a being lifted above the world,

with which His relation has somehow to be mediated, and at the same time the conviction that it owes all its reality to Him. The antinomy is one that is familiar to all students of mystic thought. The idea of emanations is a favourite method by which mystic thinkers have sought to safeguard the Absolute in His relations with the universe. Closely parallel to the fivefold hierarchy of existence of Plotinus is the doctrine of *vyūhas*, or lower manifestations of the *para* form, or transcendent essence, of the Godhead. These are partly mythological, partly metaphysical, and are to be found in the *Mahābhārata* (*Sānti Parvan*, cccxli. 70-73) as well as in the system of Rāmānuja († 1137), the philosophical theologian of the *bhakti* school. Vāsudeva, Saṅkaraṣaṇa, Pradyumna, Aniruddha, and Brahmā form a series of intermediaries between the Supreme Reality and the created world. So also Śrī, or Lakṣmī, the wife of Viṣṇu, typifies, according to Rāmānuja, the activity of the Supreme Spirit in the region of the finite.

The sacramental meal has its place in some of these cults, just as it has in Christian mysticism. It is specially important in the practices of the Kabīr Panth, where the *Jot Prasād*, a ceremony of initiation and communion, has for its aim the bringing of the worshipper into fellowship with God. Betel-leaves upon which has been written the secret name of God are eaten. The food presented to the initiates, which is chiefly coco-nut and the consecrated betel-leaf, 'is regarded as Kabīr's special gift and it is said that all who receive it worthily will obtain eternal life' (G. H. Westcott, *Kabīr and the Kabīr Panth*, Cawnpore, 1907, p. 132).

4. False mysticism. — Alongside of the true mysticism which has been an element in Hindu thought throughout its whole history there has been a false mysticism closely allied to magic, and to it some reference must be made. The difference between mysticism and magic, according to E. Underhill, is that 'magic wants to get, mysticism wants to give' (*Mysticism*, London, 1912, p. 84). The ascetic who by *tapas* or by *yoga* practices obtained powers that made the gods fear him, or whose personality was enlarged and the power of his will made dominant over nature, was not often seeking spiritual or unselfish ends, though some sought to climb by this ladder to spiritual union. The methods of *yoga* were partly physical—breathing exercises and postures—and partly intellectual. It is not easy to define the limits that in these practices separate the legitimate use of means towards a spiritual goal from magic arts. The *yoga* ritual certainly often agrees with the definition of a magical rite as 'a tremendous forcing house of the latent faculties of man's spiritual nature' (A. E. Waite, *The Occult Sciences*, London, 1891, p. 14). The self-hypnotism produced by constant repetition of the name of the god and by the use of *mantras*, or spells, belongs rather to the region of magic or 'Mysticismus' than to that of genuine mysticism. Some of the modern interpreters of Hinduism seek to explain the 'feeling of peace and calm' produced by repetition of a *mantra* on the ground that it 'sets up certain vibrations' (*Text Book of Hindu Religion and Ethics*, Benares, n.d., p. 167).

Another group of those dangerous or degraded mysticisms have kinship with the sympathetic magic of primitive peoples and are based on the notion of the analogy of the physical and the spiritual.

'Armed with this torch,' the occultists 'explore the darkest, most terrible mysteries of life' (Underhill, p. 192).

This is indeed, rightly used, a valuable means to the discovery of truth, and has been made use of by most of the great mystics, but we have already

seen its dangers in the 'spiritual nuptials' of Kṛṣṇa and his worshipper. In the erotic and bacchanalian symbolism of the Śāktas the dangers of this method are exhibited at their very worst. This sect has its roots in the very ancient worship of the female principle in the universe, with its 'sex emblems and fertility goddesses.' The Śakti worship of the Tantras, with its appeal to fears and passions that are deep in the human soul, with its suggestion that in the forces of lust and death may be found the key to the 'inmost, ancient mysteries,' has had a wide-spread influence, especially in Bengal.

'Hear me, friends,' says Chāṇḍīdās (14th cent.), a follower of the Sahajīyā cult, which owed its origin to the Vāmāchāri Buddhists, 'how salvation may be obtained through love for a woman' (D. C. Sen, *Bengali Language and Literature*, Calcutta, 1911, p. 44). 'Tantrism,' says L. de la Vallée Poussin, 'rests on the principle that "of all illusions"—and everything is illusion—"the illusion called woman is the most sublime," the most necessary to salvation.' 'No infamy, not excluding incest, is omitted from this worship of woman (*strīpūjā*) the supreme divinity' (*Bouddhisme: Opinions sur l'histoire de la dogmatique*, Paris, 1909, pp. 403, 405). 'He who worships the great Adyā Kālī with the five *makāras* and repeats her four hundred names becomes suffused with the presence of the *devī* and for him there remains nothing in the three worlds that is beyond his power' (*Mahānirvāpa Tantra*, viii.). The five *makāras* are *madya*, wine, *maṃsa*, flesh, *matsya*, fish, *mudra*, mystic gesticulations, and *maithuna*, sexual indulgence.

'The drunken consciousness,' says William James, 'is one bit of the mystic consciousness.' If that be so, Śāktism may claim a place in mysticism.

5. Modern mysticism. — That mysticism has not yet died out of India is evident when we hear the old cry for the One echoing through the writings of Swāmī Vivekānanda:

'Where is there any more misery for him who sees this Oneness in the Universe? . . . this Oneness of life, Oneness of everything' ('God in Everything,' in *Speeches and Writings*, Madras, n.d., p. 421 f.).

A truer mysticism expresses itself in the *Autobiography* of Mahārṣi Devendranath Tagore, a book that is classed by Miss Underhill with the *Testament* of Ignatius Loyola and the *Journal* of George Fox. And we find the same passion for oneness with God expressing itself again and again in the finest and most truly Indian hymns of the young Christian Church, those, e.g., of N. V. Tilak, the Marāṭhī poet. Thus:

'As the moon and its rays are one,
So may I be one with Thee!
This is my cry to Thee, my Lord,
This is this beggar's plea.'

LITERATURE. — The mystical element in the *Upaniṣads* is expounded in J. Royce, *The World and the Individual*, 1st ser., New York, 1900, lect. iv. The mystical element in the *Bhakti* religion is frequently referred to in N. Macnicol, *Indian Theism from the Vedic to the Muḥammadan Period* ('The Religious Quest of India' series), London, 1916, where a bibliography will be found. One Hundred Poems of Kabīr, tr. Rabindranath Tagore, do. 1916, and the *Autobiography* of Devendranath Tagore, do. 1914, give examples of Indian mysticism at two widely separated periods, while the prefaces to both those books by Evelyn Underhill provide interesting comparisons with the teaching of Western mystics. See also the artt. on the various saints referred to above, as well as BHAKTI-MĀRGA, INCARNATION (Indian), etc.

N. MACNICOL.

MYTHOLOGY. — By 'mythology' is properly meant the scientific and historical study of myths; but the word is often used in a looser sense to mean the body of myths belonging to any people or group of peoples. It is by no means easy to define a myth; but all myths seem to have certain characteristics in common. In the first place, they are traditional; this may mean that they go back to a 'mythopoeic age,' which represents a certain stage in the development of human thought. But some myths, such as those of the Holy Grail or of the Charlemagne cycle, or many legends of the saints, have arisen in historic times. A traditional story must, however, have had an origin, often perhaps in some individual imagination. In such a case it seems necessary that the story must so far express or coincide with the contemporary spirit as to be taken over by it and become common property.

A myth is usually, directly or indirectly, in narrative form; its difference from ordinary tales seems to lie partly in the fact that it is believed to be substantially true, at least by those among whom it is first repeated; it thus differs from a parable or allegory, as well as from a fiction or romance. Moreover, most myths, if not all, are ætiological; that is to say, they grew up or were invented to explain certain phenomena, beliefs, or customs. Thus the relation of mythology to religion and theology becomes clear, if we accept the definition quoted by W. Warde Fowler:

'Religion is the effective desire to be in right relation to the Power manifesting itself in the universe' (*Religious Experience of the Roman People*, London, 1911, p. 8).

For mythology, by its explanations and illustrations of the nature and character of the gods or other powers, would help man to keep his relations with them on a right basis. The relations of mythology and ritual, or the various forms of religious worship, are also very close, since ritual supplies the means whereby the desire contained in the above definition of religion can be made effective; and these means evidently depend on the nature of the powers to be worshipped or propitiated.

In relation to magic, mythology serves a similar function, except that in this case the powers to be dealt with are of a lower and often of a malevolent order. Between mythology and folklore it is not easy to draw a definite line. Much folklore is mythology in the making; much may be a survival of broken-down myth. In primitive ages mythology and history are often inextricably mingled, and many of the early speculations of natural science have been embodied in mythical form.

1. *Classification of myths.*—One of the chief problems that are met in the study of comparative mythology is the question how far similarity in myths must be held to imply a common origin, and how far such similarity may be due to psychological laws, to the tendency of the human mind under similar conditions and in a similar stage of development to produce similar myths. In some cases, in European peoples, e.g., influence and reaction seem to offer the most probable explanation. But, when we find similar tales told to explain similar phenomena or customs in places so far removed from one another as Greece and Australia, direct influence from one on another seems precluded. Here the analogy of art forms, and especially of decorative forms, is instructive, when we find identical patterns, arising independently from similar technical conditions, in early Europe and in America. It seems that in the case of myths also similar tales in remote regions may be of entirely independent origin. On the other hand, we often find, side by side or even confused together in the mythology of the same people, myths belonging to strata remote from one another in the course of development. Such myths may either be survivals from a primitive age or be borrowed from a people in a more primitive or a more advanced stage. Any classification of myths is, for these and other reasons, full of difficulties, and admits of a great deal of cross-division; it must in many cases involve a choice between various theories as to the origin of the myths. There are, however, many myths which fall indisputably into one of the classes given below; they are classified according to the phenomena, institutions, or beliefs with which they are associated.

(1) *Periodic natural changes and seasons.*—Many myths are connected with the regular alternation of day and night and of winter and summer. The sun and the moon are usually regarded as persons. In addition to tales connected with the daily course of the sun and his nightly voyage of return from

west to east, we also find many others concerning his annual variations, and especially the winter and summer solstices. Rites on these occasions, often of a magical character with fires and dances, exist throughout the world, and various stories are told to explain them. The god is often represented as absent or distant for half the year; but it is not easy to distinguish between such tales and those connected with the 'year spirit,' or the growth and fall of vegetation. The moon and its phases are commonly believed to have an intimate connexion with the birth and growth of both animals and plants. Sun and moon are consorts in many mythologies, the sun being usually male and the moon female; but this relation is sometimes inverted. The stars also have a place in many mythologies, especially in those of peoples who, like the Chaldeans in Babylonia, gave much study to astrology. The myths connected with the 'year spirit' have attracted much attention from modern mythologists, and appear to be of almost universal diffusion; they also have an intimate connexion with human activities, whether of a practical kind, as in sowing, harvest, etc., or in special rites or customs intended to stimulate or maintain the activity of nature. These rites and the stories connected with them mostly represent the death or departure and the renewal, resurrection, or return of some person or persons on whose life and vigour the growth and fertility of crops, trees, and other vegetation are believed to be dependent. The tales of Adonis and of Persephone suffice to show the kind of myth which accompanies such rites. Sometimes the tale is not of death, but of departure and return, as in the celebration of the absence and return of Apollo at Delphi.

(2) *Other natural objects.*—It seems to be an almost universal tendency for primitive man to impute a personal existence to natural objects, especially conspicuous objects. In its most primitive form, the fetish or animistic stage, this may not lead to the production of myth; but the polydæmonic and polytheistic stages that follow lend themselves to extensive mythological development. Trees, e.g., and bushes are in many parts of the world believed to be inhabited by beings who may either be identified with them or regarded as having a separate existence but taking refuge in them. The dryads and other tree-myths of Greece are a familiar example. Rivers are frequently thought of as persons, and receive divine honours, and many tales are told of them. We also find what seem at first more like abstract impersonations, such as heaven and earth, the sea, etc. But some of these appear to be quite primitive, though they do not often develop into myth, apart from their association with definite gods.

(3) *Extraordinary or irregular natural phenomena.*—It is easy to understand how these, even more than the regular vicissitudes of nature, gave rise to stories explaining their origin or cause. Strange rocks or fissures were attributed to supernatural agency, just as they are still attributed in many countries to saints or to the devil, in both cases probably substitutes for the gods of an earlier mythology. Eruptions and earthquakes are attributed to the struggles of subterranean monsters, storms and tempests to special gods. The winds, whether beneficent or maleficent, are in many places regarded as persons, often rushing on wild horses; in some cases, as W. Mannhardt points out,¹ the devastation wrought by them is attributed to creatures who are not to be regarded as personifications of winds or storms, but rather as wild beings of rocks and woods. The tale of the universal flood and its survivors is known not only in Mesopotamia, but also in widely remote regions.

¹ *Antike Wald- und Feldkulte*, p. 96.

Eclipses of the sun and moon are often regarded as due to a monster or dragon who tries to swallow them, and has to be driven away by human agency. Such swallows, often of their own offspring, occur in many mythologies, perhaps not always due to a similar origin.

(4) *The origin of the universe.*—Speculation as to the origin of the visible world occurs in many primitive mythologies; it varies between the two extreme notions of a creator existing independently of the world and fashioning all things by his will and some form of evolution. Many systems combine both theories in varying proportions. There often exists in the religion of primitive peoples a vague belief in a supreme god or all-father, which can hardly be derived from a more advanced monotheistic system. But the creation of things is not as a rule attributed to him; it is usually assigned to some being or set of beings of an intermediate character. The notion of a primeval chaos out of which the cosmos is gradually evolved is not uncommon. Sometimes the earth is fished up out of the water by some creative agent; sometimes, as in early Greek mythology, water is the origin of all, or else the marriage of earth and heaven.

(5) *The origin of the gods.*—In many mythologies, both of a primitive and of a highly developed character, the gods, even if immortal, are not thought of as having always existed, and stories are told as to their origin, birth, and family relations, and their substitution for an earlier dynasty of gods. Often these earlier gods have little mythological personality, and are little more than abstractions, made up to explain the existence of their successors. Sometimes we find a belief that the present dynasty of gods, as it has begun, is also to pass away or be superseded; a familiar example is seen in the Scandinavian legend of the twilight of the gods. We also find tales of gods coming from elsewhere, as in the Greek stories of the wanderings of Apollo or of Dionysus. In some cases these may actually record the route by which the worship of the god was spread; but there is here a danger of confusion with similar tales due merely to the annual vicissitudes of nature mentioned under (1).

(6) *The origin of animals and of mankind.*—These two are often intimately connected, and the possibility of the one being produced by or transformed into the other is a common belief. It is especially found in connexion with the system of totemism (*q.v.*), in which particular animals or even plants are regarded as the ancestors or kindred of certain families or groups. A creator god is sometimes vaguely believed in; but the creation of living things, as well as of the universe, is very commonly assigned to some intermediate creator, sometimes in animal form; a well-known example is the mantis grasshopper, which is regarded as the creator in S. Africa. The tale of men being moulded of clay and then given life, known to us in Greece in the myths of Pandora and of Prometheus, is also found elsewhere. Another story of wide prevalence is that men were made from stones or rocks, as in the tale of Deucalion and Pyrrha, or that they sprang from the ground as the result of the sowing of some strange seed, such as dragon's teeth.

(7) *Transformations.*—A belief in the possibility of transformation of men into animal and other forms is almost universal, and is implied in innumerable stories. For classical examples, we need only remember the title of Ovid's *Metamorphoses*. The power is commonly attributed to witches and wizards of all sorts, and also especially to sea-creatures and other elemental spirits, as in the case of Proteus and Thetis, and numerous

examples from northern folklore and fairy-tales. A curious and sinister form of the belief is seen in lycanthropy (*q.v.*) and the tales in which men are supposed to change into a wolf, a leopard, or other beast of prey. The transformation of men or of beings in human form into trees or bushes is the basis of many tales; their transformation into stones is also common, and is often represented either as a punishment for some offence or as due to magic. See art. *METAMORPHOSIS*.

(8) *Heroes, families, and nations.*—It is a usual thing for any family or tribe to trace its descent from a common ancestor, and traditions of relationship are often embodied in elaborate genealogies. Such tribal heroes are often regarded as capable of performing many things beyond the powers of modern men, and numerous and varied tales are told of their exploits in destroying giants or monsters, of their beneficial inventions, and of the social institutions which they founded. Tales of a heroic age may sometimes have no such racial relation; but it seems usually to be the case that the heroes of them are, if not regarded as ancestors, at least of a tribal or national character. Even the heroic saints who replace them in more recent tales are as a rule specially associated with some particular place or nation.

(9) *Social institutions and inventions.*—All the arts of war and peace, the chief advances in civilization and social organization, and the material means by which they are attained are very commonly attributed to gods or to tribal heroes. The gift of fire, or the stealing of fire from heaven, attributed in Greece to Prometheus, is a subject for stories in almost every region of the earth; tales are also told of the invention of metal-working and other crafts. Customs and institutions, alike of primitive and advanced races, are frequently said to have been ordained by the gods or established by a legendary hero, and various tales are told both of their foundation and of the penalties that follow breaches in their observance.

(10) *Existence after death and places of the dead.*—The belief in continued existence after death is almost universal, though this existence is often of a shadowy and unsubstantial kind. On the other hand, the dead are often thought of as having considerable power either for good or for evil, and are accordingly objects of worship. There are often found side by side the two inconsistent notions that the dead may be found or invoked near their tombs, where they are sometimes seen in the form of a serpent or other animal as well as in a human apparition, and that they go away to some distant and mysterious place of the dead. This is usually towards the sunset or the west, and is either on an island or separated from the land of the living by an ocean or a river, which has to be crossed by boat. Charon, the ferryman of the dead, is familiar from Greek myth, and has his counterpart in many other regions. Sometimes the land of the dead is a dark and dismal region below the earth, approached by caves or chasms; many tales are told of men who have visited it and returned. Tales of the transmigration of the souls of the dead into men or animals are not uncommon. Tribal or national heroes are often believed to return and help their descendants or successors in times of great stress. The belief that the happiness or misery of existence after death depends upon conduct or ceremonial observance in life is very wide-spread; and many tales record instances to prove it.

(11) *Dæmons and monsters.*—The imagination of man often peoples wild or desolate places with terrible or horrible creatures; it has been said that the savage is never less alone than when he is alone; and even among civilized people we often find an unreasoning fear of the dark or of the

waste. This often finds expression in tales of beings that inhabit these regions, whether of human or monstrous form. Rivers also and pools are inhabited, sometimes by nixies or water-nymphs, sometimes by horrible monsters like the Scottish kelpie or the Australian *bunyip*. Floods and other disasters, such as the devastating of the land, are often attributed to these monsters, and their destruction or taming affords an opportunity for the prowess or power of heroes and saints, as in the case of Bellerophon and the Chimæra, St. George and the Dragon, or St. Martha and the Tarasque. The centaurs and satyrs, too, are examples of wild creatures of the wood and mountain. The struggle between gods or heroes and such monsters often comes to symbolize any struggle between good and evil, or between higher and lower ideals.

(12) *Historical events*.—It is usually difficult and often impossible to draw any clear line between history and myth. Many mythical traditions, such as that of the siege of Troy, are now generally considered to have a historical basis; on the other hand, many historical personages, such as Alexander in the East or Charlemagne in the West, have become the centres of cycles of myths. The notion of what is historical evidence, and also of what events are probable or possible, varies greatly from age to age and from place to place. And, while it does not follow that, because we find certain improbable or impossible elements in any story, the whole story is entirely mythical, we are often confronted in such cases with the difficulty that what seem to us the probable and improbable elements often rest on precisely the same authority. It is impossible to lay down any rules for discriminating between historical and mythical tales; nothing is much help except a wide experience of such tales, coming from various regions and various strata of development. It is, *e.g.*, often difficult, if not impossible, to tell whether some mythical heroes are early gods whose divinity has become humanized or actual men who have come to acquire divine or semi-divine honour. The question is of great importance in view of the Euhemeristic theory, mentioned below, which would give history a leading place as a source of myth.

The above classification cannot, of course, be regarded as exhaustive; but it includes most of the commoner classes of myths.

2. *Origin of myths*.—Numerous theories exist as to the origin of myths, and most of them are to a greater or less extent tenable; here the main difficulty and confusion arise from the indiscriminate way in which one theory or another has been applied as a kind of universal key to solve all mythological problems. Most myths, and still more most gods and other mythical personages, are of a highly complex character, and are compounded of elements varying in origin as well as in stage of mythical development. Myths may therefore be classified, not only according to the phenomena, actions, or beliefs with which they are associated, but also according to the origin of the ideas which they express.

(1) *Meteorological*.—The tendency, in a primitive age, to assign a personal existence to the sun, the moon, and other heavenly bodies has already been noticed. The stories that are told about them are for the most part such as might be told about any other god or hero, and give little scope to the elaborate allegorical or figurative interpretations that were applied too literally by Max Müller and other advocates of the 'solar myth.' Few mythologists, *e.g.*, would now derive the tale of Heracles and his death by the shirt poisoned with Nessus' blood from the sun setting amid red clouds. To take another example, while there may be some

elements derived from a wind-god in the mythology of the Greek god Hermes, the attempt made by W. Roscher¹ to derive all his functions from this conception is an example of misapplied ingenuity.

(2) *Physical*.—This class corresponds to the myths connected with various natural phenomena, and need not here be further commented on.

(3) *Ritual*.—Many myths originate in the explanation of ritual practices. The value of a ritual custom in preserving the tradition of some event is fully recognized; and a similar origin comes, partly by analogy, to be assigned to many practices which had their origin in magic rites or other different sources. For instance, it was the custom for the Greek women of Thebes and other towns to conduct nightly dances on the mountains in honour of Dionysus at certain seasons; and hence arose the story that the god himself had once led his Mænads over Cithæron. Again, the common custom of celebrating annually in spring the departure or death and resurrection or return of a person representing the spirit of the year or of vegetation led to the growth of such beautiful myths as that of the loss and return of Persephone. It is difficult to set a limit to this influence of ritual on myth; for even in cases where the myth has a different origin the manner in which it is celebrated or commemorated often comes to react upon the tale itself.

(4) *Historical or Euhemeristic*.—The most extreme application of this theory was made by the philosopher Euhemerus, towards the end of the 4th cent. B.C. He maintained that all myth was of historical origin, and that the gods were men who had performed great exploits or conferred benefits upon their fellows. In proof, he quoted the grave of Zeus shown in Crete. The theory was recently rehabilitated by Herbert Spencer's attempt to derive religion from ancestor-worship; but it would not now be accepted by mythologists except within certain limits. We have already noticed that tales of historical events of persons often show mythical accretions or transformations. But the great mass of mythology cannot be explained as transmuted history. See art. EUHEMERISM.

(5) *Artistic*.—When artistic representations of mythical subjects exist, they often have considerable influence on the form of myths. The mixed Oriental monsters which we know as sphinx and siren, *e.g.*, were borrowed by Greek art merely as decorative types. There is no reason to suppose that even in the time of Homer these monsters were thought of under what later became their recognized forms. The representation of mythical scenes was often transferred from one tale to another, and so the artistic tradition came to influence the mythical one.

(6) *Ethical*.—Some mythical stories seem either in origin or in form to be mainly ethical in character, to be, in short, tales with a moral. A familiar example is offered by *Æsop's Fables*; but it is uncertain how far these are of a traditional character. The same doubt occurs in other cases, such as the myth of the choice of Heracles. Though such myths usually have an artificial appearance, some of them may be of a primitive origin, especially those which tell of retribution following the breach of some divinely sanctioned law or custom, or of a prohibition to see or touch some sacred object.

(7) *Mystical or allegorical*.—Mystical interpretations of myth have been prevalent at various times—*e.g.*, among the Neo-Platonic school in Greece. But such interpretations are mostly fanciful, and have very little connexion with the origin of the myths. It has been thought that such allegorical

¹ *Hermes der Windgott*, Leipzig, 1878, also *Lexikon*, art. 'Hermes.'

interpretations were taught in the Greek mysteries; but this is not now believed to have been the case, apart from the simplest and most obvious symbolism. Myths of an entirely allegorical character, such as that of Cupid and Psyche, are mostly of late origin.

It is clear that myths vary considerably according to the form in which they are repeated or preserved and the character or status of those who repeat them. The science of mythology is concerned mainly, if not exclusively, with myths of a genuinely popular character and of spontaneous growth, but these are often modified or transformed according to the media in which they are preserved. Thus official mythology, whether preserved in temple records and sacred books or in other works of a systematizing character, will tend to produce a deceptive uniformity, by suppressing differences and variations which are often interesting and by passing over apparently irrelevant or unseemly details, which would often have given a clue to the origin or meaning of the myth. The same is true to an even greater degree of the myths preserved to us in poetical form. The more serious poets often give them an ethical character, and use them to embody deep religious truths or subtle studies of character; others use them freely as themes for imaginative embroidery, so that it is difficult to distinguish the myth itself from mere fiction. Plato's rejection of the unworthy stories of the gods from his ideal State shows what treat-

ment of mythology we must expect from philosophers; we have already noticed the fanciful methods of interpretation of the Neo-Platonists, and the later artificial allegories. On the other hand, some quite early speculations of philosophers, both in the moral and in the physical world, may have come to be preserved in mythical disguise.

The study of mythology is for all these reasons obscure and difficult, but, when rightly and cautiously pursued, it abounds with evidence as to the primitive aspirations and beliefs of mankind, and as to the various stages of moral and intellectual development.

LITERATURE.—The literature of the subject is very extensive and miscellaneous; the following are a few of the works that deal with mythology in its wider aspects: J. G. Frazer, *GB*³, London, 1911 ff. (very full bibliography in vol. xii., 1915); A. Lang, *Myth, Ritual, and Religion*, do. 1887, art. 'Mythology' in *EB*¹¹; W. Roscher, *Lexikon der griechischen und römischen Mythologie*, Leipzig, 1884 ff.; E. B. Tylor, *PC*, London, 1873; F. Max Müller, *Lectures on the Science of Language*⁶, do. 1871, *Selected Essays*, do. 1881; L. R. Farnell, *OGS*, Oxford, 1896-1909; L. Preller, *Griechische Mythologie*⁴, ed. C. Robert, Berlin, 1894, *Römische Mythologie*⁵, ed. H. Jordan, do. 1881-83; O. Gruppe, *Griechische Mythologie und Religion*, Munich, 1906; G. Wissowa, *Religion und Cultus der Römer*², do. 1912; J. E. Harrison, *Prolegomena to the Study of Greek Religion*², Cambridge, 1903; W. Mannhardt, *Antike Wald- und Feldkulte*, Berlin, 1877, *Mythologische Forschungen*, Strassburg, 1884; J. Grimm, *Deutsche Mythologie*⁴, Berlin, 1875-78; tr. J. S. Stallybrass, London, 1882-88; E. S. Hartland, *Legend of Perseus*, do. 1894-96; E. Rohde, *Psyche*³, Tübingen and Leipzig, 1903; A. W. Howitt, *Native Tribes of S.E. Australia*, London, 1904; H. H. Bancroft, *NR*, do. 1876-76.

N

NABATÆANS.—The Nabatæans were an Arab race which, from about the 6th cent. B.C., occupied the south and east of Palestine, the old Edomite country, with Petra as a capital and centre of their caravan trade. Though Arab by race, they used a dialect of Aramaic for writing and commerce. Before the Hellenistic period almost nothing is known of them. Probably they are the same as the Nahajāti mentioned by Ašurbanipal (7th cent. B.C., *KB* ii. 216 ff.); Josephus, followed by Jerome, identified them with the OT Nebaioth (Jos. *Ant.* i. xii. 4; Jerome, *Quæst. in Gen.* 25¹³ [*PL* xxiii. 977]); etymologically the connexion is uncertain, though Lagarde maintains it (*Bildung der Nomina*, Göttingen, 1889, p. 52 n.).

The Nabatæans first appear in 312 B.C., when Antigonus sent two expeditions against them, according to Diodorus (xix. 94), who gives an account of their habits and trade. At times they made themselves troublesome on the shores of the Gulf of 'Akāha by preying upon merchant ships (Agatharchides, in *Geogr. Gr. min.* i. 178). Their first known ruler, Aretas I. (in Nabatæan Hārethath), is named (169 B.C.) in 2 Mac 5⁶; we also learn that they were on friendly terms with the Maccæes (1 Mac 5²⁵ 95⁵). The decay of the Greek kingdoms of Syria and Egypt gave them an opportunity of expansion which was vigorously used by Erotimus (? a Græcized form of Aretas II.), the real founder of their power (Justin, xxxix. v. 5 f.). The Nabatæan kingdom, called Nebātu in the native inscriptions, extended from Petra northwards east of the Jordan, over Hanrān (after 88 B.C.), at times even as far as Damascus (in 85 B.C., and again c. A.D. 34-62), and southwards into N. Arabia, as far as the north-east shore of the Red Sea. In 85 B.C. Aretas III. ruled in Damascus and struck coins there, 'of king Aretas Philhellene'; not long after

the Nabatæans began to come into collision with the Romans under Pompey and Scarnus (Jos. *Ant.* xiv. i. 4-ii. 3, v. 1, *BJ* i. viii. 1). They managed to retain a tolerable measure of independence as 'allies' or vassals through the varying fortunes of the Roman campaigns, and reached a high state of prosperity during the long reign of Aretas IV. (9 B.C.-A.D. 40). By this time their warlike and nomadic habits had been exchanged for settled life and the steady pursuit of profitable trade; their well-equipped caravans looked like armies on the march; and the enterprise of their merchants has left traces as far as Rome and Puteoli, and near Denderah in Upper Egypt (see Strabo, xvi. iv. 21, 23, 26; *CIS* ii. 157-159; *PSBA* xxvi. [1904] 72). Then in A.D. 106 the short-sighted cupidity of Trajan reduced Petra, and the Nabatæan kingdom was absorbed into the Provincia Arahia (Dio Cass. lxxviii. 14). The following is a list of the Nabatæan kings: ¹ Aretas I., 169 B.C. (2 Mac 5⁶); Aretas II., c. 110-96 B.C. (= Erotimus); Obedas I., c. 90 B.C. (Jos. *Ant.* xiii. xiii. 5, *BJ* i. iv. 4); Rahiluz I., c. 86 B.C. (*CIS* ii. 349=NSI, p. 250 n.); Jos. *Ant.* xiii. xv. 1, *BJ* i. iv. 7); Aretas III. Philhellene, c. 85-60 B.C. (*CIS* ii. 349=NSI, p. 250 n.); Malichus I., c. 50-30 B.C. (*CIS* ii. 158, 174=NSI 100, 102; Jos. *Ant.* xiv. xiv. 1 f., 6, xv. vi. 2, *BJ* i. xiv. 1, xv. 1, xviii. 4, xxii. 3); Obedas II., c. 30-9 B.C. (*CIS* ii. 354=NSI 95); Aretas IV. Philopatris, 9 B.C.-A.D. 40 (*CIS* ii. 160, 197-217, 354; NSI 78-91, 95, 96, 102; 2 Co 11²³); Malichus II., c. A.D. 40-71 (*CIS* ii. 195, 218, and 182=NSI 92, 99; Jos. *BJ* iii. iv. 2); Rahilus II. Soter, A.D. 70-? 106 (*CIS* ii. 183, 161=NSI 97; *ib.* 101, p. 255 n.); ? Malichus

III., A.D. 106 (*CIS* ii. 218 = *NSI* 92).¹ Strabo tells us that the kingship and chief offices were hereditary and descended to the eldest son (*XVI. iv. 25*); associated with the king was a high official called 'brother' in Nabataean and *ἐπίτροπος* in Greek (*NSI*, p. 246 n.). The inscriptions clearly point to a tribal form of government (*φύλα*, often in Greek inscriptions from Haurān); a tribal district had at its head a shaikh, called *ἐθνάρχης* (2 Co 11³²; also in Greek inscriptions from Haurān), or *στρατηγός* when he held military authority (*NSI*, p. 247 f.; Waddington, *Inscriptions grecques et latines de la Syrie*, no. 2196; cf. *Jos. Ant.* XVIII. v. 1); possibly 'the chief of the camp' (*NSI* 96) was the heir to this post. Another title for the governor was 'eparch' (*ib.* 87, 93; cf. 107; like *στρατηγός*, the Greek word is Aramaized). An interesting feature of Nabataean social life is the independent position held by women; they could possess and bequeath property; sometimes descent is reckoned through the female line; the queens are often represented on coins (*ib.* pp. 221, 246, 256).

Most of the inscriptions have been found in the three chief Nabataean settlements, Petra, Hegra (in N. Arabia, c. 340 miles south of Petra), and Haurān. A great number of Nabataean graffiti, belonging to the 2nd and 3rd centuries A.D., are inscribed on the rocks in certain wadis of the Sinaitic Peninsula (*CIS* ii. 490-3323; see *NSI*, p. 258). The splendid rock-tombs at Hegra display the finest inscriptions (*CIS* ii. 197-307), and testify to the importance which the Nabataeans attached to the family burying-place. Petra is famous chiefly for its ruins, dating from the pre-Hellenistic period down to the first half of the 3rd cent. A.D.; three or four valuable inscriptions have been found there, in addition to numerous graffiti (*CIS* ii. 349-489). At Petra, on a height (en-Negr) overlooking the main group of tombs, exists the most complete specimen of an ancient Semitic sanctuary that is known, a rock-hewn place of sacrifice open to the sky.

The chief god of the Nabataeans was Dūshara, whose worship was centred at Petra (cf. Epiphanius, *Her.* li. 22), and from Petra spread with the advance of the people. By Greek and Latin writers he was identified with Dionysos-Bacchus; there are coins of Bostra in Haurān of the 3rd cent. A.D. which show a wine-press and the legend *Ἰακτρία Δουσάρια*; but the god of a race which was once nomadic and dwelling in the desert cannot originally have had a Bacchic character; most likely he was a solar deity. Now and then he is styled 'lord of the temple' (*CIS* ii. 235; *RÉS* 1088), 'who is at Bostra' (*NSI* 92, 101), once 'who separates the night from the day' (*RÉS* 1102). Dūshara is merely a title = 'owner of Shara,' probably a place; his name is unknown, unless it was A'ara; the two are sometimes combined (*ib.* 1096, *Δουσαρεῖς Ααρα*, and 676), but separated in *NSI* 101. A'ara may lie behind the Orotal = Dionysos of Herod. iii. 8; and possibly A'ara may be a form of the ancient Arab deity Rūda (M. Lidzbarski, *Ephemeris für semitische Epigraphik*, Giessen, 1900-12, iii. 90-93). Sometimes with Dūshara we find 'and his *mōthab*' (*CIS* ii. 198, 250 = *NSI* 80, 94), which may mean 'and his spouse' (see *RÉS* 1099). The chief goddess of the Nabataeans was Allāt, 'the mother of the gods' (*CIS* ii. 185, 193 = *NSI* 80). Other deities named on the tombs are Manūthu (*CIS* ii. 197, 198 = *NSI* 79 f.), a goddess, perhaps 'Fate'; and the gods Qaishah, Hubalu (*ib.*), She'a-alqum = 'the protector of the people,' the god of the caravan (*NSI*, p. 255 n.). The expression 'the divine 'Obadath' (*CIS* ii. 354 = *NSI*

95) may imply nothing more than *divus*, and not the deification of the king after death.

The Nabataean dialect, in which a good many Arabic forms and idioms occur, belongs to the group of Western Aramaic, and is closely related to the Aramaic of Ezra (? 4th cent.) and of Daniel (2nd cent.). In many respects it is older than Palmyrene, and agrees with the Aramaic of Ezra, while Palmyrene comes nearer to that of Daniel (see S. A. Cook, *JQR* xvi. [1903-04] 274 ff.). Even after the break up of the Nabataean nationality in A.D. 106 the language and script continued in use here and there; e.g., a sepulchral inscription from Hegra is dated A.D. 267 (Jausen-Savignac, *RB* v. [1908] 241 ff.), and an inscription has been found at en-Nemāra in Haurān dated A.D. 328 (Dussaud-Maccler, p. 314 ff.), which, though written in Nabataean characters, is composed in classical Arabic, and shows that the latter had by this time almost supplanted the Nabataean dialect (Lidzbarski, *Eph.* ii. 34 ff.).

LITERATURE.—For the dialect, and references to the Nabataeans in Arabic writers, see T. Nöldeke, *ZDMG* xrv. [1871] 122 ff. For Hegra and its tombs, C. M. Doughty, *Travels in Arabia Deserta*, 2 vols., Cambridge, 1883; J. Euting, *Nabatäische Inschriften*, Berlin, 1885, who also collected the *Sinaitische Inschriften*, do. 1891. For Petra see the magnificent work of R. E. Brünnow and A. von Domaszewski, *Die Provincia Arabia*, Strassburg, 1904; G. H. Dalman, *Petra und seine Felsheiligtümer*, Leipzig, 1908; and A. Münsil, *Arabia Petraea*, Vienna, 1907-08. G. A. COOKE.

NĀGĀS.—As connoting a religious body, the word *nāgā* is said to be a corruption of the Skr. *nagnakāḥ*, Hindi *naṅgā* or *nāṅgā*, 'naked,' and to mean a naked religious mendicant. There is no sect called 'Nāgā,' but the Vaiṣṇava Vairāgis, Śaiva Sannyāsīs, and Sikhs have each a sub-sect known by this name.

These men, in their excess of zeal, leave off all covering, and in former times went about entirely naked. At the present day they wear the minimum of clothing that the laws regarding decency allow. Most of them, with the exception of the Sikh Nāgās and the Jaipur Nāgās, to be presently described, are the offshoots of Vaiṣṇava and Śaiva mendicant communities, of which they are worthless and profligate members.

In former times they were distinguished as travelling about in armed companies that developed into bands of desperadoes. There are numerous stories current in India regarding sanguinary battles between Vaiṣṇava and Śaiva Nāgās, in which there is reason to believe that they were assisted, and perhaps instigated, by the other members of their respective communities. The most famous, which is still remembered, occurred at the religious festival at Hardwar in 1760, when the Śaiva Nāgās expelled the Vaiṣṇava Nāgās from the sacred spot. It is said that no fewer than 18,000 of the latter were left dead upon the field.¹ During the Marāṭhā wars the Śaiva Nāgās, often called 'Gosains,' made themselves notorious in Central India. They attacked Colonel Goddard in his famous march from Bengal to Bombay in 1778, and, under a condottiere named Anūpgir Himmat Bahādur, they played a prominent part in the fighting in Bundelkhand.²

For the Sikh Nāgās our only authority is Wilson. Neither Trumpp nor Ibbetson mentions them, nor does their name appear in the Census reports.

According to Wilson, they 'are said to differ from those of the Vaiṣṇava and Śaiva sects in abstaining from the use of arms, and following a retired and religious life. Except in going without clothes, they are not distinguishable from the Nirmalas' (*Religious Sects*, p. 275).

² See *IGI* vi. 349, ix. 71, x. 177, xii. 15, xiv. 19, 318, xix. 401, xxii. 279.

¹ *CIS* ii. 181 f.; Schürer, *GVV* i. 728 ff.; R. Dussaud and F. Macler, *Mission*, etc., Paris, 1903, p. 69 ff.; A. Jausen and R. Savignac, in *RB* viii. [1911] 273 ff.

Under the British Government the marauding bands of Nāgās have disappeared, and the only organized body of these men is found in the State of Jaipur. Here¹ there is a corps of irregular infantry composed of 5000 Nāgās. They are Vaisnavas, and form a military order within the Dādūpanthī sect.

They are reputed to be faithful and daring, and, as such, are more feared than the other troops of the State. They will not undergo any discipline, wear no uniform, and are armed with sword, spear, matchlock, and shield. During the general mutiny of 1857, these were the only body of men really true to the chief, and, but for them, the so-called regular army would have rebelled.²

According to Sherring (iii. 60), they are separated into three sub-castes: (1) Dādūpanthī, (2) Rāmnanthī, and (3) Viṣṇuswāmī. The first consists of the followers of Dādū, and the second of those of Rāmnanth; Sherring gives no information regarding the third. All these Jaipur Nāgās are vowed to celibacy, and their numbers are replenished by children placed by parents under their charge as disciples. For further particulars regarding them see art. DADŪ, vol. iv. p. 386.

NĀGAS.—1. Habitat and distribution.—The Nāga tribes occupy the mountain ranges which form the eastern boundary of Assam. In accordance with the results of the linguistic survey, they are classified geographically and philologically into four sub-groups: (1) the Nāga-Bodo; (2) the Western Nāga; (3) the Central Nāga; and (4) the Nāga-Kuki. The Nāga-Bodo group occupies the Kachar Hills and the hills north-west of Manipur. The Nāga-Kuki group falls almost entirely within the area of the Manipur State. The Western and Central tribes are under direct British administration. The area of the Nāga Hills has undoubtedly been a meeting-point for many lines of movement, and the relationships of the several tribes have yet to be decided. Kuki influence is evident in the south, and it is quite certain that contact with Bodo-speaking peoples has modified the speech and probably the rest of the social life of the Kabui and Kachchha Nāgās in important respects. All belong to the Tibeto-Burman group of languages.

To the Nāga-Bodo group belong the Kachchha and Kabui Nāgās. The Western Nāga group includes the Angamis, the Kezhamas, the Rengmas, and Semas. In the Central group are the Aos and Lhotas, while to the Nāga-Kuki group are assigned the Sopvoma or Mao Nāgās, the Tangkhuls, and minor groups in Manipur. There are Nāga tribes, north, north-east, and east of the Nāga Hills in areas which are not within the scope of British influence and authority. It would be easy to push the classification of these people into much minutest detail, as villages tend to differ from their neighbours by reason of the separatism which marks them so notably.

2. Organization and structure.—The family, or extended household, and the clan—a group of families descended, according to common belief, from a common ancestor—are well defined units in Nāga communities, and are patrilineal and exogamic. A Nāga village consists of a number of clans, each of which as a rule inhabits a definite area. As a social whole a Nāga village was seldom capable of rigorous common action, mainly by reason of the clan feuds whose bitterness and intensity have often been noticed. Nevertheless it acts on occasions as a whole. Still less social coherence in political action was possessed by the

tribe as a whole, in spite of its common language and customs.

The principle of exogamy is here sometimes explained and justified by the belief that it was laid down by revelation of supernatural authority—a late belief—or by the belief, probably more archaic, that infraction of this rule would surely cause wide-spread social misfortune. Further and fuller knowledge of the social structure of Nāga communities is likely to disclose interesting limitations on the law of exogamy and to reveal the existence at no distant date of that particular mode of definite exogamy called 'cousin-marriage' as well as of cyclic exogamy.

Exogamy is tempered to a greater or less extent by the habit of local endogamy. This 'habit' may be a survival of a state of affairs in which there was a definite law of endogamy, sanctioned by beliefs similar to those which give force to the law of exogamy. In one interesting group (Tangkhul Nāgās, 'cloth-weaving Nāgās') economic motives have occasioned local endogamy. But for various reasons local endogamy has been modified, at least in individual cases, as by marriages of ambition—of alliance at a price—with the daughters of a strong and powerful village whose protection might, it was hoped, be thus secured. It has been modified also in those cases where one village establishes a hegemony over its neighbours.

In practice the mother's kin are often completely neglected, and people marry into their mother's clan, but the practice of unlimited patrilineal exogamy is in many cases definitely unknown and marriages with the mother's clan are forbidden, at least for two generations. Whether this rests on any, and, if so, on what belief, is not yet clear. Mere practical convenience, ignorance of language and customs, and apprehension of close contact with strange customs will account for the habit of local endogamy, even apart from religious or economic sanctions.

Divorce is common and results from infidelity or incompatibility of temper. If the wife is unfaithful, the husband recovers the marriage-price; if the husband is in fault, the parents of the girl get some money and a pig; in cases of mutual incompatibility the marriage-price is refunded. Polygamy exists when the man's resources permit it. The marital relations are in such cases, in theory at least, regulated by custom. Polyandry, if it exists at all, is only a polite term for prostitution and would probably be described as such by the local expert. Not so long ago in many Nāga villages the standard of female chastity was as high after marriage as before marriage it was low.

The social fabric thus viewed is simple. The other main lines of social organization rest on sex and on age distinctions. The laws of marriage, the laws affecting sexual relations in general, are, it would seem, fairly simple. Sexual relations with women are permitted even when marital relations are forbidden. Marriage, therefore, is here recognized as a social institution for the procreation of members of the social group. Since they believe that members of the social group are recurring units (see below, p. 124^b), clearly the function of marriage is the production of such recurring units. The idea that Nāgās practised infanticide rests on the custom of killing the children of slaves or children of incestuous connexions. The lines of social classification, based on age, physical and social maturity, are fairly clearly marked—by differences in coiffure, dress, and ornaments as well as by various tabus (*gennas*; see below). The bachelors' house, which in some cases has a counterpart in a spinsters' hall, is a wide-spread institution, though in modern times it is disappearing.

Nāga villages are of the permanent type and

¹ See IGI xiii. 397, and *Rājputānā Gazetteer*, 1879, ii. 161.

² *Rājputānā Gazetteer*, loc. cit.

occupy well-defined areas. The people subsist by rice-cultivation, wet and dry. The terraced fields, constructed in some cases by organized labour, are admirably irrigated, often by elaborately planned channels. The dry cultivation varies in extent. Pressure of population has often led to the formation of new villages. Certain features of the agricultural ritual show that in earlier days Nāgas were nomad cultivators periodically seeking fresh sites. Fishing, hunting, trade, cloth-weaving, basket-weaving, metal work, and pottery are minor, subsidiary industries, 'protected' by interesting tabus (see below). Nāga village government is often described as democratic. It is certainly difficult in many cases to discover one authority, but in the village and clan *gennaburas*, who are distinguished from their fellows by interesting privileges and disabilities and are surrounded by important tabus, resides a very considerable measure of authority, which varies according to their individual capacity and ability, and rests upon their position as representing the social unit in its religious activities.

3. Religious beliefs. — The activities of the creator deity seem to have ceased with the acts of creation. In some cases he is identified with the earthquake deity, in consonance with the theory that earthquakes caused the earth to emerge from a waste of waters. The earthquake deity, again, seems to be one with a deity whose function it is to exclude the unworthy from heaven and its bliss. Wide-spread, however, is the belief that the creator's sons (the number varies) are now charged with the duty of watching over mankind and of punishing those who are guilty of what in Nāga opinion is wrongdoing. Quite independent of these divine beings are the powers, nameless and formless, who inhabit hill and forest, river and pool—powers who by nature are ill-disposed to man. They are periodically placated. If an epidemic breaks out, in addition to the village *genna* there are rites to discover and placate the author of the plague. The majority of these beings are not of human origin, except in the sense that all such beliefs are of social human origin, while a few are human beings who have achieved a measure of divinity. These were, in a few notable cases, men who in life were reputed to have possessed great, unusual powers which their death and in one or two instances the manner of their death only intensified and enhanced.

The belief is found that the world was once a waste of waters from which by means of an earthquake (the area is liable to seismic disturbance) the hills were made to emerge. Elsewhere the story of a flood appears: two members of the tribe alone survived, from whom are sprung the present race. Others declare themselves sons of the soil who have issued from a cavern in the ground. Others, again, preserve recollections of migrations due to religious and political schisms.

The belief in the importance of omens and dreams is general. Witchcraft exists, and there are men who are reputed to be able to change themselves at will into tigers. Nāgas were notorious head-hunters. The practice was in part religious, resting on the belief that the success of agricultural operations would be secured by sprinkling the blood of an alien over the fields; in part social, since the man who had taken a head had attained to social maturity. Often, again, heads were taken merely as a proof of success. Further, since those whose heads are cut off, and who are in other ways mutilated, are segregated in the after world and are incapable of rebirth, a permanent diminution of the social stock of an enemy village was thereby effected.

The beliefs as to twins are varied and curiously

assorted. In some cases they are regarded as lucky, as indicating agricultural prosperity; in other cases the parents are looked on as sub-human, as animals, and to be shunned. There is also some evidence that in one or two villages the practice prevailed of putting to death all children who were born in a particular way. The belief also exists that between the father and the unborn child there is a bond such that the acts of the father may affect the unborn child injuriously. He is therefore, as elsewhere, required to abstain from all acts held to be injurious to the child. In the rule requiring unmarried girls to abstain from the flesh of male animals may be detected a survival of the belief that impregnation can be effected by means of food. Married women are constrained to abstain from certain articles of food while pregnant, lest the qualities of the food that they eat should be transmitted to their children.

Oaths are in general held to be of value by Nāgas. In many cases the sanction works almost automatically. By extending the effect of the imprecation beyond the individual to a household, clan, or village additional solemnity is obtained. The formularies are often picturesque in their details, but, as contact with civilization increases, it is to be feared that the simple faith which held to the truth in real fear of the consequences of perjury is sadly diminished. Covenants sanctioned by a conditional curse, with the blood of a slaughtered victim as its vehicle, are often established between Nāga villages, and for a good while observed by the contracting parties.

The belief that individuals are reborn is held by many, if not by all, of the Nāga tribes. Some think that man has seven existences on this earth and that he then is lost or absorbed. Some recollect and relate their genealogies with considerable care. The necessity for identifying a new-born child, and for ascertaining which of its ancestors has been reborn, occasions the rites of omen-taking associated with birth and name-giving rites. The custom of erecting stone monuments is in part influenced by the desire to perpetuate the stock, since it is believed that, as long as the stone stands, so long and thereby will the family endure. Viewed in another aspect, this practice gratifies the vanity of the living, and may be viewed as propitiating and securing the aid of the dead. Whether to these beliefs or to beliefs and practices of a far different origin is to be assigned the erection of the elaborate stone circles—some of which still exist in excellent preservation, as notably that at Kuilong—is a question of some difficulty, and the materials for answering it are not yet available.

In societies arranged as are Nāga groups, in definite strata according to age and social maturity, rites generally exist to effect and facilitate the passage from one age and maturity stage to another. Birth, marriage, and initiation rites exist, but are not very definitely nowadays oriented by the idea of the typical *rite de passage*. Birth rites are marked mainly by a desire to facilitate the birth, and rest on a crude appreciation of hygiene. There are simple rites—family rites—for ear-piercing and first hair-cutting. The initiation rites, such as they are, which are practised when a lad enters the bachelors' house for the first time and thus begins his education are extremely simple.

The marriage rites are far from elaborate. The girls in many cases have a considerable voice in the disposal of their persons; the bride-price varies greatly and is influenced by social standing, etc., though in many villages it is definitely fixed by custom. Marriage by servitude is rare. The betrothal forms a distinct stage. A mock fight—whether a survival of capture, which is generally regarded as improbable, or a *rite de passage*—effect-

ing the severance of the bride from the group of the unmarried is a very general feature. It is said that, if the bride's party wins, she will rule the roost, and will live long. It is a period of some danger to the young couple. In some cases they must not cohabit within the house for some days. In other cases the bride stays with her people, is visited there by her husband at night and by stealth till she is admittedly *enceinte*, when she moves to his house with rites and sacrifices. In other cases representatives, generally children, of the bride and bridegroom's party sleep in the bride's new home for the first night. That marriage is an institution ordained for the procreation of children to the maintenance of the social fabric would be recognized by Nāga communities, yet the absence of definite fertility rites as part of the marriage ceremony is noteworthy. It may rest, perhaps, on imperfect observation.

The cycle of life ends with death—the portal to another world. To usher the deceased into that other world, to secure the living from the force which compassed the death, to separate the dead from the living, are the purposes of funeral rites here as elsewhere. These are modified in every detail of mode, place, and time of sepulture, and duration and social extent of *genna*, by considerations of the social importance and status of the deceased and of the manner of his death. Since it is held that those who die in certain ways—those who are killed by wild animals, die of snake-bite, or are drowned, and women who die in child-birth—are entirely dead, socially and spiritually as well as physically, it is necessary in mortuary ritual to deal in one way with those who are deemed capable of rebirth, and in a very different way with those whose manner of death argues them to be incapable of rebirth perhaps as victims or objects of divine displeasure by reason of some sin of which they have been guilty as individuals or vicariously as members of the community to which the actual offender belonged.

It is significant that the Nāgas bury those who are to, or may, be reborn in the direction whence they deem their ancestors to have come. The reason is clear: those who are buried there are their ancestors and, since their ancestors are by this belief a constantly recurring element in the social fabric from which the authority of custom derives no inconsiderable part of its validity, this spot, their burial-ground which they revere, is indeed in their view the origin of the village.

Sin, sickness, and death are closely connected. The sin which occasions sickness and death may be that of some member of the community other than the unfortunate individual on whom the punishment has fallen; yet to rites of expiation necessary in this view of the causation of sickness they add practical—often sound—treatment, based on a knowledge of the properties of jungle herbs, and on the employment of some simple surgical devices, above all of massage, in a crude and violent form.

4. *Gennas*.—The word *genna* means 'forbidden.' In practice it extends beyond the tabu and includes a series of ritual acts or states which involve the participation of entire social groups. It requires the exclusion of all persons who are not members of the social group affected. All members of the social group affected separate themselves from other social groups, and separate themselves as far as possible from their normal mode of life while the *genna* state lasts. It is thus a means of restoring and of publicly asserting and indicating the unity of the group. There are *gennas* affecting villages, clans, households, age groups, and sex groups. The necessity for asserting and restoring the unity of the group may be periodically recurrent or may be specially produced by some sudden emergency.

There are thus periodic as well as special *gennas*, occasioned, e.g., by earthquakes. It is almost possible to estimate the social importance of any event by ascertaining the duration of the *genna* required to restore the current of social life to its normal flow and the social groups which it affects. In the limited sense of tabu, in the sense of a prohibition of the use of things, it rests upon the recognition of the fact that things possess qualities and upon the attribution of permanently or temporarily dangerous qualities, socially dangerous qualities, to things whose use to members of other social groups or to members of the particular group in other times and in other circumstances is innocuous or even beneficial.

NAHMANIDES. — Nahmanides (Moses ben Nahman, RaMBaN, also called Bonastruc de Portas) was born about 1195 at Gerona in Catalonia in Spain. He was a member of one of the best Jewish families in Gerona, and his early education was in the hands of famous teachers. At a very early age he began to show his wonderful mastery of the Talmudic literature. When he was fifteen years old he wrote a compendium on parts of the Rabbinic law, and shortly afterwards he composed a work, *Milhāmōth Adhōnai*, in defence of R. Isaac Alfasi. Nahmanides was soon known as a great Talmudical authority. He wrote commentaries to various tractates of the Talmud, and glosses (*novellae*) on the whole of the Talmud. He also wrote important Hālakhic works. Of his private life little is known except that he was a Rabbi and teacher in Gerona and Barcelona. As he studied medicine, he may have also practised as a physician.

Nahmanides was not only a great Hālakhist; he also wrote homiletico-exegetical and devotional works. He was first and foremost an intense Jew, devoted to Judaism with every fibre of his heart. He was well versed in philosophy, but philosophy was to him a secondary consideration; his first and main consideration was Judaism. But he was no fanatic. He was orthodox without being intolerant. This is seen in his attitude to Maimonides. Although by nature the antithesis of Maimonides, he held the latter in the highest esteem. In the great Maimonides controversy, which raged with such force many years after Maimonides' death, Nahmanides tried to keep the balance between the two opposing parties, although his natural sympathies must have been with the anti-Maimonists. His attempts at reconciliation failed; but never did a harsh word against Maimonides escape his mouth or his pen. His failure to end this controversy Nahmanides must have regarded as a tragedy in his life. This happened about 1232.

The second tragedy in Nahmanides' life was his disputation with Pablo Christiani, which took place in 1263 at Barcelona in the presence of King James of Aragon and his court and many ecclesiastical dignitaries. The disputation was forced upon Nahmanides, and lasted four days (July 21-24). As doubts were raised by the Dominicans as to the result of the disputation, Nahmanides published the controversy. The publication of this work was construed by the Dominicans as a blasphemy against Christianity, and Nahmanides was sentenced to exile. Expelled from Aragonia,

he stayed for a short time in S. France, and in 1267 he migrated to Palestine.

Early in life Nahmanides began to turn his attention to the study of the Bible. He was known as a great Biblical scholar, and he was frequently consulted by Christian scholars on Biblical questions. But it was in Palestine that he wrote the greatest part of his commentary on the Pentateuch and that he completed it. To Nahmanides the Tōrah was the most perfect teaching that could be given to man. Everything good was contained in it. There was nothing that required justification or help from philosophy. Everything in it was perfect. All that was wanted was that it should be understood. For Nahmanides there was no need to reconcile reason with religion (as Maimonides and other mediæval Jewish philosophers tried to do). His aim was to reconcile man with religion (Schechter, *Studies in Judaism*, p. 137)—we say 'man' and not 'Jew,' because, according to Nahmanides, Christians and Muhammadans were also heirs of the Tōrah. The Bible, Nahmanides says, speaks to the whole of mankind.

Nahmanides was very broad-minded and very tender-hearted. He was emphatic in the prohibition of cruelty to animals. He believed in bodily resurrection and in transmigration of souls. It was clear that to a nature like that of Nahmanides mysticism should appeal, and we find in his writings elements of *kabbālā*. Nothing human was to him contemptible. The human being a part of the divine, its actions were willed by God and were thus holy. This view is most prominent in his book on marriage (*Iggereth haq-Qōdesh*). His book on mourning (*Tōrath hā-Adām*) is also very interesting. Nahmanides was human. Indifference to pleasure and pain (for which certain philosophers strove) he declared to be ungodly. Man should rejoice on the day of joy and weep on the day of mourning. He had a great mind and a large heart. Man was his concern. It was largely to his desire to make the people happy, to provide them with material for edification and 'sweet words' on Sabbaths and festivals, that we owe his commentary on the Pentateuch—his greatest work.

In his commentary on the Pentateuch we have the whole Nahmanides before us—the great scholar, the profound believer, the man of tender feeling, and the Jew with his unbounded love for Judaism. His commentary shows a deep knowledge of the Bible and of the whole Rabbinic literature. The commentary is built on sound exegesis. But we can see on every page the Talmudist and often also the *kabbalist*. He constantly tries to show the greatness, depth, and wisdom of Judaism. His antagonism to Ibn Ezra can be explained only by the fact that Ibn Ezra appeared to him as too dry a philologist. Nahmanides wanted to penetrate into the heart of the Tōrah. Exegesis alone was not sufficient for him. Hālakhic exposition and homiletic interpretation were indispensable for a true understanding of the Tōrah. But throughout his commentary we can discern a sound judgment for exegesis. He was the first Jewish commentator to give at the beginning of each of the five books of the Pentateuch a short summary of the contents of the book. In his commentary on the book of Job also, which is purely exegetical and surpasses his commentary on the Pentateuch, he gives a short summary of each of the speeches of Job and his friends.

In Palestine, where he spent the last years of his life, Nahmanides built synagogues, organized communities, and gave lectures and sermons for the edification of the people. His letter from Jerusalem to his son and some notes on the state of things in Palestine (published in the *editio princeps* of his commentary on the Pentateuch) show how

great was his love for the Holy Land. He died about 1270, and was buried at Haifa.

NĀLANDĀ.—Nālandā, in Magadha, was celebrated for many centuries as the seat of the most renowned Buddhist monastic university in India—'the mine of learning, honoured Nālandā' (*der Fundgrube des Wissens Sri Nālandā*), as Tāranātha, the historian of Buddhism, calls it (*Gesch. des Buddhismus*, p. 152).

The variant name, Nālandra, occurs in Tibetan books (*JASB*, pt. i. vol. ii. [1882] p. 115). Local Brāhmins affirm that the original name was Kundilpur. Buchanan-Hamilton heard the name Pampāpuri applied to the place, apparently by a Jain. All the ancient names, including Nālandā, are now forgotten. The site, which has been identified with certainty, is usually described under the name of Bargāon ('village of the *bar*, or banyan tree'). Bargāon, a village of 600 inhabitants, now a station on the Bihār light railway, is in the Bihār subdivision, Patna District, 'Bihār and Orissa' Province, and is not many miles distant from Rājagriha, the early capital of Magadha or S. Bihār, and other famous places in the Holy Land of Buddhism, lat. 25° 8' N., long. 85° 26' E. A small village, Begampur, adjoins Bargāon on the north. The principal mass of ruins lies to the south of Bargāon.

The Jains of Bihār town affirm that Rājā Śrenika (Bimbisāra), who lived about 500 B.C., and, according to them, was a Jain, resided at Nālandā, where a Jain temple of comparatively modern date exists. The ancient remains seem to be wholly Buddhist. The Buddhist sanctity of the place goes back to the very beginnings of Buddhism. The site of the first monastery is said to have been a grove presented to Buddha, while his favourite disciples, Śāriputra and Maudgalyāyana (or Mudgalaputra), were born and died at neighbouring villages. Their names are often connected directly with Nālandā, the Nāla of Fa-hien. Tāranātha observes that Āśoka may be regarded as the founder of the Nālandā monastery because he made costly offerings at the shrine of Śāriputra and erected a *stūpa* in his honour. Several Āśoka *stūpas* stood at or near Nālandā. According to the Chinese pilgrims, Hiuen Tsiang and I-tsing (I-ching), who both resided at Nālandā for a considerable time, the earliest monastery was founded by Rājā Śakraditya not long after the Buddha's death. His name is not otherwise known, and his date cannot be fixed. His modest foundation, a temple 50 ft. square, was so added to by many successive kings, of whom Hiuen Tsiang names five, that it grew into a gigantic establishment, comprising a multitude of temples, monasteries, with their lecture-rooms and other appurtenances, *stūpas*, and all kinds of sacred edifices. A large number of noble tanks secured an ample supply of water. In the 7th cent. of the Christian era the Nālandā establishment undoubtedly was the most important and splendid of its kind in India, or, in fact, in the world. It was the principal centre of Buddhist learning, and was crowded with students from every quarter. It was truly a great university. The professors gave instruction in the Vedas and other Hindu books, as well as in the Buddhist scriptures, and every form of art was cultivated with success.

The most detailed description of the complex of buildings is that recorded by I-tsing, but his language is not easy to understand fully, and the drawing which he prepared to illustrate his text unluckily has been lost. The main block of buildings was an oblong rectangle containing eight distinct halls or temples, three storeys in height, each of about 10 feet. The structures were built essentially of brick, stone being used only for minor and ornamental features. The eaves of the block projected, making a covered way or verandah running all round. All the larger spaces were paved with bricks, small spaces outside, roof terraces, and the floors of rooms being covered with an almost indestructible concrete cement, highly polished. I-tsing describes the way in which it was made. The roofs seem to have been often flat, and adapted for walking. The whole group was surrounded by an enclosing wall, as at Kasiā.

Hundreds of sacred spots, appropriately marked by monuments of various kinds, surrounded the central block of buildings. Many are catalogued by Hiuen Tsiang, from which the following may be selected for mention. To the east, a great *vihāra*, or temple, 200 ft. high, where Buddha had resided; further north the *vihāra* of Rājā Bālāditya, 300 ft. high, magnificently decorated, and enshrining a notable statue; to the east of that *vihāra* a standing statue of Buddha in copper, 80 ft. high, erected by Pūrṇavarman, Rājā of Magadha, and a descendant of Aśoka, about A.D. 600; and, further north, a lofty brick statue of Tāra Bodhisattva, which was the object of costly worship. The Rājā Bālāditya mentioned probably was Narasimhagupta Bālāditya, who reigned about A.D. 500. The copper statue of Buddha 80 ft. high was a work unequalled in the world. King Harṣa, or Śilāditya, the friend of Hiuen Tsiang, was building a temple covered with brass (or bronze) plates, which was still unfinished when the pilgrim left India.

The biographer of Hiuen Tsiang observes that 'the monasteries of India are counted by myriads, but this is the most remarkable for grandeur and height' (Beal, *Life of Hiuen-Tsiang*, p. 112). He notices the rich ornament of the towers, the fairy-like turrets, the red pillars, and numberless other beauties, not forgetting the 'deep translucent ponds,' adorned with blue lotuses. Hiuen Tsiang and I-tsing use similar language, permitting no doubt that every resource of art was lavished on the buildings. It is clear that a great school of local artists must have existed in order to carry out those works, and that the artistic influence of Nālandā must have been felt in China and over the whole Buddhist world. We are told of one eminent Chinese artist, Sing-yun or Prajñādeva, who painted a picture of Maitreya Buddha and the *bodhi*-tree during his stay at Nālandā. When returning to China, he took with him his painting, which was probably on silk.

The site of Nālandā has never been properly surveyed, examined, or excavated. The rough and inaccurate surveys which have been published were made long ago. Buchanan-Hamilton's notes appeared in 1838, those of A. Cunningham in 1871, and those of A. M. Broadley in 1872. There is nothing of later date. Since Broadley's crude efforts, much of the ruins must have been destroyed. The site has been a quarry for bricks during many centuries, and the opening of the light railway must have largely increased the demand. When the Archaeological Department comes to examine the site, possibly not much will be left to explore. Cunningham and Broadley found the great rectangular central mass of buildings easily traceable in a line of mounds running north and south, about 1600 ft. long by 400 broad.

Numerous *stūpas* and other remains were visible in the immediate neighbourhood; what may be left now is not known. It is understood that the area has been protected from further spoliation since 1910. Many fine examples of sculpture probably still exist, and a considerable number of specimens were removed to the Indian Museum, Calcutta, in 1891. Buchanan-Hamilton published outline drawings of six good examples. Two sculptures are figured and described in *Ann. Rep. Arch. Surv. of India*, 1903-04, pp. 213-236. The Nālandā sculptures deserve special illustration and study, which they have not yet received.

A detailed history of Nālandā would be a history of Mahāyānist Buddhism, from the time of Nāgārjuna in the 2nd cent. A.D. (?), or possibly even from an earlier date, until the Muhammadan conquest of Bihār in A.D. 1197—a period well over a millennium. All the most noted doctors of the Mahāyāna seem to have studied at Nālandā. Tibetan Buddhism is an offshoot of the teaching of Nālandā and its rival, the Vikramaśīla monastery, which was probably situated at Patharghātā in Bhāgalpur. When Hiuen Tsiang was at Nālandā (A.D. 637 and 642-3) studying the *Yoga śāstra*, the head of the establishment was the venerable Śīlabhadra, then of great age, who received his visitor with the utmost courtesy and generosity. I-tsing, who spent ten years at Nālandā (675-685), warmly admired the regulations of the monastery and the strict discipline enforced on more than 3000 resident monks. Out of the crowds of foreign students who arrived, not more than 20 or 30 per cent were sufficiently advanced to proceed with the courses of study. Some sort of matriculation test seems to have been compulsory in order to weed out the weaklings.

After the 7th cent., when the guidance of the Chinese pilgrims is lost, the notices of Nālandā are few and scanty, but there is no reason to doubt that the establishment continued to flourish as the headquarters of Tantric Buddhism throughout the long domination of the Pāla kings, and that it was destroyed, like the other Buddhist institutions of Bihār, by Muhammad the son of Bakhtyār in A.D. 1197. The monks who escaped slaughter fled to Tibet, Nepāl, or S. India, the buildings were reduced to ruinous heaps, and the rich libraries were consumed with fire.

LITERATURE.—I. CHINESE PILGRIMS.—Hiuen Tsiang, in S. Beal, *Buddhist Records of the Western World*, 2 vols., Boston, 1885, or reprint, London, 1906, and *Life of Hiuen-Tsiang*, do. 1888, new ed., 1911; T. Watters, *On Yuan Chwang's Travels in India*, 2 vols., do. 1904, 1905; I-tsing (I-ching), in J. Takakusu, *A Record of the Buddhist Religion*, Oxford, 1896, and, with other pilgrims, in E. Chavannes, *Voyages des pèlerins bouddhistes; mémoire . . . sur les religieux éminents*, Paris, 1894, esp. sect. 41.

VINCENT A. SMITH.

NAMA.—The Nama are a branch of the tribe commonly called 'Hottentots' (*q.v.*), or, by themselves, 'Khoikhoi.' They now live chiefly in the south-west territory, north of the Orange River, though a small number (62, according to the census of 1904) are found within the limits of the Cape Colony. The names of Great and Little Namaqualand indicate their habitat through a considerable period, though they removed further and further to the north in the course of the 19th cent., while the Cape Records show that, in 1665, they were living as far south as Olifant's River, near the

present town of Clanwilliam. Brincker, writing in 1899 (*Mitt. des Seminars für orientalische Sprachen*, II. iii. 128), estimated the number of 'Hottentots' in German S.W. Africa at 20,000. He appears to include the whole of these under the designation of 'Nama,' though, strictly speaking, it will not cover them all. He speaks, e.g., of 'aus der Capcolonie eingekommene Namas,' but Jonker Afrikaner's people, whom he reckons among these, were a sub-branch of a distinct tribe, the Khaunas ('Cauquas'). The Nama 'have always been, and still are, by far the most powerful tribe among all the Khoikhoi' (T. Hahn, *Tsuni-Goam*, London, 1881, p. 102). Reports of them reached Van Riebeeck during the first years of the Dutch settlement at the Cape, and he sent more than one expedition to their country, chiefly attracted by rumours of copper-mines there. The first Europeans to come in contact with them were Cruythof and Van Meerhof, who, in 1661, visited the kraal of the chief 'Akembie' and entered into friendly relations with him. They described the Nama as larger in form than other Hottentots (Alexander, in 1836, says that 'their general height was five feet six or five feet seven' [*Expedition of Discovery into the Interior of Africa*, i. 96]) and better dressed. They were acquainted with the art of smelting copper and iron, and wore many ornaments of those metals. Their style of living, dress, and weapons seem to have been much the same as when visited by Alexander, except that the latter traveller found them using 'some old muskets and long guns obtained from the colony, for four, six, or eight oxen each piece' (p. 96). In 1681 a party of Nama came to Cape Town, bringing presents of cattle and copper ore; and a return visit was paid by Governor Van der Stel in 1685, when he succeeded in reaching the famous Copper Mountain—now the Ookiep mines. It is uncertain whether these were first worked by the Nama, the Bushmen, or some unknown immigrants in early times; but that they were worked before the advent of Europeans, and that 'not without a certain skill and good instruments,' admits of no doubt (Brincker, p. 128). The Bushmen are still employed by the Ovambo to dig up copper ore.

The various 'Hottentot' tribes appear to have been more or less at feud with each other when the Dutch first settled at the Cape, though it may be doubted whether their feuds were invariably of a serious character. The accounts scarcely seem compatible with their having lived, like the Somali of the present day, in a chronic state of raiding or being raided. The Nama sometimes attacked the tribes in the neighbourhood of the Cape Peninsula, but, in general, kept on good terms with the colonists. In 1761 Governor Tulbagh sent out an expedition under Hendrik Hop, which not only crossed the Nama country but penetrated beyond the Orange River (then for the first time seen by Europeans) about as far as 27° S. The journal of the expedition is, says Theal (*Hist. and Ethnogr. of Africa*, iii. 391), an interesting document, drawn up by men 'who were diligent observers, and one of them had the advantage of being acquainted with the Hottentot language.'

At this time the 'Little Namaquas' were found to be very much impoverished, and the 'Great Namaquas' had retreated northwards, considerably reduced in numbers owing to an epidemic of small-pox. About the same time they seem to have come into collision with the Herero or Damara, who had reached this point in their migration from the north-east, and by 1791 we hear that the latter had been conquered and robbed of their cattle by the Nama. The feud thus begun went on more or less continuously till quite recent times. This state of things reached its height during the third

quarter of the 19th cent., when Nama chiefs armed with guns became dangerous freebooters, terrorizing the country with their lawless bands of horse-men.

The tribes anciently settled in Great Namaqualand who may be counted as real Nama are:

The !Aolnin or Gajmen, called by the Boers 'Topnaars,' from their being farthest north of all the tribes—i.e. at the 'top' of the country; the !kha-ragai-khoi or 'Fransmannen,' also known as 'Simon Copper's people'; the !baboben or 'Veld-schoendragers'; the !gami !nu'n or 'Bondelzwarts'; the !khan !gōan or 'Zwartboois'; others, such as the so-called 'Red Nation' (*Rooi Natie*) or !Khauben, the Kha-rol-ban of Keetmanshoop, and the !ogain or 'Grootdooden,' came in at various times from the south, as did the clan of the Afrikaners already referred to, who figure so largely in Moffat's narrative.

The present-day Nama have largely adopted European clothing and ways of living, and it is estimated that about two-thirds of them are converts to Christianity. They are passionately fond of hunting (which, and cattle-lifting, they formerly considered the only occupations worthy of a man); and they make excellent herdsmen and waggon-drivers, but they show little disposition towards hard and continuous work, for which, indeed, their physique is not fitted. They are quick-tempered, passionate, and, in moments of excitement, ferocious, but in general good-natured and kindly, easily influenced for good or for evil, and capable of great devotion when once their affections are gained.

Their religion is apt to be emotional, not to say fanatical, and to take forms more easily appreciated in the 16th cent. than at the present day.

Hendrik Witbooi and his people might have been seen engaged in religious services of the most enthusiastic description, with hymn-singing, prayer and fervent oratory, and immediately afterwards mounting and riding off to attack the Herero, rob them and kill as many as possible;—being indeed, as they imagined, the executors of God's judgments on those people, whose possessions were therefore assigned to them by the Divine decree' (Brincker, p. 127).

But there is no ground for questioning their sincerity, or the fact that in many cases a high level of character was reached. Moffat's account of Christian (formerly Jager) Afrikaner (*Missionary Labours*, pp. 109, 111–113) will be remembered by most readers, and—to name no more—Alexander (i. 217) speaks almost as highly of Hortman (Houtman?), a chief of the Bondelzwarts.

Intellectually, many of them have shown marked ability. Christian Afrikaner seems, from the account already mentioned, to have been a thoughtful man, with a thorough grasp of such affairs as came within his scope; and, more recently, Abraham Platje made his influence felt outside his own community. Of Aramap, a member of the Afrikaner clan who was a noted warrior in his day and defeated the Herero in 1835, Alexander says that he was a modest and unassuming little man who, on closer acquaintance, was found to possess 'a daring mind, good judgment and very active habits' (ii. 151). His description of Hendrik Buys, chief of the Veldschoendragers, is also full of interest.

Unless we are to accept the view that the only qualities desirable in a subject population are those of a strong and serviceable machine, the Nama are a people with valuable possibilities, and their extinction would be a matter for regret.

This extinction, though referred to by many writers as a certainty, is not likely to be more than partial. The mixed race known in Cape Colony as Griquas, in German S.W. Africa as 'Bastards' (their settlements are in and about Rehoboth and Grootfontein), have plenty of vitality, good looks, and intelligence, and (Brincker, p. 130) supply the best skilled workmen to be found in Cape Colony. The German authorities have of recent years recognized their importance as a factor in the community. The original settlers in Namaqualand migrated from the Cape about 1868 and therefore derived their origin from other tribes

than the Nama; but they have, no doubt, intermarried to a large extent with the latter.

The N. African origin of the 'Hottentots' was suspected long ago by Moffat (p. 5), and suggested independently, from the linguistic point of view, by W. H. I. Bleek (*De Nominum Generibus Linguarum Africa Australibus*, Bonn, 1851, pp. 45-60), J. C. Adamson (*JAOS* iv. [1854] 2, 448), and J. R. Logan ('Ethnology of the Indo-Pacific Islands,' in *Journal of the Indian Archipelago*, vii.-ix. [1853-55], esp. viii. 229ff.). The Hamitic affinities of the Nama speech maintained long ago by R. Lepsius (*Nubische Grammatik*, Berlin, 1880, Introd. p. xvi) have now been fully demonstrated by C. Meinhof.¹ Its deviations from the Hamitic type are to be explained by its having assimilated Bushman words and forms; and, in any case, it is the branch most remote from the parent stock. Though much Hottentot tradition has been irrecoverably lost and much is recorded in a form calculated to obscure its real meaning, we can still trace remarkable points of contact with the Galla, Masai, and other Hamitic and half-Hamitic tribes of Eastern Equatorial Africa. Like the Galla, they consider the hare unlucky (the hunter whose path it crosses will take nothing) and abstain from eating its flesh (Brincker, p. 179; Alexander, ii. 250). In the Galla saga of the origin of death, however, the creature cursed is not the hare, but a bird, a species of hornbill; on the other hand, the aversion to the hare is shared by the Abyssinians, and may therefore have some connexion with the old Semitic prohibition. A number of tales are almost identical in the folklore of the Hottentots and Bantu, except that the exploits attributed by the latter to the hare are performed, according to the former, by the jackal, which is also connected by the Galla with the same or nearly the same incidents. We may instance the well-known story where the hare kills the lion by inducing him to swallow a hot stone (Schultze, *Aus Namaland und Kalahari*, xlv.; Bleek, p. 5; for Bantu, MS material); or the 'Uncle Remus' episode where Brer Rabbit makes a riding-horse of Brer Fox, which is told by the Nama (Schultze, xxxiv.) of the jackal and the hyena.

Some unexpected light seems to be thrown on the extraordinary myth of Tsui ||Goab and his wounded knee by the Masai and Nandi traditions recorded by Hollis. The Nandi (A. C. Hollis, *The Nandi*, Oxford, 1909, p. 98) say that the first Dorobo produced from his leg a boy and a girl, who were the progenitors of the human race. (The Dorobo, as by some S. African tribes the Bushmen, seem to be postulated as outside mankind.) Among the Masai the myth has been partly forgotten and has assumed the form of a fairy-tale, 'The Old Man and his Knee' (Hollis, *The Masai*, Oxford, 1905, p. 147 ff.). There is therefore some ground for supposing, with Meinhof (*Die Dichtung der Afrikaner*, Berlin, 1911, p. 34), that the old interpretation 'Wounded Knee' is really the correct one. Hahn also mentions, on the authority of Wuras, that the Good being (Tsui ||Goab) is supposed by the !kora to live in the Red Sky and the Evil Being (||gannab) in the Black Sky. Hollis tells us that, in the Masai belief, 'there are two gods, a black one and a red one,' the former, however, being good and the latter malevolent (*The Masai*, p. 264). This may

¹ *Lehrbuch der Nama-Sprache*, Preface, p. 61., *Die Sprachen der Hamiten*, *passim*.

be something more than an accidental coincidence, but it is to be feared that it is too late in the day to obtain a clear statement of the !kora tradition. Another point is touched on by Hahn (pp. 62, 105): 'The !kora say that the snake and the first man originally lived together.' The Masai elders relate that 'when God came to prepare the world he found three things in the land, a Dorobo, an elephant, and a serpent' (Hollis, *The Masai*, p. 266).

Very little is known as to the tribal organization of the Hottentots during the time when it still existed unimpaired. It is generally stated that their chieftainships were hereditary, unlike those of the Galla, who elect their chiefs for a term of years. As, however, the hereditary principle is recognized by some Hamitic peoples, there is perhaps no need to suppose that it was imposed by the Dutch administration on the mistaken assumption that it already existed. It is possible, however, that we have a hint of parallelism with Galla institutions in the statements that the 'Cochoquas' (whose territory extended north-west of Cape Town, as far as Olifant's River) were 'in two divisions under the Chiefs Oedason and Gonnema' (Theal, ii. 126), and that the same was the case with the 'Chainouquas,' the next tribe to the east, of whom Theal says:

'There was still in name a chief of the Chainouquas, but in fact that tribe was now divided into two clans under the captains Klaas and Koopman' (ii. 210).

Apart from the wrong use of the word 'clan' in this passage, it may be permissible to doubt whether the bisection of the tribe was merely accidental, as here supposed. The Galla regularly have two chiefs (not appointed simultaneously, so that one is always junior to the other), each presiding over one section of the tribe. Alexander, in answer to a question as to the succession among the Nama, was told that 'the eldest son of the last chief is selected' (ii. 171); but, though he was a careful observer, some other information elicited on the same occasion (whether through an interpreter or from Dutch-speaking natives remains uncertain) suggests that he should be read with caution. He says, e.g., that 'nothing is known of lucky or unlucky days, omens,' etc. (i. 172), and elsewhere that some of the Nama 'even have no names' (i. 165). The best recent account of this people is Schultze's *Aus Namaland und Kalahari*, which contains, *inter alia*, a collection of sixty-eight folktales and fables, taken down at first hand.

LITERATURE.—In addition to the works specified under Literature in art. HOTTENTOTS may be mentioned: L. Schultze, *Aus Namaland und Kalahari*, Jena, 1907; G. McCall Theal, *Hist. and Ethnography of Africa south of the Zambesi*, 3 vols., London, 1907-10 (vols. II. and III. correspond to vols. I. and II. of the *Hist. of S. Africa* in the earlier ed.); *Nieuwste und deknopte Beschrijving van de kaap der Goede-hoop, nevens een Dagverhaal van eene Rys naar het Binnenste van Afrika door het Land der kleine und groote Namaquas*, Amsterdam, 1778 (a Fr. ed. was published simultaneously), containing the journal of Hendrik Hop; J. E. Alexander, *An Expedition of Discovery into the Interior of Africa, through the hitherto undescribed Countries of the Great Namaquas, Boschmans, and Hill Damaras*, 2 vols., London, 1838; P. H. Brincker, 'Die Eingeborenen Deutsch-Südwest-Afrikas,' in *Mitteilungen des Seminars für orientalische Sprachen*, Berlin, 1899, II. iii. 125-139; C. Meinhof, *Lehrbuch der Nama-Sprache*, Berlin, 1909 (= *Lehrbücher des Seminars für orientalische Sprachen*, xxiii.), and *Die Sprachen der Hamiten* (with appendix by F. von Luschan, 'Hamitische Typen,' illustrated with photographs), Hamburg, 1912; R. Moffat, *Missionary Labours and Scenes in Southern Africa*, London, 1842; J. Irlé, *Die Herero*, Gütersloh, 1906, containing much valuable firsthand information as to the Nama and Herero wars between 1860 and the German annexation.

NAMES (Primitive).—I. DATA.—In lists to which new references are being added daily we find abundant information concerning the names of non-civilized races in almost all parts of the world, but the connexions between these facts are not noticed during a first reading. The synthetic attempts at explanation by the totem (J. G. Frazer), by animism (E. B. Tylor), and by tabu (S. Reinach) cover only some of the phenomena or submit to a one-sided theory facts which cannot in their entire range logically be adjusted to it. The best method seems to be to try to classify the principal groups of facts relating to the name without first connecting them with each other, and retain only the facts which constantly recur among the majority of present-day non-civilized races, and consequently among races and tribes which never could have had historical connexions with each other.

1. Name-giving.—A general characteristic is the importance attached to the giving of the name among the uncivilized. The personality—and the rights and obligations connected with it—could not exist without this preliminary condition. The giving of the name, either at birth or in certain fixed circumstances (in the case of successive names), is generally a solemn social ceremony, with a fixed ritual of a public character. The choice of the name may be reserved to certain persons other than the parents—e.g., the chief (cf. J. Henry, *L'Ame d'un peuple africain, les Bambara*, Münster, 1910, p. 170), who sometimes explains in public the reasons of his choice, and then communicates it to the mother. The name is conferred either by a representative of the social group or—most frequently—by the father or mother, showing the double bond uniting the child to the social group and to one or both of the parents (see MOTHER-RIGHT).

Name-giving does not necessarily take place at birth. It may be deferred until suitable circumstances arise in the phenomena of the exterior world (astrology, seasons, signs of nature, etc.) or simply until the lapse of an astronomical period of time (e.g., the 20th day among the Oraibis, with exposure to the rays of the sun; cf. H. R. Voth, 'Oraibi Natal Customs,' *Field Columbian Museum, anthrop. ser.*, v. vi. no. 2, Chicago, 1905, p. 47). In the instances quoted in § 3 much longer intervals of delay will be found. In such cases provisional designations are invented for practical purposes, such as recognition and address. This is the first sign that the essential purpose of the name is not identification or recognition.

2. Classes and varieties.—It is impossible to mention here all the kinds of titles suggested to the mind to designate human beings, but, if we attempt to classify the thousands of individual cases according to the circumstances in which the names are assigned, we find that the classes of names may be suggested by: (1) sex, (2) order of birth, (3) the repetition of the names of near relatives or of paternal or maternal ancestors, (4) order of age, (5) name of the clan, group, tribe, or nation, (6) a characteristic circumstance (change of office, condition, etc., initiation, etc.). The name may be derived from (1) a physical feature, (2) an onomastic list of animals, plants, inanimate things,

and phenomena of nature, (3) names of gods, spirits, fetishes, the dead, etc., (4) a motto or an allusion to a historical or mythical fact, or a eponymous sentence, (5) a statement derived from a historical fact or from the life of an individual, (6) a connexion between the individual and his human or supernatural protectors. But such lists are never complete, and are of no real use. Enumerations like those given by A. van Gennep (*Les Rites de passage*, Paris, 1909, p. 88) are neither complete nor comprehensive; there is no logical connexion between the twelve or fifteen kinds of names which they place in groups. They will be found in the present article arranged and explained in a different way.

The attention of ethnologists should be drawn to the innumerable 'designations' employed by primitive races either among themselves or before strangers in order to hide their real names. These are not names; they have none of the characteristics of names. Their apparent multitude has misled many investigators; their elimination, on the other hand, leads to the surprising discovery that the number of real names is very small and shows that the choice of these names by primitive peoples all over the world has always been guided by the same four or five ideas.

3. Change of name.—(a) *Ordinary men.*—The name is independent of the physical existence of the person. In other words, not only is it not necessarily given at birth, but it may be changed once or oftener in the course of life, either in circumstances determined beforehand or as a result of certain unforeseen circumstances.

A great many races may be cited among whom a provisional name, purely for practical purposes, is given to the new-born infant, and its real name (that of an ancestor, or the so-called totemic or theophoric name) is conferred, with a prescribed ceremony, when the child reaches a certain age marked by some visible sign (first tooth, end of suckling, puberty, etc.).

Thus, in Australia and among the Malays, children are named at first according to their order of birth. Tylor (*PC* i. 253 ff.) gives similar facts for America, among the Dakotas and the Sioux. In Africa—e.g., among the Basonga (C. van Overbergh, 'The Basonga,' *Monogr. ethnogr.* iii, [1908] 277)—the provisional name is a diminutive of that of a man or woman of the village, who will be a provisional protector of the child. Among the Manjas (H. Gaud, 'Les Mandjas,' *Monogr. ethnogr.* viii, [1911] 327) the real name is not given until about the age of seven years. Name-giving is delayed among some races until adult age—e.g., among the natives of British Columbia (C. Hill-Tout, *JAI* xxxvii, [1907] 308-310). Young Australians do not give up their provisional names until the age of puberty (cf., e.g., *GE* 3, pt. ii, *Taboo*, London, 1911, p. 320).

In reference to successive name-changing, traditionally fixed cases must be carefully distinguished from exceptional circumstances. For the fixed cases the most constant phenomenon is the obligatory change of name at the time of general 'initiation' of the young men (this must not be confounded with 'secret societies').

The Waiyan (D. Livingstone, *Last Journals in Central Africa*, London, 1874, i. 81) and the Sherbro (T. J. Aldridge, *The Sherbro and its Hinterland*, London, 1901, p. 173) are two good examples from African peoples. The same change is practised in Polynesia (W. Ellis, *Polynesian Researches*, London, 1830, i. 322-324, was the first to notice this custom, numerous examples of which have been collected since by anthropological literature).

Among other occasions on which the savage changes his name, the following are the most important. (i.) Parents change their names at the birth of their first child (see, e.g., T. Engels, 'Les Wangata,' *Revue Congolaise*, ii. [1911] 29, and cf. *GB*³, pt. ii., *Taboo*, pp. 331, 339, on the name of parents called 'Father of N' and 'Mother of N'). (ii.) Parents take a new name at the death of a child. This has two variants: (a) a person gives up his name and takes that of the deceased (Musquakies [cf. M. A. Owen, *Folk-lore of the Musquakie Indians of N. America*, London, 1904, p. 83]); and (β) all the chief members of the family change their names, either for a fixed time or altogether (savages of California, Colombia, Borneo, Tasmania, etc., cited by A. Bros, *La Religion des peuples non civilisés*, Paris, 1907, p. 197 ff.). These two processes, suggested by opposite reasons (see § 8 and II. below), really have a common source. Frazer's remarks on the duration of these changes of name (*GB*³, pt. ii., *Taboo*, p. 372) will be examined below (§ 10 (d)). (iii.) A person changes his name after any striking event in his life, sometimes by successive replacements, sometimes by accumulation. The most complicated systems (apparently arising from ethnic fusions) are observed on the west coast of Africa—Dahomey, the Ivory Coast, Nigeria, Benin (cf., e.g., A. Le Hérissé, *L'Ancien royaume du Dahomey*, Paris, 1911, p. 235 ff.). (iv.) Lastly, the most curious case of periodical adaptation of the name to regular exterior circumstances is that of the Kwakiutl Indians of British Columbia, where the nobles had a winter and a summer name (cf. *GB*³, pt. ii., *Taboo*, p. 386). Here we see that feature so characteristic of pre-Columbian American religions—the predominance of astrological and seasonal elements in the garb of religion and ethics.

From the long list of unforeseen events entailing a change of name the following are typical examples. The new name to be taken may be revealed by a dream or an oracle (e.g., in Dahomey). More frequently the name is changed after a dangerous illness; the new name is revealed by the medicine-man or the sorcerer (see, e.g., R. Schmitz, *Baholoholo*, Brussels, 1911, p. 327). The accession of a king may oblige all those bearing the same name to take a new name at once under pain of death (cf., e.g., A. Réville, *Les Religions des peuples non-civilisés*, Paris, 1883, i. 41; *GB*³, pt. ii., *Taboo*, ch. vi. § 4). The cases of this kind are connected with prohibitions, which will be discussed below (§ 10). Lastly, the new names conferred by the favour of the chief on his brothers, officials, and servants (Le Hérissé, p. 235) should rather be connected with the theory of accumulated names (see below, § 4).

(b) *Chiefs and priests*.—The names of the intermediaries between the community and the supernatural powers are subject to special rules. The name of an individual before the new condition is, as a rule, replaced by a new name, the choice and the conferring of which are the object of a ritual and processes of transmission fixed with the greatest care. This class of persons includes medicine-men, sorcerers, and members of already organized priesthoods, as well as chiefs, princes, and kings, the theory of the proceeding being the same for them all (cf. below) and differing only by the different degrees of evolution of the primitive idea. The giving of the new name might take place (1) at the professional initiation of the sorcerer or medicine-man, (2) at his entrance into the priestly body, (3) at the conclusion of the initiation or training in the college of priests, or (4) on the occasion of his first entrance into office. (For the most typical examples of these facts see works cited above.) For sovereigns or chiefs of groups

the protocol of the kings of Dahomey on their accession (Le Hérissé, pp. 13–16), with its barbarian complication, is a good example, half-way between the primitive method of the Bushongo (E. Torday and T. A. Joyce, *Les Bushongo*, Brussels, 1910, p. 108) and the learned and civilized elaboration of the coronation-names of the kings of Siam. The three great classes of names of royal accession seem to be: (1) the groups of theophoric or theogenic names showing the connexion between these sovereigns and the powers which rule the world or are the national protectors of the ethnic group; (2) the names expressing the rights of the new chief to govern a certain district or group of men; (3) the motto-names recalling directly or by allusion (by diction, sentiment, etc.) a great event of a mythological or historical kind.

The most typical African series has been collected in Dahomey by Le Hérissé (p. 13)—e.g., for Dako-Donou and for Ouè Gh'adja (= 'the fish-king of the ocean escaped from the net'), in which the theory of the divine origin of the monarchy is combined with the allusion to events of a historical kind in a manner which perhaps explains the origin and formation of the powers of royalty for a large part of the African continent (cf. KING [Egyptian]).

The successive and accumulated names (cf. § 4 below) of the kings of the Baviili are examined in R. E. Dennett, *At the Back of the Black Man's Mind*, London, 1906, p. 100 (in spite of its obscurities and lacunae, very excusable in such a new and complicated subject, Dennett's treatment of this subject is to be highly recommended). In the opinion of the present writer, these names are the most primitive examples accessible with any certainty of the way in which the name of the chief was conceived as having to express a necessary connexion with the supernatural beings or forces whose intermediary he was. E. A. W. Budge (*Osiris and the Egyptian Resurrection*, London, 1911, p. 242) has made a thorough comparative study of these African 'strong names' and those of the Pharaohs (cf. NAMES [Egyptian]).

4. *Superimposed or accumulated names*.—Along with names which are successively changed we find, though in a fragmentary state in different parts of the world, the practice of accumulating names. Accumulated names may be grouped in two categories. (1) Those of the first class, purely 'optical' in form, do not imply any essential change in the individual; they simply state his relation to his own people, or group, or to the world of spirits. Such, e.g., are the three names of the Ba'ngongo—the first is the individual name, the second, preceded by the sign *bôn*, is that of the mother, and the third, preceded by the prefix *a*, is that of the father (cf. Torday and Joyce, p. 108). (2) The second class comprises the names which, by being added to the first name, one after another, connect it with accumulated forces or protections, and each time add to the personality of the bearer.

Surnames, 'good' names, eponymous names, form a transition-group between these two groups. They must be carefully distinguished from simple indicating surnames, describing the individual, or referring to a memorable event which has happened to him (cf. § 3).

One of the best examples of the process of accumulating names, which has been very little investigated, is that of Dahomey (Le Hérissé, p. 235, unfortunately not clearly described), where the child, besides his apparent names (rank and place of birth, physical peculiarity, etc.) and his real secret name (derived from the protecting fetish of one of his parents), afterwards receives a name derived from that of the divine author of the life of the family-group (e.g., the names derived from *Sô*, the thunder-god, or *Haun*, the sky-god—*Sosau*, *Sosa*, etc., *Haunjo*, etc.), and then a name of a protecting spirit, revealed at a certain stage of adolescence by an oracle.

Although the theory cannot yet be demonstrated with the necessary number of proofs, the present writer suggests that the series of names given to one person, far from being a later complication, is a survival of a state which preceded changes of name and probably even the single fixed name.

5. *Names of the dead*.—Newly-born children receive the names of deceased members of their family, according to fixed rules, arranged beforehand in a definite order, or determined at the moment of birth by traditional processes (dreams,

divination, mantic ceremonies, canonical revelations, etc.).

Examples occur among all the races of the world. Of all the facts connected with names this is the one whose universality is the most remarkable.

Among the Wa'ngata of the African Congo the oldest child takes the name of one of the father's ancestors; for the others the father chooses the names of other ancestors, and sometimes allows these to be taken in the maternal line (Engels, p. 29). The first-born among the Waregas takes the name of the paternal grandfather, the second that of the father's eldest brother, the third that of the maternal grandfather, etc. (E. Delhaise, 'Les Waregas,' *Monogr. ethnogr.* v. [1909] 153). The Baholoholos give the child the name of a paternal ancestor or of a dead relative revealed by the sorcerer (Schmitz, 'Les Baholoholo,' *ib.* ix. [1912] 327). Among the Balubas the name given is that of a dead relative of the paternal branch (in which case it is given by the child's father), or, in certain cases determined by divination, of a relative of the maternal branch (in which case it is conferred by the mother) (Colle, 'Les Balubas,' *ib.* x. [1914] 251). Among the Tahwi of Guinea the child receives the name of a dead ancestor after a divinatory test (cf. below (2)); and the proceeding seems general there (M. H. Kingsley, *Travels in West Africa*, London, 1897). The mere enumeration of the known facts for the continent of Africa would exceed the limits of the present article, and those given here are only from the most recently published. For Asia and Australasia a series sufficient for demonstration was given by Tylor (*PC* ii. 3 ff.) with the necessary references, to which are to be added the innumerable facts gathered together since in the immense bibliography of ethnological periodicals. The examples taken from the Khonds and from New Zealand are typical for Asia and Australasia. The same abundance of definite facts exists throughout the whole of the New World, among the Algonquins, the Tacullis, the Nutkas, the Eskimos, the Kaloshes, the natives of Vancouver, and the Yumanas of California. It will be noticed that the giving of the name of the dead ancestor does not usually take place at birth (see above, § 1). Observations made by the first explorers of the New World show that the giving of the name of ancestors was practised by a multitude of races which are now Christianized or have disappeared (cf., e.g., the naive account of B. de Sahagun, *Hist. générale des choses de la Nouvelle-Espagne*, tr. D. Jourdanet and R. Simeon, Paris, 1880, p. 456, of the name given to the new-born child among the Aztecs, of one of his grandfathers, 'that he might share the fortune and the lot of this relative by carrying them on'; see also H. de Linschot, *Le grand Routier de mer*, Amsterdam, 1633). Lastly, the fact that a similar practice has been found among the latest non-civilized branches (Lapps) of the continent of N. Europe (G. F. Klemm, *Kulturgeschichte*, Leipzig, 1843-52, iii. 77) completes the convincing proof of the universality of the custom.

The giving of the name of dead relatives is either (1) subject to an order fixed by the law or custom of the social group, or (2) regulated by processes of divination. The first of these modes marks a considerable progress in evolution, and forms one of the rings of transition between the non-civilized stage and the semi-civilized. It cannot, therefore, be regarded as belonging to primitive peoples, and the cases enumerated above (§ 2) give a sufficient idea of it. On the contrary, the idea of having recourse to exterior aid, revealed by divination, in order to find out the name of the dead to be given to the new-born child, belongs rather to the group of concepts which may, relatively, be called primitive.

It is not surprising to find here an infinite variety of divinatory methods. Although the psychological mainspring is a single one, its external manifestation has assumed a thousand different aspects. The principal classes are: (a) indication by a dream; e.g., the dead of the Waregas indicate in a dream to the mother the name of the child about to be born, and among the Balubas their desire is shown by dreams of a mysterious kind, which are explained by the priest; the same methods recur in Brazil and over the whole of S. America; (b) the dream with direct meaning may be replaced by the vision of an abnormal or inexplicable phenomenon or by violent pains during accouchement (Baholoholos and Balubas), of which the priest gives the explanation, as in the case of the dream; (c) still more frequently the child itself reveals its name by (apparently, at least) indicating its desire when it is shown a number of objects that had belonged to various deceased ancestors (Guinea), either by looking as if it recognized them or by stretching its hand towards them (Belgian Congo); or it interrupts a list of names of ancestors recited to it by crying or sneezing (New Zealand, Tatar Cheremiss); (d) divination by the automatic combination of external material elements constitutes a kind of mystical writing; combinations of leaves, small sticks, strings, or movements in a liquid indicate the name of a dead relative to be given to the child, and are regarded as signs of the wish of invisible beings (the method of the Khonds—grains of rice thrown into a cup of water—is a good example); (e)

physical resemblance—blemishes, signs, or special marks on the body—between the new-born child and the dead person whose name he must take (Indian Nutkas, Indian Kaloshes, inhabitants of Vancouver in America; Wa-Nyikas, Guinea, Yorubas in Africa; the examples in Australasia have not yet been classified). This short list is all that can be given here.

6. Totemic name.—Besides a person's names, surnames, new names, successive or accumulated, modifying, strengthening, or adding to his personality, there are the names which have been classed by anthropological literature under the vague and incomplete term 'totemic' (see TOTEMISM).

The totemic name of a person may be traditionally constant. This tendency to fixity is a step towards the family name and the generic name of the social and religious group. It is often in such a case an embryo of the theophoric or theogenic names of advanced societies. We may therefore doubt *a priori* whether this fixity is a primitive characteristic. The totemic name revealed accidentally by an unforeseen event, by divination, or by a direct dream is, on the contrary, in the comparative frequency of its manifestation among present savage races, a probable survival of the primitive process of the individual choice of the totem. This is suggested, however, with the reservation of a more complete examination, which it is not possible in the present state of anthropological research to conduct with the necessary strictness. This presumption is strengthened by the observation of many cases in which the giving of the totemic name is the result of the direct use of divination, not accidentally, but regularly, either at birth or at a change in the personality of the individual. In such cases the divinatory proceedings are similar to those employed for the names of the dead given to newly-born children (see above, § 5), the most frequent being the chanted enumeration of lists of names of 'totems' or 'spirits', stopping at the one which coincides with the delivery of the mother or a cry of the child. The variants cited by Frazer (*Totemism and Exogamy*, London, 1910, i. 51 ff., for the Samoans, Quiches, Hervey Islanders, etc.) give illustrative examples. The names of the mysterious forces, beings, or 'spirits,' and of the animals, plants, or substances which they inhabit, of the colours which invariably attract them, and of phenomena by which they show themselves, form a significant list of what the primitive man wishes to get from the totemic name. The use of the constant traditional totemic name, afterwards common to a group, will be examined below (§ 11).

7. Pronunciation of the name.—The pronunciation of the name has effects regarded as irresistible—and by 'pronunciation' is meant, at least primitively, the 'declamation,' with chanted intonations, rhythm, and melopœia. The force of this pronunciation is the same for men, animate beings, visible or invisible, spirits, genii, demons, gods, spirits animating things apparently inanimate, etc.—for the weakest as well as for the strongest. Spirit-raising, exorcism, possession, sorcery, and oaths, in all their infinite variety, are based on this imperious handling of names. The chief operations of primitive magic-religion and black magic rest above all on the knowledge and pronunciation of the names which they claim to attract, subject, or obtain in an amicable or hostile manner. Commands of man to the beings or forces of this world cannot be imagined without the pronunciation of their names. Properly addressed, these beings cannot escape from the order given them. If spirits and the dead are subdued by the calling of their names, why be surprised at the idea that one may cause a man's death by taking away his name, or by incorporating it by sorcery with a substance that is to be destroyed? And why be astonished, on the other hand, that the

man can protect himself by entrusting his name to a material object with which he incorporates it, and then hiding in a place known to nobody? (For the innumerable circumstantial proofs of this general theory see the books mentioned above, §§ 1-6.) The affinity between the pronunciation of the name and the personality is as certain as a chemical reaction, with the same fatally necessary effects, even although it is without the wish or contrary to the wish of the person who pronounces it. The attracting takes place of itself, with all its inevitable consequences.

Hence the belief that the name attracts the fate of the person bearing it; e.g., the Wa'ngata (Engels, p. 30) believe that, if all the children of one family die at an early age, the cause is the danger which their name contains, and they call the next child 'He who is deprived of a Name,' in order to shield him from the unknown risk. Hence, in the majority of cases, the changes of name after an illness (see § 5), and also the idea of the Bechuana, Navaho Indians, and New Mexicans that the mere pronunciation of certain names of spirits or gods can cause real floods or storms, either at any time or at certain periods (e.g., in winter). The theory of unlucky names or names of evil augury of advanced religions is a normal evolution of these facts, which recur universally among non-civilized races.

The power of the name is naturally in proportion to that of the person whom it calls up, man, spirit, or god, and specialized in the attributes of that being. A practical consequence of this principle, important for the problem of totemism (q.v.), is that the carefully recited pronunciation of the totemic name of a dead person can recall that person to life (cf. Frazer, *Totemism and Exogamy*, i. 43); and the fact that the dead gives over to death his personal name, but keeps his totemic name, is also important.

8. Names prescribed by circumstances.—One of the first consequences of the power of names is seen in the rule that certain names must be given to certain persons in certain fixed circumstances, which place them in fatal affinity with the power of certain forces or spirits (who possess or are prepared to protect these names). Physical marks, peculiarities of place or time of birth, natural phenomena, terrestrial or astronomical, the thousand alleged revelations of invisible wills, establish infinite varieties peculiar to each of the groups of non-civilized races, and cannot be further detailed here.

One case (not yet investigated) may help to the understanding of the general theory of such cases. It is that of the names of twins, whose appearance (in Africa chiefly) has always created characteristic religious manifestations. With most of the Bantu peoples twins must always receive the same names—e.g., Ahuri and Nobese for boys, Ahuda and Tindabe for girls, among the Manghattus (cf. *Monogr. ethnogr.* iv. [1899], where the author has unfortunately omitted to say what were the functions of the spirits to whom these names belong). The example of the Balubas (cf. Colle, p. 252) throws fresh light on the matter; twins there invariably receive the names of two former kings, Kyungu and Kahya, probably twins, who went mad. The divine character of mad kings and priests in the majority of non-civilized religions is well known, and this case of 'totemism' peculiar to twins should be carefully compared with the facts collected by E. S. Hartland in his *Primitive Paternity*, London, 1910.

9. Secret names.—A second inevitable consequence of a similar intrinsic power of the name is the development of the idea of withdrawing the name from the eventually dangerous use that might be made of it, by keeping secret the real names of persons.

(a) *Men*.—For men we have the series of secret names, universal among primitive races, the characteristic cases of which are found in the Indies, in the Far East, among the shamanist peoples of the north in Asia; in Senegal, Dahomey, the Congo, S. Africa, and Abyssinia in Africa; among the Araucanians, the Indians of Chile, the Colombians, the Navahos, the Indians of Texas and of other parts of the United States in the two Americas; and among all the races of Australasia (for an early list of these facts see Bros, p. 197,

and especially GB³, where will be found the chief bibliography on the subject down to about 1895).

This explains the custom of having for the individual an ordinary name, for daily use, and a real name, which he alone knows (or which even has sometimes been given to him at his birth by his parents unknown to him). Sometimes this name is given during the first years of life; sometimes it is revealed secretly to the individual, on a fixed occasion, by his parents, the fetish-man, or the priest, or by a priestly college (e.g., on the occasion of entrance upon the duties of diviner, sorcerer, priest, chief, king, etc.). The most frequent case is that of the secret name whispered by the mother in her child's ear on the day of his birth (cf. PC³ ii. 231 for the Mandingoes). He who possesses this secret name will never reveal it to anybody, and in all circumstances his ordinary name will be used, or the various accumulated names cited above (cf. GB³, etc.).

(b) *Spirits, gods, and the dead*.—Like men, spirits, genii (and later gods), and the dead have also secret names, for the same purpose of protection, or for keeping their powers intact. The secret name gathers strength from a prohibition (see below, § 10 (a)) of pronunciation, of pictographic representation, and later of representation in writing. The names of the protective spirits called totems share in these protections and prohibitions (cf., e.g., Frazer, *Totemism and Exogamy*, i. 16). The secret of the real name of the gods leads us to the dividing-line between non-civilized and civilized. The knowledge of these secret names plays a considerable part in the magic-religion of advanced races (and in all their black magic); and the mystery of these secret names of the classical gods has been very often so carefully preserved by the depositories of this treasure that even to-day we do not know the real personal names of most of the great figures of past religions; it is only the apparent names that we know.

10. Forbidden names.—By a natural transition another consequence, even more varied in its manifestations, is to surround names with a host of protections or prohibitions, which ethnography has somewhat arbitrarily called 'tabus.' The cases of name-tabus can be counted by thousands. They may, however, be classified for practical purposes as follows. (a) The personal name of the individual must not be pronounced, in some cases even by himself. This prohibition is parallel to the custom of the secret name. It has the same variants and modes of time, place, and circumstance. This point was noticed during the first synthetic researches by Tylor (*Early Hist. of Mankind*², London, 1870, p. 142), and anthropological literature (especially GB³) has since accumulated so much information on it that simple geographical indications will be sufficient here, referring for enumerations to the two works cited.

Prohibition naturally increases in strictness according to the importance of the individual. It attains its maximum when the latter, on account of his virtues, has received a name which connects him with the world of supernatural forces (cf. below (b)). A corollary, which is not found among all primitive races, forbids the pronouncing of the names of near relatives (Nyassaland, Kafirs, E. Africa, Dayaks, natives of Celebes, Omaha and Dakota Indians, etc.).

(b) The same prohibition extends, in a more rigid form, to the world of gods, genii, spirits, and powers personified by animism. The names of these invisible beings must not be pronounced; they must not even be written when symbolical pictography and writing have acquired, among the semi-civilized, the magical value of the voice (China, Korea, Cambodia, etc.). The prohibition may be absolute (Mongols, Bechuana), at certain periods of the year (Central America), on certain

unlucky days (*passim*), or on certain occasions revealed by divination (*passim*).

(c) The same list of prohibitions applies to the names of personages who are no longer simply men, but who by consecration have been made intermediaries between men and the invisible beings, or have even been made members of this group of 'invisibles' (fetish-men, diviners, sorcerers, priests, chiefs, and kings). The secret name which they receive at initiation, entry into the priesthood, or coronation cannot be known (Siam, Dahomey); or, if it is known, it cannot be evoked or pronounced (Far East, Laos, E. Siberia, Ainus). Men who had a similar name must change it (cf. above). The prohibition against bearing a name similar to that of the chief goes even so far as to deprive of this name the dead who shared it during their lifetime (Polynesia, New Zealand, Zululand). Here and there 'primitive terror' has marred the ordinary language, by changing or disfiguring by homonymy or alliteration all the words in it which might evoke the name affected by tabu (Zululand, Tahiti, etc.). This fact is of interest in the morphology of primitive languages.

(d) Belonging to the world of the 'invisibles,' and *a priori* eventually dangerous, the names of the dead are the object of the same tabus. Here the prohibition shows interesting differences, resulting from the variable idea held concerning the nature of the spirits of the dead or the time during which they are supposed to be dangerous. The prohibition may refer to the name of the dead itself. In this case it is of perpetual duration among some peoples. More frequently it is limited either to the duration of the funeral ceremonies, to that of the mourning, or to the supposed duration of the bodily remains (the last two cases in primitive times are one and the same).

The examples collected by anthropological literature prove the universality of this class of tabus (Asia: Samoyeds, Chermis, Ainus; Africa: Kafirs, Zulus, W. Africa, and the majority of Bantu races; Australasia: the whole of Australia, Tasmania, Celebes, Borneo; America: Brazil, Peru, Paraguay, Mexico, the Indians of Texas, and of other parts of N. America).

The opposite custom, that of leaving the dead man's name with him, but changing those of all the survivors, was noted in connexion with the living (cf. above, § 3 (a)), but, in reality, it does not spring from the same initial motive as the preceding tabus. It is another means of warding off the same danger, by bewildering the dead or by withdrawing the living out of his power, by his ignorance of their new names. For the same reason, the name of the dead man was given at his death to a living being—in order to prevent him from doing harm and from wandering invisibly to inflict injury. Thus among the Tacullis, at a death, the priest 'seizes' the name of the dead from his mouth, and places it materially on the forehead of one of those present. It becomes incorporated in him, and it will pass, by the sexual act, into the embryo of the first child born to this man; the child will bear the name of the dead. At the funeral ceremony in Australia a young warrior takes the name of the dead man, pretends to go to the other world, and returns; he is henceforth regarded as belonging to the family of the dead man, for he has really become the dead man, who has now ceased to be dangerous. Among the Chermis, at the funeral feast, a man, made up and dressed like the deceased, takes his name, says that he is happy in the other world and has no desire to return from it, and disappears. This is a perfected variant of the same initial idea. In the case of very young children, however, who would not know any evil, we find the opposite practice. Their names are repeatedly called up, in order that they may become reincarnated in the only way which is possible to them, by animating the embryo in the womb of a pregnant woman (preferably the mother of the dead child). To facilitate the process the bodies of young children (Belgian Congo, ancient Egypt, Central America) are buried either in the houses or at the side of paths frequently trodden by the women of the town or village.

(e) With men, priests, kings, spirits, and gods, the rest of animate nature participates theoretically in this class of prohibitions. The logical consequences have been almost everywhere deduced by non-civilized peoples—hence prohibitions bearing the names of certain animals, plants, fragments of nature apparently inanimate but regarded as animated by a particular spirit, such as mountain-peaks, rocks, lakes, marshes, rivers, etc.; hence

also prohibitions regarding the names of certain sacred objects or even phenomena.

The sum-total of the name-tabus cited above amounts to several thousands, which are distinguished, in the principal subdivisions, by time, place, and circumstance, and characteristics at one time temporary, at another permanent. There can be no possibility, therefore, of finding them all at once in each of the non-civilized races. Nor can we expect each of these races to have traced to the end the pseudo-logic of the deductions drawn from the first rules of the subject. But we have the essential proof of the presumed primitive character of such tabus in the double fact (1) that the general features, explicable by the same initial data, recur in a whole group of peoples who could not have had any historical connexion with each other, and (2) that the majority of the lists of prohibitions, fragmentary or not, always recur identically with regard to a certain kind whenever inquiry is methodically made. There is therefore the greatest probability that we have here to do with authentic survivals of the ideas of primitive people.

11. Collective names.—Like the individual, the group also has its names. The most important is the name of the ancestor (see ANCESTOR-WORSHIP AND CULT OF THE DEAD), spirit, or tutelary spirits with whom the group has formed an alliance. From the smaller to the larger group, from the family to the tribe, to the people, to the confederation of tribes, to the semi-civilized nation, a series of names, sometimes superimposed, is the possession and exclusive property of the group. We find, again, for these collective names most of the variants cited above in the case of the individual, including the so-called 'totemic' name. These characteristics of collective names have the same consequences for them as for the individual names; hence totemic collective names, or others of a secret character, or specially reserved names (cf. below, § II.); hence also all the prohibitions or so-called tabus which concern them.

II. DISCUSSION.—The above facts show that a general explanation of all the phenomena could not be found in either the totemic or the animist theory. They reckon with only some of the facts. The explanation of 'prohibitions' by tabu is a pure tautology which explains nothing. In fact, the beliefs and usages relating to the name proceed from a far more general concept, to understand which we must completely remove 'civilized' people from our argument.

The nature of the name, as primitive man fancies it, its power, its dangers, its good or bad qualities, are connected with the idea of the articulated voice and its effects. The enunciation of the primitive name must be conceived not as a series of syllables articulated with more or less tonic accent, but as a chanted declamation, in which rhythm, note, and tone constitute the essential elements. Such an enunciation, therefore, is connected with the powers and nature of the *carmen* and with the general theory of voice-magic. Here we enter the sphere, known partly by anthropological literature, of the sympathetic and mimetic forces and of the irresistible power of the human voice, either unorganized or organized under forms which the term 'music' more or less completely includes (cf. J. Combarieu, *La Musique et la magie*, Paris, 1909, p. 125 ff.). But statements like these may be extended from the human voice—which is only a small section of the whole—to every 'voice' in the world, and, in the last analysis, to everything that is 'sound.' This statement can be easily verified, so that proof is unnecessary here. Now, if sound itself possesses such powers and effects, it is because it is one of the aspects of the very essence of life, perceptible by the senses. Sound is an emanation

of life, and the sound emitted by a being or an animate object is a function of that life.

If we accept these initial data, the chanted (or later declaimed) name is not merely an artificial imitation of what forms the very substance of the person; it is not even a simple 'double'; it is *this very substance*. The name of a person is his very soul—let us say his 'name-soul'—i.e. his reason for living, his life as far as it has any personality. But the ego and the life (not only the terrestrial life in the body of flesh, but life in itself) are not distinguished by primitive peoples. They associate both in one and the same substance. They naturally imagine them under an exclusively material form. They then notice the manifestations capable of being perceived by the senses. They notice that sound is perceived not only by the ears but sometimes also by touch (in the form of shock), and even by the eyes (luminous vibrations accompanying sound, vapours produced in the air by the emission of a sound or of the human voice). Sound, and consequently the song and the voice, appear to them finally as a characteristic aspect of that energy whose vibrations constitute life; and the various sounds peculiar to beings or animated objects are the essential manifestations of the ego peculiar to each of them. In reproducing them by his own effort the human being conquers the possessor of this ego by taking the secret of his life from him. That life may continue more or less to animate from a distance the being from whom it is drawn, but it is in the power of a new master. Thus the name of the dead man given to the newly-born child is justified. What survives of the man is not his apparition, shadow, or any other of these more or less fluid multiple survivals, which move in the various abodes of the dead; it is above all his 'name-person,' his 'name-soul.' The desire of the dead to become reincarnated (and as often as possible in their descendants) is shown by those dreams in which they speak to the expectant mother, and the pains which the diviner interprets; or, if they have already returned in the body of the newly-born child, they pronounce their name, they reveal their personality by the movements or cries of the child, who recognizes the objects presented to him or salutes the pronunciation of his name in the list enumerated by the priest. Thus by the same process one of the greatest problems of primitive thought is solved—to know the origin and the fate of the living being. Alongside of the body of flesh, the begetting, and the conception, the essential germ of life, independent of the sexual act of man, and the only depository of the real personality, becomes detached from an immense number of 'name-souls,' dwelling either in the same regions as living beings or on their immediate borders, and animating sometimes 'spirits,' sometimes animate things, and sometimes human beings by periodical returns to the body of man. In this way is explained the custom of making the tombs of children on footpaths trodden by a mother who, having lost a young child, calls it by its name, in order that it may come and reincarnate itself in the new germ within her. And all this reincarnation of the dead in new beings of the same family frees the survivors from two serious cares—preoccupation with the suffering and privations endured by the disincarnated 'name-souls,' and apprehension of the dangers which the miserable condition of these dead brings upon the living.

These dangers justify all the strange prohibitions or tabus which have been found to surround the names of the dead. Spells were cast by the simple pronunciation of the name; the dead would come to roam about their former dwelling-places; they would try to get possession of their goods again; they would have revenge for their

privations and sufferings; they would seize the bodies of the survivors by 'possession.' The suppression of their name among the living is one of the chief precautions to prevent them from coming back to the place where they lived. The changes of name among the survivors puzzle them and break the bond between them and the survivors (not to mention all the accessory precautions taken to prevent the return of the spirit of the dead [see art. DEATH AND DISPOSAL OF THE DEAD]). Sometimes a veritable plunder takes place; the 'name-soul' of the dead is taken from him at his death by a living person who plays the part of the dead man, and, having thus deprived him of all his power, prevents him for ever from acting, or substitutes his own will for the dead man's.

These prohibitions, disguises, or changes of the names of the dead or of their surroundings are, as we have seen (§ 10 (d)), most frequently limited to the material duration of the bodily remains. A magical bond unites the different parts, the whole of which form the being (see BODY). The body of flesh, or its debris, remains the necessary material support which enables the name-soul to continue in material proximity to the living. This support destroyed, is the name-soul condemned to dissolution? No non-civilized people has formally asserted this; nor has any one formally expressed its indefinite existence. Whether it is that our information is as yet incomplete, or that primitive thought has not the power to push to their conclusions the logical deductions from such problems, the ideas of non-civilized races on this point end in uncertainty. Some seem to have believed in the possibility of an indefinite prolongation, on condition of being maintained by reincarnations at intervals not too far apart. Hence the possibility of dead persons becoming reincarnated after several generations or after the complete disappearance of their mortal remains, on condition that their 'names' are evoked by certain persons provided with a special power (kings or priests); hence also the entirely logical consequence that certain 'name-souls' are more powerful and resist destruction longer than others, according to the quality or the rank of the persons who bear them, or, still more frequently, according to the 'totem' power of the 'spirit' to which the name gives the individual access. Here we see the first manifestation of the future theory of theophoric or theogenic names.

The facility of managing the 'name-soul' by the irresistible force of pronunciation has already (see I. 7 above) justified all the precautions taken by the living to prevent any one from using their names; it also justifies all the strange prohibitions of which the chief have been cited above. It explains the possibility of depriving of life the person whose name is evoked by artifice. With it is connected the tabu which not only protects the individual's name but also prevents him from pronouncing that of his near relatives or connexions, by reason of the increase of mysterious power given him by the bond of kinship. It gives the key to all the customs connected with secret names. It justifies the apparent absurdity of those kings who punish with death subjects who bear the same name as they. The capital penalty for making use of a chief's name in an oath is due to the same fears. Lastly, the dangers of the thoughtless or malevolent use of the names of invisible beings or supernatural forces rationally lead to the tabus regarding the names of gods, geni, spirits, totems, etc. These prohibitions have been taught and commanded to men by the leaders of the invisible world, in order to guard their independence; or they have been asserted by the chiefs of a human community in order to keep intact the depository of the secret powers by which man can command the masters of the universe; or, lastly, they have been issued in order to prevent vengeance, anger, or the misfortunes which would be let loose by the pronunciation of these dreaded names.

The material being is in constant change, normal or abnormal, regular or irregular. To changes of stature, appearance, physical aptitudes, family or social conditions, correspond new affinities with new categories of vital substances. Consequently a new name must be adopted, containing in its essential texture the harmony necessary between

the body and the vital principle which makes it a person. The innumerable varieties of name-changes are explained in the last analysis by this necessity of readjustment: name-changes in the different classes of age, at circumcision, at puberty, at initiation, at the first motherhood or fatherhood, or at old age, etc. The needs of a name-soul better suited to a new state, stronger and wiser, entail many consequences. The danger of possessing a name subject by affinity or weakness to the attacks of spirits has its remedy in a change of name after an illness. In the same way the need of new special forces for the functions of diviner, sorcerer, priest, chief, or king, presupposes the presence, within their bodily structure, of new name-souls, which introduce into it the powers or aptitudes formerly lacking. These new names, as we have seen (§ 4), come as entirely new entities, are superimposed on the old, or are substituted for them, and their virtue transforms the being inhabited by the new souls. The names of consecration, coronation, installation, priesthood (or their equivalents in the social organization of primitive man) transform the whole substance of those on whom they are conferred. The choice of appropriate names unites them with the groups of beings possessing invisible and mysterious powers. A new being is created, sharing both in the management of his own forces and in that of the human group which he represents. A natural evolution leads these sacred intermediaries to take the name even of one of the all-powerful masters, and then to identify themselves completely with him. A projection of the name-soul of the spirit is thus extended to the human body which it penetrates and transforms. It inhabits the body of the chief or of the priest. It *mizes* the divine substance with that of the human being. The king-god or the priest-god is created.

But at the limits of primitive thought the primitive peoples show us in germ a new evolution of this datum. For the confusion of names from simply taking the divine name is gradually substituted a compiled name of king or priest which will express no longer an identification of crude sympathetic magic, but a mixture (or rather a capacity for mixing) with one of the forces, manifestations, aspects, *âperal*, of the divine or supernatural being. Here we get a glimpse of the beginnings of more developed and infinitely more refined concepts. These lead civilized societies to the use of the theogenic name, the theophoric name, the eponymous name; then, later still, to the name of the protecting patron and to the mere pious intention, taking the place of the magical mixing, just as the prayer of the priest takes the place of the summons in the fetish-man's incantation.

But a more important fact dominates the subject and in a way constitutes the *summum* of the name-soul. If the millions of visible or invisible beings have all a vital principle of the same texture, the degrees of resistance to the overthrow of these principles vary infinitely for each of them. Nevertheless, none of them has theoretical immortality, nor has any one of them been imagined to be the first origin of life. Unable to conceive eternity metaphysically, the thought of primitive man solves the problem of the origins of creative life in its own way. It imagines for each of the different groups of beings an entity, a special name-soul, composed of all the 'name-forces' which it has detached from itself, of all the name-souls which it has put into the different persons or the different beings connected with it throughout the course of time. This entity is the supreme principle whose individual existences are only signs. Hence it is that the name of the clan, the tribe, or the nation, the totemic name, the

mysterious name, is so jealously guarded by the human group; it maintains the bond between the source of life and individual transient existences; it establishes the necessary mixture, the safeguard of the individual life, between the collective soul common to all and the special soul of each. The totem, the depository of the indefinite life of each by the indefinite life of all, gives, with the knowledge of its name and affiliation with its inmost substance, the knowledge of charms, powers, and secrets which are like the 'treasure of war' of the race, and the sum-total of which has made the quasi-omnipotent force of which it is the résumé. If, as everything goes to show, the first cause of the phenomena comprised under the name of 'totemism' is in the inquiry into the vital principle of the human group, an immense number of totemic facts, such as tabus of all kinds, food and other prohibitions, and totemic initiation-rites, are explained and logically connected. Those relating to totemic names are naturally in the first rank.

With the so-called totemic phenomena we reach the limit of non-civilized thought. It would be beyond the scope of this article to examine the conclusions which the magic-religion of more advanced societies draws from these elements. But it is necessary in conclusion to point out at least two of the most important immediate consequences: (1) in the supreme domain of the divine the power of the name leads to a profound modification in the concept of creation, or rather of demiurgy; established first on the organization of inert matter by the effort or the physical action of the demiurge, or on its material fecundation by the supreme being, or later on direct childbirth, drawn from the very substance of the organizing god, the idea of the beginnings of the living and organized world results in teaching that matter has been organized and vivified by the god pronouncing the irresistible words and denominating beings or things in the measure in which he thus gives them existence; (2) in the wide domain of magic an equivalent power is accorded to the 'figurations' of names, no longer chanted or pronounced by the voice, but reproduced by pictography and later by writing. Written magic transports into the representation of names all the forces, practices, and prohibitions connected with the pronounced names. The repertoire of 'written names' has the same sanctity and power in itself as its proper reading. It keeps them enclosed in itself, as if it were a living substance which all these fixed names animate by signs—the non-civilized man even going the length of eating and drinking it diluted in a liquid, or trying to make all the virtues of a magical or a sacred book pass into the body. The history of advanced religions shows us all that man can draw from this new subject, the destiny of 'names.'

LITERATURE.—There is no monograph on names. The authorities cited in the course of the art. contain the chief references to works on the subject. GEORGE FOUCART.

NAMES (Arabic).—I. Kinds of names.—The name (*alam*, from '*alima*, 'to know,' like *nomen* from *noscere*) can be of four kinds, according to most authorities, though some increase the species to seven. There is the name proper, *ism*; the paternal or maternal name, *kunya*; the relative name, *nisbah*; and the sobriquet or title, *laqab*. Some add the *takhallus*, assumed name; the '*uhdah*, functional name (this appears to be an Indian usage); and the *manṣab*, name of rank. The use of the first four goes back to remote antiquity. The word *ism* is Old Semitic, and indeed is probably the source of the word 'Semitic,' since the theory is plausible that the hero Shem is an inference from the phrase *anshē shēm*, 'men of

note.' The suggestion of Robertson Smith (*Kinship and Marriage*², p. 248) that its source is to be found in the verb *wasama*, 'to brand,' is erroneous, since that verb appears to be purely Arabic, and to be traceable by a tortuous course to the Greek *σαμβρας*, 'a horse branded with the letter S.' The verb from which *kunyah* is derived is found in the OT in the sense of 'giving a name of honour.' Another derivative is used in the Mishnāh for 'euphemism,' and the general sense of the verb in Arabic is 'to name indirectly.' The practice by which parents are called after their children is not wholly unknown outside Arabia—e.g., in the *Iliad* Odysseus calls himself (in Arabic *iktanā* or *kannā nafsahu*) *Τηλεμάχοιο φίλον πατέρα*—but in Arabia it became regular, and names of this kind ('Father of Zaid,' 'Mother of Amr') were given to infants. The existence of a son bearing the name which follows the words 'father or mother of' cannot be inferred, as indeed the Abu Zaid of the *Maqāmahs* of Ḥariri states that he has no son named Zaid. As a mode of address it is thought to be respectful, and it enhanced a man's dignity if the sovereign thus addressed him. Historians (e.g., Ṭabarī, ed. Leyden, 1879–1901, iii. 2208) sometimes give the date of the first occasion when this occurred in the case of an eminent man.

(a) *Kunyah*.—The *kunyah* as an indirect mode of address served somewhat the same purpose as is served by the surname and title in the European languages, where the forename is not ordinarily employed outside the family. Hence strangers, when talking to children, call them respectfully by the *kunyah* (Yāqūt, *Dict. of Learned Men*, v. 442). Certain *kunyahs* go regularly with other names, owing to the first owner of the name having had the same *kunyah*; thus an Abrahām (Ibrāhīm) is ordinarily Abū Ishāq (Isaac), a Zakariyya Abū Yahyā (John), an 'Omar Abū Ḥafṣ, and an 'Alī Abū'l-Ḥasan. Hence the *kunyah* could often be inferred from the name, and, according to the tradition, Muhammad explained the statement in the Qur'an that the Virgin Mary was addressed as 'Sister of Aaron' on an analogous principle.

In the common language many animals had *kunyahs*—e.g., 'Father of Job' for the camel, 'Father of Ravening' for the lion; these names are employed in the dialogue of fables. In the 19th *Maqāmah* of Ḥariri a number of similar appellations are collected, which, according to him, are the *kunyahs* employed by parasites and the euphemisms of Sūfis; the former are chiefly designations of meats and the like—'Father of Thaqif (strong?)' for vinegar, 'Father of Jamil (handsome)' for vegetables, 'Father of Jāmī (collector)' for the table or tray; the latter seem to be names for abstract ideas—e.g., 'Father of Yahyā (John, meaning in Arabic 'he shall live') for death, 'Father of 'Amrah' for hunger. Parallels to these can be found in other languages—e.g., Davy Jones for drowning, etc. A dictionary of these *kunyahs* was composed by al-Mubarak b. al-Athir († A.D. 1209), called *Kitāb al-Muraṣṣa*, ed. C. F. Seybold, Weimar, 1896.

(b) *Nisbah*.—The *nisbah* is an adjective which locates the person to whom it is given, whether as the member of a tribe, as the resident of some place, as following some particular trade, or in any other way. This adjective has all the multifarious senses of the preposition 'of.' In the OT it is found with the tribal and local senses—e.g., Y'hūdhi, Tishbi, and perhaps others, as in 'Ibhrī ('Hebrew'). Names of trades are sometimes formed in this way—e.g., *kutbī* ('bookseller'), but more usually on another principle; they are, however, treated as equal to *nisbahs*. A. von Kremer (*Culturgeschichte des Orients unter den Chalifen*, Vienna, 1877, ii. 185) makes the observation that

the employment of trade-names as *nisbahs* dates from 'Abbāsid times; but this is unlikely. This form of appellation is not infrequently taken from a political or religious party—e.g., Sunnī, Shī'ī, meaning 'follower of the *sunnah*,' 'member of the *shī'ah* or party of 'Alī.' One important use of the *nisbah* is to indicate the patron of a manumitted slave; Zaidi might thus be the designation of one manumitted by a man named Zaid, as well as of a sectarian who held that a certain Zaid had a right to the sovereignty. This usage meets us most frequently in the case of persons manumitted by the sovereign. There are cases in which the *nisbah* is based on some more casual connexion, such as the name Badrī applied to Muslims who fought at Badr, or Alfi used of slaves purchased for a thousand (*alf*) coins. Naturally the same man may have numerous *nisbahs*. The most elaborate dictionary of these names is that by Sam'ānī († A.D. 1166), published by the Gibb Trust, London, 1912.

(c) *Laqab*.—The word *laqab* is probably identical in origin with the phrase *nigqbbhū bh-shēmōth* which occurs in the OT, where the former word appears to mean 'were designated,' but its exact sense is unknown. It can best be defined negatively as a name other than that which the holder received at birth, yet not substituted for it. When it is contemptuous, it may be called *nabaz*. In the 2nd cent. of Islām, as will be seen, something resembling systematic titles came into use; but the *laqab* in the sense of 'sobriquet' is found at all periods. Often it is taken from a personal defect; at times it commemorates some deed. The saying with reference to the two Khalifahs, 'Omar II. and Yazid III., 'the Slashed-face and the Diminisher were the best of the Marwanides, illustrates both origins (*Fakhrī*, tr. E. Amar, Paris, 1910, p. 208). Poets often received such *laqab* in consequence of a line that had attracted attention; so the chief of the Arabic poets al-Mutanabbi, 'the Prophet-aster,' is so called after a line in which he compares himself to a prophet; al-Ba'ith was named after a verse which began *ta'abatha* (Jāhiz, *Bayān*, Cairo, 1312, ii. 51); one Abdallāh b. Muṣab is known as 'the Dog's Visitor' (Ā'id al-Kalb) after a line in which he claimed to visit his friends' sick dogs (Mubarrad, *Kāmil*, Cairo, 1308, i. 322), etc. This practice was so common that there were special treatises written about it—e.g., by Muhammad b. Ḥabīb (Yāqūt, vi. 475). Cases occur in which the *laqab* is taken from a favourite expression of the person on whom it is bestowed; this appears to be the origin of the *laqab* Ḥais Baṣ, by which the poet Sa'd al-Saifi is ordinarily known (Ibn Khallikān, tr. W. M. de Slane, Paris, 1842–71, i. 561; the words mean about the same as the Hebrew *tōhū-bōhū*). The origin of these appellations was often forgotten, and they gave rise to mythical narratives; an example will be found in the case of the poet Muraqqish (*Aghānī*, v. 193).

The normal appellations of an Arab then bore some resemblance to Italian nomenclature, where the *ism*, *nisbah*, and *laqab* are regularly represented—e.g., in 'Marcus Tullius Cicero.' On the other hand, the Italian method ignores the *kunyah*, which often serves instead of the *ism*, which at times is forgotten (see a case in Yāqūt, ii. 48), and may never have been conferred; thus in the case of some men of eminence—e.g., the first Khalifah and his father (Abū Bakr b. Abī Quḥāfah)—there is no certain tradition of an *ism*. The employment of the *laqab* was in part due to the popularity of certain names, which rendered the *ism* insufficiently distinctive. When honorific titles came into use, they had a natural tendency to displace the original name; hence, e.g., the title Salādin (Salāh al-dīn) displaced the original name Yūsuf b. Ayyūb. The

modern European combination of forename and family-name is even now found only in those circles in the Arabic-speaking world which have been deeply influenced by Western practice. In these the name of the father of the first person who adopts the method becomes the family-name. The employment of a father's name as a surname is common, the word *ibn* ('son of') being in recent times ordinarily omitted; the Palmyrene inscriptions, however, show that this practice is not in itself modern, and Muḥarrad (*Kāmil*, ii. 130) quotes some early Arabic examples. The employment of the mother's name in lieu of the father's is not quite rare. Sometimes the reason lay in the history of the family; thus the first Maḥdī was called Ibn al-Ḥanaḥiyyah ('Son of the Ḥanīfite Woman') to distinguish him from the sons of 'Alī by the Prophet's daughter Faṭimah. Occasionally the mother was supposed to be the more distinguished; thus one 'Alī b. Muḥarak was known as Ibn al-Zābidah ('Son of the Female Ascetic') because of his mother's renown as a saint (Yāqūt, v. 300). The poet Ibn Mayyādah claimed that his mother was of noble family, whence he took her name (*Aghānī*, ii. 88). At times such surnames were given contemptuously (Yāqūt, v. 113, whose evidence on the matter may be accepted, though in this particular case he misunderstands his authority). According to the *Fakhrī* (tr. Amar, p. 180), when the father was unknown, the child might be called after the mother (as in a case in Yāqūt, vi. 475) or else Ibn Abihi, 'Son of his Father,' and examples of this phrase occur. The use of a daughter's name for a *kunya* is about equally common; it may be due to the absence of a son or to personal choice; the names Ahū Maryam, Ahū Ruḥm, and Ahū Hurairah are familiar; the last of these is often erroneously explained otherwise. The practice was not generally approved.

Within the family, or at any rate where informal language was used, the names were, as in the case of other languages, liable to the alterations which are expressed by the Greek word *ὑποκορισμός*; and for these the grammarians have drawn up rules. Normally the diminutive of a name, however, counts as a separate name; but at times it is used either affectionately or contemptuously as its substitute.

2. Classification of forms.—The classification of the forms of names given by the grammarian Zamakhsharī (*Mufaṣṣal*, ed. J. P. Broch, Christiania, 1879, § 4) is probably exhaustive. They are: (1) single words, (2) compound, (3) transferred, (4) invented. The compound may be made up either of a sentence—e.g., Ta'abbata sharran ('He put mischief under his Arm')—or of two elements made into one word (the examples given are foreign names to which popular etymologies are assigned, or Arabic words to which Persian terminations have been appended), or of a word followed by another in the genitive case—e.g., Abdu-llāhi ('Slave of Allah'). The transferred may be taken (a) from an object—e.g., 'Bull,' 'Lion'; (b) from an abstract noun—e.g., 'Excellence,' 'Despair'; (c) from an adjective—e.g., 'Perfect' (*Kāmil*), 'Handsome' (*Qāsim*); (d) from a verb either in the perfect—e.g., Shammara ('He girded his Loins')—or in the future—e.g., Taghlibu ('She shall Conquer'); (e) from an interjection; (f) from a sentence, as above. The invented is either (a) a normal formation, though not in ordinary use as a common noun—e.g., Ḥamdān from *ḥamida*, 'to praise'; or (b) an abnormal formation—e.g., Mauhab from *wahaba*, 'to give,' which has for its substantive *mauhib* in accordance with a general rule.

All these modes of forming names can be shown

to go back to remote antiquity; for, though comparatively few names of pre-Islamic Arabs are known, certain Biblical appellations of persons clearly bear the same relation to Arabic names as Hebrew forms generally bear to those of classical Arabic, i.e., are, unless appearances are entirely deceptive, derived from the latter, occasionally altered in accordance with sound-laws. Thus the Biblical Eli, Simeon, Gideon, Oreh, Zeb, are found in Arabic as 'Alī, Sam'ān, Gud'ān, Ghurāb, Dhi'b, etc. At times the root is lost in Hebrew, but the name survives—e.g., Zipporah, which may be interpreted Daffarah ('a woman who plaits her hair')—or the sense is lost in Hebrew, but preserved in Arabic—e.g., Reuben for Ri'bāl, 'Lion,' and perhaps Jacob, i.e., Ya'qūb, 'Partridge.' The use of the third person singular of the future as a proper name is common at this early period as afterwards—e.g., Jephthah, in Arabic Yaftah, 'He shall conquer,' identical in sense with the proper name Al-fath, 'Conquest,' and Joseph, identical in sense with the Arabic Yazid, 'He shall increase.' In the Arabic form the subject is ordinarily the holder, not, as in Hebrew, the deity.

3. Source of names.—(a) The sources from which proper names are drawn are practically unlimited; and their choice presents very different degrees of ingenuity. The simplest possible name for a child is clearly 'Child,' in Arabic al-Walid, or 'Posterity,' in Arabic Khalaf; Ukhayy, 'Little Brother,' is equally simple, Ubayy, 'Little Father,' Umaimah, 'Little Mother,' not very different. Other names merely indicate parental delight or affection—Maḥbūb, 'Beloved,' Huhba, 'Dilectissima,' Wahn or Mauhab, 'Gift.' Others involve a good wish—Sa'd, 'Good Luck,' Sa'id, 'Lucky'; similar to this are the names Ya'ish, 'May he live,' 'Ā'ishah, 'Destined to live,' though, as names of this sort had a tendency to provoke the envy of the demons, unlucky names were sometimes substituted—e.g., Yamūt, 'He shall die,' Qabīḥab, 'Ugly.' The last are uncommon, and such adjectives as signify good qualities or conditions are far more frequently used as proper names—Kāmil, 'Perfect,' Shujā, 'Hero,' Salim, 'Safe,' Muqātil, 'Fighting man,' Mujāhid, 'Warrior,' Mālik, 'Possessor,' Maṣūr, 'Divinely aided,' etc. The abstract nouns of these or similar roots likewise serve as proper names—al-Ālā, 'Sublimity,' al-Faḍl, 'Excellence,' Zaid, 'Increase,' Ridā, 'Favour.'

(b) Names of *beasts, birds, and plants*, and of other objects and animals, have been employed for this purpose from the earliest times. Thus among familiar Arabic names are Nimr, 'Panther,' diminutive Numair, Asad, 'Lion,' Thaur, 'Bull,' Dhi'b, 'Wolf,' of which the diminutive is Dhu'ail, Nusair, diminutive of Nasr, 'Vulture,' Ḥayyah, 'Eve,' i.e. 'Snake,' Qunfudh, 'Porcupine,' Hurairah, 'Kitten,' Kalh, 'Dog,' of which the plural Kilāh, 'Dogs,' is also in use as a proper name. The notion has at times been held that these are totem-names, and, when they belong to tribes, this theory may conceivably have some truth in it; in the greater number of cases the notion is fantastic. Other natural objects which furnish names to human beings are stars—e.g., Thurayyā, 'the Pleiades,' Badr, 'the Moon,' Hilāl, 'the New Moon'; mountains—e.g., 'Arafah, Raiḥān, 'Fragrant Herb,' Shaibah, 'White Hair'; whereas artificial objects are represented by such names as Shabakah, 'Net,' Qaṭīrān, 'Pitch,' etc.

(c) Names that are more decidedly *religious* in character are those in which the holder is brought into connexion with a deity, either as a slave (masc. 'Abd, fem. Amat), or as 'the man of' (Imru'u), or as 'the gift of' (Āṭā or Wahb), or 'the blessing of' (Barakat). A list of these theo-

phoric names for Arabio pagan antiquity was made out by J. Wellhausen (*Reste arabischen Heidentums*², Berlin, 1897). Names in which the god is associated with a verbal predicate (e.g., Yasma'il, Ishmael) are common in S. Arabia, but rare in Central Arabia, though perhaps not quite unknown.

(d) The tendency to employ *foreign names* seems to be traceable to antiquity in Arabia, and the ease with which words are naturalized in Arabio made them lose their foreign aspect in many cases. Thus Zainab probably stands for Zenobia, and Alexandros, in the form al-Iskandar, was thought to have the Arabio article for its prefix. Where names are borrowed from the closely allied Hebrew, Syriac, and Abyssinian languages, they are often indistinguishable from native formations. Hence the Arabic forms of 'Adam' and 'Eve,' Adamu and Hawwā'n, are easily interpreted as *fuscus* and *nigra* (*Letters of Abū'l-'Ala*, ed. D. S. Margoliouth, Oxford, 1898, p. 125).

(e) Further, it may be noted that in early Arabio the same names have a tendency to be used for both sexes, and masculine names are often found with feminine terminations. This phenomenon is often easily explicable. If an abstract noun is feminine in form—e.g., *maslamah*, 'safety'—when used as the proper name of a man, it is naturally not altered. The most common feminine termination is often used for intensification—e.g., *hārithah*, feminine of *hārith*, 'ploughman,' probably meaning 'ploughman habitually'; in this case too it would not be altered when used as the proper name of a man; e.g., one Hammād is commonly called al-Rāwiyah, 'the Professional Narrator.' But other cases are more difficult to explain—e.g., the employment of Jamilah ('Pulchra') as the name of a male slave (Yāqūt, v. 306), Umayyah ('Ancillula'), the ancestor after whom the Umayyads are called.

(f) The grammarians use the names Zaid and 'Amr as conventional words for the illustration of grammatical rules, and the latter, written with a final *w* to distinguish it from 'Omar, is one of the commonest names which meet us in early records. Its import is not quite certain, and many other names are formed from the same consonants; most probably it means 'life.' The name Muḥammad, the sense of which appears to be 'Laudatissimus,' was certainly in common use before the birth of its greatest bearer; but it was not particularly popular, so far as we can understand.

4. Principles of naming.—For the names of orthodox Muslims the basic traditions are collected by Bukhārī (Cairo, 1312, iv. 49–51), Muslim (do. 1290, ii. 167–170), Tirmidhī (do. 1292, ii. 136, 137), and Ibn Mājah (do. 1313, ii. 211, 212), who in the main are in agreement. The names which God loves best are 'Abd-Allāh and 'Abd al-Rahmān. That of which He most disapproves is Mālik al-amlāk, i.e. 'King of kings.' The Prophet objected to the names Rāfi, 'Exalting,' Barakah, 'Blessing,' Yasār, 'Wealth,' Rabāh, 'Profit,' and Aflah, 'Most Successful'; according to some, they were objectionable only when given to slaves, and the objection was apparently withdrawn. Names which meant ugly things should, according to the Prophet, be changed; thus for 'Asiyah, 'Rebel,' he substituted Jamilah, 'Beautiful.' But a name which implied the possession of a virtue should also be altered; hence for Barrah, 'Beneficent,' he substituted Juwairiyah, 'Handmaiden.' The names of prophets may be taken (Muḥammad called his son after Abraham); there is therefore no objection to the use of the name Muḥammad and its synonyms; but the name of the son born to the Prophet before conversion, Qasim, should apparently not be taken, or at any rate it should not be

used for a *kunyah*. Further, the name should be given on the seventh day.

The practice corresponds fairly well with the theory. The most popular of all names are certainly those of the Prophet. 'If you have a hundred sons, call them all Muḥammad,' is a saying of the pious (Jāhiz, *Ḥayawān*, Cairo, 1906, iii. 8). But those specially recommended in the tradition also enjoy great popularity, and the names of prophets mentioned in the Qur'ān are frequently employed, the most favoured being that of Abraham (Ibrāhīm). Further, the names of the early heroes of Islām are in common use, though the practice of the sects is naturally influenced by their political theories; the Shīah avoid the names of the first three Khalifahs, whereas in Umayyad times the names of 'Alī and his sons were avoided; if a man named his son Ḥasan, it was because parents were in the habit of cursing their children, and were unwilling to curse a name which they revered (Yāqūt, v. 311). As with other nations, children are called after friends or others whom the parents wish to revere; so 'Abd-Allāh b. 'Omar (prince and theologian) called his son after one Waqīd, though that name ('Burning') is ill-omened, and, owing to the popularity of a governor of Khorāsān named Silm, more than 20,000 infants born in the province were called by that name (Ṭabarī, ii. 489).

Of the rules given above the only one that is frequently violated is that which forbids the *kunyah* Abū'l-Qasim. Goldziher has devoted a monograph to this matter (*ZDMG* li. 156–166). Either the tradition was emended by the omission of the prohibitive particle, or it was thought to apply only to the time of the Prophet, or the combination Abū'l-Qasim Muḥammad was forbidden, but the *ism* or the *kunyah* might each be used separately. The last is said to have been the view of the first person named Muḥammad after the Prophet, one Muḥammad b. Ḥātib (*Latā'if al-Ma'ārif*, Leyden, 1867, p. 9). The names 'Abd-Allāh and 'Abd al-Rahmān, which are especially recommended in the tradition, are made to include names compounded of the word 'Abd and any of the ninety-nine names of the deity. These serve as substitutes for the old polytheistic names.

Certain other principles may be faintly traced in the ordinary nomenclature. Members of a family have a tendency to be called by names derived from the same root; so Ḥasan, Ḥusain, Muḥassan; Khālīd, Khallād, Makhlād, Mukhallād; and derivatives from the root *salima*, 'to be safe,' which have at all times been popular. In early times we find such derivatives used as alternative names for the same person, the same individual being optionally called Sallām and Snlaimān, or 'Abd-Allāh and Ma'bad (*Letters of Abū'l-'Ala*, p. 85); and indeed the Prophet calls himself both Ahmad and Muḥammad, while in what is ostensibly contemporary verse he is also called Mahmūd.

5. Women's names.—The choice of names in the case of women is, it would seem, more limited, and here Fāṭimah, the Prophet's daughter who survived him, has as many namesakes as her father. His other daughters and his wives have also many namesakes. Survivals from old times are Khālidah, the Biblical Khuldah (2 K 22¹⁴), Numa, the Biblical Naomi, and perhaps Laila, the Hebrew Lilith. In the family of 'Omar we find a daughter given the same name as a son, only with a feminine termination (Ḥafṣah and Ḥafṣ). It is not always possible to tell from the form of the name whether it is masculine or feminine; thus Ḥabīb, which is masculine in form, is also used for females, and, as has been seen, the converse case is frequent. The number of female names recorded in our authorities is meagre when compared with that of the male names; thus in

the lexicon of traditionalists by Ibn Ḥajar about a hundred pages out of twelve volumes are given to the women. The names of women, in Muslim opinion, are not to be mentioned, if they can be avoided. The poet Mutanabbī, in composing a dirge over a princess, gives her name as Fa'lah, i.e. the grammatical model according to which her name was formed.

Certain names were used properly for slaves; this was the case with the name Jamilah (quoted above) and its synonyms; the woman to whom the Prophet gave it complained of this, according to Baihaki (*Maḥāsin*, ed. F. Schwally, Giessen, 1902, p. 38). Names taken from gems appear to have been employed in this way; the poet Yāqūt, 'Ruby,' when he adopted a professional career, changed his name to 'Abd al-Rahmān (Ibn Khallikān, tr. de Slane, iv. 5).

6. Meanings of names.—There is a natural tendency to attach importance to the meanings of names, and to suppose that they have some effect on the fortunes of their bearers. There is a story that the general who won the victory for the 'Abbāsids was commanded to change his name by his master, on the ground that, unless it were changed, the enterprise would not succeed (Ibn Khallikān, ii. 100). Ṭabarī, in a character sketch (ii. 1886), relates how a master would call one of his slaves or freedmen by a lucky name such as Fath, 'Victory,' or Maimun, 'Lucky.' In an early work, the *Muwatṭa* of Malik († A.H. 179), the Prophet is represented as maintaining this theory. When there was a camel to be milked, he asked the name of each man who offered his services; the first was declined because his name was Murrah ('Bitter'); the second because his was Ḥarb ('War'); finally, one whose name was Ya'ish ('He shall live') was accepted. Similarly 'Omar, finding that a man was called Jamrah b. Shihāb ('Coal Son of Flame') and that his tribal and local names were all connected with fire, foretold that his house and family would be burned; and this actually occurred (*Muwatṭa*, Cairo, 1280, iv. 205).

7. Name-giving and name-changing.—The name is probably given by consent of the parents, and there appears to be no rule on this subject; Ṭabarī (ii. 1466) records a case in which the father, being absent at the time of the birth, hit on a different name from that given by the mother, who called the child after her own father; the father, though Khalifah, acquiesced in the name given by the mother. Names can be changed either by those who hold them or by some person whose authority they recognize: numerous cases are recorded in which the Prophet changed the names of his followers, and occasionally we read of the sovereign doing this at a later period; 'Omar, it is said, thought of compelling all Muslims to take the names of prophets. Slaves are apt to change their names on manumission, even when the original name was Arabic. Foreign names were changed into Arabic names in the time of the Umayyads, when the non-Arab Muslims were thought to be an inferior caste; but, when the Persian and Turkish dynasties commenced, this practice became less common. Converts to Islām, however, even in these days usually change their names, ordinarily selecting one which belongs to an Islāmic saint.

8. Honorific names.—The honorific title is found at the commencement of Islām, beginning with the case of the Prophet himself, who was not to be addressed in the style of an ordinary man (Qur'ān, xxiv. 63). On certain of his followers he conferred honorary titles, calling Abū Bakr al-Siddiq ('the Saint' or 'the Faithful Friend'), 'Omar al-Fārūq ('the Deliverer'), etc. Similar titles were be-

stowed on other eminent Muslims of the first generation—e.g., al-Waṣī on 'Alī, meaning 'the Trustee' or 'the Legatee,' al-Tayyar, 'the Winged' on his brother Jafar, who was transformed into a bird of paradise; and even heroes of the OT are honoured with such titles, Moses being usually called al-Kalīm, Abraham al-Khalil. Somewhat greater regularity is found after the rise of the 'Abbāsids, who took titles under which they reigned, al-Manṣūr, 'the Divinely-aided,' al-Ḥādī, 'the Guide,' al-Rashid, 'the Rightly-guided,' etc. This practice was followed by other dynasties which claimed the Khalifate, in Egypt, Spain, and S. Arabia. In the 4th cent. of Islām the Khalifahs began to bestow on semi-independent princes titles of which the second element is al-Daulah, 'the Empire'; the first occurrence of this appears to be in the case of al-Ḥasan b. 'Abdallāh b. Ḥamdān, governor of Maasil, called Nāṣir al-Daulah (Ibn al-Athir, anno 317). The most famous holders of such names belonged to the Hamdanid, Ghaznawid, and Buwaihīd families—e.g., Saif al-Daulah, 'Sword of the Empire,' Yamin al-Daulah, 'Right Hand of the Empire,' Bahā al-Daulah, 'Glory of the Empire.' Titles compounded with the word al-Dīn, 'the Religion,' begin to appear in the 4th cent., the first instance being apparently one where the word is an addition to al-Daulah, the title Nāṣir al-Dīn al-Daulah being bestowed in 388 on one Badr b. Ḥusnawaihī; they are still rare in the 5th cent. and apparently bestowed only on persons of the highest eminence in the State—e.g., Nizām al-Dīn on Yamin al-Daulah, the conqueror of India in 404, Dhakhīrat al-Dīn ('Store-house of the Religion') on the heir-apparent in 440. In the 6th cent. such titles become exceedingly common, being bestowed not only upon governors of provinces like Salāh al-Dīn ('the Prosperity of the Religion,' Saladin), but upon persons of literary or theological eminence—e.g., Shihāb al-Dīn ('Flame of the Religion') on the polygraph Yāqūt, Amīn al-Dīn on the calligrapher of that name. After this time they were regularly bestowed on those who distinguished themselves in these lines, whence in the lists of theologians and judges which the Egyptian chronicles of the Mamluk period contain such titles figure repeatedly. Titles compounded with other words are less common, but sometimes found; so al-Mulk, 'the Kingdom,' e.g., in Fakhr al-Mulk, Nizām al-Mulk, 4th and 5th centuries.

These titles were properly conferred by the Sultān, but their source is at times obscure; they were never hereditary. In Persia similar titles are still conferred; in Turkey their place has been taken by certain orders which bear a closer resemblance to patents of nobility.

LITERATURE.—A treatise on *Names, Kunyahs, Titles, and Nicknames* was composed by Jāhiz of Baṣrah († 255 A.H.; quoted in his *Bayān*, Cairo, 1813, i. 63), doubtless containing much curious information. A treatise on names called *Al-Sāmi fī'l-asāmī* by Maidānī († 518), author of the classical collection of proverbs, was highly praised (see Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1913, ii. 108). Special treatises on the *laqabs* of the tribes were composed by Muhammad b. Ḥabīb († 245) (ib. vi. 476). Of works in the hands of Arabic scholars that which bears most nearly on the subject is the *Ishṭiqāq* of Ibn Duraid († A.H. 321), ed. F. Wüstenfeld, Göttingen, 1854, which gives the etymology of the names of the tribes and their most important representatives. Of European works there may be mentioned the art. of I. Goldziher, in *ZDMG* li. [1897] 156 ff.; W. Robertson Smith, *Kinship and Marriage in Early Arabia*, London, 1903; Garcin de Tassy, *Mémoire sur les noms propres et les titres musulmans*, Paris, 1878; A. C. Barbier de Meynard, 'Surnoms et sobriquets dans la littérature arabe,' *JA* x. ix. [1907] 176-244, 365-428, x. [1907] 55-118, 193-273.

D. S. MARGOLIOUTH.

NAMES (Babylonian).—I. Sources.—Hundreds of thousands of temple administrative documents and private contracts which are filled with personal

names, and also with names of countries, cities, rivers, canals, temples, streets, etc., have been found in the ruin-hills of Babylonia and Assyria. Besides this source of material for the Babylonian onomatologist there have been found a large number of tablets which belonged to the school libraries of ancient Babylonia, and also to the library of Ashurbanipal found at Nineveh, which contain lists of names of all kinds of stones, trees, animals, gods, stars, countries, persons, etc. New editions of texts will rapidly enlarge this material. When all the inscriptions of the various periods have been published, it will be possible to know the genealogy of families, *e.g.*, of Abraham's day better than that of many of the Christian centuries.

2. *Forms.*—The characteristic Babylonian personal name contains a sentence, which may be a statement of a fact in experience, a religious belief, a prayer, or a prophecy. As a rule, names are theophoric, although not a few substitutes are found, as, *e.g.*, epithets, titles, temple-names, etc. It would seem that up to a comparatively late date new names were occasionally coined as an expression of sentiment, but the occurrence of the same names for many centuries and other reasons suggest the idea that in the late millenniums the introduction of new names was rare.

3. *Writing of names.*—In all periods considerable attention was paid by the schools of scribes among the Babylonians to the study of personal names. The scribes wrote the names ideographically and phonetically, not as they were pronounced, but according to the elements of which they were composed. That is, it was the rule in all periods of Babylonian history for the scribes to know the meaning of the names, as is shown by the manner in which they wrote them. The name 'Na-bi-um-kn-du-ur-ri-u-šun-r, *e.g.*, could be written phonetically with eleven characters, or 'Nabûm-kudurri-ûsur, ideographically with four, but it was pronounced something like Nebuchadrezzar, as has been preserved by the Hebrews. This enables scholars at the present time to analyze and understand the meaning of Babylonian names in a way that is not possible with those of any other ancient people. Five name-books of five different periods have been published (see Literature below). These, besides the texts that have been published since the appearance of the name-books in the respective periods, furnish a nomenclature so extensive that it has no equal in ancient literature.

4. *Composite names with deity as element.*—The names of the patron deity or deities of a city conspicuously entered into the composition of the names of the people who resided in it. With the exception of tablets from one or two great cosmopolitan centres, like Babylon, it is generally possible to determine their provenance from a study of the personal names contained in them. Half a dozen tablets, *e.g.*, from Nippur of the Persian period contain more names compounded with the names of the gods Ellil and Enmashtu than thousands of tablets from other sites.

In the early Hammurabi period two-element names predominate; but, while this is also true in later periods, the number of those containing three elements is greater than in the early period. The different formations in all periods are numerous.

(a) *Two-element names.*—Two-element theophoric names consist of a substantive *plus* deity, as Amêl-Marduk ('Evil-Merodach'), and the name of a deity followed by a verbal form, or *vice versa*. When the deity is the first element, the verbal form can be the participle, as in Mušêzib-Bêl, 'One saving is Bêl'; preterite, as in Ibbi-Marduk, 'Marduk has created'; imperative, as in Silim-Bêl, 'Be merciful, O Bêl'; precativ, as in Lipšab-Adad, 'May he reverence Adad'; and present, as in Itamar-Adad, 'He will worship Adad'. Besides forms in the third person, there exist such forms as Taqîš-Gula, 'Gula, thou hast presented,' Lulšamar-Sin, 'May I worship Sin,' Atanab-Ilû,

'I sigh, O God,' etc. These name-formations occur also in reversed order, *i.e.* with the deity as the first element.

(b) *Three-element names.*—In three-element names many formations are possible, with the deity in the first, second, or third position. The most common are deity *plus* verb *plus* substantive, like Ašur-bânî-apal, 'Ašur is creating a son,' and deity *plus* substantive *plus* verbal form, the latter being either the imperative, like Nabûm-kudurri-ûsur (Nebuchadrezzar), 'O Nebo, protect the boundary,' or the preterite, like Ašur-ahu-iddin (Esarhaddon), 'Ašur has given a brother.'

The third element may be a suffix, as in Ilû-šur-šu, 'God has protected him,' Sin-išma-anni, 'Sin has heard me,' etc. Again, two verbal forms may follow the deity, forming a relative sentence, as Nabû-tahni-ûsur, 'O Nebo, protect what thou hast created,' Sin-tuhtahšî-lîšir, 'Sin, direct what thou has brought into existence.' A suffix may be attached to the divine element, as Ilû-šu-lbni, 'His god has created,' or a particle may precede the verb, like Ilû-ul-amši, 'God, I did not forget.'

When the deity is the second element, the first may be a substantive, as in Nûr-Bêl-lûmur, 'May I see the light of Bêl,' Šepi-Bêl-ašbat, 'I seized the foot of Bêl,' etc., or a preposition, as in Ana-Ašur-taklak, 'Upon Ašur I trust,' Itti-Ea-lubluš, 'With Ea may I live,' or the relative, as in Ša-Bêl-lîšîl, 'Whom may Bêl support.'

Other three-element formations with the verb in the first position are Ušur-amat-Ea, 'Protect the word of Ea,' Lûmur-dumqi-Bêl, 'May I see the favour of Bêl,' Linûb-lîbî-lîlani, 'May the heart of the gods be appeased,' etc. The second element may be a verbal suffix, as in Taqîš-šu-Gula, 'Gula, thou hast presented him,' Šušra-anni-Marduk, 'Guide me, O Marduk,' Lîšîr-ani-Samaš, 'May Šamaš direct me.' Also the second element may be a preposition, as in Atkal-ana-Marduk, 'I relied upon Marduk,' Upaq-ana-Marduk, 'I wait upon Marduk,' etc.

(c) *Names of four or more elements.*—Four-element names occur in a great variety of formations: Bêl-taddannu-bullî-šu, 'Bêl grant him to live whom thou hast given,' Sin-alk-idi-ia, 'Sin goes by my side,' Lûšsu-ana-nûr-Marduk, 'May I go forth in the light of Marduk,' Nabû-alsi-ka-abluš, 'Nebo, I cried unto, I live,' Sin-mâr-farrî-ûsur, 'O Sin, protect the son of the king,' etc. Names of even five and more elements occur, like Ašur-etil-lîlani-mukin-aplu, 'Ašur, the lord of heaven is establishing a son,' Ašur-etil-šamê-u-iršiti-bullî-šu, 'O Ašur, the lord of heaven and earth, give him life,' etc.

(d) *Feminine names.*—Feminine names are not as numerous as the masculine, though a large number have been found. As a rule the deity in feminine names is feminine, and the verbal form is also feminine. Only occasionally are feminine deities found in masculine names, and even then the predicate is masculine. The formations are similar to masculine names. A few may be given: 'Tabnî-lštar, 'Ishtar has given,' Gula-qâšat, 'Gula is presenting,' Ina-Ekur-bâlat, 'In Ekur she rules,' Ina-Uruk-dininni, 'In Erech judge me,' etc.

(e) *Names with element substituting deity.*—As in W. Semitic names, the elements *abu*, 'father,' *ummu*, 'mother,' and *ahu* 'brother,' are frequently found as substitutes for the name of a deity, or for the term *ilu*, 'god.' In fact, there were many such epithets or equivalents used in all periods. Even temple-names are used in this manner. In some instances it is clear that they refer to the deity—*e.g.* Tukulti-apal-Ešara, 'My help is the son of Ešara' (*i.e.* the god Enmashtu), Nabû-Ina-Ešgila-lûmur, 'May I see Nebo in Ešgila,' Ina-Ešgila-zêr-iddin, '[The deity, *i.e.* Marduk] in Ešgila gave seed,' Ezida-lîša, 'Ezida has presented,' etc. Not a few names have as an element the name of a city. Many of these are feminine: 'Ina-Akkadi-rabat, 'In Akkad she is great [namely, the goddess], 'Ina-Uruk-dininni, 'In Erech judge me,' 'Pa-an-Uruk-lûmur, 'May I see the face of Erech [*i.e.* the goddess of Erech], 'Ina-Nîsin-râmat, 'In Nîsin she loves.'

5. *Single-element names.*—The number of personal names composed of a single element is also large. These may be grouped as follows:

(a) *Trade names:* Âtû, 'Overseer,' Bâ'iru, 'Hunter,' Bânû, 'Builder,' Êšparu, 'Weaver,' Nappahu, 'Smith,' Pašaru, 'Potter,' Sangû, 'Priest,' Malûhu, 'Sailor,' etc.

(b) *Gentile names:* Akkadâ, 'The Akkadian,' Ašurâ, 'One from Ašur,' Borsippâ, 'One from Borsippa.'

(c) *Month names:* Ulûlâ, 'Belonging to Elûl,' Addarâ, Duzâ, etc.

(d) *Plant names:* Allanu, 'Oak,' Karânatu, 'Vine,' Nanašu, 'Plant,' Suhûtu, 'Ear of corn,' etc.

(e) *Animal names:* Nîrum, 'Panther,' Mârânu, 'Little Lion,' Šellihu, 'Fox,' Kalûmu, 'Sheep,' Nubtâ, 'Bee,' Šahîtn, 'Gazelle,' etc.

(f) *Other objects:* Inatum, 'Precious Stone,' Kuppu, 'Spring,' Inšahum, 'Ear-ring,' etc.

6. *Hypocoristic names.*—Hypocoristic, or abbreviated, names abound in all periods. Names which were composed of from two to six elements were generally abbreviated in everyday life. *E.g.*, the name, Sin-ahê-eriba (Sennacherib), 'Sin hath increased the brothers,' might be found abbreviated as Sinai, Ahêa, or Eribâ. Generally a hypocoristic ending was added to the element used like the ending *my* in 'Sammy' (Samuel). In Babylonia most of these endings had apparently a similar

meaning, while others may have had the force of a diminutive. The endings used were *a*, *ia*, *aja*, *ea*, *u*, *anu*, *uni*, *atu*, *utu*, *aitu*, *iātu*, *iautu*, *ānitu*, etc.

Examples of these are: Ap-la-a, Iz-kur-ri-ia, Nabā-aja, Si-in-ni-l, Ab-e-a, Nabū-u-a, Bal-ta-a-nu, A-ḥu-ni, Id-di-na-tum, Ib-nu-tum, Bu-un-na-ai-tum, A-ḥa-ti-ia-tum, A-bi-ia-u-ti, Ku-du-ra-ni-tum.

In many instances only the abbreviated name was employed, as if the individual had no other, or fuller, name; in others the full name as well as the abbreviated form is found in the literature. This ending is used also in connexion with one-element names, as Zumbā, 'Flee,' Suluppā, 'Date,' Puhhurā, etc. There is also a *fu'ulu* formation represented by many names—e.g., Buzzuru, Dullubu, etc.—which may be included in this class.

7. Names showing attributes of deities.—From the names there is obtained not a little data for the description of the divine nature as regards infinity, immutability, immensity, etc., as well as the attributes by which the activity of the deities is shown, as in creation, protection, justice, power, goodness, etc. For some of the ideas expressed practically every synonym in the language is employed.

Examples are: Bāši-llu, 'God exists,' Manum-balum-ilišu, 'Who can without his god [exist]?', Manum-kima-ili-ia, 'Who is like unto my god?', Bēl-dannu, 'Bēl is mighty,' Sin-kālāma-idi, 'Sin knew the people,' Samaš-iršu, 'Shamash is wise,' Sin-karābi-īme, 'Sin has heard the prayer,' Sin-mudammī, 'Sin is favourable,' Nabū-sālim, 'Nebo is gracious,' Tarām-Adad, 'Adad, thou art merciful,' Ilu-ippasram, 'God is appeased,' Sin-nūr-lāni, 'Sin is the light of the gods,' Ilu-bāni, 'God is creating,' Ašur-bāni-apal, 'Ašur, creates a son,' Sin-šum-imbī, 'Sin has pronounced a name,' Samaš-šum-ukin, 'Shamash has established a name [child],', Sin-aḥ-ušabši, 'Sin has brought a brother into existence,' Nabū-nādīn-napišim, 'Nebo is giving light,' Sin-mālik, 'Sin rules,' Marduk-hēl-usati, 'Marduk is the lord of help,' Nabū-ālik-idi-ia, 'Nabu goes by my side,' Samaš-rē-u-a, 'Shamash is my shepherd,' Ellil-hātin, 'Ellil is protecting,' Ašur-nāsir-apal, 'Ašur is protecting a son,' Nusku-kāšir, 'Nusku is keeping,' Bēl-mušālim, 'Bēl is preserving,' Bēl-ēfir, 'Bēl is saving,' Bēl-šum-ukin, 'Bēl has established a name.'

In other theophoric names the individual expresses some personal relation to the deity, or the deity is petitioned.

Sin-udlūl, 'May I serve Sin,' Pan-Samaš-lūmur, 'May I behold the face of Shamash,' Ana-Bēl-upāqu, 'Upon Bēl I wait,' Lūmur-dumqi-Bēl, 'May I see the mercy of Bēl,' Ana-Sin-ēmid, 'In Sin I rely,' Putur-Sin, 'Release, O Sin,' Samaš-liblūt, 'Shamash, may he live,' Sin-zēr-līšir, 'O Sin, direct the seed.'

Most of the gods are given credit for having created children, or having brought them into existence. All seem to have had the ability to protect, to direct, to preserve life, to grant prosperity, etc.; in short, it is impossible to differentiate and develop from the names the religious beliefs of the people with reference to this or that deity. This is, doubtless, due to the fact that the bulk of the literature from which the names are taken belongs to a comparatively late period, covering little more than the last twenty centuries of Babylonian history. And, when it is considered that the names of many of the deities arose through the use of epithets, or from the form in which they appeared in different centres, having been first written by a non-Semitic people, and that many of them go back to an original solar or lunar deity, concerning which at present little is known, we realize how futile it is to attempt, except in a general way, to give the attributes which are peculiar to the different deities. Moreover, these attributes are practically the same as those applied to other solar deities of the W. Semites. Notwithstanding this fact, the study of the Babylonian names is very important for the light which they throw on many obscure Hebrew names.

8. Foreign names.—Masses of foreign names are found in all periods, the study of which is so important for the correct understanding of the movements of people, due to persecution or captivity, or to the fact that at the time the ruling

dynasty was foreign. The tablets of the Hammurabi era contain many W. Semitic names of the Arabic, Aramaic, and Hebraic types. In the Cassite period (2nd millennium B.C.) Hittite-Mitannian as well as Cassite names abound, and those of other peoples are also represented. Comparatively few W. Semitic names, however, are found in this period. In the Assyrian period many of the latter are again in evidence; but especially in the Neo-Babylonian and Persian periods many of the names familiar in the OT occur. Their presence in these periods is, of course, due to the Assyrian and Babylonian captivities. In the Persian period also the nomenclature contains many Iranian names, and even a number of Egyptian; in the Greek period some Grecian names occur.

The study of these foreign names in the cuneiform literature is important also for the light which they throw upon the names themselves, owing to the fact that the exact pronunciation is often in question, since, as in the Semitic script, only the consonants are written. With the help of the writings of these foreign names in the cuneiform literature, where the vowels are always given, they can be vocalized, and often better understood.

9. The divine name.—The forms in which the name Jahweh appears are of special interest. Unfortunately the divine name has thus far been found only in personal names compounded with other elements. In the Assyrian inscriptions it is written Ja-u, as in Ja-u-ḥa-zi (Jehoahaz, *Iwaxas*), etc. The vowel *o* as well as *u* is represented by *u* in Assyrian; Ja-u here represents *ih*. In such instances the Hebrew letter *h* quiesces with the vowel; in other cases it is represented by *h*, especially in the late Babylonian inscriptions—e.g., Ja-ḥu-u-na-ta-nu (Jonathan), Ja-a-ḥu-la-ki-im, and Ja-a-ḥu-lu-nu. The Massoretic vocalization, therefore, of Hebrew names containing Jahweh as the first element can be said to be corroborated by the way in which the cuneiform and Greek have reproduced them.

The divine name as the second element appears in Assyrian texts in Ha-za-qi-Ja-u, Ha-za-ki-Ja-a-u, Ha-zi-qi-a-u (Hezekiah), Iz-ri-Ja-u, Az-ri-Ja-a-u, Az-ri-a-u (Azariah), Na-ad-bi-Ja-au, Na-tan-Ja-u (Nethaniah), etc. In Neo-Babylonian tablets the name appears written Ja-a-ma, which was pronounced Jāwa. Nearly a score and a half of Hebrew names containing this element have been found that have their exact equivalent or parallel in the OT. To quote a few: A-bi-Ja-a-ma (Abiah), Aḥi-Ja-a-ma (Ahijah), Az-zi-Ja-a-ma (Assiah), Ba-li-Ja-a-ma (Bealiah), Ba-na-Ja-a-ma (Benaiah), etc.

It is very probable that Jāwa represents the exact pronunciation of the divine name. This follows when it is considered that Hebrew names compounded with Ja-a-ma occur more frequently in the Nippur tablets of the Persian period than Babylonian names compounded with their prominent deities. It is reasonable to infer that Jāma is an adopted writing for the name of the god of the Hebrews, and represents the full pronunciation of the name. The form preserved in Greek by Theodoret, namely, *Iaβe*, and that in Arabic in a letter to de Sacy, namely, Jahwa or Jahwe, confirm this. This coincides with the pronunciation which for years has been adopted for the divine name, namely, Jahweh.

The Jews in Egypt, as is well known, wrote the divine name יהוה. This was surely pronounced exactly as the Jews pronounced it in Palestine. To say, therefore, that they vocalized these letters יהוה (Jahū) seems unreasonable. The characters must have been vocalized יהוה (Ja'wa), i.e. with a slight overhanging or final vowel, which may even

have been dropped. The same is true when the divine name appears as the final element in Hebrew names. It is improbable that יהו was pronounced *Jāhū*, as the Massoretes have pointed it; more probably it was *Ja'wa*, or apocopated as *Ja'w*.

Hebrew names compounded with אל are found in Babylonian tablets written with the plural sign after the character for 'god.' The Babylonian scribes apparently recognized the difference between the pronunciation of the Hebrew אל and their *ilu*, and, knowing, doubtless, that the Hebrew word for 'god' in general use, namely, אלהים , was a plural, in order to distinguish it from their own word for 'god,' wrote it ideographically in these names—*ILU-MES*, i.e. *ilu* with the plural sign.

CLAY.

NAMES (Chinese).—Names occupy a very prominent position in Chinese national and social life.

1. **Names in ancient times.**—The Chinese believe that there is an order in the sequence of essentials, and that the men of old, who in the first place apprehended 'the great unseen principle of Good dominating and permeating the universe,'¹ assigned names among these essentials. 'Wherever there is form, there is also its name.'² It was necessary to adopt nomenclature corresponding to capabilities 'in order to serve the ruler, nourish the ruled, administer things generally and elevate self.'³

The ancient Chinese laid great stress on the proper application of names. 'If names be not correct, language is not in accordance with the truth of things,' and this would lead to affairs not succeeding. 'The name without the reality is folly.'⁴ A bad name (or reputation) 'gets the credit of every vice,' and is a danger.⁵

2. **Family-names.**—Family-names are of great importance, and persons bearing the same family-name are considered both in law and by custom to be related, intermarriage as a rule being forbidden, though there may be no kinship at the present day between the parties. The same family-name offers a ready passport to intimacy. They are known collectively as 'The Hundred Family Names.'⁶ These comparatively few family-names (there are more than 200 in common use and over 2000 altogether) have sufficed from a period anterior to the Christian era for the hundreds of millions of this ancient people, forming thus a marked contrast to the limitless number of our modern surnames in the West.

One Chinese author (the compiler of *The Book of the Hundred Family Names*) has traced some of them back to their origin 3000 years ago, but the best account says that family-names came into existence only about 2000 years ago. The name Sing, applied to them now, in those early days really meant the place of birth.⁷ Under these circumstances it is not surprising that more than half of the family-names of the present day are derived from place-names. About a quarter are ancestral in origin, such as an ancient title or a

sobriquet. The rest are from many sources, as with European surnames. Those derived from animals are considered objectionable. Family-names cannot be changed; only Buddhist priests and nuns drop their family ties and names. A woman on marriage takes her husband's family-name, but adds her own to his in her signature, and is described by the two in legal documents.

3. **Individual names.**—i. **BOYS' AND MEN'S NAMES.**—(a) *The 'milk-name.'*—In the matter of individual or personal names there is a marked contrast, for a large variety of them are in use, the memorable events in life being marked by a new name.

The child is given a 'milk-name' when a month old by his father or grandfather, a feast being held at the time. This name is used by parents, relatives, masters, or privileged persons, and it is a great liberty and intolerable familiarity for others to use it. Among the poorer classes, however, this simple name may be the only one. At times this name indicates the numerical position of the individual bearing it in the family, as *Sextus*, etc., or sometimes, with an aged father, the father's age at the time of the child's birth, as 'Seventy-two,' or it may denote the age of the grandmother or possibly great-grandmother, as 'Eighty-four.' Among 'milk-names' are to be found such as 'Peace,' 'Brightness,' 'Enter Wealth,' and 'Spring Forest.' Should parents fear the loss of a child by death, a depreciatory name will be given, such as 'Dust-pan,' 'That Dog,' 'The Stupid,' 'Flea.' This is done with the belief that the evil spirits who might have taken the child will be thus deceived into thinking it of no account.

(b) *The 'book-name.'*—On going to school the boy receives from the father or the teacher a more elaborate and carefully selected 'book-name.' This is the name used in arranging marriages and in official registration. Examples are 'Worthy Prince,' 'Spring Dragon,' 'Literary Rank,' 'Celestial Emolument.' The 'book-name' is often preferred, and in that case the 'milk-name' is not used, though the contrary also happens. The greatest care is taken to record the names and genealogies of those entering on a literary career (which forms the high road to government employment), to prevent inconvenience in future.

(c) *Distinguishing appellations.*—Every gentleman of any scholarship or position has in addition one or more 'distinguishing appellations' used in social circles and by intimates—e.g., 'Scholarship Complete.'

(d) *Noms de plume.*—A nom-de-plume is also common and often very fantastic—e.g., 'The Weak Man of the River.'

(e) *The marriage-name.*—The marriage-name is taken at marriage or on coming of age at 16. It is given by the father, if alive; if he is dead, by an uncle or elder brother.

(f) *The official appellation.*—This is assumed on entering office or a public examination, and is used on visiting cards and by relatives. That of the viceroy Li Hung-Chang might be rendered in English as 'Literary Polish.' This name can be changed before obtaining rank, but not afterwards, unless a superior has the same.

(g) *The t'ong name.*—The *t'ong*, or 'ancestral,' name is largely employed in business matters, shares or partnerships being often held under it. It may embrace a whole family of brothers, or each may have a different one. It always ends with the word *t'ong*.

(h) *Nicknames.*—Nicknames are also largely used, based on some personal defect or characteristic.

(i) *Posthumous names.*—A posthumous name is awarded the deceased.

⁵ *Ib.* p. 128.

⁶ The word 'hundred' is here used in the sense of a large number, as, more *Sinico*, in the phrases 'The Hundred Officials,' 'The Hundred Traders.'

⁷ See *China Review*, xiii. [1884-85] 124.

(j) *Emperors' names*.—The emperors in China have not ascended their thrones under a personal name, but an auspicious combination of two characters forms the 'empire designation' or 'year title' of the reign. If anything inauspicious or unusual happened, these were changed (until recent times) for others. 'Compliant Rule,' 'Reason's Brilliance,' 'The Decree of Heaven' are examples of emperors' 'year names.'

ii. *GIRLS' AND WOMEN'S NAMES*.—Girls and women do not have such a variety of names as boys and men. They have a 'milk-name' and may have another one or two. Sometimes the 'milk-name' is changed on marriage if it clashes with one in the family which the girl is entering. As a general rule, girls have not received schooling or a literary education,¹ though there have been notable exceptions; nor has it been customary for a woman to hold office of any kind. Consequently 'book-names' and 'official names' have been practically unknown. Flowers predominate in the names of girls, and beautiful objects in nature are often selected for them. The desire of the parents for male offspring also appears in their names. Examples are 'Narcissus,' 'Jadestone,' 'Proud Phoenix,' 'Love of the Moon,' 'Virtuous and Rare,' 'Fear,' 'Slave-girl,' 'Lead on a Younger Brother.'

4. *Partial unity in the names in a family*.—It often happens that all the sons in a family will have in one of their respective names the same character as a part of their designations. Thus three brothers known to the writer bore the names Cheeoo Chee-yōng, Cheeoo Chee-Tsoong, and Cheeoo Chee-yung. This seems somewhat akin to the Jewish example of Ahijah and Ahimelech, but among the Chinese the father would not, like Ahitub, have the same portion of his name the same as his sons. With the Chinese there is a regular system employed for this. It often consists in the characters being taken from a book which lends itself well to the purpose, and, as each generation succeeds another, the next character is selected and appears as a component part in each of the names of the brothers of that generation.

5. *Absence of religious names*.—It is curious, considering the religious character of the Chinese, that the names of their deities are not employed in their personal names, as in India. The title 'Supreme Ruler' is doubtless considered too exalted to be dragged down to such common use, though occasionally 'heaven' ('heavenly' or 'celestial') does occur in some combination serving as a name—e.g., 'Heaven's Increase,' 'Heavenly Intelligence,' 'Heavenly Illumination.' Possibly the same feeling in a lesser degree militates against the employment of the names of the demi-gods and canonized heroes, but it must be remembered that it is not a Chinese custom to name children after others; in fact, the contrary is the case.

Some religious influence is noticeable, as, e.g., in the name 'Happy Birth,' derived from Buddhism. Taoism is responsible for another, if not more, viz. 'The Second God of Literature.'

6. *The meanings of names*.—Unlike European names, the significance of which is hidden from the mass of those who use them, and which require the labours of antiquarians and philologists to elucidate their origin and meaning, the Chinese names, whether they are those of individuals, places, cities, or villages, carry patent on their surface their import, and thus often show the reason for their selection.

7. *Names of relationship*.—The Chinese language is very rich in its nomenclature of relatives, and notes the differences between elder and younger

paternal and maternal uncles and aunts, elder and younger brothers and sisters, and cousins, giving distinctive names to them which show the exact relationships.

8. *Shop-names*.—It is the general custom to employ a combination of two or three Chinese characters for the name of a business, a firm, or a shop, the owners' or partners' names not appearing, except in the partnership book, and then very probably under the *t'ong* name. Auspicious designations are selected for this purpose, such as 'Expansive Profit,' 'The Three Unions,' etc.

9. *Names of vessels*.—Auspicious characters are also selected for the names of vessels. The large sea-going junks of former days, which went to the Straits and Eastern Archipelago and voyaged up and down the China Sea, bore names often composed of three characters in which the word 'gold' generally appeared.

10. *Names of the gods*.—The being who appears to be a conception of God in ancient China, and who was worshipped by the emperor, is known by the name of the Supreme Ruler. The Buddhas of Buddhism bear the names or titles known in India, translated or transliterated into Chinese. The gods and demi-gods of the Taoists, when not borrowed from Buddhism, are mostly deified human beings, and are generally known by some name or title which shows forth their power or the work which they perform in the hierarchy of celestial beings.

11. *Village-names*.—The family-names are often used, showing, in many cases, that the village has been founded by one of that family. There are not a few cases in which all the inhabitants belong to the same family or clan, while in other cases not one of the name remains. Two family-names are sometimes joined together in the village-name. As far as the writer's experience goes, these village-names in the south of China are permanent, but in the north they appear liable to change.¹ A temple will give a village a name, singly or in combination with a family-name or some incident connected with, or characteristic of, the village itself, its surroundings, or its inhabitants, any peculiarities being seized upon for the purpose, as 'Red Temple Village.' The writer in a journey passed two villages, the one 'Mud Village' (possibly deriving its name from the fact that sundried mud was largely used for building) and the other 'Brick Village' (where probably proper bricks were used).

12. *City-names*.—There are three classes of cities in China, and the names given to them show of what district (or county), prefecture, or province the city is the capital. Besides these politico-geographical names the city may also have another name in common use, and very likely others as well, derived from some legend or historical event in its past; e.g., 'The Expansive Western Provincial City' is also known as 'The City of Cassia Groves.'

13. *Names of flowers*.—In names of flowers the Chinese appear to have been influenced in much the same way as the West, except that names derived from foreign languages are not so common.² The influence of religious ideas appears to a small extent. One species of chrysanthemum is named 'Buddha's Seat'; a species of the citron is called 'Buddha's Hand'; the narcissus is 'The Water Genie'; the word 'heaven' ('heavenly' or 'celestial') occurs in several.

14. *Names of periods of time*.—Each year during a period of sixty years has a name. Two sets of

¹ See A. H. Smith, *Village Life in China*, Edinburgh and London, 1899, ch. iii.

² For the names given to the divisions and families of the vegetable kingdom see J. Dyer Ball, *Things Chinese*, p. 118.

¹ This is now being altered in China.

characters; one ten in number and the other twelve. each contribute one character in certain rotations to form these names. There is, unfortunately, no serial naming or numbering of these sexagenary cycles as they revolve through the ages. These combinations also serve as names of seconds, minutes, hours, days, and months, signs of the zodiac, points of the compass, etc. The four cardinal points of the compass—in fact, the eight principal points—have common names having the same meaning as in the West. Names are also given to terms of fifteen days each throughout the course of the year, appropriate to the season, such as 'Little Heat,' 'Rain Water,' etc.

15. Names of stars.—There were two principal periods of star-naming among the Chinese—that of primitive China (2300 B.C.) and that of the Chow dynasty (1120 B.C.—A.D. 220). The first naming was agricultural and domestic in character and then feudal.¹ The grouping of the constellations and the names of them and of the stars differ from those in use in the West. One of the best known to the common people is that of the 'Northern Measure or Peck,' the residence of the fates, which is Charles's Wain. The Milky Way is the 'Silver Stream' of heaven.

16. Technical and scientific terminology.—The terminology of technical and scientific subjects has been largely added to by the study of European science, art, and education. Many of these names have been adopted from Japan, the precursor of China in recent times in modern knowledge. The Chinese characters are largely used in Japan, so that the Chinese have found the new names which they require in many cases ready for their use. This enriching of the language began, however, before this by the instruction of the people in China itself in modern knowledge, and is still going on. Where new names to represent hitherto unknown (to the Chinese) matters, things, or processes were required, a translation was made, the new name being descriptive of the object to be named, or the sounds of the name in the European languages were transferred to the Chinese language.

The first Nestorian missionaries in China wisely adopted many Buddhist terms or names, and their Roman Catholic and Protestant successors followed their lead. The names thus taken over into Christianity have proved of much use in the religions instruction of the Chinese.²

17. A good name.—The term 'a good name' is largely used in China and connotes the same idea as in Europe. The Chinese would agree with Iago in its being 'the immediate jewel of their souls.' As an instance of its use the following saying may be quoted, 'He who does good hands down a fair name for a hundred generations.'³

J. DYER BALL.

NAMES (Christian).—Names applied to Christians by themselves or by others (nicknames) have been already noticed (cf. vol. iii. pp. 573-576). The present article is intended to sketch any special features in the personal names assumed by Christian individuals during the history of the Church. Such features are on the whole curious rather than numerous or even significant.

I. Christian indifference to names.—At the out-

set Christians saw no reason to differ from the other members of their world in nomenclature any more than in dress or in language.

'Christians are not differentiated from the rest of mankind either in locality or in language or in customs. . . . They dwell in cities of Greeks and of non-Greeks as their respective lot is cast, following the native customs in dress and food and the rest of life' (*Ep. ad Diognetum*, 5).

And what was true of the 2nd cent. has been true, in the main, of the succeeding centuries. Christians have generally taken current names. In no age of the Church could the mere name be taken invariably as a clue to the religion of its bearer. During the epoch of persecution this was intelligible, for any association of a personal name with the new faith would have instantly exposed the bearer of it to arrest. Christians were content as a rule with the generic name of 'Christian.' That was the badge of their fellowship and the red ensign of their confession before tribunals. But, even when the 4th cent. saw the end of persecution by the Roman empire, Christians continued usually to call themselves, as their pagan fellow-citizens did,¹ after colours (Albanus, Ater, Candidus, Rufus, etc.), jewels (Margarita, Smaragdus, etc.), numbers (Tertius, Quartus, Septimus, etc.), rivers (e.g., Euphrates, Nilus, Orontius, Rodane), and months (Aprilis, Dins, Januarius, Junia, Octobris, etc.), from agriculture (e.g., Fructuosus, Silvia, Tilia, Vindemialis), or from geography (Afra, Anatolius, Libya, Thalassius, Tiburtius, etc.), from a wish for good luck (e.g., Eutyches, Faustus, Felix, Secundus), and so forth. Names like Stercorius and Stercoria and the numerous animal-names (e.g., Aper, Asinia, Columbanus, Leopardus, Lupus, Turtura, Ulfilas=Wulfila) are attributed by Martigny to the strong sense of humility which pervaded some early Christians; but the literal significance of such names was not felt in every case, and not all of them (e.g., Aquila, Leo, and Ursula) connote humility.² Some names were naturally more attractive to Christians than others, but there was no serious idea of calling any of them common or unclean, and very little conscious emphasis on their etymology.

Perhaps the most striking proof of the indifference felt by Christians to names is the freedom with which they continued not only to bear but to confer names associated with the very mythology and idolatry against which they were arrayed. Sometimes these names are current modifications of an idol's or a pagan deity's name (like Heraclides, Jovianus, Phœbe, Olympius, or Posidonius), but in some cases the actual name is borne. Origen's life furnishes a significant proof that in the last quarter of the 2nd cent. there were Christian parents who evidently entertained no scruple about giving their children names which recalled pagan deities. Leonides called his boy Origen ('born of Horus'), and Leonides was far from being a worldly Christian. Ares, Bacchus, Ceres, Hermes, Mercuria, and Nereus appear among the names of Eastern martyrs, Eros is an episcopal name, St. Ambrose of Milan had a brother called Satyrus, three bishops in Chrysostom's age were named Ammon (i.e. after Jupiter Ammon, not after the OT Ammon), a Roman martyr is called Lucina, and an Alexandrian martyr bore the name of Aphrodisius. The instances of this practice are so numerous and cover so many centuries—they occur down to the 6th cent.—that we are justified in regarding it for the

¹ Thus in the 4th cent. we find a certain Christopher (Χριστοφορος), who had a Christian son, and yet the boy is called Paphnutius (*Heidelberger Papyrus-Sammlung*, i. [1906] 6). Probably the father was a Christian, but he did not choose a distinctly Christian name for his child, although the name may have been given in honour of the great Egyptian ascetic.

² Hrabannus, the great monastic scholar of the 9th cent., was called after the raven (*hraban*).

¹ See art. in *China Review*, xvi. [1887-88] 257 ff.

² See J. Edkins, *Chinese Buddhism*, London, 1880, ch. xxii.

³ J. H. Stewart Lockhart, *A Manual of Chinese Quotations*, Hongkong, 1893, p. 397.

most part as normal. The paradox is apparent to modern students, but it does not seem to have been visible to contemporaries as a rule. Thus, Apollonius, who was martyred in the reign of Commodus, is invited by the prefect to 'sacrifice to Apollo, and to the other gods, and to the Emperor's image,' the probability being, as F. C. Conybeare (*Monuments of Early Christianity*, London, 1896, p. 38) points out, that the scene was actually ἐν τῷ Ἀπολλωνίῳ, since Apollo is the first and only god mentioned by name. Here, then, we have a Christian martyred for declining to sacrifice in honour of the very god whose name underlay his own! But the incongruity was not felt, or, if it was felt, it was not remedied. When we discover that late in the 3rd cent. a Christian presbyter is called Apollon (Ἀπόλλων [*New Classical Fragments, and other Greek and Latin Papyri*, ed. B. F. Grenfell and A. S. Hunt, London, 1897, no. 73]), and another Psenosiris, we do not require to set this down as a peculiarity of Egyptian Christianity; it was not confined to Egypt, and it survived as it had preceded that particular period.

2. Rise of a distinctive nomenclature.—But there are occasional indications of a break away from this habit of bearing names associated with mythological culture and the pagan cultus, and these indications are all the more interesting because they mark the first of the two paths along which the early Christians struck out a more distinctive nomenclature of their own, viz. (a) by adopting OT names, and (b) by appropriating the names of apostolic saints.

(a) From the scanty amount of extant evidence it would appear that some of the early Christians did feel uneasy under semi-idolatrous¹ names, and that they occasionally sought refuge from their embarrassment by exchanging them for OT designations. An early instance of this practice is mentioned by Eusebius (*de Mart. Palest.* xi. 8), in his account of the five Egyptian Christians who were arrested at Cæsarea in A.D. 310 and eventually put to death.

When the judge asked their spokesman what his name was, 'he heard the name of a prophet instead of his proper name. And so with them all. They had altered their names, to replace the names given to them by their parents, for the purpose of avoiding idolatrous associations. You would hear them calling themselves Elijah, Jeremiah, Isaiah, Samuel, or Daniel.'

In this way, Eusebius adds approvingly, they showed that they were true Jews of the kind praised by St. Paul (Ro 2²⁹), God's genuine Israel; their names as well as their deeds proved it. But it is plain, even from the tone of Eusebius, that this was not a line followed by the majority of Christians. The 6th cent. Procopius of Gaza, it is true, commenting on Is 44¹⁻⁵ (*PG* lxxvii. 2401), reports that during the fierce persecutions many Christians of pagan birth took Jewish names from the OT, like Jacob, Israel, Jeremiah, Isaiah, and Daniel, and with these sacred badges gladly went to martyrdom (μεθ' ὧν ὀνομάτων ἐπὶ τὰ μαρτύρια προθύμως ἑαυτοὺς ἐπέδιδσαν). Yet these are local and sporadic expressions of pious austerity. The records of the martyrdoms amply corroborate the impression that even the majority of the martyrs, who were the fighting line of the Church, died as they had lived under names which were often redolent of pagan associations.²

Furthermore, the adoption of OT names as more

¹ Athanasius (c. A.D. 332) notices that one of his five Meletian antagonists at court was called Gelæus (i.e. γελαῖος, 'ridiculous') Hierakammon; 'qui nominis sui pudens Eulogium se appellandum curavit' (*Fest. Epp.* iv. 6).

² Sometimes a martyr would refuse to give his or her name (e.g., Sanctus at Lyons [Eus. *HE* v. 1. 20], who would only repeat, 'I am a Christian'), either from an ecstatic indifference to the secular personality or to avoid identification (as in the case of Sahina [*Acta Pionii*, ix.], who, on the suggestion of Pionius, called herself Theodota, 'ne in mannis dominae implae posset incidere').

congenial to out-and-out Christians went forward more rapidly in some circles of the East than in the West. Possibly it is due to accident that most of the extant data point to Egypt, but the general difference of nomenclature between the Eastern (especially the Palestinian) and the Western Churches may be seen, e.g., in the early lists of bishops. The Jerusalem lists record a large proportion of OT or Jewish names: Tobias; Benjamin, Moses, Ephraim, Joseph, Levi, Elias, Hermon, Isaac, and Amos are more characteristic than Seneca or Narcissus. The Roman lists, on the other hand, do not contain any OT names. Even the names of the bishops of Antioch and Alexandria show no distinct Biblicizing tendency; the mere fact that the Antioch list contains names like Heron, Eros, Serapion, and Asclepiades proves that the archaic tendency of the Jerusalem nomenclature was not distinctively Eastern, although it may be felt to some extent in the adjoining Church of Syria. Recourse to OT names may be said, therefore, to have been Eastern rather than Western, and it was not by any means predominant even in the Eastern Church.

(b) The choice of apostolic saints' names began earlier, and began not as a protest but spontaneously. Hero-worship rather than a reaction against paganism was its spring. By the beginning of the 3rd cent., in some circles (Egyptian?) at any rate, Christians were fond of making their children namesakes of Paul or Peter. This is plain from the remarks of Dionysius, bishop of Alexandria, as quoted by Eusebius (*HE* vii. 25. 14).

He is attempting to prove that the John of Rev 22³ need not be the apostle John, and he observes that in his opinion many during the apostolic age took the same name as the apostle John out of admiration for him, 'just as Paul and Peter are frequently given as names to the children of believers' (ὡςπερ καὶ ὁ Παῦλος πολλὸς καὶ δὴ καὶ ὁ Πέτρος ἐν τοῖς τῶν πιστῶν παισὶν ὀνομάζονται).

But this inference is purely conjectural; there is no support for the opinion that people at that early period called themselves after John or any other apostle. The name was not uncommon, and its multiplication was not due to hero-worship. On the other hand, the fact from which Dionysius draws this inference is indisputable; his incidental allusion to contemporary usage proves that the prestige of the apostles had already begun to induce some Christian parents to call their boys after Paul and Peter. Paul is more common than Peter, and the names of other apostles occur only seldom. But it always remains doubtful whether the occurrence of a name like Paul means that it had been chosen out of special regard for the apostle.

It is more difficult to determine how soon and how far Christians assumed the names of men and women who had lived outside or after the apostolic circle. We can readily understand that the hero-worship of a pious contemporary which led to the adoption of his name would be natural, whether the new name replaced the old or was merely added to it. But the evidence, such as it is, needs to be sifted.

E.g., Jerome explains Cyprian's middle name (Thascius Cæcilius Cyprianus) by suggesting that it was adopted from the presbyter who had been the means of his conversion (*de Vir. Illust.* 67: 'Cyprianus . . . suadente presbytero Cæcilio, a quo et cognomen sortitus est, Christianus factus'). Inherently there is nothing improbable in this. It was legal, at any rate. The likelihood is, however, that it is one of Jerome's biographical errors,² for the presbyter's name, according to

¹ Abraham came into vogue throughout the Eastern Church by the 4th century. Ahel seems Christian in the 5th cent. letter preserved in *Oxyrhynchus Papyri*, x. [1914] 800; he was a valet. But many of these OT names were due to Jewish influence; converts from Judaism already bore them.

² Another mistake of the same kind occurs in 6, where he derives 'Saul' (Ac 13⁹) from the proconsul Sergius Paulus ('ab eo, quod enim Christi fidei subegerat, sortitus est nomen'). But 'Paul' was an alternative birth-name for Saul, not a Christian name.

Pontius (*Vita Cypriani*, 4), was Cæcilianus, not Cæcilius. Still, Jerome would not have made this suggestion, if the practice had not been credible in his own day.

We may assume, therefore, that by the 4th cent. Christians sometimes adopted the name of a spiritual hero who had helped them. A century earlier we have the partial parallel of Eusebius in Cæsarea calling himself "Eusebius Pamphili" out of admiration for Pamphilus his friend.¹ But all doubt is removed by the contemporary evidence of Chrysostom (*in Gen. hom. xxi. [PG liii. 179]*). In commenting on Gn 4th, he contrasts the haphazard way² in which parents name their children nowadays (*καθάπερ οἱ νῦν ἀπλῶς καὶ ὡς ἐτύχε τὰς προσηγορίας ποιοῦνται*) with the pious care of the ancients, who made the child's name an incentive to moral excellence.

Nowadays they say, 'let the child be called by the name of his grandfather or great-grandfather; not so the men of old, who took the greatest pains to give their children such names as not only incited the hearers to moral excellence but proved instructive (*διδασκαλία φιλοσοφίας ἀπάσης*) in all ways to everyone else and to all succeeding generations.'

He exhorts Christian parents to name their children not after honoured and distinguished ancestors, but after saintly Christians conspicuous for goodness (*τῶν ἀγίων ἀνδρῶν τῶν ἀρετῇ διαλαμψάντων*), although neither parents nor children must rely on the mere name; the name without the corresponding character is of no avail (*οὐδὲ γὰρ ὀλίγησιν τι προσηγορία ἀρετῆς ἐρημος οὐσα*). The saintly men whose names are recommended may have included OT no less than NT figures; they certainly did not exclude pious contemporaries, for some of the Antiochene Christians called their boys after Meletius the bishop (Chrysostom, in *PG* 1. 515), feeling that even to have his honoured and holy name within their homes was a blessing and a source of strength.³

Here the 4th cent. is echoed in the 17th. This word of Chrysostom is precisely the argument and appeal of an English Puritan like William Jenkyn.

He had his congregation remember how good it was 'to impose such names as express our baptismal promise. A good name is as a thread tied about the finger, to make us mindful of the errand we came into the world to do for our Master' (*Exposition of Jude*, London, 1652, p. 7).

Only, as we shall see, the Puritan's models were strictly Scriptural; he would have indignantly repelled the desire to call Christian children after any saint later than the NT at any rate, and he would have denounced the superstitious belief, which Theodoret of Cyrrhus in Chrysostom's age expressly mentions, that such saintly names put their bearers under the ægis of patron-saints:

In a eulogy of the martyrs Theodoret declares that 'philosophers and orators are consigned to oblivion, and most people nowadays are ignorant of the names of kings and generals; but all know the names of the martyrs better than those of their dear ones (*τὰς τῶν μαρτύρων προσηγορίας μᾶλλον ἴσασιν ἅπαντες ἢ τὰ τῶν φιλάτων ὀνόματα*). In fact they are keen to confer martyrs' names on their children, thus securing protection and guardian care for them' (*de Græcarum Affectionum Curationibus*, sermo viii.).

¹ As Petrus, in the 11th cent., called himself Damian, out of gratitude to his brother, Damianus.

² The Italian Dominican, Campanella (1568-1639), makes the same criticism upon his contemporaries. In his *City of the Sun* (tr. in H. Morley's *Ideal Commonwealths*, London, 1839, p. 235) he notes that the inhabitants take a better way: 'names are given to them by Metaphysicians, and that not by chance but designedly,' etc.

³ In the 5th cent. Arlesius changed his name to Zeno, when he married the emperor's daughter, and reigned as Zeno (Evagrius, *HE* ii. 15); but this alteration of name was not religious. On the other hand, the Decian martyr Achatius (T. Ruinart, *Acta Primorum Martyrum*, Ratisbon, 1859, p. 202) tells the judge: 'si proprium nomen meum exploras vocor Agathos-angelus' (*car. lecti*. Agazangelus, Agathangelus). Witiza (Euticius), the second founder of monasticism in the West during the 8th cent., took the spiritual name of Benedict, by which he is known to fame. Two centuries earlier Gregory of Tours had changed his name, at his consecration, from Georgius to Gregorius, after his maternal grandfather, the holy bishop of Langres. There are numerous instances of this practice throughout the Middle Ages.

The cult of the saints developed this practice, however, in the Middle Ages. The popularity of certain names is explained in many cases by the local traditions of particular saints. It was an analogous but less supernatural feeling that led Alcuin, e.g., in the beginning of the 9th cent., to call his distinguished pupil Hrabanus by the name of Maurus, as if he were a second Maurus (i.e. equipped with the excellences of St. Benedict's famous disciple).

The use of definitely Christian names was helped by the rise of infant baptism. But it was not confined to the naming of children. Catechumens might change their names at baptism, or assume a 'spiritual' name,¹ and this was in vogue by the beginning of the 4th cent., if not earlier. Ignatius is the earliest Christian who is known to have assumed a second, 'spiritual' name; he took, at baptism, the title of Theophorus (*θεοφόρος*, 'bearing God,' or *θεόφορος*, 'borne by God') for religious reasons. Perhaps this explains why Theodorus (Eus. *HE* vi. 30) took the name of Gregory; Gregorius was not a specifically Christian name, but it was capable of a Christian suggestiveness (*γρηγόριος*, 'watchful'). The Samaritan (?) martyr, Peter Balsamus (Ruinart, p. 525 f.), told the magistrate that his paternal name was Balsamus, 'spirituali vero nomine, quod in baptismo accepi, Petrus dicor.' That was in A.D. 311, and it tallies with the data already tabulated (see, further, Ducange, *Glossarium*, Niort, 1883-87, s.v. 'Binomius').

(i.) Though Chrestus was used, one name in the NT was naturally left alone, the name of Jesus. St. Paul's friend 'Jesus, surnamed Justus' (Col 4th) had received the name as a Jew (=Joshua); but reverence prevented Christians from assuming it. For opposite reasons, Sapphira does not seem to have been appropriated by women—although it emerges in 17th cent. England (Bardsley, *Curiosities of Puritan Nomenclature*, p. 78), and a Presbyterian lady of 81 bearing this staid name appears on a burial register as late as 1704. As Judas was shared by several apostolic figures, the ill-fame of Judas Iscariot did not discredit it among Christians.

(ii.) Sometimes a name was added posthumously. John, the eloquent bishop of Constantinople, received the admiring title of Chrysostom (*χρυσόστομος*) after his death; and Henry Suso, the 14th cent. mystic, was similarly dubbed Amandus. But Suso had privately chosen this name; he did not allow it to be known during his lifetime, although he had changed his name from that of his irreligious father for the maiden-name of his pious mother, which he Latinized from Sues to Suso.

3. Formation of new names.—The creation of names went on; e.g., from (a) festivals of the Church, like Epiphanius (?) or Epiphania, Paschalis, Pascasus,² and Sabbatius, and from (b) qualities of mind or of the moral life. The latter class are naturally numerous, but they are not always distinctively Christian. Names like Aeternalis, Athanasius and Athanasia, Anastasius and Anastasia, Eucharistus, Evangelius, Martyrius, Patrophilius, Praulius,³ Pistus, Prosdoke (martyred, A.D. 306), Refrigerius and Refrigeria, Sanctus, and Sozomen tell their own tale. But other names of this class are not exclusively Christian. Thus Hieronymus was pre-Christian, while even Irene (*εἰρήνη*) was a pagan name, and continued to be used by pagans after Christians had adopted it (cf. *Oxyrhynchus Papyri*, i. [1898] 114-116).⁴ We are on safer ground with names derived from divine names; Adeodatus and Adeo-

¹ This survives in the new name assumed by the pope on taking office. Adrian vi., the reforming pope, stood out against this, when he was elected in 1522. 'Contrary to the custom observed for five hundred years, he adhered to his baptismal name. He was determined, even as Pope, to be the same man as before' (L. Pastor, *Hist. of the Popes*, Eng. tr., London, 1891-1912, ix. 48).

² Just as in England children born at Easter were sometimes called Pash.

³ Theodoret (*HE* v. 33) notes, in connexion with Bishop Praulius of Jerusalem in the 5th cent., how admirably his disposition and hearing suited his name (*πράβλιος*, 'mcek-spirited').

⁴ Ireneus also is a pagan formation (cf., e.g., *Fayum Towns and their Papyri*, ed. Grenfell and others, London, 1900, p. 43).

data, Christopher,¹ and Cyriacus are rooted in the Christian soil. Yet caution is needed even here. No doubt names like Dorothea, Theodoretus, Theodosia and Theodosius, Theodoulos, Theognostos, Theoktista and Theoktistus, Theopemptus, and Theophylact were favourites² in the Church; but it must be remembered that similar names, like Dorotheus, Theocritus, Theodektes, Theodorus, Theodotus, Theognis, Theophanes, and Theophilus, were current in non-Christian circles before they were taken over by the Church, and that, while a name like Theopistus (a Roman martyr) seems a Christian formation, this was not the case with Theoteknus³ and need not be the case with some other names of the same class. Occasionally a name would be coined, in the OT fashion. Thus, in the (early) 5th cent. panegyric on St. Phocas (cf. *Analecta Bollandiana*, xxx. [1911] 252 f.), his Christian parents give him the name of Phocas (Φωκάς), because he is a 'light' to their home: ἐφάνη ἡμῖν φῶς ἀληθινόν, ὁ πρωτότοκος ἡμῶν υἱός.⁴ Such a source for names is natural and spontaneous, apart from any question of Scriptural precedent.

But, apart from the question of origin, the early Christians adopted or adapted a number of names as particularly appropriate to their faith—e.g., names derived from ἀγάπη (Agape, Agapetus, Agapins) and *xmo* (especially among the later Gauls), from εἰρή (Elpis, Elpidius, Elpisura) and *spes* (Spes, Spesina), and from joy (Exillaratus, Hilara, Hilaris, Hilarius). Whether the metal is Christian or not, the Christian stamp is obviously on names like Eleutherus, Macarius,⁵ Vigilantius, Vitalis,⁶ Vitalissimus, Viventius, Vivianus, Zoe, and Zotikos.

4. Some typical groups of early Christian names.—The data outlined in the previous paragraphs may be tested and illustrated by reference to one or two lists of bishops and martyrs in the early Church. Their contents are often significant.

(1) At the N. African synod of 256 the names of the 87 bishops who attended are mainly Latin, but only two are Scriptural (Peter and Paul); the rest are ordinary pagan titles.

(2) Seventy years later, at the Council of Nicæa, five-sixths of the names (there are 237 in all) are such as we meet in contemporary non-Christian life; of the remainder, we have 18 pious names like Eusebius (5), Hosius, Theodorus, Theodotus, and Theophilus, and the 19 Scriptural names include Moses, Paul (6), Peter (4), Mark (3), John, James, and Stephen, with one Polycarp.

(3) For Egypt in particular there is ample evidence in the writings of Athanasius, which tallies with these data. To take only a single item, almost at random: in A.D. 347 he (*Fest. Epp.* xix. 10) notes the appointment of new bishops called Psenosiris, Arion, Triadelphus ('instead of Serapammon'), Theodorus ('instead of Anubion'), and Orion ('instead of Potammon'); two OT

names occur among the episcopal lists (Isaac and Jacob); at Arsinoë Andreas succeeds Silvanus; and at Clysma Tithonas is grouped with Paulus. The small size of this group makes the variety of the names (mythological, local, and Scriptural) particularly significant.

(4) A century later, we discover that the (early) 5th cent. martyrology of the Roman Church which A. Urbain has edited (*TU*, new ser., vi. [1901], pt. iii.) contains about 800 names. The large majority are ordinary Greek and Roman names, even including Achilles, Hermes (2), Neptunialis, Orion, Romulus, and Toga. Moses is the only OT name, unless Abacuc (Abacum) is included. There are a few formations like Audax, Calumniosus, Chrises, Dynamius, Eunuchinus, and Poleminus. Paul (5), Peter (5), John (2), Philip, Marcus (2), and Timotheus (2) represent the Scriptural element—which once more is scanty. The most popular male name on the whole is Felix (18). The women's names include Agnes (2), Beatrix, Candida, Julia (6), Maria, Martha, Præpedita, Sophia (2), Sotere (3), Victoria (4), and Zoe.

(5) Later still, among the saints of Thrace and Moesia (not later than the 7th cent.; cf. H. Delehaye, in *Analecta Bollandiana*, xxxi. [1912] 163 f.), we come upon a deacon called Ammon, while the virgins who are his fellow-martyrs at Heraclea are Laurentia, Celsina, Theoclia, Theoktiste, Dorothea, Eutuchiana, Thecla, Aristainete, Philadelphie, Mary, Beronike, Euthymia, Lamprotate, Euphemia, Theodora, Theodote, Teteia, Aquilina, Theodoule, Haplodora, Lampadia, Procopia, Paula, Junilla, Ampliane, Persisa, Polynike, Maura, Gregoria, Kyria, Bassa, Callinike, Barbara, Kyriake, Agathonike, Jnsta, Irene, Matrona, Timothea, Tatiane, and Anna. The 38 martyrs at Philippopolis are called Orion, Anatolinus, Molias, Eudaimon, Silvanus, Sabinus, Eustathius, Straton, Bosbas, Timotheus, Palmatus, Mestus, Nikon, Diphilus, Dometius, Maximus, Neophytus, Biktor, Rhenus, Saturninus, Epaphroditus, Kerkas, Gaius, Zotikos, Kronion, Anthus, Oros, Zoëlus, Tyrannus, Agathos, Pansthenes, Achilleus, Pantherius, Chrysanthos, Athenodorus, Pantoleon, Theosebes, and Genethlios. The Scriptural (apostolic) element is noticeably small in these names of Christians outside the inner circle of the empire; there is a distinct proportion of 'spiritual' names, or at any rate of names with a pious application. On the other hand, mythological names like Ammon and Orion are still used freely.¹

5. Oblation of names.—Before passing on, we may notice the employment of names in the liturgy of the early Church. Lists of names were read aloud for a definite purpose; this broadened as the doctrine and cultus of the Church developed, but originally it was quite simple. The names of those who gave donations in money or otherwise (commemorial elements, endowing or building a church) were recited in public worship, that the faithful might requite them by praying for them. This practice occasionally led to fulsome praise, when the amount of each person's subscription was read out after his or her name, as Jerome pungently objects (in *Ser.* ii. [116], in *Ezek.* vi. [182-9]), yet in itself the custom was naive and pious. The names were written on two-leaved tablets or diptychs (διπτυχα). But these diptychs or registers soon embraced other names. They were used to bid the Church commemorate not only these benefactors after death but all the faithful dead, especially the martyrs and confessors. This became a regular part of the eucharistic worship, the names being at first recited usually by a deacon, after which (oblatio) the prayers (post nomina) were offered by a priest. The later liturgical variations are numerous and complicated (cf. *DCA* i. 560-563, ii. 1197, 1376-1377), but it seems plain that from the 3rd cent. onwards the names were recited in the eucharistic liturgy at the altar, and they came to include

¹ Phileas, bishop of Thmuis, speaks at the beginning of the 4th cent. about some martyrs at Alexandria as being *χριστοφόροι* (*Eus. HE* viii. 10. 3). But Rufinus shrinks from the term, and translates it by the colourless *beati*, just as he renders Eusebius's description of Phileas (φίλας) by *beati* in viii. 10. 11. The 10th cent. pope Christopher had to be deposed!

² Gregory of Nyssa's wife was called Theosebeia, and she lived up to her name.

³ The name belongs to a bitter persecutor of the Church, A.D. 303 (Ruinart, p. 374). As Eusebius remarks (*HE* ix. 2. 2), his conduct belied his name.

⁴ The Armenian version omits this derivation of the name. Similar formations are Lucellus and Photinus.

⁵ Eusebius (*HE* vi. 41. 17) mentions a Libyan martyr who was truly named 'Makar.' Similarly Theodoret (*HE* i. 3).

⁶ Vitalis in England seems (Bardsley, p. 132 f.) to have been originally a pre-Reformation name given to children christened before birth, 'in cases where it was feared, from the condition of the mother, they might not be delivered alive.' Like the cognate Creature, it was common to men and women, owing to the circumstances in which it had been conferred.

¹ It was against this tendency that the 19th canon of the Arabian pseudo-Nicene canons was directed ('Fideles nomina gentiliū filiis suis non imponent; sed potius omnia nomina Christianorum suis nominibus utantur, ut gentiles suis utantur, imponentque nomina Christianorum secundum scripturam in baptismo'). But this attempt to discourage native names as secular never succeeded; it was revived later, however, in the Puritan movement.

not only local but catholic saints. A similar extension took place in the diptychs of the living, which soon embraced not only donors but teachers, spiritual and imperial authorities, holders of clerical office and civil magistrates, and eventually the entire body of the faithful belonging to any church. In the Roman liturgy of the Mass the *commendatio pro vivis* precedes, the *commendatio pro defunctis* follows, the consecration. What underlies this offering of names is the sense of unity, the living and the departed alike being recognized as members of the one Church. But the practice naturally gave an opportunity for recognizing the orthodoxy or heterodoxy of the living or even of the dead. It was a convenient means of enforcing Church discipline. To have one's name on such a register was to be accredited a full and true member of the Church; to be omitted was a stigma and punishment, and attempts might even be made after a man's death (cf. the case of Chrysostom) to remove his name from the list as a posthumous censure on his life or opinions.

The practice thus passed into the rubric of prayers and masses for the dead, but it was steadily enforced on the special grounds of gratitude and unity, particularly the former. This is explicitly decreed in the 19th canon of the Portuguese Council at Merida, A.D. 688 ('Eorum nomina a quibus eas ecclesias constat esse constructas, vel qui aliud hanc sancte ecclesie videntur aut visi sunt contulisse, si viventes in corpore sunt, ante altare recitetur tempore missae, quod si ab hac decesserint aut discesserint luce, nomina eorum cum defunctis fidelibus recitetur suo in ordine'). The former recitation of names survives in the Bidding prayers of the English Universities, which gratefully commemorate the benefactions of the past, naming the donors singly, but praying only for the living (ecclesiastical, temporal, and academic authorities).²

6. Mediaeval practice.—On the whole, the same general features reappear in the Christian nomenclature of the Northern nations under the Church, from the 6th cent. onwards. The significance of names leads to the practice of onomantia; local and national names are usually retained; terms connected with pagan worship are either dropped or more frequently carried over with slight changes in the wording;³ and the new Christian names already consecrated by the Greek and Roman Churches make their way along the channels of the saints' calendars and traditions. Saints' names were generally the favourites. It is not unlikely that a certain impetus to the use of Biblical names was given throughout the West, from the 7th cent. onwards, by the Spanish bishop of Seville, Isidore, whose learned *Etymologiae* (bk. vii. chs. 6-10) brought out the religious significance of the Biblical names. A cult of such names began to spread. The old principle, 'bonum nomen, bonum omen,' regained its vitality in this department of nomenclature; but it was unable to overcome entirely the prejudice against OT names which were already borne by the Jews, and the anti-Semitic tendency hampered the free use of such names down to the 10th century. Not until the Reformation were such names adopted eagerly, and then it was by the Biblicizing Protestants on the Continent. How soon this practice began, and how characteristic it was of the new movement, may be seen from the Council of Bordeaux in 1539 (ix.), which decreed:

'Nomina sanctorum patrum veteris Testamenti affectare haereticorum est.'⁴

Montaigne's contemporary witness is also significant:

'Dira pas la posterité que nostre reformation d'aujourd'hui ait esté delicate et exacte, de n'avoir pas seulement combattu

les erreurs et les vices et rempli le monde de deuotion, d'humilité, d'obeissance, de paix et de toute espeece de vertu, mais d'avoir passé jusque à combattre ces anciens noms de nos baptêmes, Charlee, Loye, François, pour peupler le monde de Malthusalem, Ezechiel, Malachie, beaucoup mieux sentans de la foy?' (*Essais*, bk. i. ch. 46 [ed. Bordeaux, 1906, p. 356]).

Evidently this cult of Scriptural, and especially of OT, names was an innovation in the France of the 16th century. Up till then the Northern nations had for the most part shown a natural and healthy preference for names of native growth. This applies in the main to Teutons, Celts, and Saxons alike, as well as to the Slavs. Like the Goths, the Teutons still bore their ancestral names, such as Alfred, Arnold, Baldwin, Charles, Frederick, Gertrude, Henry, Hugo, Mildred, Sigismund, Theodoric, and Ulrica; saints' names from the Church's calendar came in, but they did not submerge their predecessors.

In Britain, where different racial strata affected the nomenclature, an examination of the names used by Christians yields an almost identical result. Thus in the list printed by E. Hübner (*Inscriptiones Britanniae Christianae*, Berlin and London, 1876, p. 94 f.), which comes down to the 11th cent., the majority of male and female names are drawn from the Celtic and Anglo-Saxon vernacular; there is a sprinkling of Latin names, and only one or two from Scripture—e.g., Jacobus (8th cent., Cardiganshire), Samson (9th cent., Glamorganshire), and Gideon (? Dorsetshire). Among the English nuns who assisted Boniface to spread monasticism through Germany in the 8th cent. we find native names like Walpurga and Lioba alongside of Thecla; it is exceptional to come upon even a saint who bears any name except a native one, in Gaul or in the Northern islands, and it is significant that in Britain no Saxon bishop is known to have taken a Biblical name. The change did not come, according to Camden, until after the Norman Conquest.

Then 'our nation (who before would not admit strange and unknown Names, but avoyded them therefore as unlucky) by little and little began to use Hebrew and sacred names, as Matthew, David, Samson, Luke, Simon, etc., which were never received in Germany until after the death of Frederick the second, about some 300 years since' (*Remains concerning Britain*, p. 53).

The use of Biblical names in pre-Reformation England has been traced to various sources, in particular to the popular dramatic mysteries and the Crusades (which popularized Ellis=Elias, and John especially). But it was the Norman influence that enabled Scriptural and saints' names, among others, to compete with the Old English ones successfully.

7. Puritan nomenclature.—The sudden enthusiasm for Bible-names in the 16th and 17th centuries throughout Puritan England replaced a sort of clerical system by an irregular freedom of choice on the part of parents.

'Previous to the Reformation,' as Bardsley writes (p. 48), 'the priest, with the assent of the gossip, gave the babe the name of the saint who was to be its patron, or on whose day the birth or baptism occurred'—'saint' including the great host of men and women notable in the Church's tradition and history.

The Puritans eschewed these as savouring of papacy and paganism, preferred godly names from Scripture, and took the choice into their own hands. Macaulay (*Hist. of England*, vol. i. ch. i. [ed. London, 1871, i. 40]) insists that their special preference for OT names was due to militant sympathies, and that the extreme Puritans were actuated in this, as in other matters, by their revolutionary, theocratic principles.

'They baptized their children by the names, not of Christian saints, but of Hebrew patriarchs and warriors.'

To some extent, this is true; it explains, e.g., how even Puritan girls could be disfigured by the name of Jael. But the reason was larger than mere militant piety. The Puritans were also driven by anti-ecclesiastical antipathies; in their passion for

¹ Cf. L. Duchesne, *Christian Worship*, Eng. tr., London, 1912, p. 179 f., and, for the earlier Gallican Mass, p. 203 f.

² Cf. T. Seccombe and H. S. Scott, *In Praise of Oxford*, London, 1910-11, li. 773-775.

³ E.g., the analytic formation of personal names which meets us in the OT involves, in pre-Celtic Ireland as in the Semitic East, the occasional incorporation of a god's name, and this practice was continued in Christian times with the aid of the words *mael*, "bald, tonsured," and *gille*, "boy, servant-boy" (J. Rhys, *Lectures on Origin and Growth of Religion as illustrated by Celtic Heathendom*, London, 1892, p. 215). A good example is Gilchrist, from *Gillecríst* ('Servant of Christ'). For name-giving in connexion with ethnic baptism see *ERE* ii. 369.

⁴ The habit persisted into the 17th century. In the list (1693) of 254 French Protestants recently sent to the galleys (E. Arher, *The Torments of Protestant Slaves*, London, 1907, pp. 271-280) we find Abraham (4), Aaron, Benjamin, Daniel (12), David (10), Elie (4), Israel, Isaac (6), Jacob, Joseph (8), Moïse (3), Samson, and Solomon, i.e. a fifth of the whole number. Three-fifths are Scriptural (NT) or 'saints' names.

sacred names they found that some of the NT names were, as they thought, compromised by associations with Church festivals and the calendar of the saints, and the result was that they felt shut up to OT names or to NT names which were innocuous and minor. In both ranges of choice they took names often irrespective of their original associations¹ or uncouth in the last degree. Girls were baptized as Aholiab and Drusilla, e.g.; or as Kerenhappuch (as late as the 18th and even the 19th cent.). The essential thing was that a name should be Biblical; as a rule, the Puritan extremists cared for little else. They swung to the opposite extreme from Royalists, who did not hesitate to use names like Cassandra, Diana, Lais, and Venus for their daughters. Biblicism and an equally artificial neo-paganism were at the corruption of nomenclature.

The practice extended to the habit of making names out of abstract virtues, as in the early Church. Puritan boys were baptized Perseverance, Humiliation, and Repentance—to quote only three cases. Even more whimsical was the construction of a name out of a phrase or sentence.

'Sometimes a whole godly sentence was adopted as a name. Here are the names of a jury said to be enclosed in the court of Sussex about that time.

Accepted, Trevor of Norsham.
Faint not, Hewit of Heathfield.
Make Peace, Heaton of Hare.
Redeemed, Compton of Battle.
God Reward, Smart of Fivehurst.
Standfast on High, Stringer of Crowhurst.
Earth, Adams of Warbleton.
Called, Lane of the same.
Kill Sin, Pimple of Witham.

Graceful, Harding of Lewes.
Return, Spelman of Watling.
Be Faithful, Joiner of Bridling.
Fly Debate, Roberts of the same.
Fight the good Fight of Faith, White of Emer.
More Fruit, Fowler of East Hadley.
Hope For, Bending of the same.
Weep not, Billing of the same.
Meek, Brewer of Okeham.²

In justice to these ultra-Puritans, however, we ought to remember that, whether they were conscious of it or not, they had a precedent for such compounds. The early Church had led the way, in making names not only out of abstract terms, as we have seen, but out of devout phrases. This uncouth formation of personal names was much older than the Puritans. In the martyr-list of the Carthaginian Church (6th cent.) Jan. 8th is the anniversary of the *depositio Quodvultdeus Episcopi*, and Jan. 5th celebrates the *depositio* of two bishops, one of them called Deogratias. The latter was the local bishop who was elected in A.D. 454, but we know of at least one earlier presbyter, bearing the name of Quodvultdeus, who consulted Augustine.³ Besides, the practice goes back to Hebrew custom, and it was the well-known OT instances that formed a conscious precedent for the English Puritans. Both in the construction of these phrase-names and in the predilection for OT names they were actuated by the feeling that the Bible (especially the OT) was a world, or rather the world, of God, which contained rules and standards for the outward as well as the inward direction of life. Where the Puritans differed from previous circles of Christianity, as regards nomenclature, at any rate, was in the extent to which they carried their imitation of the OT, rather than in the fact of that imitation. They felt that they did not need to look further than the Bible for 'a commodity of good names.'

These rough formations and the craze for Biblical names are ridiculed mercilessly by contempo-

¹ Bardsley (p. 78) is astonished at Antipas, who was 'a murderer and an adulterer,' but he has forgotten 'Antipas, my faithful martyr.' (Rev 213). It was this Antipas, and not the Herod of that ilk (Mt 141, Lk 97 1823, Ac 141), of whom Puritan parents thought when they baptized their babies by such a name.

² Hume, *Hist. of England*, London, 1789, ch. lxi.
³ The epitaph of an archdeacon Deusdedit in the 6th cent. is quoted by G. B. de Rossi, in *Roma Sotteranea*, Rome, 1864-77, iii. 239, 242. The first Saxon archbishop was also called Deusdedit.

rary dramatists and satirists, but in vain. Such extremists were impervious to humour. Fortunately, they were only a minority, even among earnest religious people, and the æsthetic sense of the majority prevented Scriptural names from swamping all others. Shakespeare makes Juliet declare:

'What's in a name? that which we call a rose
By any other name would smell as sweet . . .
Romeo, doff thy name.'

Bnt, as H. E. Maxwell observes, Shakespeare knew better than his heroine.

'Romeo and she would never have become, among Western nations at least, the type of all that is passionate and tender, had their sponsors named them Abraham and Sarah.'

He quotes two extreme cases of the contemporary fanatical habit.

One is of the sponsors 'who were answerable for the following entry in the baptismal register of Waldron:—

"Flie-fornication, the base sonne of Catren Andrewes, bapt. y^e 17th Desember, 1609." . . . A more charitable spirit moved the sponsors of another unwelcome little stranger, who is recorded in the Register of Kingsdown, in Kent, in 1581, as "Innocent Day, the base borne sonne of one Day" (Meridiana, pp. 267, 276).

But what artistic instinct did for some, good sense and native tradition did for others, and the eccentricities of the Puritans failed to raise rugged Semitic formations or moralistic names 'that would have made Quintilian stare and gasp' into a characteristic feature of English nomenclature.

8. Variations and peculiarities of later practice. —A sudden reaction set in soon on the Continent. The French Revolution produced an antipathy to the use of ecclesiastical and Biblical names; in fact, the legislature forbade any being conferred except those in general use 'dans les différents calendriers, ou ceux des personnages connus de l'histoire ancienne' (*La Grande Encyclopédie*, Paris, n.d., xxvii. 571). Anti-clericalism threatened to narrow the range of Christian nomenclature (the *prénom*), but this cloud passed, although it left, under the Code Napoléon, certain restrictions behind it.

In England, meanwhile, the dominance of the Bible continued to affect Christian names in some circles of the people, long after the Puritans had ceased to be a political power. The evidence for this lingering influence is scattered but ample. Let it suffice to quote a contributor to *NQ* IV. ii. [1868] 342, who notes the following strange names in a parish register of Donnybrook near Dublin:

'Ezble, the daughter of James and—Gudle,
Kesia, daughter to Thomas and Martha Wilkinson,
Wealthy, son to Symon and Eleanor Whathing,
Richards, son to Edward and Baptize Anderson,
Mahitable, daughter to Richard and Elizabeth Burnett,
Utilia, daughter to Richard and Elizabeth Deacon,
Anntistas, daughter to John and Sarah foley,
Imey, daughter to William and Elizabeth Mattashaw,
Abernathy, daughter to James and Elizabeth Bromlow,
Syabella, daughter to John and Margaret Wallis,
Regina, daughter to Magnus and Elizabeth Syck,
Kumie, daughter to John and Ann Dauncy,
Bathia, daughter to James and Elizabeth Bromlow,
Ananias, daughter to Peter and Sarah Portovine,
Levina, daughter to John and Margaret Griffith,
Ammoross Burges,
Teasia, daughter to William and Elizabeth Yonng,
Burlanah Bumbarry,
Amia, daughter to James Cosgrave,
Neptune, son of Harris and Mary Blood of Ringsend,
Deliverance Branan.'

These are all from the first half of the 18th century. But such eccentric names are no longer what they once were. What makes them remarkable is their singularity among the mass of normal names. The temper of mind which underlies them survives still, it is true, in some quarters, as occasional entries in baptismal and burial records prove.

E.g. the parish register of St. Faith's, Norwich, chronicled, as late as 1874: 'Dodo Eliza Delilah, daughter of Arphad Amhrose Alexander Habbakuk William Shelah and Virtue Leah Woodcock' (*NQ* vii. xii. [1891] 404 f.).

Against such names there is no law—except the unwritten law of good taste, and certain forms of piety count themselves free from that law. In fact, it is doubtful if any English law controls the giving of names. T. A. Ingram (*EBr*¹ xix. 159) refers to a 13th cent. injunction of Archbishop Peckham:

'Ministers shall take care not to permit wanton names to be given to children baptized, and if otherwise it be done, the same shall be changed by the bishop at confirmation.'

Legal authorities seem divided on the question whether such a change of name is permissible, but an English Church clergyman, though required to baptize a child by any name selected by the parent or godparent, may 'object to any name on religious or moral grounds, although the rubrics do not expressly say so.' This right of objection, however, would hardly be valid in the case of Scriptural names. So far as the clergy can exercise any real influence in the matter, it is probably by prohibiting silly or freakish names and by encouraging the choice of sensible Christian names—i.e. taking 'Christian' in its legal rather than in its strict sense.

From a Scottish statistical paper for 1860, printed in W. Anderson's *Genealogy and Surnames* (Edinburgh, 1865, p. 149), the registrar's figures show that, out of 3690 entries of male Christian names, the most popular were John (563) and James (503), that Thomas (189) and Andrew (102) outstrip Peter (64), and that, while Daniel occurs 17 times, there is not a single Paul in the list. But even the 'apostolic' names which do occur were not always chosen for religious reasons; patriotic and national interests were more commonly in evidence, when children were thus named.

9. Modern practice. — Modern practice has settled down into a rational liberty in the matter of Christian names, and this has been due to a growing recognition of the truth that it is possible to be religious without being Biblical. Many people do not profess any religious interest at all, but even those who have their children baptized are rarely guilty of giving them 'pious' names. The danger of sanctimoniousness has proved so real that the majority have long ago dropped belief in any specific virtue attaching to a Scriptural or even to a moral name. Family associations, some fashion of the day, or pure caprice are uppermost. Good taste and common sense control the average religious person in selecting names for his children, and, just as a sense of humour and of the fitness of things would probably prevent a rational non-Christian from labelling his offspring Jupiter or Semiramis, Napoleon or Messalina, so a member of the Church would hardly seek to prove his own piety or to ensure that of his children by dubbing them Methuselah or Rizpah, Jabez or Tryphosa, as if these names possessed any intrinsic virtue which might be transmitted to their modern bearers. He is more likely to be guilty of cruelty to children, in peace as well as during a war, by fastening upon them 'Christian' names derived from some contemporary figure or event, which he desires in his folly to commemorate.

LITERATURE.—For the early Church the materials are collected by J. A. Martigny, *Dict. des antiquités chrétiennes*, Paris, 1865, pp. 445–453, and after him, by J. Bass Mullinger, in *DCA*, London, 1880, ii. 1367 ff.; but, in view of subsequent discoveries and researches, especially among the papyri, Martigny's lists (e.g., of distinctively Christian names) need revision. Add: A. Harnack, *Die Mission und Ausbreitung des Christentums in den ersten drei Jahrhunderten*, Leipzig, 1906, Eng. tr., *Expansion of Christianity*, London, 1907, bk. iii. ch. 3, excursus 2.

For the later periods, particularly in England, see W. Camden, *Remains concerning Britain*, ed. London, 1870, pp. 52–109; and C. W. Bardsley, *Curiosities of Puritan Nomenclature*, do. 1880.

¹ Cf. Dickens' satire in *Martin Chuzzlewit* (ch. II.: 'Mr. Pecksniff was a moral man: a grave man, a man of noble sentiments and speech: and he had had his christened Mercy. Mercy I ob; what a charming name for such a pure-souled being as the youngest Miss Pecksniff! Her sister's name was Charity': ch. ix., where he is drunk: "'Mercy and Charity,'" said Mr. Pecksniff, "Charity and Mercy. 'Not unholy names, I hope!'").

For the general subject, from the etymological or historical point of view, cf. the data and discussions in C. M. Yonge, *Hist. of Christian Names*, London, 1863, esp. i. 229 f.; F. W. Farrar, *Chapters on Language*, ed. do. 1873, p. 237 f.; P. Dudgeon, *Short Intro. to the Origin of Surnames*, Edinburgh, 1890; Herbert E. Maxwell's essay in *Meridiana*, Edinburgh, 1892, pp. 267–300; and J. P. Struthers, *What is Thy Name?*, Greenock, 1915. JAMES MOFFATT.

NAMES (Egyptian).—1. General introduction. —Egyptian civilization presents an exceptionally rich and interesting field for the study of names. On the one hand, in the remnants of its ancient beliefs that have survived throughout so many centuries Egypt still preserves several characteristics of primitive religion (cf. NAMES [Primitive]), practically unaltered, whose origin and exact meaning can be verified from the context; on the other hand, during the course of its long history it shows the successive evolutions which primitive notions contained in germ and which non-civilized races either kept as they were or confused and complicated, being unable to arrange them in a system; here they develop into the most refined conceptions of the contemporary theologies of Mediterranean civilization. Egypt therefore supplies us with the necessary connexion between primitive ideas on the name and the advanced theories of civilized religions.

2. Primitive elements. —To understand these elements it will suffice to refer to what is said about the irresistible power of the pronunciation of names among non-civilized races in NAMES (Primitive). Declamation or *melopœia*—the chanted voice of the oldest languages—is regarded as reproducing the harmonious sound, i.e. the material vibration, which is one of the signs of vital substance. This chanted voice (*khrou*; cf. G. Maspero, *Bibl. égyptol.* i. [1893] 101) engenders magical forces (*hikan*). All the texts, ritual, and magic of Egypt rest essentially on the fact that the name, thus understood, constitutes a material soul, and is the most secret part of the whole living being, since it is his very reason for living. The name is therefore the ego. It exists by itself. It is the most subtle of the various souls of the individual (see BODY [Egyptian]). It is the last term in the series of active principles which, gradually increasing in airiness and 'evocability,' result from the combination of body and bone with the blood, the double, the ghost, the shade, etc., to form the life *par excellence* (*önkhu*).

The Egyptian name is so definitely a soul—a living being existing by itself—that the most important and oldest liturgical texts make it the essential element in their magical operations (see below, § 5). There is therefore neither person nor living thing that does not possess a name, known or hidden. No being would be complete, or, rather, existent, if he had not his name, and a man's life can be taken from him by taking away his name by magic. Cursing or execration by the name of an individual lets loose upon him to injure him all the forces which the formula has 'bound to' the name.

This material soul (cf. Pyramid Texts, Ritual of Pepy II., line 669 = *RT* xii. [1892] 146) of the oldest lists is a thing which can be carried off, devoured, or struck. But it can also be seized in order to be incorporated in objects or figures which are vivified not for hostile but for beneficial purposes. The name of a dead man, declaimed and materially captured by the priest, is placed on his image or statue, and he lives again in it. This was the primitive meaning of the expression 'to commemorate the name of N.' The lifeless figures of a bas-relief or tomb-fresco, painted wooden dolls, become so many living servants of the dead man when the image has been provided with a name by

the officiant at the magical funeral ceremony. Painted objects or representations of fictitious offerings become a real sacrifice. No text could be more explicit on this point than the passage which mentions 'those things which chanted declamation makes real.'

These substitutions or magical exchanges of a name, which thus passes materially from one being to another, or from a person to his image, go still further. In order that the dead may not perish, they are transformed into other beings, and even into imperishable objects, by their names being conferred on those beings or objects. By mingling the substances the magical operation mingles the destinies. The chapters on 'Transformations' describe those strange means of escaping annihilation. The names recited on talismans or amulets enclose in these objects the vital principle of an individual. This is probably the explanation of the difficult formulae of the famous Pyramid Texts, where the phrase *am ranuf ni* ('in his name of') assimilates the dead king with groups of divinities or even objects of worship or sacred substances, and even confuses the 'royal name,' i.e. the soul of the king, with heavenly localities believed to be possessed of a personality of their own by their name.

Magic capable of producing such wonderful effects in names flinches before nothing. The popular tales and the sacred literature of the hymns and invocations record the prodigious effects of the declamation of names as quite natural. Since the whole world is made up of living names which animate every substance and every body, we need not be astonished that, by chanting these names, the priest-magician can command everything. If he 'knows the names' (*rokhū ranu*), he can with his voice cleave mountains, rend the sky, make the stars move more slowly or more quickly.

No Egyptian being, natural or supernatural, can avoid the calling of his name. The iconography and the texts leave no doubt about this fact. They show how the name can be materially seized, snatched from one person, and incorporated in another. In Egypt magic (mimetic or sympathetic) is based almost entirely on the use of this possibility, which is increased tenfold in power and varieties of use by the invention of written magic (see below, § 5). The priest-magician devotes all his learning and power to 'knowing' (*rokhū*) the exact texture of the name, its qualities, quantities, musical tonality, and scanned declamation. The magical chant (*khrou*) which exactly reproduces all those elements gives to him who possesses it the complete ownership of the name-souls thus evoked. To the irresistible call which attracts their vital substance all beings, visible and invisible, must answer. Spirits, genii, the dead, the most powerful gods, cannot avoid it. And, after the lapse of centuries, when individual magic, alongside of the official religion-magic, developed its dangerous occult power, the processes were not different. It is by the summoning of secret names that the sorcerer of the Latin-Egyptian *tabellæ devotionis*, in order to accomplish his evil works, subdues the spirits of the dead, the genii of the under world, and sometimes even the august deities of the classical pantheon. It was therefore dangerous to make use of a name, and consequently the Egyptians were prohibited from using the name of the gods or that of the Pharaoh outside of the liturgy and foreknown cases; hence, e.g., the punishments befalling those who in ordinary life make use of the oath or the curse on the royal name.

3. Secret names.—The person who is adjured or evoked, not being able to avoid the declamation of

his name, has naturally devised a means of resisting incantations and exorcisms. He keeps his name secret. From the most humble spirit to the most powerful of the gods, each has a 'secret name,' which no one is supposed to know. He defends it jealously as his very life. For, as the texts say, 'this is his name by which he breathes.'

Of the many examples in Egyptian literature none is clearer in this respect than the famous legend of the god Rā. He was stung by a scorpion, and nothing could cure him until, overcome by the pain, he told Isis his secret name, which she used to compose an invincible exorcism and drive out the poison (for the different versions of this classical episode see Maspero, *Histoire*, I. 167 ff.; and Budge, *Gods of the Egyptians*, I. 224 ff.).

But man also employs all his patience and ingenuity to find out the secret names in order to get possession of them. The priestly bodies of each of the provinces of feudal Egypt were engaged in committing to writing collections of formulae containing the knowledge of mysterious names. The medicine-men of the modern Congo do the same. Of those collections, which were at first passed on orally, an important part of what is known to us concerns everything connected with the fate of the dead. They are proved by philology (and often with the help of the natural sciences) to go back to the pre-historic period.

The lists called *Books of the Dead* and Pyramid Texts are based almost entirely on the knowledge of secret names. By them are annulled dangers from serpents, crocodiles, hippopotami, and monkeys armed with knives that lie in wait for the dead on the roads of the other world; the lions which guard the gates of Aulis are reduced to powerlessness; hostile spirits are dispersed; the protections and obstacles of the mysterious kingdoms have no longer any power when the hidden name of their spirit is pronounced. The fourteen secret names of the fairy barque and its principal parts place it at the disposal of the dead. The mysterious names of the thread which captures the souls of the dead, pronounced by the shade on its journey, enable him to escape it. By the same means he crosses the lakes of fire; he also knows the mysterious names of the magical weapons placed at his service to drive back or strike the hostile deities. Having at last arrived at the land of the dead, he causes the gates to open by his knowledge of the 'names' of the leaves and locks of the doors; he can find a place for himself there and obtains command over the inhabitants and the chief of the spirits by telling them that he 'knows their names' and by pronouncing imperiously the names of the guardians of the Seven Regions or those of the Twenty-one mysterious Pylones. It is not so much on account of his virtues and religious merits as by the knowledge of their secret names that he obtains from the forty-two judges of the dead the right to live in peace in the kingdom of Osiris. In the stellar or heavenly voyages which the theologies of the Pyramid Texts prescribe for the human soul, it is again by the pronunciation of the secret names that the dead sail across the spaces, conciliate the aerial groups of *kunmami*, compel the gods of lights or of dark spaces to give them help or allow them to pass, to let them sail with them, or to share their powers or their food with them.

These powerful collections, elaborated for the use of dead chiefs, then gradually for the use of all the initiated, were secret. Writing, by fixing them, has preserved them for science, so that we may say that on many points of the religion-magic of Egypt we know from the papyri secrets which the people of Egyptian civilization, with the exception of priests and compilers of books, did not know.

The priestly body naturally had similar collections of mysterious names for the living Egyptians. Only some of them have come down to us (especially from the medical papyri) for cases of illness, possession, bad dreams, etc., and for avoiding ghosts, noxious animals, and the other dangers of everyday life. Unfortunately we do not know the formularies for the great operations of national worship. Perhaps they have never even been written out on account of the gravity and the all-powerfulness of the use of such names. They may have been bequeathed orally from priest to priest at the time of initiation. We shall never know any but the apparent names of the greatest gods of Egypt. The real names of Amon, 'whose name is secret,' Atumu, 'the mysterious,' Min, and

many others are unknown. The only thing that we know of the most powerful of all, the sun Rā, is that he had a secret, all-powerful name, and that Isis alone knew it one day (cf. p. 152^b). We should remember that those formidable real names borne in classical antiquity by Zeus, Athene, Dionysos, etc., have never been found out—names which from century to century were known only by the priests in their service and the initiates of the great mysteries. We do not yet know the real name of Rome.

Private and personal magic made the same efforts as the national priesthood to know the names necessary for the good or evil operations which it had in hand. Like the magic of the temples, it utilized all methods to penetrate the secrets of the names. It arranged them in the same way in lists and tables. A 'curse table,' a charm, or an amulet of the magic of Græco-Roman Egypt differed in no way in composition and appearance from the means invented by the regular priesthood (cf. Budge, *Egyptian Magic*, pp. 177-179, and the important considerations on the Egyptian origin of the rites of Gnostic magic).

The irresistible power of the name and the knowledge of the name being united, man was theoretically all-powerful. How, then, were so many failures in practice to be explained? The answer is easy. Non-civilized races have often answered it in their way. To evoke a name is the most difficult thing imaginable. A name is too living and subtle a thing for a few pronounced syllables of it to be magically its exact counterpart. Even an extraordinarily detailed collection of hundreds of precautions was not sufficient to give faithfully the cadence, tonality, rhythm, and accent of each of the chanted syllables which constituted a name. A single mistake destroyed the whole evocation, as a single fault in syntonization destroys all means of communication between two stations of telephony or of wireless telegraphy. A thousand unsuccessful attempts were explained just as easily, so that one single apparent success might be remembered as a decisive proof.

4. Primitive elements which have disappeared or are absent.—All the preceding facts refer to primitive Egypt. But at the most ancient period accessible to research several of the characteristics pointed out with regard to primitive peoples are no longer found; name-tabus do not occur, except under the reverential form prohibiting the thoughtless use of divine names (see below, § 7); the prohibition of ordinary names does not appear; and that of the names of the dead and of kings is replaced by the exact opposite. In fact, nobody any longer makes a lavish use of invocations or formulæ in the name of the dead; and, far from prohibiting names similar to those of gods or kings, the great majority of the Egyptians give their children names like those of the reigning Pharaoh, or expressing devotion or consecration to this sovereign master. The children called 'Pepy is living' in the VIth dynasty, the Amenhoteps and the Thotmeses of the XVIIIth, those called 'Great is the heart of Psammetichus' under the Saïtes, and so on throughout each reign, are innumerable. The hundreds of names derived from those of gods (their apparent names, of course) also show all the imaginable ways of uniting man to his gods by a series of names of relation, protection, love, or devotion.

The longest list is that of the ordinary theophoric names ending in *mas* (e.g., Thotmas = 'Thôth has fashioned him'), *hotep* (e.g., Amenhotep = 'He is united to Amôn'), *miri* (e.g., Phtahmiri = 'He is the beloved of Phtah'), *setpu* (e.g., Rinsotpu = 'He is the chosen or the elect of Râ'), etc. Apocopated theophoric names form the next important group, constructed on a plan similar to the Semitic formation (e.g., Abdu, 'He is his Servant,' i.e. the servant of God). The rest of the list is made up of groups of designations referring to physical pecu-

liarities, of epithets of praise or of good luck, etc. (cf., for details, Erman, *Life in Ancient Egypt*, p. 158 ff.). Surnames, eponymous names (*ran nesir*), the great name (*ran ad*), etc., are simply determinative of everyday life or the commemoration of a notable fact, without any special religious importance.

Two other characteristics deserve mention: (1) there are only very faint traces of the belief in the re-incarnation of the dead in newly-born children, showing that this belief possibly existed at a time untouched by research, in the most remote archaic period; and (2) two passages in the so-called 'popular' literature seem to allude to the possibility that the newly-born infant received a secret name from its mother at birth; but nothing definite is known on the point.

With regard to 'totemic' names, if Egypt ever passed through this phase, there is no trace of it left in the periods known to us. At the time of the most ancient monuments, in order to confer on her living subjects and on her dead most of the protections which the totem and its name give to primitive races, Egypt had an amazingly perfect system of affiliation to the cult of a certain protector-god, by initiation into the mysteries of the god. The title *amkhu* assumed by the initiates is followed by the name of the god, to whom the man henceforth owes special allegiance, and from whom he will receive protection in this life and in the life to come. The abandonment of the childish secret and of the materially magical association between the man and the depositary of life is replaced by initiation of a properly religious character, and the divine name, being united, but not confused, with that of the man, marks reciprocal obligations and duties, to which time by degrees gives a moral character.

5. Written names.—Among non-civilized races the vital principle of the name may be materially seized and incorporated in another person or thing (cf. NAMES [Primitive]). The latter is consequently transformed into a living person possessing the personality of the one whose name has been pronounced. This theory gave rise to fetishes and idols. It led semi-civilized Egypt to try to reproduce persons and objects, and thus she made her first attempts at painting and modelling. She advanced no farther in this respect than a score of other races in modern Africa. But, when by pictography she attained a kind of magical semi-writing, the consequences were incalculable. On receiving a name, the written forms lived the same magic life as living beings. Having arisen from ideograms, then from phonetic signs, of a value independent of the characters or forms which were drawn, they retained the faculty of keeping alive the sounds which they wished to express. It was possible from that time to *write* a name, and, by pronouncing the name on the writing, to enclose it for ever alive with all its magical powers in the signs traced by the hand of man. Written magic was created. Henceforward all that the voice had been able only to evoke, writing could *fix*. Names and their powers were contained on a stone, on a board, or on a papyrus-leaf. The tables and 'conjuring books' of priestly magic appeared. The thousand applications of the names of gods, spirits, forces, substances, the dead, belong to the subject of magic (*q.v.*), and need not be enumerated here. But we must notice the chief consequences in order to understand the history of names in Egyptian civilization.

(1) If an object or substance (e.g., a papyrus-roll) contains written names, each of the signs of the name has the same marvellous power as the soul of the person possessing the name. The essential condition is that during the writing out the names are pronounced aloud. Hence the ability to transfer the soul by contact or mingling to whatever the priest or sorcerer wishes. A formula applied

to the forehead, or, better still, boiled and diluted in a beverage, introduces into the body the 'name-souls' of the gods or spirits whose names it contains. All countries have employed this method in their magic, but it was Egypt that first practised it.

(2) Every 'resemblance' of a person may become his exact equivalent by having his name inscribed on it (the name, of course, being pronounced during the operation)—e.g., the statues, figures, and figurines of temples and tombs, and the figures of the servants of the dead in the frescoes and bas-reliefs; for the applications made by sorcery and magic see artt. MAGIC.

The operation of 'making the name live' often ran the risk of exposing the name, thus written, to the exorcism of an enemy. The prohibitive formulae were some protection against the danger. The hiding-place of the statues in the *serdab* of the Memphite tombs was another protection. Several isolated cases show greater ingenuity. Maspero (*Guide Musée Caire*, p. 225) cites a *ushabti* (or funerary statue), on which the engraved name of the dead man has been covered with a layer of enamel. The same precaution has perhaps been taken in the case of some of the wooden statues covered with thin painted stucco preserved in our Egyptian museums.

(3) Other more curious examples show that the name, in its written form, could as a real material soul be incorporated with any object whatever, that it was instantaneously transformed into a person, or that it changed into a kind of talismanic shelter which would hide and guard the life of the individual for ever. The most convincing examples are given in the *Books of the Dead*. Both in funerary and in ordinary life they try to enclose the name-soul in scarabæi (cf. Maspero, *Guide*, p. 533) or in amulets and talismans (cf. Budge, *Egypt. Magic*, p. 160, and *Gods of the Egyptians*, i. 301), of which the museums show ingenious varieties.

The most characteristic of these methods is undoubtedly the small stone cut into the shape of the hieroglyphic sign meaning 'name' (𐀀), or *rân*, with the name of the possessor engraved on it (cf. Maspero, *Guide*, p. 525). It is interesting to compare with these customs the passage in Revelation (217) where it is said concerning the Church of Pergamos that the neophyte received 'a white stone, and upon the stone a new name written, which no one knoweth but he that receiveth it.'

It is therefore the very souls of the persons whose names are written on them that those *rân*-figures contain. This explains (a) the sacred value of the royal statues in Amarna, representing the Pharaoh and his relatives holding tightly in their hands large talismans of this shape, on which are inscribed the names of the king and the god Atonu; there could be no surer means of securing for ever the union of the two substances, the divine and the royal; (b) the numerous scenes in which the king offers, as a valuable *ex voto*, a tablet on which his name is inscribed; he is consecrating his soul to his god; (c) the abundance of those *rân*s among the royal names in the sacrifice scenes and on the pieces of sacred furniture. Through time the barbarity of the primitive idea was softened, and what was originally a work of divine sorcery was transformed into a proof of piety. We now understand the religious meaning of the Egyptian statues in which the worshippers unite their eternal destiny with that of their god by kneeling and holding, not a representation of the god, but a tablet on which is engraved the *rân*, the divine name-soul; of their master.

We now seem to be far removed from those first ages of Egyptian magic, when a person hid his name in an object, as the hero Bitu hid his soul in the blossom of a tree; and far from the strange magic of the Pyramid Texts, in which the name-soul of the king animates his crowns, weapons, throne, and the parts of his dress, where it is mingled with the name-souls of the gods. Thus the kings of Egypt, like those of Dahomey, passed their divine soul into their staff or their sceptre of power. Nevertheless the mystic scene of the *ashdu* tree

shows us that at the height of the classical period the king was led on the coronation day in front of the god-tree at Heliopolis—the tree in which one of the souls of Atumu dwelt—and that there his name was engraved on the fruits of the tree. The name-soul thus penetrated into the eternal substance of the god and there mingled its destiny for ever. Over a score of bas-reliefs prove the survival of such ceremonies as late as the XXth dynasty. But, as a matter of fact, during the historic period these rites were simply traditional ceremonies to which only a symbolical value was attached; and we may be sure that, in the coronation ceremony, as in the family-worship of the dead, 'to make the name live' had acquired the high meaning of commemoration which it has in our own day.

6. Names and creation.—As we said above, from the neolithic age to the classical period Egypt passed through the successive conceptions to be seen arising and evolving in the various religions of non-civilized races. Like the most 'primitive' of those, ancient Egypt was acquainted with the vague 'sky-god,' indistinguishable from the substance of the sky, the general author of life and death. The great Horus of the earliest legends, the god Anhur, the thunder-god Minu, giver of the rain which engenders life, the mysterious Atumu hidden in the primordial water, and ten others of the same kind were distributed among the local religions of pre-historic Egypt. In order to organize and vivify inert matter, and to 'create,' man had believed that he obtained the fertilizing substance from himself, from his sweat or his tears (Horus), his saliva (Knumu and Hikiti), or his semen (Atumu) when he was imagined as of the male sex. A second, more advanced, theory believed in birth by the supreme god. There were sky-goddesses (the pre-historic Nuit, Hathor, Mihit, Neith, and the pre-historic Isis) who were at first believed to be capable of conceiving by their own energy, then (in a more learned theory) fecundated by an exterior divine principle (hence, e.g., the common idea of cow-goddesses suckling human beings, then fecundated in their turn by the song to whom they have given birth; cf. the final theory of the sky-goddess represented as a cow, suckling the sun in the form of a calf, which, having become a bull, is the 'husband of his mother' and fecundates her with a constantly renewed life). Such theories gradually gave place, partly at least, to clearer theories, in which man, understanding the rôle of the sun better, assigned the first place to that luminary, who, however, still used material effort, or at least action, in order to create. This stage, which non-civilized races never surpassed, the Egyptians exceeded by a long way through their knowledge of names, and their ability to deduce from them. Finding in the omnipotence of the chanted voice, and consequently in the power of the name, the solutions of the problems of primitive races, the Egyptians decided that, if names are the vital substances of all beings, it was by names that creation was effected. The latent life was organized by the god, who, by pronouncing the names of all personalities and entities, created them. The vibrations of energy, co-ordinated in sonorous waves, formed chanted words, attracted matter, and animated it with as many different forms as there were names. It was at Hermopolis that theology arrived at this clever idea, and Thôth (later Hermes Trismegistus) was 'the god who created by the voice.' This fact is important for the origin of systems infinitely more philosophical which came to light later—e.g., Pythagoras's system of numbers.

7. The name of the Eternal.—If the name is the divinely originated particle which animates every living thing, Egyptian theology, proceeding from

one difficulty to another, had to face the problem of the origin of the creator-god himself. Like Genesis and the ancient demiurgies, it could not believe that the god pre-existed before matter, and tried to imagine how he freed himself from it in order afterwards to organize it. The most important of the Egyptian texts on this point is ch. xxviii. of the *Book of the Dead*, where the supreme god, in order to show himself and to obtain possession of his own person, utters his name himself, and at the same moment exists apart from matter (cf. Budge, *Gods of the Egyptians*, i. 307, and Erman, *Egypt. Religion*, p. 156).

Having arrived at this point, the theory of names entered a new phase, less limited by verbal magic, in which the crudeness of the primitive data was transformed until it reached a high stage of refinement. The divine name tended to become a power rather than a material soul; and, as Egyptian theology realized better the many aspects of the god and his energies, it saw that this power, single in its essence, was multiple in its manifestations. It explained the matter by teaching that the god had as many name-souls as he had attributes or functions (*aperai*). Hence legends like that of the sun creating his names in order to organize his powers as master of the universe; hence the series of names possessed by the chiefs of the divine world; and hence the necessity that man should know those names of his gods and the value of enumerations and lists. The range of such a principle was considerable. Round primitive divine names (we are speaking only of their unbidden names) new secondary names described their divine activities. They created gods 'one in several persons,' and the theological task was refined and perfected from century to century. In spite of the difficulty of such researches, Egyptology can now find out the oldest names of the great gods of pre-historic Egypt; it has recovered for each of the independent nations the old primordial gods, the general author of life and master of invisible things, the sky-gods represented as a hawk (Horus, Montu), an eagle (Minu, Anhmri), a ram (Knumu, Amonu), or, if they are goddesses, as a vulture (Manit), a cow (Nuit, Hathor, Mihit), etc. Their names expressed a pure and simple quality: 'The Mysterious,' 'The Hidden,' 'The Very Strong,' 'He who is on High,' etc. But, in proportion as divine intervention ceased to be confined to vague initial functions, and as its beneficent and active rôle multiplied in definite activities, so the name-souls multiplied also, and created the series of 'secondary persons' of the god. The separate functions were at first probably quite humble. Khonsu, called Nofirhotpu, was a healer and exorcizer, while Khonsu, named Pairisakhru, replied by oracles, and Khonsu, 'the brilliant dweller in Thebes,' magically protected the products of the earth. Time modified what was originally too material in this division of the powers of Khonsu. The powers of the gods contained in their divine names became especially aids and divine virtues. In the case of the great gods their number was augmented by all that was expected from them on the earth. The list of these names gradually included all the ideas of the Egyptian on the *θεῖον*. At the same time, if each of the names continued to make a new soul for the god, these souls gradually became merely manifestations, for the sake of the material world, of a single soul, whose names are pious epithets. As the same task was carried on for each of the great local gods, no means of fusion was more efficacious in multiplying hypostases. It is no exaggeration to say that the evolution of the rôle of the name has played a part of the greatest importance in the history of Egyptian syncretism.

8. Names of children of the gods.—In the case

of human beings a parallel evolution appears. Royal, feudal, and priestly names had at first been simple magical statements of the bond uniting the god to the person who bears a theophoric or theogenic name. They had protected with their mysterious power those on whom they had been conferred. Later they had established the delegation of power possessed by the representative of the gods on the earth. The modern Negus of Abyssinia, who at his coronation took the name of 'He who watches on the Frontiers,' simply did what the Pharaohs of ancient Egypt did (cf. KING [Egyptian]). But a day came when the coronation names of these kings lost their power of materially mingling with the magical souls of the gods to indicate the moral rôle, of justice and beneficence, which the kings expected to inherit from them on the earth (cf. *ib.*). The names of the feudal nobility and those of the servants of the gods underwent similar changes as each had his task pointed out in this world by the divine organizers of the *κόσμος* (see DUALISM [Egyptian]).

There is no doubt that a similar course was taken by the ideas connected with the names of ordinary mortals. Theophoric names (apocopated or not) and names taken from those of the king had the same crude magical beginnings; they gradually became a sign of piety and devotion towards the sovereign or divine patron. With those who took the names of the deceased ancestors of the family the idea might have been to revivify those names; but it was no longer in the sense attributed to it by primitive peoples; it was for the same purpose which we have to-day when we call our children after those whom we have loved and who are no more.

When formal magic thus gave up its rights in the power of names and its irresistible effects, the Egyptian metaphysics of the last twelve centuries took up the study of the matter. The virtues of the names passed from the Hermopolitan deminrgy into the refined systems of Hermesianism and Trismegistus, whence they spread to the ancient classical world of the Mediterranean. But in the low levels of human thought popular magic clung firmly to the original ideas. It persisted in seeking evocation by the names of the forces which it wished to subject, and did not fear to subjugate even the gods of good to the service of the absurd or of the individual passions. Extended gradually towards the gods of evil, it spread its 'Egyptian sorceries' in the empire, and, surviving after the old religions from which it arose, continued to our day its puerile or hateful pursuits. It shows by its recent successes in handling the names in the lists of demonology that, if there are still any 'primitive people' in this world, they are not necessarily to be looked for among uncivilized races.

GEORGE FOUCAULT.

NAMES (Hebrew).—I. INTRODUCTION.—A few well-attested names have survived from the earliest centuries of the Hebrew nation, a far larger number from various periods of the monarchy (c. 1050-586 B.C.) and again from certain periods

between the Exile and the Fall of Jerusalem in A.D. 70. Even before the last date, and still more subsequently, the growing practice of naming children after relatives, especially the grandfather—a practice which was little if at all in vogue among the Hebrews before the 5th cent. B.C.²—and also the practice of reviving distinguished names of the past,³ and the incursion of foreign names (e.g., Persian, Greek, Roman), were leading to a great falling off in the creation of Hebrew names, at all events of such names as were really fresh and not mere abbreviations or modifications of existing names. The present survey, therefore, takes nothing more than incidental notice of Jewish names after A.D. 70.⁴

Names are principally (1) names of places, and (2) names of persons; (3) a third class, tribal or clan names, consists of names in large part closely related to one or other of the first two classes. The names of a large number of places occupied in historical times by the Hebrews are known; but it is certain that many of them were in existence before the Hebrews settled in Canaan, and it is probable that with few exceptions the place-names of Canaan mentioned in the Bible were given by Semites indeed, but not by that particular branch of Semites known to us as Hebrews. The discussion of these names falls outside the present article,⁵ which will be concerned only with personal names.

The sources of our knowledge of Hebrew names are mainly three: (1) the OT; (2) the Aramaic papyri⁶ discovered at Elephantine (and Assuan), which contain the names of several hundred Jews living at Elephantine in the 5th cent. B.C.; (3) Babylonian business documents,⁷ especially those found at Nippur and dating from the reigns of Artaxerxes I. and Darius II. (464–404 B.C.). Except in special instances, names from these sources will be cited without reference; but, unless the context already makes the provenance of a name clear, the Elephantine names will be distinguished by the addition of (Egyp.), the Babylonian by the addition of (Bab.). The Biblical names can easily be traced in Hebrew dictionaries or Biblical concordances,⁸ the Egyptian and Babylonian in the indexes to the works of Sayce and Cowley, of Sachau, and of Hilprecht and Clay cited in the footnotes. In addition to the OT, such literary sources as the extra-canonical literature of the Jews contain some names not otherwise known; and to the discovery of ostraka at Samaria we are indebted for knowledge of an important

group of Hebrew names assigned by the discoverers to the 9th cent. B.C.; unfortunately no facsimiles of the ostraka have yet been published nor have the inscriptions been systematically edited, and we remain dependent on merely provisional information.¹ A certain number both of names known from literary sources and of others not so known have been found on seals, coins, etc.²

The material furnished by all these sources is considerable; but there are difficulties in the use of it, and consequent uncertainties in conclusions derived from it, which should at the outset be briefly indicated. (1) Proper names are peculiarly liable to corruption in the process of transcription; and a comparison of the forms in the Hebrew text and the Greek version of the OT shows how frequently as a matter of fact Hebrew names preserved in literary sources have been misread.³ Names derived directly from the cuneiform tablets, the Samaritan ostraka, or the Egyptian papyri are, of course, exempt from this particular danger, though occasional examples of obvious mistakes of the scribe or engraver⁴ are found. But even with these names we have to allow for uncertainties of decipherment; these may arise from injury to the material on which the names are written or inscribed, or from the ambiguity of certain signs—e.g., in the Egyptian papyri the letters *d* and *r* are quite indistinguishable. (2) The chronology of names is frequently uncertain. There are in this connexion two distinct questions: (a) When was a given name first formed?; (b) To what date is a particular use of the name to be assigned? In general with regard to (a) we can rarely assert more than that a given name had been first formed as early as such and such a date—the date, namely, of the first person to bear the name. Question (b) turns on the character or trustworthiness of documents; e.g., granted that the papyri are genuine, it is certain that the name Penuliah (פְּנוּלִיָּה), though unknown to the OT, had been created as early as the 5th cent. B.C., for it occurs several times in the Elephantine papyri. So also, granted the correctness of the text, the name Gabael (גַּבְאֵל) was created as early as the date of the book of Tobit—say the 3rd cent. B.C.; but, in view of the general character of that book, the genealogy in which this name occurs cannot be described as good evidence that Gabael was as ancient as the 9th cent. B.C., to which the story refers it. So also many names referred in Chronicles to periods centuries earlier than that work, or in P to the Mosaic age, cannot safely be accepted as possessing the antiquity attributed to them: some of them may be very ancient, some almost certainly are not; but all that can safely be affirmed is that they are at least as ancient as the book of Chronicles in the one case, and as the source P in the other.⁵ (3) Even when a name can be read with certainty, and its age determined, its meaning may be obscure or am-

Clay, 'Business Documents of Murashu Sons of Nippur,' in Series A: *Cuneiform Texts of the Babylonian Expedition of the University of Pennsylvania*, vols. ix., x., Philadelphia, 1898–1904; and A. T. Clay, *University of Pennsylvania, The Museum Publications of the Babylonian Section*, vol. ii. no. 1, do. 1912. A few Jewish names of the reigns of Cyrus and Darius are given in K. L. Tallqvist, *Neubabylonisches Namenbuch*, Helsingfors, 1905; cf. S. Daiches, *The Jews in Babylonia in the Time of Ezra and Nehemiah according to Babylonian Inscriptions*, London, 1910.

⁸ To facilitate reference Biblical names will generally be cited by the forms given in the EV; to which recognized dots under letters and the sign ' for y will sometimes be added.

biguons. As a matter of fact, the meanings of many Hebrew names remain quite uncertain, and some apparently obvious and straightforward names are ambiguous; e.g., does Azaniah mean 'God hears,' or, as Nöldeke thinks, 'God weighs'? Either meaning is possible enough; the root נח , 'to hear,' is familiar, though the verbal form in use is Hiphil, not Kal; the verb נח , 'to weigh,' is not actually found in Hebrew literature, but its existence is perhaps attested by כאונים , 'scales.' Even when the etymology of a name is clear and unambiguous and the meaning in part clear, the complete meaning may remain ambiguous. Azariah means 'Jahweh has helped'; but whom? and how? Such uncertainties can only be limited in proportion as it is possible to group and classify names. Before leaving this question of ambiguity, it should be remembered that the same name probably acquired different ranges of meaning at different periods and in different circles; and that the continued existence of some names was probably promoted by the ease with which the sense in which they might be understood could be modified. The various stories of the naming of children show how easily the real etymology, even if fairly obvious, could be set aside in favour of a false one. Samuel really meant 'name of God':¹ but it might be given by some one who wished to record that the child had been 'asked of God' (1 S 1²⁰). Jesus or Joshua certainly had originally no reference to deliverance from sin (Mt 1²¹), though it is not inconceivable that in certain circles even before the Christian era the name was sometimes chosen because this meaning had been imported into it.

Owing to the various uncertainties and ambiguities arising from the causes just indicated, it is obviously unwise to base any far-reaching conclusions on a single name, especially if that name is but once attested. Guided by this consideration, we may proceed first to a general survey of the meanings of Hebrew names, reserving for the close of our discussion some reference to their chronological distribution, and some account of one or two special problems.

II. CLASSIFICATION.—Hebrew names may be classified in respect of their formation,² as (i.) simple, i.e. consisting of a single element—e.g., 'Ikkesli, 'crooked'; or (ii.) compound, i.e. consisting of more than one element—e.g., Nathanael, 'God has given.' Compound names are most common, like the example just cited, sentences; simple names are commonly epithets; but some compounds are epithets—e.g., Obadiah, 'servant of Jah(weh),' and others in which the two elements are nouns in the genitive relation, and a large number of simple names are sentences or are derived from sentences; such, e.g., are those which consist of the 3rd pers. sing. of a verb; e.g., Nathan, '(he) has given.' The example just cited is really an abbreviation of such statements as 'God (or Jahweh) has given,' which fuller statements also occur as proper names (Nathanael, Elnathan, J[eh]onathan). Occasionally at least the same individual was known by both the longer and the shorter form; thus Ahaz, king of Judah, is named by the fuller form Jehoahaz in an inscription of Tiglath-pileser. So also in the Elephantine papyri כחיה and כחיה interchange, כחיה once appears as כחיה (see the notes in Sayce-Cowley on A. 9, D. 36), and כחיה of Sachau 4² is probably identical with כחיה of Sayce-Cowley H. 16,

J. 17. But, generally speaking, such longer and shorter forms are distinct names applicable to different people. Another considerable class of names (caritatives)³ consists of abbreviations or modifications of what were originally sentences—names in which one element is not simply omitted but is replaced by an ending, some modification especially in the vocalization often taking place in the other element also; in this way it is probable, e.g., that many names in א —are to be explained; thus Shimea (שמעיה) is probably an abbreviation of Shemaiah (שמעיה), Abda (עבדה) of Obadiah or Abdeel, or the like. In so far as such abbreviated or modified forms retained their meaning, it was the meaning of the sentences of which they were abbreviations that they would naturally express and suggest, though many such forms may of course have been peculiarly liable to be used also with fresh meanings alien from their actual etymology. Further probable examples of modifications of what were originally sentences are to be found, e.g., in names of the form קטל ; thus Zaccur, Hasshub, Jaddna, Malluch, Nahum, 'Azzur, 'Akkub, Sadduc (Jos. Ant. XVIII. i. 1), Shallum, Shammua; the frequently recurring נח and נח of the Elephantine papyri may some or all be modifications of Zachariah, Hashabiah, Jedaiah, Malchiah, Nehemiah, 'Azariah, 'Akabiah (cf. Aqbi-ia-a-ma [Bab.] and Phoen. Bel'akab), Zedekiah, Shelemiah, Shemaiah, Gedaliah, Nethaniah respectively, and should in that case be interpreted accordingly, '(Jahweh) has remembered,' 'regarded,' 'known,' etc.⁴ Differently vocalized, some of these names might be passive participles or adjectives; in that case they would be epithets, and Zaccur (not Zaccur) would mean 'remembered,' 'Azur (not 'Azzur) would mean 'helped'; Gadol (not Gaddul), though it would still be ambiguous (see below), might mean 'great.' But for the existence of names of the form קטל we do not rest only on the vocalization of MT; for (1) many Greek forms contain the reduplicated middle consonant: so Ζακχουρ , Ἀκκουβ , Σαλλουμ , Σαμμουε in the LXX, and Ζαδδουκος and Ιαδδουρ in Josephus; (2) the passive participles from the roots appearing in Shallum and Nahum would be not Shalum and Nahum but Meshullam, which frequently appears

¹ E. Renan, 'Des Noms théophores apocopes,' in *REV* v. 161ff.; Nöldeke, art. 'Names,' in *EBI*, §§ 49-57; Lidzbarski, 'Semitische Kosenamen,' in *Eph.* ii. 1-23.

² To be vocalized, perhaps, Gaddul, Nattun, rather than Gaddol (Sayce-Cowley), Nathun, though in the latter, as in other similar names, the Babylonian forms commonly show only the single middle radical; e.g., Na-tu-nu, A-ku-bu, Za-bu-dn; an instance of the reduplication in Bab. is Sa-at-tu-ru; cf. the Biblical כחיה pointed כחיה in MT, but probably enough originally pronounced כחיה .

³ Cf. Lidzbarski, *op. cit.* p. 21, from whom most of the examples given above have been cited. It is worth observing that most of these names first appear relatively late; an isolated early example would be the name of David's contemporary, if this were pronounced not דוד (MT; EV 'Zadok') but, as in some MSS of the LXX, Ζαδδουκ (cf. P. de Lagarde, *Bildung der Nomina*, Göttingen, 1889, p. 227ff.) like the Ζαδδουκος of a later age cited above. The name דוד of the Elephantine papyri in view of the consistent absence of the ד is probably neither Zadok (Sayce-Cowley) nor Zaddnk, but דוד , resembling in form דוד , Nathan, cited above. Similarly the Gileadite usurper (c. 740 B.C.) may have been named שלם (2 K. 15¹⁰), i.e. Stillel, rather than שלום (2 K. 16¹⁸⁻¹⁹); LXX has consistently in 2 K. 15¹⁰⁻¹⁵ Σαλλαμ , not as, e.g., in 1 Ch 24¹⁰ of another person, Σαλλουμ . So also שלם , Σαλλαμ of Jer 22¹¹ may have been שלם rather than שלום as in 1 Ch 3¹⁵. Apart from דוד and שלם the earliest attested examples of names of the form קטל are עוזר (Jer 23¹) and נחום (Nab 1¹). Most of these names are confined to, but some of them are frequent in, Chronicles, Ezra, and Nehemiah; זכור and שכוע also appear in P; עוזר , זכור , שלום , and שכוע also occur, some of them frequently, in the Elephantine papyri, and עקוב and שכוע in the Babylonian tablets.

⁴ Cf. Nöldeke, 'Names,' in *EBI*, § 56.

¹ Against some recent attempts to explain the name otherwise, see S. R. Driver, *Notes on the Hebrew Text of the Books of Samuel*, Oxford, 1913, pp. 16-19.

² Into details as to the various grammatical forms of the compound names it is impossible to enter here; see *HPN* under 'Grammatical Structure of Compound Names,' in the Index; and *EBI*, s.v. 'Names' (§§ 20-23, 75-70).

as a proper name, and Menuham.¹ It may well be that some names like Hanun which are pointed in the MT as passive participles were actually examples of the form *kattāl*, though Hanun in particular has the single *n* in Babylonian documents (Hilprecht-Clay, ix. 27. 59). But these ambiguities, like many others connected with names, it is rarely possible to eliminate with certainty in the case of particular examples; in general we may conclude that some examples of both forms—*kattāl* and *kāṭāl*—were in use. It is impossible to enter here into other certain or possible types of caritatives such as the form *kattai*, possibly a further modification of an original *katalyah*, so that, e.g., Zaccai (זכאי) as well as Zaccur would be derived from Zechariah.

Sentence-names are almost all of religious significance; so also are some of the names that are epithets, especially such of these names as are compounds; but epithets consisting of a single element are in many cases not of religious meaning. We may first survey those names which are simpler in form and secular or less markedly religious in meaning, passing then to those in which a religious meaning is at all events more obvious.

i. SIMPLE NAMES OR EPITHETS.—Jacob may or may not mean 'one that takes hold of another by the heel,' and the circumstances of the child's birth may or may not have been as described in Gn 25²⁵; but the story is good evidence that the circumstances of birth might suggest a child's name. So, again, though it is wholly improbable that Esau means 'red,' and not certain that it means 'hairy,' Gn 25²⁵ indicates that the physical appearance of the new-born child might suggest its name. Some of the Hebrew names have more or less clearly meanings that suggest such origins.

1. Circumstances of birth.—(a) Yathom, Yathomah, and, less clearly, Yathma²—names which occur in the Elephantine papyri—mean 'orphan' or 'fatherless,' and they were probably given to posthumous children. Nöldeke would interpret Jotham and Akkub (OT; Egypt; Bab.) in the same way; but both these names are ambiguous and may be quite differently explained (see above for Akkub, and ii. (4) below for Jotham). The mother of Azubah, 'forsaken,' may have died in childbirth.

(b) One or other of two children born at a birth might be called Thomas (תאם), 'twin'; and a small group of names is perhaps to be explained of the relationship established by the birth: Ahab means 'father's brother'; Ahiam should perhaps be vocalized 'Ah'em, 'mother's brother'; Ahumai, if not rather a caritative, may mean 'brother of my mother.' 'The idea is that the new-born child will at some future time stand by his mother, as if he were her brother' (Nöldeke, *EBi* iii. 3296).

(c) Becher (בכר), if vocalized Bechor, would mean 'first-born'; but both this name and Bichri may rather be derived from בָּכָר, a young camel (cf. 2 (e)). And, though Hakkatan may mean 'the youngest,' it is doubtful whether the proper name is to be so explained (see 2 (b) below).

(d) Among the clearest examples of this whole class are names that refer to the time of birth. Haggai (OT; Egypt; Bab.), a very popular name in and after the 6th cent., means 'festal,' i.e. born at the feast; and the earlier attested woman's name Haggith has the same meaning. Shabbethai

(OT; Egypt; Bab.) means 'Sabbatical,' i.e. born on the Sabbath; cf. שַׁבְּתָי (Sachau, *Tafel* 62, no. 1, col. ii. 4), Σαββαίος (Jos. *Ant.* XIII. iii. iv.), and Barsabbas (Ac 1²³ 15²³). Hodesh, if rightly read in 1 Ch 8⁸, may, like the more obvious Phen. בְּנוֹרָה, mean 'one born at the new moon'; and possibly פֶּסַח (MT, RV, Peseah) may mean 'one born at Passover' (but see also under 2 (d)).

(e) Place of birth or race suggested a few names: Jehudi, 'Jew'; Judith, 'Jewess'; Cushi, 'Ethiopian'; Beeri, 'belonging to (born at) Beer'; Baalmeoni (Samaritan ostraka), 'belonging to (born at) Baalmeon.' Most, however, of the numerous names ending in —, ē, are not *gentilicia*, but caritatives.

2. Physical characteristics.—(a) Sex perhaps suggested the name Geber, 'man,' or 'male' (cf. Job 3⁸ RV).

(b) Size apparently is referred to in Hakkatan, 'the small one' (rather than 'the youngest'; see 1 (c)). Gadol (Egypt), even if rightly punctuated so, is rather a sentence with suppression of the divine subject than an epithet, 'the large one.'

(c) There is more and better evidence that colour suggested names (cf. Gn 25²⁵), though not all of the following are equally certain: Laban, Lebanah, Libni, Labani (Bab.) may all mean 'white'; Haruz, 'yellow'; Zohar, 'reddish white'; Sheharhor, a name probably occurring on a Hebrew seal (*JA*, 1883, p. 156), 'black' (cf. Ca 1⁶).

(d) Defects gave rise to another group of names, though again some of the following might be questioned: baldness suggested Kareah (to be vocalized Kēreah) and, perhaps, Korah; dumbness, Heresh; crookedness, Ikqesh; scabbiness, Gareb; leprosy, Zeru'ah. Gideon, Gideoni, like the Arabic *jud'an*, may mean 'maimed'; Peseah, if vocalized Pisseah, would mean 'halting' (but see also under 1 (d)); 'Ater (OT; Egypt), if vocalized 'Itter, would mean 'left-handed'; but it is not improbably an abbreviation. Harim, Harum, Harumaph, may mean 'with slit nose.'

(e) Some of the rather numerous class of names derived from animals, plants, and various objects may have been given because the animal or object in question conspicuously suggested a physical characteristic detected in the infant or which it was desired the child should possess when grown up. But in any particular instance the original cause of such names is generally ambiguous; they may have reference not to physical characteristics, but to some accidental connexion of the object in question with the birth; according to Wetzstein, a Bedawi girl was called 'snow-flake' because it was snowy at the time of her birth (cited in *EBi* iii. 3300), and possibly the Hebrew Barak, 'lightning,' should be similarly explained; in such cases the name should really be classed under (1). Names derived from animals, again, have often been explained by social and religious developments (see below). But, with this warning as to the uncertain cause of these names, we can as conveniently here as anywhere give illustrations of the general class of names derived from animals, etc.

(a) Animals.—The majority of the proper names derived from animals and mentioned in the OT occur as names either of places or clans or of foreign individuals. As against some 80 such names of places, clans, or foreign individuals, there are at most some 20 of Hebrew individuals (all pre-Exilic); these include Deborah, 'bee'; Aiah, 'vulture'; Zimri, probably derived from *zemer*, 'a mountain sheep'; Jonah, 'dove'; Zibiah, 'gazelle'; Huldah, 'weasel'; Achbor, 'mouse'; Shaphan, 'rock-badger.' For other examples, many of which are uncertain, see *HPN*, p. 97 ff.

(b) Plants.—Names of individuals derived from plants are very few: Susanna, 'lily,' and Tamar,

¹ It is interesting, if not also significant, to note the form *kattāl* in modern names; in Algiers Abdallah becomes 'Abbād, in Syria 'Abd-el-Kādir becomes Kaddūra (cf. in Algiers Kaddūr). See A. Socin's art. 'Die arabischen Eigennamen' in *ZDJG* liii. [1899] 482–485, who compares with these Arabic formations the Hebrew חַתְּנִי, רִאשִׁי.

² Cf. *PSBA*, 1903, p. 259, where it is suggested that Yathom was originally read in 1 Ch 11⁴⁶.

date-palm,' are among the clearest; Hadassah, 'myrtle'; Rimmon, the father (? individual or clan) of Baanah and Rechab, means 'pomegranate'; Zethan is derived from *zayith*, 'olive.' Hi-il-lu-mu-tu (Bab.) may be identical with חלמל (Job 6⁶), 'purslain' (?).

(7) *Various objects*.—Bakbnk means 'pitcher'; Hotham, 'seal' or 'signet-ring'; Rizpah, 'pavement'; Achsah, 'anklet'; Shoham, 'onyx' (or some other precious stone); Keziah, 'cassia'; Keren-happuch, 'box of antimony.' Rebecca (MT Ribkah) may, like the Arabic *ribk*, mean 'a cord for tying lambs or kids.'

3. Mental and moral qualities.—Some names probably imply such qualities, and those not always of a desirable kind; e.g., Nabal means 'fool.' More intelligible are names denoting pleasantness, such as Na'omi, Na'amah, Na'aman, unless, indeed, some or all of these are rather connected with Adonis-worship.

ii. COMPOUND NAMES: NAMES WITH A RELIGIOUS MEANING, OR DERIVATIVES FROM SUCH NAMES.—Names of this class are more numerous than are those of class i., and they are far more frequently used; whereas most of the names cited under i. are known to have been borne by one, or perhaps two, individuals, many of the names of this class are known to have been borne by several persons, and some of them by more than a dozen different individuals.

It will be best to take primary account of the unabbreviated compound names—names, that is to say, in which both the subject and predicate of the sentence are expressed, or, in the case of compound epithets, in which both construct and genitive are expressed. The abbreviated names may sometimes be cited to enforce points that are established by the unabbreviated forms.

The subjects most frequently occurring in these sentence-names are (1) the proper name of the national God of the Hebrews, Jahweh, in one of several abbreviated forms;¹ (2) El, 'god'; (3) Ba'al, 'owner'; (4) Adoni, 'lord'; (5) Melech, 'king'; (6) Ab(i), 'father'; (7) Ah(i), 'brother'; (8) Am(mi), 'kinsman'; (9) S(h)em(n), 'name.' Some rarer elements in compound names, such as *ohel*, 'tent,' may be disregarded here; the others just cited refer to some divinity; whether they all refer to the same divinity is discussed below.

Of these subjects or divine elements in names, the most frequent is Jah(weh); the OT contains upwards of 150 different names into which the element Jah(weh) enters, and mentions over 500² persons whose names contain that element. The Samaritan ostraka, the Elephantine papyri, the Nippur tablets, and other sources add to this number both of names and of persons; e.g., out of some 400 Jews named in the papyri between 150 and 170 bear a name containing Jah(weh). Next to Jahweh, El is the most frequent divine element, the known personal names containing it and mentioned in the OT numbering about 113 (including some tribal names); next in frequency come compounds with Ab and Ah, each of these, however, entering into fewer than 25 names. Compounds with Am, Ba'al, Melech, Adon, number less than a dozen each, and Shaddai, Zur; and Shem form each of them a part of two or three names only.

¹ In the OT יהוה and יי (EV *Jehō*, *Jo*) at the beginning of names, and יה and יי (EV *'jah*) and occasionally יי at the end; in the Samaritan ostraka י at both the beginning and the end of names; in the Elephantine papyri יה and once or twice ייה at the beginning, and י at the end of names; on the Babylonian tablets from Nippur *Ja-a-bu* at the beginning and *ia-a-ma* (pronounced *ia-ma*) at the end.

² This includes a number of persons mentioned in Chronicles who may be fictitious; but the actual persons in question must number between 300 and 400 at least.

A few fresh names¹ belonging to some of these classes, but not recorded in the OT, can be gleaned from other sources; but the additions thus made to our knowledge are far less numerous than in the case of compounds with Jah(weh).

We turn next to the kind of predicates attached to these subjects.

(1) An interesting, and in some respects ambiguous, group consists of names which contain two of the divine terms, one being subject, the other predicate, though another view is sometimes taken of the relation of the two terms in some of these names. This group includes Eliab, Abiel; Eliam, Ammiel; Hiel (= Ahiel), Ahijah, Joah; Abijah, Joab; Elijah, Jo'el (probably); Zuriel, Elizur, Zuri-shaddai; Bealial (MT, Ba'al-yah); Adonijah; Malchiah (= Malchiyah); Elimelech, Malchiel; Abimelech; Ahimelech. Somewhat similar are the names in which the personal pronoun forms one of the elements: these are Elihu, 'he is (my) god'; Abihu, 'he is (my) father'; Jehu, 'He is Jahweh.' Alongside of Abihu (אביו) as the name of a man we find in the Elephantine papyri אביו used exclusively as a woman's name; since this ought strictly to mean 'She is (my) father,' but cannot well actually do so, we should perhaps see in it merely a feminine form of a name whose original significance had been lost.

(2) As many of the epithet-names noted under i. have reference to the circumstances of the birth of the child, so also have a number of the sentence-names: they assert something of God in reference to the birth. Since, however, the Hebrew sentence-names are incomplete, leaving the object of the transitive verbs that enter into them unexpressed, it is not, indeed, always possible to be certain that a particular name originally referred to the birth of the child; and, again, this very incompleteness of expression readily allowed any name, once it was current, to be used afresh with a different and wider meaning than it originally possessed. But with these possibilities in view we may now group together some names that most probably referred primarily to the birth, taking next names that predicate other activities of the deity, then those that attribute certain qualities to the deity, and then a small group in which the deity is the object of the sentence.

The object unexpressed but understood of the verbs meaning 'to give' used in proper names was primarily the new-born child. The chief verbs in question are *nathan*, *zabad*, and probably *nadab*; the names are Jonathan, Nethaniah, Elnathan, Nathanael, Nathan(e)l, Nethanmelech; Elzabad, Jehozabad, Zebadiah; Jonadab, Nedabiah, Abinadab, Ahinadab. The same idea is expressed in some compound epithet-names which describe the child as the gift of God: so Mattaniah, Mat(tat)hias, Mattithiah, Zabdiel. From these names we find a number of others derived by abbreviation, with or without other modification: so Nathan, and perhaps נח (Egyp.), Mattan, Matthal, Mattenai, Nadab, Zabad, Zabdi, Zabhud, Zabbai.

The gift of the child was often regarded as the answer to a petition that God had heard. Hence probably the names that predicate of God answering (*anah*), hearing (*shama*), listening (*azan*?) are closely related to those just discussed: such names are Ishmaiah, ייחמא (Egyp.), Shemaiah, Hoshama (= Jehoshama), Elishama, Anaiah, Azaniah. A frequent derivative is Shammua (OT; Egyp.; Bab.?). If Ananiah should be pointed Ananijah, 'Jahweh has answered me' (Nöldeke), we have a more directly expressed confession of the mother.

Birth was also regarded as due to an act of remembrance on the part of God (Gn 30²²); hence

¹ Abiha'al, Ba'alzamar, Khanan'am (Sam. ostraka); אכער (Egyp.).

perhaps we should class here compounds with *zakar*, 'remember,' and *hashab*, 'to take account of.' These compounds include the very popular name Zachariah (OT; Egypt.) with its almost equally frequent derivative Zaccur, and Hashabiah; perhaps also Hashabniah (for Hashabaniyah, 'Jahweh has taken account of me').

The preceding names would be suitable for any child. On the other hand, Pethaliah, 'Jahweh has opened (the womb)' (cf. Gn 30²³), would point to a first-born, while Eliasaph, 'God has added to, or increased (the family),' would point to a younger member of the family; on the other hand, Josiphiah, 'May Jahweh increase,' would be applicable at the birth of a first-born (Gn 30²⁴) or another equally. Of similar meaning may be Benaiah, Benaël (Bab.), 'Jahweh (or God) hath built up' (cf. Gn 30²⁵).

(3) It must suffice to refer briefly to some of the names that predicate other activities of God than those connected with birth; as some of the names just mentioned may have taken on a wider reference, so some of these, such as Nehemiah, 'Jahweh has comforted,' Rephaiah, Raphael, 'Jahweh (God) has healed,' might, if we were more fully informed, be seen to have had originally a reference to birth.

(a) The most general verbs of activity are predicated of God, viz. *asah*, 'to work,' 'make,' *bara*, 'to create,' in Eleasah, Asabel, Asalah, Jaasiel, Beraiah (only in 1 Ch 8²¹). (b) God interposes or exercises authority. He judges (Jehoshaphat, Shephatiah, Elishaphat, Yedoniah [Egypt.]), contends (Jeholairib, and probably Israel, Seralah), is king (Malchiah). (c) God helps (Azariah, Eleazar, Azareel), sustains (Semachiah, Ismachiah), carries (Amasiah; cf. Is 46³⁴), holds fast (Jehoahaz, Ahaziah), conceals (Elizaphan, Zephaniah), and strengthens (so, perhaps, Ezekiel, Hezekiah). (d) He delivers (Pelatiah, Elpalet, Eliphalet, Paltiel, Hoshaiah; cf. Isaiah, Joshua, Jesus), redeems (Pedahel, Pedalah, Pedahzur, Iphdeiah), guards (Shemariah). He is with men (Immanuel; Egypt. *imnū*) to help them, or on their side (Bab. Jahulakim, Jahulunū). Much the same idea is expressed by saying that Jahweh is the place of shelter or refuge (Mahseiah [Egypt.], Me'ozziyyah (Egypt.), and, if we re-point Ma'aziah, Me'ozziyyah also in OT), *מִצְלוֹתָיו* (Egypt.). (e) God brings back (Elishah, Yoyashib [Sam. ostraka]), or is hesought to return (cf. [?] Nu 10³⁹; Shubael, Shebuel), dwells (among His people, Shecaniah), blesses (Berechiah, Jeberechiah, Barachel), is gracious to (Hananeel, Elhanan, Hananiah, Jehoanan, Ba'ahanan), knows (Eliada, Beeliada, Jehoiada, Jedaiah), and enlightens (Pekahiah) (them).

(4) Qualities of God are literally or metaphorically, directly or indirectly, predicated in the following: He is strong (Amaziah), great (Gedaliah, Igdaliah, and perhaps Athaliah), good (Tobiah, Abitub, Ahitub), perfect (Jotham), high (Jehoram), incomparable (Micaiah, Michael), just (Jehozadak, Zedekiah), kind (Hasadiah); he is light (Neriaah, Abner), and fire (Urijah). In the ancient names compounded with Ab, Ah, and 'Am, it is asserted, if the obvious is the right interpretation, that the divine subject is the dawn (Ahishahar), dew (Abital; cf. *רוֹס*, Egypt.), pleasantness (Abino'am, Ahino'am), death (Ahimoth).

(5) In a small number of names the deity is not the subject, but the object of the sentence, the subject being (even if not expressed) a human being or human beings. With these names may be classed certain compound epithets which imply that God is the object of man's worship or the like. Such names are Shealti-el, 'I have asked God'; Elihoenai, 'Unto Jahweh are my eyes' (cf. Ps 123²); Hodaviah (OT and Egypt.), perhaps to be pointed Hoddiah, in which case it would mean 'Praise ye Jahweh' and resemble somewhat the curious name of the Elephantine papyri Penuliah, 'Turn ye to Jah(weh)'. Another example, concealed by the Massoretic punctuation, is perhaps Hachaliah, which, if pointed *חַלְיָהוּ*, would mean 'Wait for Jahweh.' Of the epithets it may suffice to recall the frequent Obadiah, and the less common Abdeel, 'Servant of Jahweh (God).'

III. CHRONOLOGY. — In the preceding general

survey only occasional reference has been made to the chronology of the names; here a little more may be said on the subject, though it is impossible to discuss it with any fullness. In the thousand years or more covered by this survey it would only be natural to expect that certain changes took place; and we can infer the nature of some of them with a tolerable degree of probability. Certain classes of names represented in the earliest periods disappear or nearly disappear later; others increase in popularity. If we accept the evidence of P on this point, compounds with Shaddai, the name of God which was, on the theory of P, characteristic of the patriarchal age, and Zur (Sur=Rock, obviously used as a name or epithet of God) were in use in the Mosaic age, but none is recorded later. We move on to surer ground when we say that compounds with Ab, Ah, and 'Am, which were rather frequent in the earlier periods, almost disappear after the 7th cent. B.C., two or three of each class alone surviving, and few if any fresh names of the class being created. The Biblical evidence on this point is discussed at length in *HPN*, p. 22 ff., and the conclusions there drawn are not appreciably affected by the fresh evidence that has since come to light. Thus, it is entirely in accordance with what the Biblical evidence leads us to expect that a fair sprinkling of these names is found in the Samaritan ostraka of the 9th cent. B.C. The only name of any one of these three classes that occurs with any frequency as that of a Jew in the Egyptian and Babylonian documents of the 5th cent. is Ahio or Ahijah (Egypt. *ahw*, Bab. *Ahi-ia-a-ma*). The rest are mostly the names of a single person; they are Abihu (and Abihi commented on above), Ahutab (=Ahitab), Ahiah (=Ahab), and a name unknown to the OT, *אֲחִיב*; the last is possibly a late formation, but probably not. Compounds with Ba'al, not infrequent in the Davidic age and, a century later, on the Samaritan ostraka, disappear altogether subsequently, except perhaps for one occurrence in the Babylonian tablets in the 5th cent. (Ba-li-ia-a-ma), where, however, the first syllable is marked in Clay's Index with a query. The compounds with *melech* are with one exception confined to the pre-Exilic period, though none of them even then occurred with any frequency; the exception is Malchiah, which was popular after the Exile both in Palestine and in Egypt. Infrequent in early times, compounds with *adan* and *shem* do not appear at all later.

The only two classes of compounds that are at all frequent later—and both these kinds are very frequent—are compounds with Jah(weh) and with El. Both classes were ancient, though in the earliest period, if we may safely draw conclusions from the book of Judges, they formed at first a very small proportion of the names in use; by the age of David, however, they together formed about a fifth, in the Samaritan ostraka about a quarter, and at the end of the 7th cent. B.C. more than two-thirds, of the names in use. If this very high proportion is somewhat lessened again later, it is not because older and discarded classes again became popular, but because caritatives (abbreviations) formed from names of this class gained in popularity; names like Menahem, Meshullam, Zaccur, Shilem, or Shallam occur with great frequency in the Elephantine papyri; but, though the deity is not expressly named in them, they differ totally from most of the names of one element in earlier times.

In the relative popularity of compounds with El and compounds with Jahweh there is some fluctuation; after an earlier period in which the more ancient compounds with El must presumably have preponderated over compounds with Jah(weh), the latter already in the Davidic period are more fre-

quent, and become increasingly so: among Jeremiah's contemporaries compounds with Jah(weh) occur six times as often as those with El. After that we can trace a difference of development among different groups of Jews: with the Jews of Elephantine compounds with Jah(weh) are still very frequent, and apparently a few fresh names of the type were created by them; but compounds with El have virtually disappeared, for the little special group of compounds with Bethel (see below) are different in character. On the other hand, at the same period in Nippur we find unmistakable Jewish names containing El as well as Jah, and probably compounds with El were there and then relatively to the compounds with Jah(weh) more numerous than in Palestine before the Exile. But in the post-Exilic Palestinian names we also note a renewal in the popularity of compounds with El; compounds with Jah still very largely outnumber them, but the disproportion is perceptibly less than before the Exile.

Names derived from animals, never frequent as personal names, are as such not found after the Exile; and more generally we may observe that the proportion of epithet-names is much smaller in the latest than in the earliest periods.

IV. *CONCLUSION.*—To what extent do these changes cast light on developments in Jewish religion? Does the practical elimination of all classes of compounds except those containing El and Jah point to the abandonment of other worships? To what extent do the names of any period reflect 'Israel's polytheism'? It will be possible to offer only a few brief remarks on these questions.

In the animal-names some, and pre-eminently W. R. Smith,¹ have found traces of totemism. That about a hundred places, clans, or persons, some belonging to, others not belonging to, Israel, named in the OT have names more or less clearly identical with or derivative from names of animals is altogether insufficient by itself to prove the existence of totemism. On the other hand, if other evidence tends to show that totemism may lie behind Hebrew social organization and religion, this would also satisfactorily explain certain features of the group of animal-names in the OT—and in particular the relatively small number of those that attach to individuals. Of this small number, four occur in the 7th cent., and may be connected with the existence, perhaps the recrudescence, of certain animal superstitions of which there is evidence.

We have references enough in the OT to the lapses of the Israelites into idolatry, to their forsaking of Jahweh for Ba'al, Moloch (=Melech), Astarte, and others; and we might expect to find in the names of the OT also abundant evidence of this. As a matter of fact, there are a few names compounded with Ba'al and Melech; on the other hand, there is none compounded with Astarte, though these are frequent enough in Phœnician. Unfortunately for the elucidation of the present question, Ba'al and Melech are not primarily proper names of a single deity, but terms applicable to many deities; the Hebrews could, e.g., address or describe Jahweh not only as 'my El' (e.g., Ex 15²), i.e. 'my God,' but also as 'my Ba'al' (Hos 2¹⁶). Further, as the name Elijah asserts that Jahweh is God, so Bealyah asserts that Jahweh is Ba'al, Malchiah that Jahweh is Melech ('king'). Inst., then, as at all periods, down to the very latest, the Hebrews used Jah(weh) and El indifferently in proper names as referring to the same God, viz. Jahweh, so it is at least possible that Ba'al and Melech, when used by the Hebrews in proper names, refer to Jahweh. And similarly the compounds with Ab, Ah, 'Am, Adon may be explained.

The opposite view to that just suggested has been recently stated afresh by H. P. Smith (see literature below). He finds that perhaps as many as 150 divinities other than Jahweh occur in the Hebrew names as preserved in the Hebrew text; and he argues that these are 'only a small proportion of the theophorous names which once existed in the Hebrew writings,' but have been mutilated by the removal of the strange god's name or by the substitution for it of El or Jah(weh). Among these strange gods Smith includes Ba'al, Melech, and also Ab, Ah, and 'Am. Now it is curious that all these terms are ambiguous (as we have seen); and that of the worship of Ab, Ah, and 'Am among the Hebrews we never hear, whereas the name of Astarte, of whose worship we do hear and whose name is unambiguously a proper name, enters into no Hebrew personal name. The last fact is indeed to Smith only fresh proof of the rigour with which 'names which gave offence have been removed from the texts.' But Astarte is allowed to remain in place-names! And there is another consideration which should restrain us from over-estimating the extent of the revision to which names in the OT text have been subjected, and the difference between the general character of the names of the OT and the names actually current in the several periods. And that is this: the names on ostraka, papyri, and cuneiform tablets present the same general character; e.g., among the 30 or 40 names of the Samaritan ostraka (9th cent. B.C.) there is about the same proportion of compounds with Jah, El, Ab, Ah, 'Am, Ba'al, Melech as in the names of the Davidic age recorded in the OT; but (as in the OT) there is no name compounded with Astarte.

One further point in Smith's discussion should be noted. He discounts the significance of such names as Bealyah, Abijah, which, if treated as sentence-names, assert that Jahweh was Ba'al ('owner') or Ab ('father'), by arguing that they were not sentence-names at all, but primarily names of compound divinities—fusions of the two distinct deities Ba'al and Jahweh in the first instance, Ab and Jahweh in the second—and that these names of deities were then used as names of men. Now it may be admitted (1) that there actually were compound divinities such as Ashtar-Chemosh of the Moabite inscription; and (2) that occasionally, probably as the result of abbreviation, men bore the names of gods.¹ But it would remain curious, if Smith's conclusions were correct, (1) that of so many of his inferential deities their worshippers were uncertain which way to take their names: there is no evidence that Ashtar-Chemosh could also be called Chemosh-Ashtar, but Abiel apparently could be called indifferently Eliab; Abijah, Joab; and so forth; (2) that such a large proportion of Hebrews whose names were identical with names of gods had names of compound gods.

It is probable then that Smith altogether exaggerates the frequency—whether in the original text of the OT or in the actual life of the Hebrews—of Hebrew names formed from names of deities other than Jahweh. But his material contains certain possibilities and may be consulted with advantage. We conclude with mentioning a few names at various periods which more or less probably contain the name of a strange god. Gad is the name both of a Syrian deity and of a Hebrew tribe; as a divine name the term probably enters into 'Azgad (Ezr., Neh.); but as early as J (Gn 30¹¹) gad was also a noun meaning, as in

¹ Cf. H. Meyersham, *Deorum nomina hominibus imposita*, Kiel, 1891, on Greek and Roman examples, with Addenda by G. Hoffmann, giving Babylonian, Egyptian, Syrian, Canaanitic, and Arabic examples (not all certain).

¹ 'Animal and Plant Names,' in *JPh* ix. [1880] 75-108.

Aramaic and Arabic, 'fortune,' and in this sense probably it entered into the names Gaddiyah (Egyp.), Gaddiel, 'Jahweh (God) is my fortune,' Edom in Obed-edom may be a divine name, as are the elements that follow נָדַר commonly though not invariably in other names. After the Exile a certain number of these names appear, in part perhaps as the result of intermarriage; this, combined with the growing custom of naming after the grandfather, might easily lead to the occurrence of some heathen names in Jewish families. Of such post-Exilic names we may note in addition to 'Azgad already mentioned Henadad, probably containing the name Hadad; Machnadebai, probably a corruption of מְנַדְבַּי, 'possession of Nebo'; Barkos, of which the latter half is identical with the final element in the Nabatean name כְּנֻס, 'Kaus has given'; Barnabas, which means 'son of Nebo.'¹ All these names are Biblical. The Elephantine papyri and the Nippur tablets contain large numbers of names compounded with names of deities other than Jahweh; but many of these certainly, and most, though not all of them, probably, were not names of Jews. On the other hand, the Elephantine papyri contain a little group of unquestionably Jewish names in which the familiar place-name Bethel seems to have acquired a divine character: Bethelnathan, 'Bethel has given'; Bethel'akab, 'Bethel has rewarded'; Bethel-shezeb (?), 'Bethel has delivered.' In the light of these we easily detect a similar name in Zec 7²—Bethelsharezer.

LITERATURE.—The study of Hebrew names can be carried on satisfactorily only by comparison with other Semitic names. The literature under NAMES (Sumerian) and (Syriac) must be consulted. Here some of the principal special literature on Hebrew names is given. For the interpretation or discussion of the names separately see especially Brown-Driver-Briggs, *Hebrew and English Lexicon*, Oxford, 1891-1906; Gesenius-Buhl, *Heb. und aram. Wörterbuch*³, Leipzig, 1910; EBI iii. 3271 ff.; HDB iii. 481 ff. For ancient interpretations see P. de Lagarde, *Onomastica Sacra*², Göttingen, 1887. For systematic treatment or discussions of the subject generally or special parts of it see E. Nestlé, *Die israel. Eigennamen nach ihrer religionsgeschichtlichen Bedeutung*, Leipzig, 1876; F. Baethgen, *Beiträge zur semitischen Religionsgeschichte*, Berlin, 1888; G. B. Gray, *Studies in Hebrew Proper Names*, London, 1896; M. Grunwald, *Die Eigennamen des AT in ihrer Bedeutung für die Kenntnis des heb. Volksglaubens*, Breslau, 1895; G. Kerber, *Die religionsgeschichtliche Bedeutung der heb. Eigennamen des AT*, Freiburg, 1897; F. Hommel, *Die altisr. Ueberlieferung*, Munich, 1897 (criticized in *Exp.*, 5th ser., vol. vi. [1897], pp. 173-190); F. C. Ulmer, *Die semitischen Eigennamen im AT*, pt. I, Leipzig, 1901; T. Nöldeke, 'Names,' in EBI iii. [1902] col. 3272 (full and important); H. P. Smith, 'Theophorous Proper Names in the Old Testament,' in *Old Testament and Semitic Studies in Memory of William Rainey Harper*, London, 1908, I. 35-64; G. B. Gray, 'A Group of Hebrew Names of the Ninth Century B.C.,' in *ExpT* xvii. [1915-16] 57-62.

G. BUCHANAN GRAY.

NAMES (Indo-European).—Although much attention has been devoted to the grammatical structure and connotation of the names of persons and places in all the Indo-European languages, their religious value has remained almost unconsidered. No treatise exists on the subject, and of some dialects, notably Icelandic and Old Irish, a *corpus nominum propriorum* is still to be made. The present article must, therefore, be regarded merely as a general outline of some of the leading phenomena connected with proper names in Indo-European; it cannot claim to be exhaustive. If the greater part of it is given to Indo-Iranian names, this is only because the other dialects, later in date, present few features not found in Sanskrit and the older languages of Iran. Restriction to the religious evidence to be gleaned from names leads, moreover, to the exclusion of any consideration of patronymics, occupational names, and personal names derived from place-names.

1. Grammatical structure.—While some of the

¹ See G. B. Gray, 'Nebo as an Element in Hebrew Proper Names,' in *ExpT* x. [1899] 232-234.

personal names in Indo-European are simple, the majority are compound. These fall, for the present purpose, into 'descriptive' (corresponding to the Skr. technical term *karmadhāraya*, 'office-bearing'), 'dependent' (Skr. *tatpuruṣa*, 'his-man'), 'possessive' (Skr. *bahuvrīhi*, 'having-much-rice'), and 'appositional' (not recognized by the Skr. grammarians, but a class whose importance has been much underrated). Besides these there is the very important class of hypocoristics ('pet names'). These are commonly either diminutives or abbreviations (or both together); and, when the abbreviation consists in dropping one of the components of the compound name, the resultant form may appear to be a simple name, so that in some cases it is difficult, if not impossible, to say whether a certain name is simple or hypocoristic. Here the meaning usually serves as the criterion.

The word cognate with Eng. 'name' occurs in nearly all the Indo-European languages—Skr., Av. *nāman*, Armen. *anun* (from **anōmn*), Alb. *emēn* (from **enmen*), Gr. *ὄνομα*, Lat. *nomen*, Ir. *ainm*, Goth. *namō*, O. Church Slav. *ime*, Old Pruss. *emmens*. On the other hand, in view of the very primitive character of Lithuanian civilization, it should be noted that that language employs for 'name' *vardas* (cognate with Eng. 'word').

The etymology of 'name' is quite uncertain. It has been connected with the group of Gr. *ὄνομα*, 'upbraid, insult, blame,' Lat. *nota*, 'mark,' etc. (cf., e.g., A. Fick, *Vergl. Wörterbuch der indogerm. Sprachen*⁴, Göttingen, 1890-1909, I. 99, 505; F. Justi, *Iran. Namenbuch*, p. iv); but this etymology is very unsatisfactory, both phonologically and semantically (cf. E. Boisacq, *Dict. étymol. de la langue grecque*, Brussels, 1907 ff., p. 704 f.).

2. Importance of the name.—One is, in primitive belief, not really a human being until one is named. The name is, as the Mīmāṃsā (*q.v.*) expresses it, the essence, as contrasted with the accident, or *guṇa* (O. Böhtlingk and R. Roth, *Sanskrit-Wörterbuch*, Petrograd, 1855-75, iv. 113), and in later Persian *nām* occasionally means 'person' (Justi, p. vi). This, however, properly belongs to the theory of nominalism.

3. Ceremonial of name-giving.—The early Hindu rite is described as follows by Gobhila (II. viii. 9-14, 17):

'Then he who is to do this [the name-giving] takes his seat, facing east, to the west of the fire [and] on *darbha* grass whose ends point north. Then the mother, having covered the child with a clean garment, gives it from the south to the officiant with its face upward and its head to the north. Going round behind [the officiant's] back, she seats herself to the north on *darbha* whose ends point north. Then he [the officiant] sacrifices to Prajāpati, the lunar day, the lunar mansion, and its divinity. . . . He mutters this mantra: "Who art thou? Who [of many] art thou? Enter into the month of the lord of the day"; and at the end he gives the name . . . and tells to the mother first.'

There was, however, according to Śāṅkhāyana (I. xxiv. 1-6), a preliminary rite, the *jātakarman*.

'Breathing thrice upon the new-born child, he [the father] breathes after: "Breathe in with the Rg, breathe with the Yajur, breathe out with the Sāman." Having mingled butter and honey, curds and water, or having rubbed together rice and barley, he should make [the child] taste gold thrice, saying, "To thee I offer honey for the rite, wealth produced by Savitr the bounteous. Long-lived, protected by the divinities, live thou a hundred autumns in this world." So saying, he gives his name. . . . That the father and the mother know; on the 10th day [is given] an appellation (*vyādhārika*) pleasing to the Brāhmins.'

If Śāṅkhāyana states that a child should have two names, Hiranyakeśin (II. i. 4. 11-15) declares that he must have three, one being secret and one astrological (cf. below, §§ 10, 18).

'Father and mother should name him first. Two names one should give him. . . . The second should be the name of a lunar mansion; one of the two should be secret; with the other they should address him; the soma-sacrificer should give him a third.' Gobhila says (II. x. 24 f.) that the second name may also refer to a divinity or a *gotra* (*q.v.*).

Instead of the secret name *Āśvalāyana* (I. xv. 8) speaks of an 'appellative' (*abhivādāniya*) to be given by the father and to be used by the pupil (cf. Manu, ii. 122), while other early Hindu texts

say that the teacher is to bestow this name. It is clear from these irreconcilable accounts that the ancient Indian system of name-giving was not rigidly fixed. The name should, naturally, be of good omen, but the minute refinements as to length, etc., laid down by the Hindu treatises were not observed in actual practice (Hilka, *Altind. Personennamen*, pp. 14-18).

4. When the name is given.—According to Manu (ii. 30), the child should be named on the 10th or 12th day, on an auspicious lunar day or *muhūrta* (hour of 48 minutes), or under a lucky lunar mansion (*nakṣatra*). Gobhila (ii. viii. 8), however, sets this ceremony for the 10th or 100th day after birth, or after the lapse of a year. According to Pāraskara (i. xvii. 1), Āpastamba (vi. xv. 8), and Baudhāyana (i. xi. 1), the name is given on the 10th (or 12th) day, when the mother is able to leave her bed. This was the general rule for the Brāhman caste. According to later texts (collected by Hilka, p. 11 f.), Kṣatriyas, Vaiśyas, and Śūdras were to receive their names on the 16th, 20th (or 19th), and 22nd (or 32nd) day respectively.

In Iran Farīdūn does not name his sons until they have reached an age at which their characters have become manifest (*Šāh-nāmah*, tr. A. G. and E. Warner, London, 1905 ff., i. 177, 187 f.). In Greece also the name was given on the 7th or 10th day after birth (Harporocration, p. 92), usually by the father, who might change it later (Demosthenes, c. *Baot*. 1002, 1006, c. *Macart*. 1075); and the Roman *prænomen* was bestowed on a boy on the 9th day, and on a girl on the 10th (H. Blümner, *Röm. Privataltertümer*³, Munich, 1911, p. 304).

5. Deity and name.—If it is important to call a man by his right name, it is still more requisite to do so with a divinity. Thus, in the Avesta the *yasna* to Sraoša, Atar, Tištrya, Mithra, Vanant, and other *yazatas* must be *aoxtō-nāman*, 'with name expressed' (*Yt.* viii. 11, x. 30, xx. 1; *Ys.* iii. 20 f., xxii. 27; *Vīsp.* ix. 5, etc.; cf. also *Yt.* xiii. 79).

6. Religious cult and piety.—Personal names referring to religious cult and personal piety are, as we should expect, very common. Here belong such names as Skr. Agnidhira ('Kindling the [sacred] Fire'), Aghamarṣaṇa ('Sin-effacing'), Āsvamedhadatta ('Given by the Āsvamedha' [*q.v.*]), Idhmavāha ('Fuel-bringing'), Karmaśreṣṭha ('Best in *karma*' [*q.v.*]), Taponitya ('Constant in Asceticism'), Pavitrāpāni ('Pure-handed'), Uttānarbarhis ('With [sacred] Grass spread'), Yajñasvāmin ('Sacrifice-master'), Yūpaketu ('With the [sacificial] Post for a Banner'), Yogeśvara ('Yoga-lord'), Dṛḍhāvratā ('Firm-vowed'), Sutasoma ('With pressed soma'), Satyahavis ('With true Oblation'); Iran. Anūsarvan (and variants; Av. *Anaša-sarvan, 'Immortal-souled'), Ἀραφέρνης (O. P. *Artā-farnah, 'Having righteous Glory' [or 'Righteousness [is] Glory' ?]), Artaxsathra (Artaxerxes, 'Having righteous governance'), Ἀράμνης ('Righteous-minded'), Daēvōtbis ('Demon-hating'), Dārayavahu ('Darius, upholding the Good'), Dēnmaṛt ('Man of Religion'), Farnbag ('God-light'); Gr. Διεύχνης ('Zeus-praying'); Gall. Litugenos ('Feast-son'), O. Ir. Aidan ('Aid(u)agnos, 'Fire-lamb').

Religious phrases are rare as personal names. We find them, however, in the Avesta (*Yt.* xiii. 120): Ašem-yahmāi-ušta, Ašem-yenghē-raočaō, and Ašem-yenghē-verēza (cf. *Ys.* xiii. 1; *Yt.* xiii. 5; *Vīsp.* xi. 28).

7. Power of the name.—This concept is not particularly to the fore in Indo-European, unless the theophoric name (see § 8) be regarded as coming under it, as it undoubtedly does in a sense. According to the Avesta (*Yt.* i. 1-19; cf. xv. 43-52), the revelation of the greatest of the names of Ahura Mazda is besought by Zarathuštra that

he may conquer—and not be conquered by—'all demons and men, all wizards and witches.' In late Hinduism we find the belief, among Kṛṣṇaites, Rāmaites, and Śaivites, that 'the mere repetition of their god's name is a means of salvation,' so that 'sinner or heretic, if one die at last with Krishna's name upon the lips he will be saved' (E. W. Hopkins, *Religions of India*, Boston, 1895, p. 508). With the same motive names of Rāma, etc., are often written on the margin of page after page in Sanskrit MSS, and they regularly begin with some such phrase as 'homage to Hayagrīva' (an epithet of Viṣṇu) or 'to Gaṇeśa' (the remover of obstacles). The present writer is not certain, however, that this is purely Indo-European.

Only rarely does 'name' itself form a component of personal appellatives. Yet we may cite Iran. Nāmfarux ('Name-lucky'), Vahūnām (and variants, 'Good-name'; cf. also Justi, p. 504), Old Osset. Nāmghenos ('Famous'); Gr. Ὀνομακλής ('Name-famed'), Ἀγαθώνυμος, Εὐδώνυμος ('Good-named'), Ἱερώνυμος ('Sacred-named'), Μεγαλόνυμος ('Great-named').

8. Theophoric names.—From the point of view of religion, theophoric names are by far the most important. To bear the name of a deity is to sustain a special and very real connexion with that deity, and to be peculiarly under his protection. It is the same concept which leads to the naming of children after famous men. The name being part of the hero, its application to a child is felt to give him an actual share in the valour or other admirable attribute of the original bearer. In modern times one may try to live up to the model set him in the person after whom he is thus named; primitively, *mana* would be given him by bestowing on him the name of a distinguished man.

The number of theophoric names is so great that only a few characteristic specimens can be cited, sufficient to show the main principles involved.

To this class belong Skr. Devārāja ('the God [is] King'), Devānika ('God-faced'), Devadatta ('God-given'), Devadāsa ('Servant of the God'), Devaprasāda ('Delight of the God'), Devadhara ('Upholding the God'), Devahu ('Sacrificing to the God'), Agnidatta ('Given by Agni'), Indrapālita ('Protected by Indra'), Indrapāla ('Indra [is] Protection'),¹ Brahmahali ('Oblation to Brahman'), Mitradatta ('Given by Mitra'), Kubervallabha ('Dear to Kubera'), Mukundarāma ('Joy of Rāma'), Rāmaja ('Born of Rāma'), Viṣṇusakti ('Might of Viṣṇu'), Viṣṇuputra ('Son of Viṣṇu'), Hariśiṅha ('Lion of Hari'); Iran. Hōrmizāfrid ('Benediction of Ahura Mazda'), Ormizduxt ('Daughter of Ahura Mazda'), Yazdānduxt ('Daughter of God'), Ἀραφάρης ('Protected by Righteousness'; cf. Av. *asapāta*), Ataredāta ('Given by the [sacred] Fire'), Atarecithra ('Seed of the [sacred] Fire'), Μεγάβας (Av. *Baghabāz, 'the God [is] the Arm'), Bagabuxša and Yazdānhuxt ('God-released'), Bagadāta, Yazdāndādh, Xudāidādh ('God-given'), Yazdkart ('God-made'), Cāhāruxt ('Four have released'; cf. Justi, p. 151; similarly Sēhuxt, 'Three have released', Pānchuxt, 'Five have released'), Māhdāt ('Moon-given'), Mafārtēs ('Moon-protected'), Mīhrdān ('Knowing Mithra'; cf. *ERE* viii. 752b), Spentōdāta ('Given by the Holy One'), Σπενδοδάτης ('Heaven-given'), Srōspāt ('Protected by Sraoša'); Old Osset. Ἰζόραδος ('Gift of the God'); Gr. Ἀπολλογενής ('Apollo-horn'), Ἀρητιάς ('Dear to Ares'), Ἀρτεμίδωρος ('Gift of Artemis'), Μηνόδωρος ('Moon-gift'); Gall. Camulogenus ('Son of Camulos [a war-god]), Divicus ('Divine'), Esugenus ('Son of Esus').

Often personal names are simply the appellatives of the gods, as Skr. Māhendra, Kubera, Prajāpati, Kṛṣṇa, Skanda, Chandra, Soma, Buddha, Tathāgata, Dipamkara; Iran. Hōrmizd, Xūrsid ('Sun'), Bahram ('Verethraghna'), Bahman ('Vohu Manah'); Serb. Božo ('God'). Many of these are shown by parallel forms to be possibly hypocoristic abbreviations; but in other cases it is very possible that they are full names, the name of the god being given, without addition, to the child.

Occasionally it is expressly stated that a deity
¹ Owing to the ambiguity of Skr. compounds a name of this type might also be construed as a *bahuvrīhi*, 'possessing the protection of Indra.' Absolute decision seems impossible, but it may be well thus to direct attention to the possibility that some Indo-European names are appositional rather than possessive or descriptive (cf. also § 1).

has named a place, natural object, animal, etc. Thus Ahura Mazda gave names to the good waters when he created them (Ys. xxxviii. 4), but men named mountains 'from visiting and observing them' (Yt. xix. 6).

9. Names from natural objects.—Among all the Indo-European peoples children are very frequently named after some animal, flower, or other object of nature. Names of animals whose qualities appeal to men are especially given to the male sex, such as 'Lion,' 'Tiger,' 'Wolf'; names of flowers and gems are naturally more appropriate to the gentler sex, as 'Pearl,' 'Ruby,' 'Rose,' 'Lily.' The underlying motive of these names is not absolutely certain, but it seems probable, on the whole, that the principle of sympathetic magic was originally involved. A boy named 'Wolf' would, like the animal whose name he bore, be a valiant marauder and a terror to his enemies; 'Pearl' should be as fair and softly rounded as the precious object which her name connotes.

(a) *Animal names*.—These are the most common. Omitting those which denote merely possession of horses, kine, etc., we may mention such names as Skr. Ajarāja ('Goat-king'), Ūrnanābha ('Spider'), Rśyaśrṅga ('Antelope-horn'), Ēnajaṅgha ('Antelope-leg'), Gajasiṅha ('Elephant-lion' [i.e. 'Mighty lion']), Baka ('Crane'), Vṛkājina ('Wolf-skin'), Vṛkodara ('Wolf-belly'), Vṛṣan ('Bull'), Vyāghradatta ('Tiger-given'), Śākuna ('Bird'), Śārdūlakarna ('Tiger-ear'), Sunahpuchha, Sunolāṅgula, Sunahśepa ('Dog-tail'), Mūṣikā ('Mousie'), Sakuntalā ('Birdie'); Iran. 'Opōdvns' ('Turtle-dove'; cf. New Pers. *varš*), Sag ('Dog'), Sāhēn ('Falcon'), Varāza ('Boar,' the sacred animal of Verethraghna), Gurgēn (and variants; Av. **vehrkaēna*, 'Wolfish'); Gr. Λεοντόπυον ('Lion-minded'), Λυκώγης ('Wolf-family'); Gall. Alauda ('Lark'), Lovernios ('Fox's son'), Matugenos ('Bear's son'); O. High Ger. Heidulf, Wolfheidis ('Wolf-form'), Hludulf ('Famous Wolf'), Wolfgang ('Wolf's Course'), Frifulf ('Dear Wolf'), Wacarolf ('Watchful Wolf'), Wolfarn, Arnulf ('Wolf-eagle, Eagle-wolf'), Mārulf, Wolfmār ('Famed Wolf, Wolf-famed'); Serb. Vukdrag ('Wolf-dear'), Dobrovuk ('Good Wolf').

(b) *Plant names*.—These occur not infrequently, as Skr. Aśoka (q.v.), Utpalārāja ('Lotus-king'), Chandanapāla ('Protector of the Sandal-wood' [or 'Sandal-wood [is] Protector' ?]), Padmagupta ('Lotus-protected'), Padmasundara ('Lotus-lovely'), Mallibhūṣaṇa ('Jasmine-adornment'); Iran. Barmak ('Water-ress'); Pol. Wirbosław ('Willow-fame'). It is only rarely, however, that any religious concept can be clearly seen in them, although we may mention Iran. 'Aṣṭārdavos' ('Rue,' used to protect against the evil eye [A. V. W. Jackson, *From Constantinople to the Home of Omar Khayyam*, New York, 1911, p. 119]).

(c) *Mineral names*.—These are very rare, instances being Skr. Kanakaprabha ('Gold-radiance'), Manidatta ('Pearl-given'), Mānikyamukta ('Ruby-diademed'), Rukmakāśa ('Gold-hair'), Hiranyadatta ('Gold-given').

How far such names were totemistic in origin is hard to say. As individual appellatives they scarcely had a totemistic basis, unless we assume an 'individual totem,' as when, e.g., Ikṣvāku means 'Gourd,' or in such cases as when Saṁharaṇa's father was Rkṣa ('Bear'). Even in such instances, however, the general impression gained from a survey of Indo-European personal names is strongly against a totemistic explanation. With regard to tribal names (for which cf. below, § 19) the problem is somewhat more obscure. It has been suggested (H. Oldenberg, *Rel. des Veda*, Berlin, 1894, p. 85 f.; A. A. Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 153) that the Matsyas ('Fish'), Ajas ('Goats'), and Sighrus ('Horse-radishes') men-

tioned in the Rigveda (VII. xviii. 6, 19) are totem-names (but see A. A. Macdonell and A. B. Keith, *Vedic Index of Names and Subjects*, London, 1912, i. 12, ii. 111, 378), and the same may possibly be true of the Pārāvatas ('Turtle-doves'),¹ as well as of such Vedic priestly families as the Gautamas ('Oxen'), Vatsas ('Calves'), Sunakas ('Doggies'), Kauśikas ('Owls'), and Māndukyās ('Frog-sons'), and the Avesta Saēnas ('Eagles'). On the other hand, we must not forget that such names may be hypocoristic—Vatsa, e.g., for *Vatsavant ('Possessing calves')—while the name Matsya may, like the Iranian Massagetæ mentioned below (§ 19), imply that the tribe were fish-eaters, not that they possessed a fish-totem. Doubts are cast on the totemic explanation by Hopkins (*PAOS*, 1894, p. cliv), and in the present stage of our knowledge he would appear to be right.

10. *Astrological names*.—We have already seen (§ 3) that Hiranyakeśin urges that one of a child's names be taken from the lunar mansion (*nakṣatra*) under which he is born. In India, accordingly, a full scheme has been formulated for astrological names. The importance of such an appellative is obvious—just as a theophoric name brings its bearer into close connexion with a deity, so the astrological name gives one the protection of the 'house' of his nativity. One may be named not only from the month of birth, but also from the deity (masculine or feminine, according to the sex of the child) presiding over the month (for a list cf. Hilka, p. 31 f.); and in more modern times a name may likewise be given according to the zodiacal sign of nativity.

11. *Opprobrious names*.—The use of such names, almost invariably connected with belief in the evil eye, is too obvious to require discussion. It may, however, be suggested that one Iranian name for which no satisfactory explanation has yet been advanced may possibly belong to this category—the rather frequent name Pešōtann, which literally means 'Possessing a condemned Body' ('Damned' in the theological sense). If it does, it finds a close parallel in the Romance name Perdita (at all events Justi's explanation of Pešōtann, p. 251, is incorrect).

It is readily intelligible that evil things have evil names. A disease is 'ill-named' (*durnāman* [Rigveda, x. clxii. 10]), as are other evil things (Atharvaveda, II. xxv. 2, IV. xvii. 5, VIII. vi. 1, XVI. vi. 7, XIX. xxxvi. 4, 6), and it is well known that the Avesta has a whole vocabulary of derogatory words for evil creatures, parallel to the terms applied to the good creation (L. J. Frachtenberg, in *Spiegel Memorial Vol.*, Bombay, 1908, pp. 269-289).

12. *Tabu of names*.—With a certain analogy to the secret name (§ 3), names are often regarded as tabu, lest some possible ill-wisher may through them gain control over their owners. This is particularly frequent in the case of husband and wife.

A Hindoo wife is never, under any circumstances, to mention the name of her husband. "He," "the master," "Swamy," etc., are titles she uses when speaking of, or to, her husband. In no way can one of the sex annoy another more intensely and bitterly than by charging her with having mentioned her husband's name. It is a crime not easily forgiven' (F. de W. Ward, *India and the Hindoos*, New York, 1850, p. 189).

This usage still survives in such phrases as 'my man,' 'my woman,' current in humbler circles. It seems probable, moreover, that this principle of tabu underlies the reluctance which is felt regarding the use of one's personal name, except by close friends. We brand familiar use of our given names by casual acquaintances as 'impertinence'; primitive man would see an actual menace in such employment of the only part of our names that has any individual value.

¹ This suggestion has not previously been advanced, so far as the present writer knows. For a summary of previous explanations of the name ('mountaineers,' or 'people from afar') see Macdonell-Keith, i. 518 f.

Sometimes, as in Scandinavia, the name of the dead is avoided, an epithet being preferred if the deceased bore one during his lifetime (V. Guðmundsson and K. Kälund, in *Grundr. der germ. Philologie*, iii.² [1900] 415).

13. Epithets.—The name originally given to a person is very frequently augmented by an epithet derived from some good or bad quality, personal peculiarity, or the like; and sometimes such an epithet completely usurps the personal name. To cite only a single example, the epic Indian Arjuna has the following epithets in the *Mahābhārata* (S. Sörensen, *Index to the Names in the Mahabharata*, London, 1904 ff., pp. 86–89):

Aindri, Śakraja, Śakranandana, Śakrasūnu, Śakrasuta,

(‘younger brother of Bhīma[śena]’), Bibhatsu (‘joins’), Brhannala (‘great reed’), Śākhāṃgadhva, Kapidhva, Kapiketana, Kapivaradhva, Vānaradhva, Vānaraketana, Vānaraketu, Vānaravaryaketana (all ‘monkey-bannered’), Svetaśva, Svetaśva, Svetaśva, Svetaśva (all ‘white-bosomed’), Dhanabhaya (‘booty-conqueror’), Gaṇḍivabhṛt (‘bearing the *gaṇḍīva*’), Gaṇḍivadhanvan (‘with the *gaṇḍīva* for a bow’), Gaṇḍivadhārīn (‘holding the *gaṇḍīva*’), Gaṇḍivīn (‘possessing the *gaṇḍīva*’), Guḍākeśa (‘club-haired’), Indrarūpa (‘having the form of Indra’), Indrāvraja (‘Indra’s junior’), Jaya (‘victory’), Jispu (‘victorious’), Kapiravara (‘having the excellent monkey’), Kaunteya and Kuntiputra (‘son of Kuntī’), Kaurava (‘srestha’ (‘best of the Kururace’)), Kiritaabhṛt (‘diadem-bearing’), Kiritamālīn (‘diadem-garlanded’), Kiritavat, Kiritīn (‘diademed’), Kṛṣṇasātrathi (‘with Kṛṣṇa for a charioteer’), Nara (‘hero’), Pārtha (‘son of Prthu’), Paurava (‘descendant of Pura’), Phālguna (the lunar mansion of his nativity), Prabhājanasutānuja (‘younger brother of the son of the wind’), Savyāsacin (‘ambidextrous’), Surasūnu (‘son of a god’), Tāpatya (‘descendant of Tapati’), Vijaya (‘victory’).

Such usage is especially frequent with names of deities. Indra is ‘many-named’ (*Rigveda*, VIII. lxxxiii. 17; *Atharvaveda*, VI. xcix. 1); twenty names of Ahura Mazda are enumerated in *Yt.* i. 7 f.; Dionysos, Demeter, etc., are πολυώνυμοι (*Soph. Ant.* 1115; *Hom. Hymn. in Dem.* 18). Here, however, we must reckon with the possibility that some of these epithets were originally names of distinct deities who were later amalgamated with the greater gods (cf. H. Usener, *Götternamen*, Bonn, 1896, *passim*; C. F. H. Bruchmann, *Epitheta deorum quae apud poetas graecos leguntur*, Leipzig, 1893).

14. Multiple names.—We have already noted (§ 4) that a name once given might later be changed. This was no less true in India than in Greece, for the *Satapatha Brāhmaṇa* states that a name might be adopted in later life either to secure success or for the sake of distinction (III. vi. 2. 24, v. iii. 3. 14, IX. iv. 3. 13, II. iv. 4. 4, VI. i. 3. 9). Occasionally, particularly in India, synonymy is found—i.e. the same individual may vary his own name by substituting a synonym for one of its components. Thus we may have either Dhanurgraha (‘Bow-grasping’) or Dhanurdhara (‘Bow-holding’), Śilāditya or Dharmāditya, Śreṣṭhasena or Pravarasena, Pratāpāsila or Śilāditya; while the philosopher named (or, rather, nicknamed) Kanāda (‘Atom-eater’) is also known as Kanābhakṣa and Kanābhuj.

15. Sect- and caste-names.—It is very natural for adherents of sects to prefer certain personal names, especially those connected with the founders or heroes of the sect followed by the father of the child who is to be named. Thus in India Vaiṣṇava-vites very frequently have as a component of their appellations the name of Viṣṇu or one of his epithets (e.g., Keśava, Nārāyaṇa, Mādhava, Hari) or of his *avatāras* (Varāha, ‘Boar,’ Vāmana, ‘Dwarf’)—especially Rāma (and its synonyms, as Raghunātha) and Kṛṣṇa (with its synonyms, Gopāla, Govinda, Rādhavallabha)—or of his *śakti*, or female energy (Lakṣmī, Śrī), or of his attributes (Kāmalā [‘Lotus’], Chakra [‘Disk’]). In like manner Śaivites affect the various names of Śiva (Śiva, Dhruva, Nandin, Rudra, Saṃhara, Sarva, Haṛṣa, etc.) or of his *śakti*

(Durgā, Gaurī, Himā, etc.). Minor Indian cults are also represented. Serpent-worship is implied by a number of words for ‘snake’ (Nāga, Ajagara, Ahi, Bhujāṅga, Sarpa; as a matter of fact, these names are usually borne by Buddhists), the cult of the ‘mothers’ (see *ERE* v. 6 f.) by Matr (‘Mother’), of worship of the sun, moon, and planets by words for ‘sun’ (Aditya, Divākara, Prabhākara, Bhānu, Bhāskara, Ravi, Savitr, Sūrya, etc.), ‘moon’ (Indu, Chandra, Mṛgāṅka, Soma, etc.), and planet-names (Āṅgāra, Graha, Budha, etc.) respectively (for examples see Hilka, pp. 84 f., 89–103). So Buddhists and Jains often choose names connected with the founders of their religions (Buddha, Arhant, Jina, Tathāgata, Pārśva, Sugata, etc.), or even sacred abstracts (Jñāna, ‘Knowledge,’ Dharma, ‘Law,’ Bodhi, ‘Enlightenment,’ Saṅgha, ‘Assembly,’ etc.; cf. Hilka, pp. 104–107).

Caste-names are also regular in India. According to Pāraskara (I. xvii. 4) and Baudhāyana (I. xi. 9), a Brāhmaṇa’s name should contain the component *-śarman*, a Kṣatriya’s *-varman*, a Vaiśya’s *-gupta*, and a Śūdra’s *-(bhṛtya)dāsa*. As a matter of fact, the final elements of Brāhmaṇas’ names are often *-śarman*, *-deva*; Kṣatriyas’ *-varman*, *-rāja*, *-trāta*; Vaiśyas’ *-gupta*, *-bhūti*, *-datta*.

In later Hindu usage special titles are also given to scholars, authors, etc. In this category we must reckon such components as *-svāmīn* (‘lord’—especially common about the 7th cent. A.D.), *-soma*, *-āchārya* (‘teacher’), *-ānanda* (‘bliss’), *-kaviṇdra* (‘mighty poet’), *-tarkālaṃkāra* (‘adornment of logic’), *-tīrtha* (‘ford’), *-paṇḍita* (‘scholar’), *-bhaṭṭa* (‘master’), *-muni* (‘sage’), and *-sāgara* (‘ocean’). No strict rule can, however, be formulated by which a man’s sect can be determined exclusively from his name.

In Iran a partial approach to a class-name seems to be found in *Vend.* xviii. 45–52. This declares that at the eschatological restoration of all things a man is to arise from the seed which one has involuntarily lost during his life, and that such a man must be named ‘Ātaredāta’ [‘Fire-given’], or Āterēcithra [‘Fire-sced’], or Āteredahya [‘Fire-land’], or some other name connected with Ātar.

Here, in a sense, belong names denoting belief in beings banned by orthodoxy, such as Pers. Parīcīhrah (‘Fairy-face’), Pariduxt (‘Fairy’s Daughter’), a phenomenon which is also found in place-names (see below, § 20).

Even philosophical concepts occasionally appear in personal names, as in Skr. Ātmasukha (‘ātman-bliss’), Anandajñāna (‘Bliss-knowledge’), Mokṣa-śarman (‘Happy through *mokṣa*’), Vedanidhi (‘Repository of Veda’).

16. Names from ancestors.—In view of the widespread belief in transmigration, it is not strange that the concept that a forefather may be reincarnated in his descendant should find one of its manifestations in the naming of a child after one of his ancestors, especially his grandfather. This was a common practice in Greece (Demosth. c. *Macart.* 1075), and in India Patañjali and the *Saṃskāraratnamālā* (quoted by Hilka, p. 9) state that a child should be named after his grandfather, great-grandfather, or great-great-grandfather. In the lists of Indian kings we find a number of instances where a grandson is thus named: Chandrarāja I. and II. of Ajmīr, Someśvara II., III., IV. of Kalvāna (Someśvara II. was named after his father), Viṣṇuvardhana III., IV., V., and Vijayāditya I., II., III., IV., V. of the Eastern Chālukyas, Kārtavīrya II., III., IV. and Lakṣmīdeva I., II. of Saundatti, Rudrasena I., II., III. of the Vākātaka dynasty (C. M. Duff, *Chronol. of India*, Westminster, 1899, pp. 277, 279, 301, 307 f.). We likewise find this in Iran, though much less frequently—a fact which may be significant since transmigra-

tion is not an Iranian tenet. We may, however, note Cyrus I. and II., Cambyzes I. and II., Xerxes I. and II. In the Scandinavian lands the custom was widely spread, after the 8th cent., of not naming a child after a living person, but after ancestors or recently deceased kinsmen; if a father died before his son was born, the latter unconditionally received the name of the former (Guðmundsson and Kålund, *loc. cit.*).

17. Royal names.—Just as the *Brāhmaṇas* say that the private citizen may change his name to increase his fortune (above, § 14), so kings frequently bear—especially in their official capacity—a name which is entirely different from their personal appellation. Thus the famous Indian king Chandragupta is equally well known as Vikrama or Vikramāditya, Aśoka as Piyadassi, Jayadeva II. as Parachakrakāma, Śilāditya VII. as Dhruvabhṭṭa, etc. In Iran the original name of Darius II. was Ochus, of Darius III. Codomanus, of Artaxerxes II. Arsaces, and of Artaxerxes IV. Bessos.

The meaning of this is clear, just as it is in the case of the private individual who assumes a new name. The name being a real part of a man, he changes himself if he changes his name. When one passes through a state of grave crisis, as when he becomes king, he is changed just as he is, e.g., at initiation (*g.v.*), of which, indeed, the ceremony of *abhiṣeka* (*g.v.*) may be considered a form. The man himself thus being changed with this *rite de passage*, he may very properly assume a new name.

In similar fashion a new name might be taken on entering the religious life; Māni, e.g., assumed this appellative when he began the foundation of Manichæism (*g.v.*), although his original name was Kubrika (or some variant; cf. Justi, p. 190).

18. Secret names.—Since, as we have seen, knowledge of one's name gives actual power over its owner, just as the possession of the clippings of one's hair, nails, etc., renders it possible for one's enemies to work him harm, the value of a secret name is obvious. We have noted above (§ 3) that Hiranyakeśin expressly says that one of the names of an Indian should be secret (*guhya*). The secret name is mentioned in the *Rigveda* (X. lv. 2, lxxi. 1); such a name is given the child at birth (*Sat. Brāh.* vi. i. 3, 9, *Brhadāranyaka Upaniṣad*, vi. iv. 25); Arjuna is a secret name of Indra (*Sat. Brāh.* ii. i. 2, 11, v. iv. 3, 7; cf. Macdonell and Keith, i. 443); and the gods had secret names (*Rigveda*, v. 10, ix. xcv. 2, xvi. 16, x. xlv. 2). Hiranyakeśin seems to leave it doubtful which of the two names should be the secret one, but Āpastamba (vi. xv. 3) makes this the *nakṣatra* name (see, further, A. Hillebrandt, *Ritualliteratur* [= *GIAP* iii. 2], Strassburg, 1897, p. 170f.).

We also find secret names in Iran; Kavādh, e.g., was originally the secret name of Kavādh II., whose mother called him Šērōē in public.

19. Tribal names.—The names of tribes present peculiar difficulties. Like many of the older personal names, they often defy analysis, and—as in the case of place-names—they seem frequently to be non-Indo-European in origin. When they can be satisfactorily interpreted, they seldom present any features of religious interest. Some which may possibly suggest totemism have been noted above (§ 9), and to these Skr. Mahāvṛṣa ('Great Bull') and Viṣānin ('Horned' [?]; cf. Macdonell and Keith, ii. 313) may perhaps be added. Religious cult is distinctly implied in the Italic tribal names Marsi ('Martians'), Hirpini ('Wolf-men', the wolf being sacred to Mars), and Picentes ('Wood-pecker-men', this bird also being sacred to Mars). The danger of falsely attributing religious connotation to tribal names is exemplified by the Iranian *Μασάγεται* (Av. *Mas(s)ya-ka; cf. Skr.

matsya, 'fish'), who were called 'Fishies' not because they had a fish-totem, but because they lived on fish (Herod. i. 201; cf. J. Marquart, *Untersuchungen zur Gesch. von Eran*, Göttingen and Leipzig, 1896–1905, ii. 77f.). Sometimes tribal names are contemptuous epithets bestowed by unfriendly neighbours, as Iran. *Δεσφίκες* (**dr̥gviṣka*, 'Beggars' [Marquart, ii. 139, note 1]), and Scyth. *Ἀριμασπῶτες* ('One-eyes' [Marquart, ii. 90–92]); but occasionally the names have a value as implying a former grade of civilization—e.g., Iran. Asagarta ('Sagartia', 'Dwelling in stone Caves' [C. Bartholomae, *Zum altiran. Wörterbuch*, Strassburg, 1906, p. 119 f.]).

20. Place-names.—The names of places suffer from the same obscurity—and for the same reason—as tribal names. In Greece and Armenia many date from pre-Indo-European times (A. Fick, *Vorgriech. Ortsnamen*, Göttingen, 1905; H. Hübschmann, *Indogerm. Forschungen*, xvi. 233, 366–368). Yet place-names possess a historic value which can hardly be over-estimated, especially as showing the ethnological strata which have existed in a country, and as revealing the sites of ancient sacred places. The same is true, in minor degree, of street-names, etc., in our older cities, since they still indicate, in many instances, the sites of vanished city-gates, monasteries, and the like.

This aspect may be studied with special clearness in the place-names of Scotland. Two distinct Celtic peoples are evidently responsible for such names as Aber-deen and Inver-ness; Pit-lochry is shown by its *p* to be neither Brythonic nor Goidelic; Ler-wick is Norse; Beaully is French.

This subject is discussed at length in the introduction to J. B. Johnston's *Place-names of Scotland*², Edinburgh, 1903, and has also been discussed by J. Jacobsen of Copenhagen in a course of lectures at King's College, Aberdeen, in June 1914. On the basis of place-names in Britain Jacobsen has shown that the infiltrations in Shetland, the Orkneys, the Hebrides, Caithness, Sutherland, and W. Scotland were from S.W. Norway, whereas they were Danish in N. and E. England, and in Normandy, the two streams meeting in Cumberland. Thus -*way* (Stornoway) and -*ster* (Lybster) point to Norwegian colonization, -*by* (Grimsby), -*thorp* (Ullesthorp), -*toft* (Lowestoft), -*thwait(e)* (Brathwaite) indicate Danish settlement, while -*ham* (Shoreham), -*stead* (Grimstead), -*ford* (Oxford) are Anglo-Saxon. Roman settlements are shown by the numerous English place-names in -*chester*, and former Celtic occupation where no Celts have been dominant for centuries is evident from such names as London and Carlisle.

Numerous examples of Indian place-names of religious significance are given in the present work (e.g., GARHMUKTESAR, HARDWAR, JAGANNATH). For Iranian names of this type we may cite Adhar-baijān (Pahlavi *Āturpātākān*, 'Fire-protected'), Bagavan ('God-district'); Old Osset. *Zovydāia* (Sudak in the Crimea; 'Holy City');¹ Armenian *At'oR Anahay* ('Mountain of Anāhita' [Hübschmann, pp. 286, 398]), *Astvaçaṣēn* ('God-built'), *Diçmairi* ('God-grove'); Italic Mantua ('City of [the Etruscan death-god] Mantus'); Gall. Camulodunum (Lexden Heath, 'Fort of Camulus' [a war-god]), Deobriga (Miranda de Ebro in Asturia; 'God-hill'), Divodnron (Metz; 'God-fort'), Lugudunon (Lyons; 'Fort of Lug' [the god of war]); Irish Caherepheepa ('Stone Fort of the [Fairy] Pipe'), Carrigleena ('Rock of [the Fairy Queen] Clodna'), Cushinsheean ('Little Foot of the Fairy Fort'), Knockshigowna ('Hill of Una's Fairy Palace'), Tobernashee ('Fairy Well'). Sometimes even rivers have divine names—e.g., Gall. Deva (Dee, 'Divine'), Taranis ('Thunder-god').

LITERATURE.—A. Fick, *Griech. Personennamen*, Göttingen, 1874 (the most general survey of the subject; the 2nd ed., do. 1894, omits the introduction and is, therefore, of less value for the present purpose); O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, pp. 673–678; A. Hilka, *Altind. Personennamen*, Breslau, 1910 (with good bibliography); F. Justi, *Iranisches Namenbuch*, Marburg, 1895; H. Hübschmann, *Altarmen. Personennamen*, in *Festgruss an R. von Roth*,

¹ Possibly identical in meaning with O. Pers. Suguda ('Sogdiana').

Stuttgart, 1893, pp. 99-108; W. Tomasehek, 'Die alten Thraker, II,' *SWAW* cxxxi. [1894], Abhand. 1; W. Schulze, *Zur Gesch. latein. Eigennamen*, Berlin, 1904; A. Holder, *Altkeil. Sprachschatz*, Leipzig, 1896 ff.; G. Storm, 'Sjælevandring og Opkaldessystem,' *Arkiv f. nord. Filologi*, ix. [1893] 109-222; E. Förstemann, *Altdeutsches Namenbuch*², Bonn, 1900 ff.; C. G. Andresen, *Altdeut. Personennamen*², Mainz, 1876; A. Socin, *Mittelhochdeutsches Namenbuch*, Basel, 1903; E. Lewy, *Altpruss. Personennamen*, Breslau, 1904; A. Leskien, 'Litauische Personennamen,' *Indogerm. Forschungen*, xxvi. [1909] 325-352; F. Miklosich, 'Bildung der slav. Personennamen,' *DWAIV* x. [1895] 215-330; G. Krek, *Einleit. in die slav. Literaturgesch.*², Graz, 1887, pp. 485-508. For place-names, H. Hübschmann, 'Altarmen. Ortsnamen,' *Indogerm. Forschungen*, xvi. [1904] 197-490; P. W. Joyce, *Origin and Hist. of Irish Names of Places*, Dublin, 1869-1913 (the list might be much extended, but these works, with the book of Johnston's mentioned in the text, will give an excellent idea of the method to be pursued in the study of place-names). The investigation of names seems to have been of scant interest to earlier ages; practically the only treatises known are in Irish: for personal (nick-)names see the *Góir Anamann* ('Fitness of Names'), ed. and tr. W. Stokes, *Irish Texts*, iii., Leipzig, 1891-97, pp. 285-444; and for place-names the *Dindenchas*, ed. and tr. (prose portions) Stokes, *RCel* xv. [1894] 272-336, 418-484, xvi. [1895] 31-83, 135-167, 269-312, and (verse portions) E. Gwynn, *Todd Lect. Series* (Royal Irish Acad.), vii. ff. [Dublin, 1900 ff.].

LOUIS H. GRAY.

NAMES (Japanese).—I. Family-names.—In ancient times there were two kinds of family-names recognized in Japan: *kabane*, or *sei*, and *uji*, or *shi*. Both were granted by the sovereign to only a limited number; and the mass of the people had no patronymic.

(a) *Kabane*.—*Kabane* are said to have existed since the 'divine age.' In the reign of Emperor Temmu (673-686) eight distinct *kabane* were recognized. They were as follows: Ason, Inagi, Imiki, Mabito, Michinoshi, Muraji, Omi, and Sukuna. Later the number of *kabane* was increased to twenty-three. Such family-names designated the profession or rank of those bearing them, and may be considered of the nature of class or caste distinctions.

(b) *Uji*.—*Uji* were for the most part granted by the sovereign to certain members of one or another of the *kabane* families in recognition of some special merit or to designate some special profession. Among the most ancient of these are: Mononobe, Odomo, Imbé, Nakatomi, and Soga; but the most famous in all the history of Japan are Minamoto, Taira, Fujiwara, and Tachibana. The last four are at once thought of as in particular 'the *uji*.' So prominent were they that they have by some been erroneously considered *kabane*. Sugawara, Kiyohara, Kamo, Urabe, and Abe are also among the more prominent *uji* names.

2. Local names.—As the descendants of these *uji* families increased, certain branches took a local or territorial name in addition to the *uji* name. Thus the number of apparently distinct families increased. In A.D. 815 a 'Record of *Kabane* and *Uji*' was published. This contained 1182 *uji* names, many of the local or territorial names having taken the place of the true family-name, or *uji*. Most of these branch families, bearing distinct names, were in reality members of some one of the large *uji*.

Until the beginning of the Meiji era the bearers of *kabane* or *uji* names were of high rank; and the common people, except for some special and extraordinary service, were allowed merely personal names. At the beginning of the Meiji era the government ordered all to take family-names; and, upon registration, the free changing of personal names was no longer allowed. At that time many millions of new families adopted names for the first time; but these were mostly of the local type, such as had in the earlier period been taken in addition to *kabane* or *uji* names. A large number adopted some popular name; and it was not unusual for whole villages to take the same name, often the name of the locality or of the village itself; and thus the use of the same family-name

did not of necessity signify any near relationship. The number of distinct family-names now recorded in the Tokyo Directory is 4146; and the Postal Cheque List of the whole country gives 4942. Probably the number of family-names in present use in Japan is no less than 10,000.

In writing Japanese family-names Chinese characters are used. The larger number of names consist of two characters which may be pronounced arbitrarily according to the taste of the family in one of two ways: the Japanese or the Chinese. Some names are of only one character, and rarely three or more are used. Of the Chinese characters used, certain ones are very common; and the majority have some connexion with nature or natural objects: Yama, 'Mountain'; Kawa, 'River'; Ta, or Da, 'Rice-field'; Mura, 'Village'; No, 'Field'; Hara, 'Plain'; Ike, 'Pond'; Hayashi, 'Forest'; Oka, 'Hill'; Shima, 'Island'; Mori, 'Grove'; Tani, 'Valley'; Ama, or Amé, 'The Heaven'; Hoshi, 'Star'; Hi, 'Sun'; Tsuki, 'Moon,' etc. These are all individually written in one Chinese character, though most are dissyllabic in pronunciation. Second to characters of this class are those signifying plant life: Ki, 'Tree'; Matsn, 'Pine'; Sugi, 'Cedar'; Ume, 'Plum'; Sakura, 'Cherry'; Fuji, 'Wisteria,' etc.

To these nominal forms all kinds of descriptive characters were added such as: great, small, middle, upper, lower, broad, high, black, white, red, blue, east, west, north, south, and many more.

3. Korean names.—Among the older family-names a considerable number came from Korea when the more or less extensive immigration from that country took place. In the 'Record of *Kabane* and *Uji*' a number of such names are given. For the most part, however, the Koreans, when naturalized, were given Japanese names or else their Korean names soon became so modified as to lose any distinctively Korean peculiarities which they had.

4. Personal names.—Personal names in ancient times, especially of men of rank, were of great length, as is seen in the *Kojiki* and *Nihongi*. The following may serve as fair examples: Amenigishi-kuninigishi-amatsuhidaka-hikohononiniginomikoto, and Ameshirushikuni-oshihiraki toyos-kurahikono-sumeramikoto.

5. Royal names.—As time went on, such royal family-names had a tendency to shorten. The real name of royalty was Imina, meaning 'the name to be avoided,' for it was usually avoided in conversation or writing. Imina ending with *hito* was adopted as distinctive of royalty, being limited to emperors and princes of the blood. The character read *hito* means 'benevolence,' and was first adopted by the Emperor Seiwa (859-876) in the name Tadahito. The name of Emperor Daigo (898-930) was Atsuhito; and since his time the special ending has been used with every imperial name. The name of Meiji Tenno, the late emperor, was Mutsuhito.

6. Nanori.—*Nanori* of two Chinese characters were from the Middle Ages adopted by members of the official and *samurai* class. It was also the *imina* for them. Within the same family many would adopt one of these two characters as a *tōrijī*, or character-in-common; e.g., among the descendants of Minamoto Yoriyoshi, either *yori* or *yoshi* was used in common for several generations: Yoriyoshi, Yoshiye, Yoshitsuna, Yoshimitsu, Tameyoshi, Yoshichika, Yoshikuni, Yoshitomo, Yoritomo. In the Tokugawa family Iye was the *tōrijī*: Iyeyasu, Iyemitsu, Iyetsuna, Iyenobu, Iyetsugu. It is to be noticed that the name employed in addition to the family-name was placed after the family-name.

7. *Tōrina*.—*Tōrina*, or *zokumyo*, popular or secular names, were used in everyday intercourse. With the passing of the old distinctions between the upper and the lower classes, all are now free to use these or other *nanori* together with their family-names.

In selecting the personal names for their children, certain families have the custom of using a single character as a common element for all, as in the case of *nanori*; but there is no general habit in the matter. The naming of a child after an ancestor or relative is rare. The adoption of the same name in succession by the head of the family is practised to a certain extent, especially in the case of trade or professional names.

8. Names for male children.—In the personal names of male children certain distinctive terminations are popular: *ro*, *suke*, *kichi*, *zo*, *bei*, *emon*, *hiko*, *maro*, etc. Of these some are remnants of old official titles, now unused, while others simply signify a son or male child. *Ro*, 'male child,' together with a number designating the order of his birth, is a very common personal name: *Taro*, or *Ichiro*, 'The First Male'; *Jiro*, 'The Second Male'; *Saburo*, 'The Third Male,' etc. To these combinations certain Chinese characters of noble meaning are often prefixed: *Tokutaro*, 'Virtue First Male'; *Tokujiro*, 'Virtue Second Male'; *Tokusaburo*, 'Virtue Third Male,' etc. Some of the most common of these prefixed characters are read: *masa*, 'good'; *zen*, 'just'; *michi*, 'righteous way'; *yu*, 'courage'; *shin*, 'faithful,' etc. Names of plants and animals are also of frequent use; and regard to what would produce harmonious combination with the family-name is not neglected.

9. Names for female children.—In the personal names of female children in ancient times the termination *mikoto* or *hime* was distinctive. During the Middle Ages, in families of rank, the name often terminated in *ko*. The names have all been gradually shortened and simplified; and at present the greater number contain only two syllables. In the case of such short names, however, a certain lack is felt, a certain undefined brusqueness, which is obviated by the supplementary prefix *O*. Of late the termination *ko* is increasingly taking the place of the prefix *O*, both forms serving alike to give a pleasing fullness to the name. Female names are often those of plants, trees, or animals: *Matsu* (Omatsu or Matsuko), 'Pine'; *Take* (Otake or Takeko), 'Bamboo'; *Ume* (Oume or Umeko), 'Plum'; *Tsuru* (Otsuru or Tsuruko), 'Stork'; *Kamé* (Okame or Kameko), 'Tortoise,' etc. These are popular from their omen, which promises long life. Classical names or those selected for their honourable meaning are not uncommon: *Michi*, 'Righteous Way'; *Yoshi*, 'Justice'; *Toku*, 'Virtue'; *Ai*, 'Charity,' etc.

In ancient times it appears to have been the custom that the mother should name the children; but after the Middle Ages, without any definite point of change, the right of naming devolved upon the father. In *samurai* families, as late as the opening of the present era, infant names were given; and then, at the age of fifteen, these temporary names were usually changed for permanent personal names.

10. Foreign names.—As relations with Western nations became more intimate, and especially as the influence of Christianity deepened, Western and Christian names were adopted to a slight extent. These names were for the most part so expressed in Chinese characters as to appear perfectly natural to the Japanese eye and ear. The following may be taken as examples: *Jo* for Joseph, *Paul*, *Ben*, *Samuru* for Samuel, *Joji* for George, and *Yugo* for Hugo.

11. *Azana*.—*Azana*, or alternate names, were occasionally taken by officers and scholars, after a Chinese custom, in addition to *nanori* and regular family-names; but of these little practical use was made.

12. *Noms de plume*.—*Go*, literary *noms de plume*, were not uncommon with scholars, writers, and artists; and in many cases these names became more popularly known than the real and legal cognomens. Of these the best known examples are: *Nakaye Toju* (Yoyemon), *Kumazawa Banzan* (Sukeyemon), *Rai Sanyo* (Kiutaro), *Yoshida Shoin* (Torajiro), *Yokoi Shonan* (Heishiro), *Nakamura Keiu* (Masanao). These *go*, generally taken from the name of some locality, mountain, or river, were ordinarily written in two Chinese characters, seldom in three or more. Occasionally scholars of the Japanese Classics adopted *go* expressed in Japanese characters; but these were not at all popular.

Thus it will be seen that a man of rank or scholarship might possess at the same time a large number of family and personal names: *kabane*, *uji*, a local family name, a *nanori* or *imina*, a *tōrina*, an *azana*, a *go*, and, after death, a *hōmyō*, or religious name.

13. Expressions of respect.—Following the name, not preceding it, certain expressions of respect are used. The most common in conversation, whether after the family or the personal name, regardless of sex or rank, is *San*. *Sama* may be used instead to express special distinction, as by a maid to her mistress. In writing, *San* is never used except in most familiar communications. *Sama* or *Dono* takes its place among all classes. *Kun* is a common form in addressing men, and may be thought of as taking the place of the English *Mr*.

14. Professional names.—Among actors certain family and personal names are taken by generations of pupils. *Ichikawa Danjuro* is the professional name now held in the ninth generation; *Ichikawa Yazo* in the eighth generation; and *Nakamura Kanzaburo* in the thirteenth. The same custom may be found among musicians and artists. In certain crafts specific characters are often used in common by successive generations, being recognized as distinctive. The names of Buddhist priests, usually of two characters, are ordinarily taken from the Buddhist scriptures and are pronounced in special Chinese fashion.

15. Posthumous names.—*Okurina*, or posthumous names, have been common with royalty and among the nobility. In the reign of *Kotoku* (645-654) the posthumous name *Jimmu* was given to the first sovereign, and since that time the custom has continued until the present time, when the late emperor is known by the posthumous name of *Meiji Tenno*. These names have for the most part been characteristic of the individual or his reign or some locality associated with him.

16. Religious names.—After the introduction of Buddhism the custom of giving *kaimyo*, or *hōmyō*, 'religious names,' to the dead became common. These were inscribed on the ancestral tablets and on the grave-stones, so that rarely were actual personal names to be found in such connexions. In recent years this custom has somewhat weakened; and more and more the ordinary personal and family name, acquired and used as in the West, is becoming the only name that marks the grave of the dead.

Knrita, *Studies in Shōshi Roku*, 2 vols., Tōkyō, 1897; L. Hearn, *Shadowings*, London, 1900; B. H. Chamberlain, *The Language, Mythology, and Geographical Nomenclature of Japan, viewed in the Light of Aino Studies*, Tōkyō, 1887.

T. HARADA.

NAMES (Jewish).—The post-Biblical period shows much the same general phenomena as are discernible in the Biblical age (see NAMES [Hebrew]; *HDB* iii. 478 ff.; and G. B. Gray, *Hebrew Proper Names*, London, 1896). The most significant modification concerns the marking of family sequence by the application to descendants of names borne by ancestors. In Palestine the naming of children after their grandfathers can be traced only to the Greek period, about the 3rd cent. B.C. But the Elephantine papyri carry the custom back some two centuries for the Egyptian Jews (Gray, in *Studien zur semitischen Philologie*, Giessen, 1914, p. 161 ff.). In the Rabbinic period the custom was well established, and it was recognized that a change had occurred from the older Israelite practice of naming a child after some circumstance at his birth. The change was justified by Rabbis of the 2nd cent. A.D. on two grounds: (1) the need of aiding the preservation of family genealogies, and (2) the loss of the guidance of the Holy Spirit in selecting the incident which was to be enshrined in the child's name (*Midr. Gen. Rabbāh*, xxxvii.). It has never become customary for Jewish children to bear their parents' names; there are exceptions, but in most cases the child seems to have been posthumous. More usual is the choice of the grandfather's name, though the tendency has been, since the 13th cent., not to name a child after a living relative (L. Löw, *Die Lebensalter in der jüdischen Literatur*, Szegedin, 1875, p. 95).

A full study of the history of Jewish personal names throughout the ages was published by L. Zunz in 1836 (reprinted in Zunz's *Gesammelte Schriften*, Berlin, 1876, ii. 1-82). At that time the Prussian Government, following a Bohemian precedent of 1787, was proposing to introduce legislation restricting the Jews to Biblical personal names (cf. J. Jacobs, in *JE* ix. 156 f.). Zunz had no difficulty in demonstrating that Jews had freely used non-Biblical names, adopting in succession Babylonian, Persian, Aramaic, Greek, Latin, Arabic, and later European designations. Many Hebrew names were translated into the vernaculars of Europe and Asia. Zunz's work contains long lists of the Jewish names of various periods; and there are some similar lists in Jacobs' article. In these lists Biblical names by no means predominate. The variety of Jewish names revealed in the English records of the 12th and 13th centuries is very remarkable.

With regard to surnames, there are indications that descriptive epithets were becoming common in the Rabbinic period, and that these were developed chiefly in lands where Arabic influence prevailed. Family-names were turned into surnames; so were place-names. The many wanderings of the Jews in the Middle Ages and more recent times induced the custom of naming a new settler after the town or country from which he had migrated. Then, again, such terms as Cohen and Levi, originally descriptive of descent, became surnames. Such names as Maimuni (or Maimonides), i.e. 'son of Maimon,' in the 12th cent., and Mendelssohn, 'son of Mendel,' in the 18th, are illustrations of the practice of converting the father's personal name into a surname. Animal-names are probably more common among Jews than among the general population. In the mediæval period occupations suggested many names, and in the centuries approaching the modern age names were derived, especially in Germany, from the business signs (such as the red shield which gave the Rothschilds their name). The intercourse between Jews and their fellow-citizens after the emancipation period rendered it necessary for the former to bear distinctive civic names. This had

been the case long before in Spain, and was growing common throughout Europe when, in 1787, the custom became regular in Central and Northern Europe. In the year named the Jews of the Austrian empire were ordered by law to adopt surnames; if any refused, the registration commissioners were empowered to enforce names of their own selection (cf. Jacobs, *loc. cit.*).

The naming of the child has at various times been a ceremony of considerable moment. The period covered by Scripture is fully dealt with in the Bible Dictionaries and in art. NAMES (Hebrew). From the 12th cent., according to Löw (p. 97), not earlier, Jewish boys were named on their eighth day, during the circumcision rite. The formulae vary; the now common form may be found in the *Authorised Daily Prayer Book* (ed. S. Singer, London, 1914, p. 305; cf. Löw, p. 101). A formula for the naming of girls is given in some rites (see *Book of Prayer . . . according to the Custom of the Spanish and Portuguese Jews*, ed. M. Gaster, London, 1901, i. 180); it is becoming customary to name girls at the first visit paid by the mother to the Synagogue after the birth of the child (Singer, p. 312). The names thus given are mostly in Hebrew, though sometimes the vernacular names are merely transliterated into Hebrew letters—a custom which goes back to Talmudic times. Such names as Alexander and Julian were thus treated in the Rabbinic age. Often the Hebrew and common names corresponded either exactly or in meaning, but in modern times there is frequently no exact correspondence between the Hebrew and ordinary names; thus the chief Rabbi Hermann Adler had the Hebrew name Naphtali. There is, however, some remote connexion in meaning between the two names. It is still customary to find a Hebrew name beginning with the same letter as the vernacular name. Most Jews still bear two names (though the two are often identical), the one Hebrew (termed 'sacred name' and used in Hebrew documents, in the Synagogue, in epitaphs, and so forth), the other vernacular (termed 'common name,' used for ordinary purposes). The Hebrew names thus conferred are borne throughout life, except that, under Kabbalistic influence, some rites direct the change of name in case of illness, in a prayer for the patient's recovery (for a formula see Gaster, p. 195). This custom is now more honoured in the breach than in the observance, though it has some Talmudic authority, for in *T. B. Rōsh Hashānāh*, 16b, mention is made of the efficacy of a change of name. Names are still changed on conversion; thus a Jewish convert to Christianity is given a new name, such as Paul, while a convert to Judaism receives a patriarchal name (Abraham, Sarah, or the like). On the other hand, it was held by the Rabbis a meritorious trait in the sons of Jacob that in their Egyptian environment 'they did not change their names' (*Lev. Rabbāh*, xxxii. 5). A pleasant custom with regard to Hebrew names is the selection of a Scriptural text, beginning and ending with the same letters as the Hebrew name; the text is then a kind of motto for the bearer of the name. A long list of such texts may be found in S. Baer, *Abodat Yisrael*, Rödelheim, 1868, p. 106. Some have sought the source of this custom in the Talmudic references to an older school usage. 'Repeat to me thy verse,' says a visitor to the school (cf. the incidents recorded in *Hagigah*, 15a). But the verse in these passages was some recently-learned text, and apparently had no connexion with the pupil's name.

LITERATURE.—To the works referred to in the course of the art. add: J. Jacobs, *Jews of Angevin England*, London, 1893, esp. pp. 345-369; H. Gross, *Gallia judaica*, Paris, 1897; and, for the ancient period, S. Daiches, *Publication no. 2 of Jews' College*, London, 1910.

I. ABRAHAMS.

NAMES (Lapp).—1. Saivo and saivo names.—Among the primitive beliefs of the Lapps was the worship of dead relatives. They thought that the souls of dead kinsmen helped their descendants and were reborn in them. But they regarded the name as a kind of soul, and therefore the transmission of names was of great importance. In order that a man might possess the character of a dead kinsman he must have his name, and dead men would help only those of the living who bore their names.

The burying-places of the Lapps on sacred mountains were called *saivos*, or *saivo* homes. Immediately after death souls passed into that *saivo* a tenant of which had been their familiar spirit while they lived. There, close under the ground, dwelt all souls of the dead, both men and beasts, passing a life like their earthly life, except that they were more prosperous and more powerful. They protected and helped those who survived them. The *saivo* men and women were the familiar spirits of those who bore their names, and the *saivo* beasts were also helpful spirits, especially to the shaman, whose retinue of familiars comprised not only his *saivo* men but also his *saivo* animals, viz. *saivo* birds, *saivo* fish or serpents, and *saivo* reindeer. Every adult Laplander had one or more of these familiar spirits represented by *saivo* names. The more *saivo* spirits a Laplander possessed, the higher was his reputation. *Saivo* spirits were obtained by skill in magic, by inheritance, or by gift or purchase. Parents while still living often divided their familiar spirits among their children; if they did not, their heirs took them. Marriages were esteemed in proportion to the number of familiar spirits, represented by *saivo* names, that were brought into the marriage bond.

2. Transmission of saivo names.—When a woman was pregnant, she was informed in a dream by a dead man what name the child should be given and also what dead man should rise to life again in the child. If she did not learn this in a dream, the father or other relatives had to find out by divination or by consulting the shaman. Missionaries living among the Norwegian Lapps (1716-34) stated that in their time babies were christened with common Norwegian names, but, as soon as the christening party returned from church, a *laugo*, or washing, of their own religion was held. This *laugo* was called *same-namma-kastates*, 'Lapp-name baptism.' The child was thereby consecrated to Sarakka, the birth-wife, and received a Lappish name which had been borne generally by some ancestor and communicated to the relatives in the manner mentioned above. This name was always used, the Christian name being ignored and forgotten.

'When afterwards the child falls ill, or cries more than it should, it is imputed to no other cause than because a just and genuine name was not given it. . . . A new washing was undertaken, when a new name was acquired, taken from one of his ancestors; and this is the reason why you meet with Laplanders frequently that have two or three names' (Leem, *De Laponibus Finmarckie*, p. 496, Eng. tr. in J. Pinkerton's *Voyages*, London, 1803-14, i. 483).

This new name was called *adda-namma*. Scheffer (*Laponia*, p. 301) reports similar changes of name among the Swedish Lapps, and Högström (*Beskrifning*, p. 138), who also wrote of the Swedish Lapps, says that, when a child was ill or troublesome, or sometimes for other reasons—e.g., to avert a suspected misfortune—the Lapps changed its name, washing away the old name with water coloured red by a decoction of alder-bark. Leem also mentions the use of alder-bark juice for this purpose (p. 496). C. Ganander (*Mythologia Fennica*, Åbo, 1789, p. 61) quotes the MS of Lenart Sidenius, a Danish missionary working in Norway

about 1716, who speaks of the magic baptism of the Lapps, by which they acquire a magic name and with it a *namma-guelle*, or 'name-fish,' one of their underground deities, which becomes their familiar spirit. 'They feign,' says Leem (p. 417; Eng. tr., p. 460), 'that very few can have this, unless on the second baptism.' The name-fish seems identical with the *saivo* fish which helped the shaman to hurt his enemies and carried him on his journey to the realm of the dead. The statement of Sidenius may perhaps mean that, when a man was re-baptized as a shaman in the name of a dead kinsman who had possessed a *saivo* fish, such fish thereupon became the name-fish and familiar spirit of the new shaman.

The baptismal rites of *same-namma* and *adda-namma* were never administered by the Christian godmother, but by another woman, generally the mother. She used warm water into which, Jessen says (*De Finnorum*, p. 38), two twigs of birch were thrown, one in its natural shape, the other twisted into the form of a ring. The *laugo-edne*, or washing wife, then addressed the baby, saying, 'Be thou as fruitful and strong as the birch-tree from which these twigs were taken.' Leem and Högström, however, state that alder-bark was decocted in the water. After throwing into the water some brass or silver object called *namma-skiello*, she then baptized the child, saying, 'I baptize thee with a new name, N.N. Thou shalt thrive better with this water than with that in which the priest dipped thee. By this washing I call thee up, O dead man, N.N. Thou shalt now rise up again, be healthy and receive a new body. And thou, child, shalt have the same fortune as the dead man N.N. had in his lifetime.' After the child has been baptized, she adds, 'Now thou art baptized with the *same-namma* (or *adda-namma*) baptism, with the dead man's name: see how well thou wilt thrive therewith!' The *skiello* was then taken from the water and tied to the child. It was highly prized as an amulet, and boys, when they grew up, tied it to their magic drums. Before the rite of *same-namma* baptism offerings were made to Sarakka, and both the water and the child were consecrated to her; but in the *adda-namma* baptism offerings were made to the dead man who was then reborn. When any one was to enter the ranks of the *noades*, or shamans, he was baptized, and, whenever any one received a *saivo* spirit, he was baptized in the name of the dead man who was reborn in him. Even old men over seventy were sometimes rechristened when ill. One old Lapp mentioned by Jessen (p. 40) had an *adda-namma* and thirteen *saivo* names, three of which he had received from his mother in her lifetime, and the rest he had inherited from various relatives. A Lapp youth had no *adda-namma*, properly so called, because he had never been ill, but he had two *saivo* names, one of which he had received as a present from his father, and the other he had obtained for himself by the practice of magic.

These ceremonies are a curious blend of Christian, Scandinavian, and Finno-Ugrian influences. It seems probable that the water-baptism itself is of Christian origin; but the Lappish custom as a whole is evidently of a more ancient descent, and may have been, as V. M. Mikhailovskii asserts, 'one of the most sacred rites' of the pagan Lapps (*JAI* xxiv. [1894] 148). Fjellner, the well-informed Lapp who supplied O. Donner with much of the material for his *Lieder der Lappen* (Helsingfors, 1876), told G. von Düben, the Swedish writer, that Lappish baptism was very old and mentioned in their most ancient songs. We may gather from the evidence of Högström, Leem, and Jessen that during the first half of the 18th cent., when the influence of Christian missionaries was making most progress, twigs of birch were placed in the baptismal water, but that, where pagan influences remained strong, alder-bark was used by both Norwegian and Swedish Lapps. It might perhaps be inferred that in the pre-Christian rite the patient was daubed with alder-bark juice, a substitute for, or equivalent to, blood, which had deep religious significance for the Lapps, and was used by them to a large extent in the very curious survivals of old ritual which followed the killing of bears.¹ Otherwise the name-giving customs are

¹ See P. Fjellström, *Om Lapparnes Björnsfänge*, Stockholm, 1755. It may be noticed that with the Chukcheis, before name-giving ceremonies similar to those of the Lapps, the faces of mother, child, and relatives were smeared with blood (W. Bogoras, 'The Chukchee,' in *Mem. Amer. Mus. Nat. Hist.: The Jesuit North Pacific Expedition*, vol. vii. pt. ii. [1907] p. 61).

of a general character, and occur with variations all over the north. The belief that ancestors come to life again in descendants named after them, which seems the root-idea of these Lappish customs, is of course not peculiar to the Lapps, who indeed borrowed much of their religion, like their language, from neighbours of alien blood. Such beliefs and customs are prevalent not only in Siberia but also among N. American Indians, and among the Eskimos, both American and Asiatic.¹

LITERATURE.—For Swedish Lapps: J. Scheffer, *Laponia*, Frankfurt, 1873, Eng. tr., Oxford, 1874; P. Högström, *Beskrifning öfver de till Sveriges krona lydande Lappmarker*, Stockholm, n.d. (1746-47). For Norwegian Lapps: E. J. Jessen, *De Finnorum Laponumque Norvegorum Religione*, Copenhagen, 1767; K. Leem, *De Laponibus Finmarchiae eorumque lingua, vita et religione*, do. 1767.

CHARLES J. BILLSON.

NAMES (Sumerian).—The oldest inscriptions of the Sumerians are contracts and business records, and these invariably contain names of persons in private life. These sources probably begin before 4000 B.C., so that we possess sources for the study of the personal names of this the oldest civilized people from the beginning of history until they were finally absorbed into the Semitic Babylonian race about 2000 B.C. The most remarkable fact about the personal names of this agglutinating language is that even the rude archaic inscriptions of almost pre-historic times contain no names reflecting the lower stages of culture. They have already freed themselves from names referring to bodily deformities, so frequent in the later Babylonian names.² Animal names have also disappeared, except in the names of the gods, most of whom preserved animal attributes, and were frequently referred to by animal titles. In two classes of personal names the words for 'dog' (*ur*) and 'maturing young animal' (*amar*) constantly recur, but they are no longer used in their original senses. A very large group of names begin with *ur*, followed by the name of a deity, or some sacred place or object, as *Ur-Bau*, literally 'Dog of the goddess Bau'; *Ur-Ninā*, 'Dog of the goddess Ninā'; *Ur-gir-gid-da*, 'Dog of the long wagon,' etc. In all these cases *ur* really means 'menial,' 'servant,' one who is attached to the worship of these deities, sacred relics, or objects employed in the cults. We cannot even say that we have here a remnant of pre-historic animal names. The Semitic names, which are often mere translations of Sumerian forms, never have the word for 'dog' in this class of names, but only *warad*, 'servant'; *Warad-Bau*, *Warad-Ninā*, would be their rendering, not *Kalab*.³ *Bau*, etc. As to *amar*, which for the sake of brevity we shall translate by 'calf,' the meaning is not so clear. It forms a small group of names in the sources of all periods and was rendered into Semitic by *bāru*, 'maturing young of animals.' Thus we have *Amar-Enzu*, 'Calf of Enzu (the moon-god),' Semitic *Bār-Sin*; *Amar-é-bil*, 'Calf of the new temple,' etc. The Sumerians, and after them the Semites, 'probably employed this word in the sense of 'sturdy offspring,' certainly not in the original animal sense. The element *subar*⁴ originally means 'pig,' Semitic *šahū*, and, like *ur* and *amar*, forms a small group of names of the type *Subar-Bau*, *Subar-Utu*, literally, 'Pig of the goddess Bau,' 'Pig of the sun-god,' etc., but the Sumerians clearly attached no such meaning to

these names, but understood 'Servant of Bau,' 'Servant of Utu,' etc., for the syllabars render *subar* by *ardu*, 'servant,' and in ancient texts *subar* and *nitaḥ* (the ordinary word for *wardu*, 'servant') occur side by side as class names.⁵ One of the most common personal names in Sumerian is *Subar*, which probably stands for the divine name *Ninsubar*, 'Lord of pigs.' With these groups of names thus disposed of, there remains not the slightest trace of connecting human beings with animals in assigning names.⁶ In those names which contain literal animal references we have to do with epithets of the gods which form part of the personal names; e.g., the names *Dun-tur*, 'Little zebu,' *Mas-tur*, 'Little kid,' *Mas-gula*, 'Great kid,' *Mas-du*, 'Kid,' *Subar-tur*, 'The little pig,' *Enzu*.⁷ 'The she-goat,' are apocopated forms in which the full name is reduced to the divine animal epithet.

Sumerian has no so-called pet names, or hypocoristica, and the language has in fact no proper diminutive endings. A considerable number of names end with the suffix *mu*, 'my,' as *Šes-a-mu*, 'The brother 'is my father,' *Dungi-zi-mu*, 'Dungi is my breath of life,' *Dim-zi-mu*, 'The creating one is my breath of life,' *Enlil-bad-mu*, 'Enlil is my wall (of defence),' and hypocoristica like *Zi-mu*, 'My breath of life.' The suffix *mu* is not to be regarded as having the force of endearment, but it forms a grammatical part of the original name and can be omitted in apocopated forms. Thus we have *Enlil-bad-mu* and *Enlil-bad*.

It appears that the complicated and theological names given to Sumerians great and humble were not assigned to their owners at birth, but at a later period, perhaps not until the age of their majority. This statement is deduced from two facts: (a) in the temple records infants, boys and girls, and orphans do not have names, but are entered in the lists simply as 'an infant,' 'a boy,' 'a girl,' etc.; (b) the names never refer to circumstances of birth.

Sumerian names are almost invariably of a theological character, and may be divided into two great groups: (i.) names which represent a complete grammatical sentence; and (ii.) names composed of construct and genitive. In the early period names of the former group preponderate, but the tendency to use names of the second group grew, and in the periods of the Ur and Isin dynasties the second group represents nearly half of the personal names. A name of the chief group originally consisted of a complete sentence, and generally has no reference to the life of the individual, but is taken from some well-known religious, historical, or magic text. A very large number are taken from hymns of the Tammuz and Innini cult. Thus we have *Nin-šes-ra-ki-ag*, 'The queen loves the brother'—an idea frequently expressed in the liturgies of the wailing of the mother-goddess for her brother Tammuz; *Šes-azag-gi-sú-mu-gin*, 'Unto the holy brother she has gone'—an apocopated form, in which the subject (*Ama*, the mother, or *Nin*, the queen, etc.) is omitted at the beginning of the name. A large number of names are really citations from liturgical texts; e.g., we find the following name in its various distorted forms, *Me-sig-gan-e*, *Me-sig-nu-di*, *Bara-sig-nu-di*, which are

¹ See, e.g., J. G. Frazer, *GB*, pt. ii., *Taboo*, London, 1911, pp. 368, 370, 371, *Totemism and Exogamy*, do. 1910, li. 344-346, lii. 297; K. Rasmussen, *People of the Polar North*, do. 1908, p. 116; M. A. Czaplicka, *Aboriginal Siberia*, Oxford, 1914, pp. 132, 135, 136, 144.

² See on these Semitic names H. Holma, *Die assyrisch-babylonischen Personennamen*, Helsingfors, 1914.

³ Semitic word for 'dog.'

⁴ Semitic Babylonian names beginning with *Bār* are not genuine Semitic names and gradually disappeared.

⁵ Falsely read *šah* in all previous lists of Sumerian names.

¹ Allotte de la Fuÿe, *Documents préargoniques*, Paris, 1908-1913, no. 119 VI.

² A small group of names begin with *dun*, which denotes a bovine animal, but this word also means 'strong,' 'heroic,' 'sturdy,' and has probably no reference to an animal in these names. It occurs in names of the type *Dun-a-Enlilikenag*, 'The sturdy Enlil loves,' *Dun-sag-kuš*, 'The pensive sturdy one,' *Dun-šes*, 'The sturdy brother' (referring to Tammuz).

³ Thureau-Dangin, *Recueil de tablettes chaldéennes*, Paris, 1903, no. 11 V.

⁴ 'Brother' is an epithet of the god Tammuz and always refers to him in Sumerian names.

really taken from a line of a liturgy, *Lugal-mu me bara sig-gan nu-di*,¹ 'My king whose decrees in the sanctuary cease not.' The name *Lugal-me-gal-gal* and its apocopated form, *Lugal-me*, rest upon a line like *Lugal-me-gal-gal sag-an-si mi-ni-ib-il*, 'The king² exalted the great decrees unto heaven.'³ Names taken from historical inscriptions are numerous; e.g., we have in various distorted forms the name *Nig-ud-ul-sig-e*,⁴ *Nig-ul-sig-e*,⁵ probably taken from the end of a building inscription which, after describing the construction of a temple, says, *nig-ud-ul-du-a sig-e*, 'that which unto future days has been raised gloriously.'⁶ The name *Sig-bi-gi*, 'Its brick he restored,'⁷ is for *Sig-bi-ki-bi-mu-gi*, 'Its brick to its place he restored'—a phrase which is found in many building inscriptions. Names taken from incantation-texts are easily detected; *Nin-su-el*,⁸ 'The queen-clean hands,' probably stands for *Nin-su-el-gi-gi*, 'Into the clean hands of the queen restore him,' or some other phrase of magical texts like *Nin-su-el-a-ni-ta mu-un-ku-e*, 'The queen with pure hands has eaten.' Names of purely ethical import are rare. The only one known to the present writer, *Nam-ku-li-ni-dug*, 'Friendship is good,'⁹ is probably extracted from some religious text.

We have, therefore, the remarkable example of a people who were known to each other by abstract religious phrases, usually shortened to convenient length, and often in such a way as to show that they had quite forgotten or at any rate neglected the original phrase; e.g., note the apocopation *Me-sig-gan-e* above, in which the negative *nu* and the helping verb *di* are omitted, thus completely destroying the sense. Often names are so reduced as to mean the opposite of the sense intended. Thus *Lugal-nig-a-zi-nu-ag*, 'The king does no cruel thing,'¹⁰ becomes *Lugal-nig-a-zi-ag*, 'The king does that which is cruel.'¹¹ In reducing this class of names the phrase may be apocopated at the beginning, in the middle, or at the end. Already in the early period this process has so distorted the names that many are a complete mystery, and in the later periods the names are almost wholly apocopations.¹² In the early period at least half of the names are unintelligible. As an example of the ruthless manner in which names were shortened compare *Nin-su-gal-lam*, 'The queen of Shugallam,' which is itself apocopated for 'The queen loves the chapel Shugallam,' or some similar phrase. This name appears as *Nin-su-lam* and *Nin-gal-lam*. *Nin-gu-bi* stands for *Nin-sag-gu-bi-mu-gi*, 'The queen's heart returns to its level,' i.e. she ceases to be angry, a poetical phrase taken from the return of the raging river to its banks. In the late period we have *Azag-ga-ni*, which would be unintelligible if we did not possess the early form *Ka-azag-ga-ni-mu-ba*, 'He has opened his pure mouth.'

Rarely do names have any relation to occupa-

tion. A priest who managed the religious rites connected with a canal has the name *Lugal-idig-na*, 'The king of the Tigris,' a short form containing simply the title of the river-god. It is perhaps no accident that the name of a part of Eridu, a city on the Persian Gulf, occurs in the name of a fisherman, *Amar-šubaru-(ki)*, 'The sturdy one of the city Shubaru.'¹

1. Names which represent a complete grammatical sentence.—Names of this great group may be analyzed into the following classes, which do not pretend to be exhaustive, since so many apocopated forms are obscure.²

(1) Names referring to the cult of Mother Earth and her brother Tammuz:

Dingir-sib, 'The divine shepherd'; *Dingir-seš-mu*, 'My divine brother'; *Ama-ra-[ki-ag]*, 'He [loves] the mother'; *Dam-zid-mu*, 'My faithful husband'; *Dim-tur*, 'The little wailer';³ *Ki-šū-a-be-ti-li*, *Nin-ki-šū-a*, 'The queen in a dark place dwells'; *Edin-ba-a-gub-nad*, 'In his plain . . . he sleeps'; *Dumu-mu-an-ni-dug*, 'My son maketh glad Anu'; *Dumu-nir-gal*, 'The glorious son'; *Dun-seš*, 'The sturdy brother'; *Nin-erib-ba-ni-gim-sal-zid*, 'The queen as her sister-in-law is a faithful woman';⁴ *Nin-edin-ni*, 'The queen unto the plains (has gone forth)';⁵ *Nin-mu-da-kuš*, 'My queen for (the brother) sighs'; *Nin-seš-da-kuš*, 'The queen for the brother sighs';⁶ *Nin-seš-ra-ki-ag*, 'The queen loves the brother'; *Nin-zid-dam-ki-ag*, 'The queen loves the faithful husband'; *Nin-ni-kuš*, 'The queen laments'; *Seš-da-gal-sa*, 'The brother of the merciful mother . . .'; *Seš-an-edin-na*, 'The brother from the plains (has been taken)';⁷ *Seš-kur-ra*, 'The brother in the earth (sleeps)'; *Seš-ki-na*, *Seš-ki*, 'The brother in the earth sleeps'; *Seš-ki-erim-ma*, 'The brother in the evil earth (sleeps)'; *Seš-lu-dug*, 'The brother, the good man';⁸ *Seš-ama-ra-ki-ag*, *Ama-ra*, *Seš-ki-ag*, 'The brother loves the mother'; *Seš-kal-la*, 'The precious brother.'

(2) Names referring to the goddess of begetting and the weeping mother:

Ama-en-tud, 'The mother an high priest has begotten'; *Ama-nun-un-zid*, 'The mother legitimate seed (has given)'; *Nu-mu-na-sum-ma*, 'Seed she gave'; *Nin-ū-numun-e-ki-ag*, 'The queen loves the seed'; *Ama-ka-ga*, 'The gracious mother'; *Ama-da-nu-di*, 'With the mother none rival'; *Nin-da-nu-me-a*, 'With the queen none compare'; *Ni-a-a-ma-da-ra*, 'Ninā is an everlasting mother'; *Nin-nam-tag-nu-tu*, 'The queen has no sin'; *aBau-ama-mu*, 'Bau is my mother'; *aBau-ama-da-ra*, 'Bau is an everlasting mother'; *aBau-gim-a-ba-ka-g*, 'Who is gracious like Bau?'; *aBau-zi-mu*, 'Bau is my soul of life'; *aBau-ni-kuš*, 'Bau laments'; *Nin-uru-da-kuš*, 'The queen laments for her city'; *Dim-a-Ninā-mu-tud*, 'The creating Ninā has begotten'; *aNin-dun-ama-mu*, *Dun-nin-ama-mu*, 'The queen of life is my mother';⁹ *Nin-iskim-ti*, 'The queen a helper is'; *Nin-mu-ma-da-aga*, 'My queen loves the land'; *aNinmar-ama-dim*, 'Ninmar is a creating mother.'

(3) Names referring to the word of the gods:

Enim-ma-ni-zid 'His word is trustworthy';¹⁰ *Enim-ašur-ruppak-zi-da*, 'The word of the god of Shuruppak is trustworthy'; *Enim-aEnlil-an-tub*, 'The word of Enlil shakes the heavens';¹¹ *Enim-enim-dug-ga-ni an-tub*, 'The words which he spoke shake the heavens';¹² *Enin-ud-zi-g*, 'The word is an on-rushing storm';¹³ *Enim-bi-dug*, 'His word is good.'¹⁴

(4) Names taken from historical inscriptions:

Apsu-sig-e, 'The *apsu* has been made glorious'; *Alam-kur-ta*, 'A statue from the mountain (he caused to be made)';¹⁵ *Ama-id-bil*, 'The mother the new canal . . .';¹⁶ *Bara-ir-nun*, 'The chapel with . . . oil he . . .'; *Ur-ir-nun*, 'The roof with . . . oil he . . .'; *Lugal-ir-nun*, 'The king with . . . oil has

¹ See Radau, *Sumerian Hymns and Prayers to Nin-ib*, Philadelphia, 1911, no. 1, rev. III. 17.

² 'King' in Sumerian names refers to some deity. Reference to the temporal king is doubtful in the few names which can be deduced for that purpose.

³ Cf. Gudea, Cylinder AI 2.

⁴ Nikolski, *Documents de la plus ancienne époque chaldéenne*, Petrograd, 1908, no. 18 IV.

⁵ Usually transcribed *Nig-du-pa-e*.

⁶ Cf. Kurigalzu's inscription in *Cuneiform Texts of the British Museum*, vol. ix. pl. 8.

⁷ Allotte de la Fuÿe, 69 II.

⁸ Ib. 126 III.

⁹ Ib. 120 VI.

¹⁰ Ib. 230, 12.

¹¹ Nikolski, 3, rev. III.

¹² The names of the later period, such as were known up to the date of publication, have been collected by Engelbert Huber in his *Die Personennamen in den Keilschrifturkunden aus der Zeit der Könige von Ur und Isin* (Leipzig, 1907). This list contains about 3500 names, and at least 2000 more, chiefly from Drehem and Umma, have since been published. Unfortunately the author did not realize the apocopated nature of the names of that period, and his interpretations are almost wholly erroneous. Nevertheless this book represents the first great effort to systematize Sumerian names, and is most useful.

¹ Wrongly transcribed *Amar-ba-a-ki*, by Genouillac and Hussey.

² The examples given under each number are only a selection from several hundreds which are known in the more important classes.

³ Allotte de la Fuÿe, 57, rev. 13.

⁴ This name refers to the relation of Innin and Geštinanna, sister of Tammuz; see Nikolski, 19 IV.

⁵ Cf. Langdon, *Sumerian and Babylonian Psalms*, Paris, 1909, p. 328, 22.

⁶ Genouillac, *Tablettes sumériennes archaïques*, Paris, 1909, no. 10, obv. VI.

⁷ Cf. Langdon, 336, 20.

⁸ Cf. Nikolski, 6 IX. and 6 VII.

⁹ Allotte de la Fuÿe, 87 II.

¹⁰ This name occurs frequently as a line in liturgies (see Langdon, 38, 11, etc.).

¹¹ This is one of the favourite descriptions of the Word in the liturgies.

¹² It is possible that the first two and last of these examples do not refer to the theological doctrine of the Word, which the liturgies describe as a messenger of wrath.

¹³ Thureau-Dangin, 4.

¹⁴ Allotte de la Fuÿe, 133 V.

been . . .'; *Lugal-gešten Lugal-kür-gešten*, 'The king with wine of the mountain . . .'; *Nig-du-sig-è, Nig-ud-ul-sig-è*, 'That which unto future days has been done fittingly'; *E-ki-bi-ba-gub*, 'The temple in its place has been fixed'; *Nin-pa-ki-bi*, 'Ninpa unto his place (has been restored)'; *Nin-sug-il-il*,² 'The queen on her foundation has been raised'; *Nin-ur-ni*, 'The queen upon her pedestal (has been placed)'; *Sib-kagina, Lugal-kagina, Uru-kagina*, 'The shepherd (or king) in the city has instituted justice'; *Sig-bi-gi*, 'Its brick (to its place) he restored'; *Sag-uru-ni-si*, 'Unto the heart of his city be . . .'; *Kur-gir-ni-ki, Gir-ni-ba-KU*, 'The foreign land unto his foot be reduced'; *Sa-ukkin*, 'The judgment of the assembly'; *Kingal-sa*, 'The chief of the assembly has decided.'

(5) Names taken from incantation-texts:

Nigerim-bar-ra-[au-teg], 'May the evil not approach';³ *Lugal-nin-hul*, 'May the king evil (put away)'; *Ad-da-su-el, Nín-su-el* (see above); *En-su-lab-lab*, 'The lord with clean bands (broke the spell).'

(6) Names referring to legends:

Sa-dingir-ra-ne, 'The net of the gods . . .'; *Lugal-sa-sù-gal*, 'The king with a great net . . .';⁴ *Tir-azag-gi-si*, 'The clean forest . . .';⁵ *En-abzu-a-gub-nad*, 'The lord in the ocean . . . sleeps'; *Lugal-tir-a-gub-nad*, 'The lord in the forest . . . sleeps'; *En-kür-ra-a-gub-nad*, 'The lord in the mountain . . . sleeps'; *En-du-azag-a-gub-nad, En-azag-a-gub-nad, En-azag*, 'The lord in the holy chamber . . . sleeps'; *Eara-uru-a-gub-naq*, ' . . . in the chapel of the city . . . sleeps'; *dEn-ki-sil-dagal*, 'Enki in the wide street (of the lower world walks)'; *Lugal-erida-sù*, 'The king unto Eridu . . .'; *Lugal-id-da-tud*, 'The king in the month . . . begat';⁷ *Lugal-ku-mab*, 'The king with a mighty arm . . .'; *Lugal-ma-ab-è*, 'My king arose from the ocean'; *Nam-nin-an-na-gam-gam*, 'The queenship of heaven she has subdued'; *Nam-nin-e-an-ki-gam-gam*, 'The queenship of heaven and earth she has subdued'; *Nin-si-gar-ab-ba*, 'The queen the holt of the sea . . .'; *dDungi-u-nam-til*, 'The divine Dungi the plant of life (has eaten).'

(7) Names referring to sacred places, cities, temples, shrines, and cult objects:

Azag-gi-pad-da, 'The holy reed hut'; *Amar-Kis-(ki)*, 'The sturdy one of Kish';⁹ *Amar-Subaru-(ki)*, 'The sturdy one of Shuharu';⁹ *Subaru-ki-dug*, 'Shuharu is a good place'; *Bara-ud-sud-sù*, 'In the chapel unto distant days . . .'; *Bara-nam-tar-ra*, 'In the chapel fate has been decreed (?)'; *Bara-[me]-sig-[gan]-nu-di*, ' . . . whose decrees in the chapel are not restrained';¹⁰ *Bara-zi-kür-ra*, 'The faithful chapel in the world . . .';¹¹ *Nin-bara-da-ri*, 'The queen in the everlasting chapel . . .'; *Nin-è-balag-ni-dug*, 'The queen whose temple lyre is sweet'; *Gal-balag*, 'The great lyre, apoc. *E-gis-gig-bi-dug*, 'The temple whose shadow is good, apoc. *E-gis-bi-dug*; *E-ud-gim-è*, 'The temple like the sun has risen';¹² *E-ur-bi-dug*, 'The temple whose foundation is good, apoc. *E-ur*; *Eul-ki*, 'The temple unto distant days . . .';¹³ *Gigir-ta-pad-da-an*, apoc. *Gigir-ta*, 'By the wagon . . .'; *Gir-nun-ki-dug*, 'The Gírun is a good place'; *Gir-nun-zi-sig-gal*, 'The Gírun the breath of life'; *Lugal-apin-ni*, 'The king the water wheel . . .'; *Gan-gigir-sag*, 'Abundance of the chief wagon'; *Nin-mu-nanga-ranad*, 'My queen sleeps in the enclosure'; *Nangara-sag*, 'In the propitious enclosure'; *Nin-ku-gal-lam*, 'The queen in Shugallam . . .'; *Nin-ki-dug*, 'Ninā the good place.'

(8) Names referring to personal interests of the individual, his birth, age, etc. :¹⁴

A-bad-mu, 'The father¹⁵ is my defence';¹⁶ *Enlil-bad-mu*, 'Enlil is my defence'; *Nin-bad-ni-dug*, 'The queen has made good the defence'; *Nin-ama-mu*, 'The queen is my mother'; *dInnini-ama-mu*, 'Innini is my mother'; *dBabbar-ama-mu*, 'The sun-god is my mother' (sic); *A-dingir-mu*, 'The father is my god'; *Lugal-ab-ba-mu*, 'The king is my father, apoc. *Lugal-a-mu*; *Nir-an-da-gal*, 'He has been brought into being by the mighty Anu'; *Lugal-an-da-[gal]*, 'He has been brought into being by the king Anu'; *Zi-mu-an-da-gil*, 'My

soul has been brought into being by Anu'; *Amar-dEzinu-l-ud-sud-sù*, 'The sturdy one of the grain goddess unto far-away days (may live)'; *Dim-dInnini-da-gal-sa*, 'The creation of the merciful Innini fares well'; *E-an-ni-mud*, 'Begotten in the house of heaven'; *Nigin-mud*, 'Begotten in the secret chamber'; *Lugal-nig-ga-ni*, 'The king loves his property';² *dInnini-ur-dim*, 'Innini has created a servant'; *Ur-mu-3-ab-tuk*, 'My servant I⁴ have obtained, var. *Ur-ma-tuk-a*; *dNingirsu-ur-mu*, 'I Ningirsu (have obtained) my servant'; *Ses-ur-mu*, 'I the brother (have obtained) my servant'; *Nin-ur-mu*, 'I the queen (have obtained) my servant'; *A-ur-mu*, 'I the father (have obtained) my servant'; *Nin-igi-mal-ur-bi*, 'Ninigimal (has obtained) my servant'; *Ningirsu-lu-mu*, 'I Ningirsu (have obtained) my man'; *Nin-lu-mu*, 'I the queen (have obtained) my man'; *dBabbar-lu-mu*, 'I the sun-god (have obtained) my man.'

(9) Names referring to the temporal kings:

dBabbar-igi-gub-Lugal-anda, 'Shamash is the defender of Lugalanda';⁵ *dNinā-ama-Lugal-anda*, 'Ninā is the mother of Lugalanda'; *Urukagina-dEnlil(hi)-zu*,⁶ 'Urukagina knoweth Enlil'; *Urukagina-dNinā-zu*,⁶ 'Urukagina knoweth Ninā'; *Gudea-a-ab-ba-uru*, 'Gudea is father of the city'; *dDungi-a-amu*, 'The divine Dungi is my father';⁷ [8]; *dDungi-ud-sud-sù*, 'The divine Dungi (lives) unto distant days (may give)'; [8]; *dBur-Sin-an-ni-ki-ag*, 'The divine Bur-Sin loves Anu'; *dGudea-[?]*, apoc.

(10) Names asserting attributes of the gods, adoration of their power, etc. :⁸

A-ba-mu-na-du, 'Who can walk with him?' apoc. *A-ba-mu-na*; ⁹ *A-sag*, 'The kind father'; *An-al-sag*, 'Anu is kind';¹⁰ *An-lu-sag*, 'Anu is he who shows kindness';¹¹ *Enlil-lu-sag*, 'Enlil is he who shows . . .'; . . . is he who shows kindness'; . . . god is the Zū-bird'; *dŠuruppak-im-gig-(bu)*, 'The god of Šuruppak is the Zū-bird'; *Dunnu-nir-gal*, 'The son¹² is counsellor'; *Dun-ig-gal*, 'The hero is a great gato'; *En-ig-gal*, 'The lord is a great gate'; *Lugal-d-sun-ma*, 'The king is endowed with strength'; *Lugal-aga-zid*, 'The king a sure tiara (has put on)';¹³ *dNingirsu-men-zid*, 'Ningirsu a sure crown (has put on)'; *dInnini-men-zid-dim*,¹⁴ 'Innini a sure crown has put on'; *Ses-me-na-tum*, 'The brother¹⁵ is made fit for a crown'; *Sil-tur*, 'The little lamb'; *Lugal-ug-banda*, 'The king a panther, apoc. *Utu-us-zid*, 'The sun-god is a faithful adviser.'

2. Names composed of construct and genitive.—

The large group of names composed of a construct and genitive arose from the desire, common to all peoples, of appealing more strongly to the personality of the individual. They belong logically to the names under class (8) above, for this more human sentiment found expression even among the forms designed to be wholly abstract and theological.

¹ This name is usually written *Amar-zen* and is confined to the early period, where it is very common.

² *Nig-ga*=*makkuru*, 'property', refers to the owner of the name. In the early period we have also *Nin-nig-ga-ni* (Allotte de la Fuyé, 230 VII.), and in the late period *Nin-nig-ga-ma*, which is difficult; *ma* probably represents a verb dropped at the end. More common in the late period is the form *Nig-ga-Innini*, 'The property of Innini (am I)'. This form is rendered into Semitic by *Makur-dInnini*, *Nemeli-dInnini*.

³ Names containing *ur-mu* are still obscure to the present writer, as also those with *lu-mu*; *lu* can also mean 'slave'. The renderings are tentative. These names disappear before the Ur dynasty and obviously point to some peculiarity of ancient life.

⁴ Refers to some deity.

⁵ Nikolski, § III.

⁶ The texts have *su*.

⁷ From Dungi, second king of the Ur dynasty, onward to the end of all the Sumerian city dynasties the kings were regarded as gods, and hence their names enter into personal names with the same force as that of a real deity. A selection of such names is placed here only for convenience. Each name belongs to the class indicated in the brackets. [Also Gudea, the patesi of Lagash in the middle period, appears in proper names as a god, but his own inscriptions neither recognize him as a deity nor do they mention his cult.]

⁸ This class is designed to cover a large miscellaneous group of names which cannot be reduced to more special analysis. Naturally many names assigned to the first nine classes could be grouped here.

⁹ Names of this type passed into Semitic in such forms as *Mannu-mahir-ku*, 'Who is his rival?', *Mannu-kima-Samas*, 'Who is like Shamash?', and were popular to the end of Babylonian history. Both Babylonian and Hebrew names of this type appear to depend on the Sumerian prototype.

¹⁰ Rendered into Semitic by *Anu-damik*, 'Anu shows kindness, Anu-damik', 'Anu is kind.'

¹¹ This seems to be the most probable interpretation of *lu-sag*, on analogy of *Nin-lu-ti-ti*, 'The queen is she that giveth life.'

¹² Taminuz.

¹³ This may have a lunar reference.

¹⁴ *Sanaku*=*dim*.

¹⁵ Taminuz. Or perhaps read *Ses-me-[an]-na-tum*, 'The brother bears the decrees of Anu.' So the present writer would explain also *En-an-na-tum*, *Nin-an-na-tum*, *Lugal-an-na-tum*, and *An-na-tum*, all with apocopea *me*.

¹ The meaning of the last four names is uncertain, and they may not belong under this heading. They are here referred to dedications or sacrifices.

² Read *Nin-rim-il-il*, by Genouillac and Hussey.

³ Nikolski, 16 III.; Genouillac, 10, rev. II.

⁴ Nikolski, 160 I.

⁵ Allotte de la Fuyé, 126 III., 135 VI.

⁶ The reading of *A-DU* in these names is uncertain.

⁷ Nikolski, 19 II.

⁸ This seems to be the correct interpretation with Huber, 118, but the name is rare and the legend of the plant of life is late, if it occurs at all in Sumerian.

⁹ Belongs also to the second group of names (II.).

¹⁰ Allotte de la Fuyé, 132 VII.; cf. Thureau-Dangin, *Die sumerischen und akkadischen Königinschriften*, Leipzig, 1907, p. 8 n.

¹¹ Allotte de la Fuyé, 230, 9. *Bara*, 'chapel,' does not occur in names after the Ur dynasty, with the exception of the obscure hypocoristic *Bara-si-ga*.

¹² Ib. 135 I.

¹³ Nikolski, 19 IV.

¹⁴ See also above class (2).

¹⁵ Refers to Enlil.

¹⁶ Literally 'wall.'

cal. In analyzing this group of names, we aim at distinguishing them on the basis of the philological meaning of the first element which characterizes the individual's relation to the gods, sacred places, and cult objects. It was natural that the profound sense of humility and sorrow which characterized the Sumerians' religion from the beginning, and gradually deepened in their religious life, found expression in their onomatology. And, as the austere view of life grew upon them, forcing every note of joy and exuberance from their liturgies, so also the tendency to employ names expressing dependence upon the gods increased. Since this aspect of religion was common to both Sumerian and Semite (although in a lesser degree to the latter), we cannot say that Semitic names of this type are mere translations from the Sumerian. Early Semitic names in the Sargonic era¹ have no forms like *Amel-Ishtar*, 'Man of Ishtar,' *Warad-Ishtar*, 'Servant of Ishtar,' *Amat-Ishtar*, 'Handmaid of Ishtar.' Not until the Ur and Isin periods do we meet with Semitic names of this kind and Semitic names of group i. also. These are translations of Sumerian types, and it is probable that all Semitic Babylonian names which reproduce pure Sumerian types are due to borrowing. Genuine Semitic Babylonian names express family relationship or peculiar bodily defects or traits, and, where they do express attributes of deity, they lack that theological and liturgical nature which characterizes the Sumerian names. The Semitic names of the construct and genitive type, which begin to abound in the documents of Ur and Isin, are in all probability mostly formations borrowed from one of the classes of group ii. which here follow:

(1) *Amar-dSin*, 'The sturdy one of Sin,' Semitic *Bur-dSin*; *Amar-ub*, 'The sturdy one of the shepherd';² *Amar-dPA*, 'The sturdy one of the god PA'; *Amar-sun*, 'The sturdy one of [Nin]-sun';³ *Amar-tar-an*, 'The sturdy one of the Taran';⁴ *Amar-Mama*, 'The sturdy one of the goddess Mama'; (2) *Bd-ša-dSin*, 'The mercy of Sin,' Semitic *Gimil-Sin*; *Bd-ša-Ma-ma*, 'The mercy of Mama'; *Baša-bū-a*, 'The mercy of the caretaker'; *Bd-ša-dEnlil*, 'The mercy of Enlil'; *Baša-I šub*, 'The mercy of the pure one'; *Baša-baš-dar*, 'The mercy of Ishtar'; (3) *Gim-ama*, 'Handmaid of the mother goddess,' Semitic, *Amat-ummi*; *Gim-dBau*, 'Handmaid of Bau'; *Gim-Sul-siy-ē*, 'Handmaid of the god Shulsige,' apoc. *Gim-sul*; *Gim-E-anna*, 'Handmaid of the temple Eanna'; *Gim-kun-sag*, 'Handmaid of the chief reservoir'; *Gim-ib*, 'Handmaid of the Ib';⁵ *Gim-id-edin-na*,

'Handmaid of the river of the plain'; *Gim-šugallam*, 'Handmaid of the Šugallam';¹ (4) *Lū-dBau*, 'Man of Bau,' Semitic *Amel-dBau*; *Lū-dAb-ir-nun*, 'Man of Abirun';² *Lū-db-tāg-azag*, 'Man of the holy Abtag';³ *Lū-dBabbar*, 'Man of the sun-god'; *Lū-dNinā*, 'Man of the goddess Ninā'; *Lū-Šubaru*, 'Man of Šubaru';⁴ *Lū-Ninā-ki*, 'Man of Ninā';⁵ *Lū-mid-gur-ra*, 'Man of the crescent-shaped boat';⁶ *Lū-giš-gar-ra*, 'Man of the carriage'.⁷

These are the only names of this kind known in the pre-Sargonic period. The expression 'man of' is clearly of later origin than the other classes, and becomes more frequent in the Sargonic and post-Sargonic texts. In the late period names with *Lū* become prolific and vie in popularity with those beginning with *Ur*.

(5) *Ur-dBau*, 'Servant of Bau,' Semitic *Warad-Bau*; *Ur-dDumu-zi*, 'Servant of Tammuz'; *Ur-dNingirsu*, 'Servant of Ningirsu'; *Ur-dNinsun*, 'Servant of Ninsun'; *Ur-gigir-sag*, 'Servant of the chief wagon';⁸ *Ur-šugallam*, 'Servant of the Šugallam';⁹ *Ur-ti-ra-aš*, 'Servant of the Tirash';¹⁰ *Ur-nigin*, 'Servant of the secret chamber';¹¹ *Ur-ig-gal*, 'Servant of the great gate'; *Ur-engur*, 'Servant of the sea';¹² *Ur-kun*, 'Servant of the reservoir'.¹³

In the texts from the Sargonic period onward it is not always easy to decide whether a name is to be read in Sumerian or translated into Semitic. As in all departments of literature the Semites often represented their own words by the equivalent Sumerian ideogram, so also, in writing their own names, especially those borrowed from the Sumerian nomenclature, they frequently turn part of it, or all of it, into Sumerian—a practice continued to the end of Assyrian and Babylonian history. When the Semites first came into contact with the Sumerians (which took place as early as the era of Ur-Ninā, c. 3500 B.C.), they, of course, employed their own Semitic methods in assigning names. Most of the deities employed in these names are Sumerian, but the grammatical constructions are Semitic; e.g., the name *Ik-ru-ub-E-a*, 'The god Ea has shown favour,' found on the stele of Manišusu, has the verb before the subject—which is impossible in Sumerian. These early Semites spell out their names phonetically, as *Sar-ru-ki-in*, 'The king is faithful,' *Sar-ga-li-sar-ri*, 'The king of all is my king,' names of the first and fifth kings of the first Semitic dynasty. But they soon learned to turn these names into Sumerian, and in the same period we have *Sar-ru-GI-i-li*, 'Šarrukīn is my god,' in which *ki-in* is represented by the Sumerian *gi*, which means *kinu*, 'faithful.' Naturally this name was pronounced throughout in Semitic. But, when the entire name was turned into Sumerian, the problem arises as to whether the Semites really pronounced it in Sumerian as it was written or translated it into Semitic. Occasionally the scribe adds a Semitic phonetic complement to the Sumerian sign to indicate that the sign is to be rendered into Semitic. The best Assyriologists agree in translating all names clearly Semitic by nature, whether written wholly or partially in Sumerian, into Semitic. This statement applies to the Sumerian period and in centres where the population was mixed. In a name clearly Sumerian in form, like *Šu-ma-ma*, 'The mercy of Mama,' it is highly improbable that the reading was *Gimil-Mama* even when given to a Semite. Towards the end of Sumerian influence and from the period of complete Semitic supremacy all names, whether Semitic or Sumerian in form, were rendered into Semitic. But difficulties on this point during the transition period of the Ur

¹ No adequate collection of names, either Sumerian or Semitic, has yet been made from the Sumerian and Semitic texts of the Sargonic and post-Sargonic periods. The names in the stele of Manišusu have been arranged by Scheil, *Délégation en Perse*, Paris, 1900, II. 41–52, and partly studied by Hoeschander, *ZA* xx. 246–302. A collection of names from the Sargonic period is given by Dhorme in *BASS* vi. 63 ff., but the author did not understand the apocopated nature of the names written in Sumerian, and translated most of them into misleading Semitic forms. Names of that period written in Sumerian were probably pronounced as such even when they are names of Semites. In this period there are names *Lū-dNinā*, 'Man of Ninā,' but not *A-še-il-dNinā*; *Ur-dEnki*, but not *Warad-dEnki*.

² Allotte de la Fuÿe, 59 III. ³ Ib. 92 II. ⁴ A sacred place (?); cf. *Ur-tar*, *Ur-tar-mā-a*; Nikolski, 19 IV. The above form occurs in Allotte de la Fuÿe, 96, rev. III. Note the *Amar-ma-a-an* (Huber, 86).

⁵ Transcription uncertain. The first element of this group is one sign, originally = *KA* + *ŠU* + *ŠA*, and later seems to be reduced to *ŠU* simply. But the old form persists even in the late period; cf. *KA* + *ŠA* + *dNintud* (CT 4, 18A 17) with *ŠU* + *dNinsun* (CT 8, 20, 24). The original *KA* + *ŠU* was confused with another sign *KA* + *KAR*; cf. *KA* + *KAR* + *ŠA* + *dUtu* (CT 8, 47A 24); *KA* + *KAR* + *ŠA* + *dSin* (CT 10, 46, 21256, R. 5), and finally we have *KA* + *KAR* in the texts of Ur and Isin. All these corrupt forms we shall designate by *ŠU* (A), *KA* + *KAR* + *ŠA* (B), *KA* + *KAR* (C). The Semitic rendering was most probably *gimilū*. The Semitic names of the Sargonic period have *ŠU* invariably, as well as the Sumerian names of that period.

⁶ Written C. ⁷ Written B in Legrain, *Le Temps des rois d'Ur*, Paris, 1912, no. 314, 6.

⁸ Written B in Huber, 153, and Legrain, 342, 6, but A in most cases (Huber, 154), and in Semitic names of the Hammurabi period *ŠU* is almost the only form employed.

⁹ A sacred place.

¹ A sacred place.

² A cult object.

³ Sumerian avoids the ordinary word for 'slave,' *nitaš*, in the formation of its proper names, probably because of the association suggested by this word. In the sum-total of Sumerian names this formation with *Ur* far surpasses in popularity all other classes. The element was popular in names of the early period and continued so to the end.

⁴ A cult object.

⁵ A sacred place.

⁶ In the Nippur Collection of the University Museum of Philadelphia the writer copied a fragment of a large tablet containing a list of at least 300 names beginning with *Ur*.

and Isin dynasties will never be settled. Here we have Semites bearing pure Sumerian names and written in Sumerian. In all such cases it is safer to render the name as it is written.

LITERATURE.—i. *EARLY PERIOD*.—M. Allotte de la Fuyé, *Documents présargoniques*, Paris, 1903-13 (three fascicules, not yet complete; only texts); H. de Genouillac, *Tablettes sumériennes archaïques*, do. 1909 (texts and lists of names); M. I. Hussey, *Sumerian Tablets in the Harvard Semitic Museum*, Harvard Semitic Series, vol. III., Leipzig, 1912 (texts and list of names); M. Nikolski, *Documents de la plus ancienne époque chaldéenne de la collection Likhatcheff*, Petrograd, 1903 (texts and list of names); F. Thureau-Dangin, *Recueil de tablettes chaldéennes*, Paris, 1903 (texts 1-76 are pre-Sargonic, and many of the names are included in the list of Genouillac).

ii. *SARGONIC AND POST-SARGONIC PERIOD UNTIL THE UR DYNASTY*.—List of names both Sumerian and Semitic by P. Dhorme, *BASS* vi. pt. 3, pp. 63-83 (includes only names of the Sargonic period taken from volume I [see above]). Names in V. Scheil's ed. of this text: 1900; F. Thureau-Dangin, do. 1910 (texts and summaries in translation). For the middle period the only texts are in Thureau-Dangin, 180-260. A few texts of historical and religious character from the period of Gutium are listed in S. Langdon, *Historical and Religious Texts*, Munich, 1914, p. 8.

iii. *PERIOD OF UR AND ISIN*.—List of names and a study of Sumerian nomenclature by E. Huber, *Die Personennamen in den Keilschrifturkunden*, Leipzig, 1907; Thureau-Dangin, 261-429 (texts); H. Radau, *Early Babylonian History*, London, 1900 (texts and partial list of names); G. A. Reisner, *Templeurkunden aus Tellah*, Berlin, 1901 (texts and list of names); G. A. Barton, *Haverford Library Collection of Cuneiform Tablets*, Philadelphia, 1905-14 (texts and list of names [in pt. iii.]); *Cuneiform Texts in the British Museum*, vols. I. [1896], iii. [1898], v. [1899], vii. [1899], ix. [1900], x. [1900], xxiii. [1912]; H. de Genouillac, *Inventaire des tablettes de Tello*, Paris, 1911 (texts and summaries in translation); L. Delaporte, *Inventaires des tablettes de Tello*, do. 1912 (texts and summaries in translation); R. J. Lau, *Old Babylonian Temple Records*, New York, 1906; H. de Genouillac, *Tablettes de Drehem*, Paris, 1911 (texts and list of names), *La Trouvaille de Drehem*, do. 1911; S. Langdon, *Tablets from the Archives of Drehem*, do. 1911 (names included in Genouillac, *Trouvaille*); W. M. Neshit, *Sumerian Records from Drehem*, New York, 1914; A. Poebel, *Babylonian Legal and Business Documents*, Philadelphia, 1909 (texts and list); L. Legrain, *Le Temps des rois d'Ur*, Paris, 1912 (texts and list of names); G. A. Barton, 'Religious Conceptions underlying Sumerian Names,' *J.A.O.S.*, 1914, pp. 316-320).

iv. On the reading of Semitic names with Sumerian elements, A. Poebel, *Die sumerischen Personennamen zur Zeit der Dynastie von Larsam und der ersten Dynastie von Babylon*, Breslau, 1910. S. LANGDON.

NAMES (Syriac).¹—As the language which we now know as Syriac is only the Christian literary form of Aramaic, and does not in its essential characteristics differ from the language spoken in Palestine in the time of Christ, any investigation of the system of personal nomenclature in Syriac naturally begins with the NT. The Semitic names borne by the Jews of the 1st cent. A.D. were as a rule either old Hebrew names or Aramaized forms of such, and the names of purely Aramaic origin existing in the NT are few in number. We have, however, clear instances in the two female names Mārthā ('Mistress') and Tabithā ('Gazelle'), and another is almost certainly to be recognized in Silas (Shilā = 'Asked'), which, though exactly equivalent to the Hebrew Saul (Shā'ul), can hardly be a mere Aramaization of it.² Aramaic also are the three quasi-patronymics Barabbas (Bar Abbā = 'Son of Father'), Barsabas, and Barnabas (see *HDB* and *DCG*, s.vv.), and the name Cephas (Khiphā = 'Stone') bestowed by Christ upon Simon. The last three, however, were not names in the ordinary sense of the word, but appellatives given late in life, and would therefore naturally be in the popular language. For the earliest Syriac Christian names we must look to Edessa, the home of the Syrian Church and the birthplace of the literary language; but the first which meet us—those of the legendary bishops Addai and Aggi—are of uncertain derivation, and

those of their more historical successors, P.L.W.T. (the vocalization is uncertain) and Kunā, are not much clearer.¹ Another name borne by an early Syrian Christian is that of the celebrated Gnostic writer of the 3rd cent., Bar Daisān (= 'son of the Daisān,' the river on which Edessa stood); but, as he was the son of heathen parents, this cannot properly be described as a Christian name. Of the names borne by Syriac-speaking Christians, especially those who lived within the empire, a large proportion are of Greek, Latin, or Biblical origin; and, since the true Syriac names are of similar character to Hebrew names, it is not necessary here to discuss the system of nomenclature in detail. The majority of them, as in Hebrew, have a definite religious origin; and, as in Hebrew, the religious names are divided into two main classes: (1) those which have some relation to the person bearing the name or his parents, and express gratitude for his birth or dependence upon God, and (2) those which merely express a general religious sentiment. The former class are by no means peculiar to the Semitic languages, but are to be found also in Greek (Theodore, Theodotus, Diodorus, Athenodorus, and many others), and in such late Latin names as Deusdedit and Adeodatus; but for the latter, unless the name Deogratias is assigned to this class, it would be hard to find parallels among Aryan peoples except the strange names adopted by the English Puritans of the 17th cent., though names of virtues such as Irene, Sophia, Grace, Mercy, etc., have some resemblance to them. The exact meaning being often obscure, however, it is not always easy to assign a name definitely to one class or the other.

(1) Of those which belong to what may be called the personal class the most obvious are Yaballāhā = 'God gave' (cf. Elnathan, Deusdedit), Yabyeshu² = 'Jesus gave,' Māryab³ = 'The Lord gave,' and Māran'amēh⁴ = 'Our Lord is with him.' The names Dādyeshu⁵ and Yeshu'dād = 'Jesus is friend' (cf. Jedidiah) seem to be a commendation of the child to the divine protection, and the names Shubbālmāran⁶ = 'Glory to our Lord,' and Shubbālyeshu⁷ = 'Glory to Jesus' (cf. Deogratias) probably express special rather than general thanksgiving. The name Aphnimāran⁸ = 'Our Lord has restored me' (cf. Restitutus) is apparently intended to describe the spiritual state of the person bearing the name; and on this analogy⁹ nānyeshu¹⁰ should probably be rendered 'Jesus has answered me,' but in this case the object of the verb seems to be the parent, not the child; though, even if we render it 'Jesus is a cloud,' it would seem, like Yeshu'dād, to be a commendation of the child to the protection of Christ, and should therefore be included in this class. The name of the bishop of Edessa at Nicæa appears as ܐܕܝܐ and ܐܕܝܐ, and may be transcribed as Itballāhā ('God is') and placed in the general class, or as Aithillāhā ('God brought') and placed in the personal class. To the personal class also belong Brikhā¹¹ = 'Blessed' (cf. Benedictus, Eulogius, Macarius); Hibā = 'Given' (cf. Donatus); Shilā = 'Asked' (cf. Rogatus), to which reference has been made above; Z'abīnā¹²

¹ To the names of the legendary bishops Bar Sh'āmā and Bar Samyā and others in the *Doctrine of Addai*, ed. G. Phillips, London, 1876, reference is made later.

² In Nestorian Syr., 'Yeshu' is vocalized Isho'. In this art. it is always written Yeshu'.

⁸ *Ib.* I. 359. This name might be placed in another category; see below.

⁹ Ass. I. 15, II. 30. Cf. Ζεβίδος, Ζεβιδᾶς (Eus. *HE* vi. 13, *Mart. Pol.* ix. 5). See also *Ezr* 10⁴³, where the name is Aram., not Heb.

¹ In this art. Ass. = J. S. Assemani, *Bibliotheca Orientalis*, 3 vols., Rome, 1719-23; Wright = W. Wright, *Catalogue of the Syriac MSS in the British Museum*, 3 pts., London, 1870-72. For well-known names references are omitted.

² Tabithā is also equivalent to Ziblah (2 K 12¹).

⁷ *Ib.* III. 1. 187, 217.

= 'Bought'; and the odd name Barlāhā¹ = 'Son of God,' to which such names as Theogenes and Diogenes are not really parallels. Names beginning with 'bed or 'Abd² ('slave'), which are very common in Arabic, and of which we have instances in the OT in Obadiah, Obededom, and Abednego, seem in pre-Christian times to have been in use among the Syrians, for in the *Doctrine of Addai* and the *Ancient Syriac Documents* edited by W. Cureton (London, 1864) several names of this kind occur—e.g., 'bed Nābu³ = 'Slave of Nebo,' 'bed Shemsh⁴ = 'Slave of the Sun,' 'bed Shaddai⁵ = 'Slave of Shaddai,' and 'besh'āmā⁶, i.e. 'bed Sh'āmā⁶ = 'Slave of peace' (where the authenticity of the names, or at least the evidence for the existence of names of this type, does not depend on the historical character of the persons mentioned); a martyr named 'bed Haiklā⁷ ('Slave of the temple') suffered in Sapor's persecution; in a 6th cent. MS we have a name 'bed El⁸ ('Slave of El'); in the same century we find an author named 'bed M'shih⁹ ('Slave of Christ'), and a 'bed Yeshu¹⁰ ('Slave of Jesus') was nearly contemporary with the Arab invasion. Up to this period Christian names of this kind were apparently very rare, but, perhaps through Arab influence, the name 'bed Yeshu' is from this time forward of not uncommon occurrence. With the exceptions, however, of this name and 'bed M'shih it would be hard to find a name of this type, for 'bed Allāhā¹¹ ('Slave of God') is a mere translation of the Arab. 'Abd Allah.

(2) Of the second class of religious names the clearest instances are Kāmyeshu¹² = 'Jesus has risen (from the dead),' Yeshu' d'nah¹³ = 'Jesus has risen (as a star),' Kāmyeshu¹³ = 'Jesus is exalted' (cf. Jehoram), Yeshu' bakhar¹⁴ = 'Jesus is the first-born,' Yeshu' z'khā¹⁵ = 'Jesus has conquered,' Māran-z'khā¹⁶ = 'Our Lord has conquered,' S'libāz'khā¹⁷ = 'The Cross has conquered,' Th'riyeshu¹⁸ = 'Jesus is upright,' and Yeshu' sabran¹⁹ = 'Jesus is our hope.' From the last it is clear that Sabaryeshu¹⁹ means 'Jesus is hope,' not 'Hope of' (or 'in') 'Jesus'; and on the analogy of these words we must infer that H'nānyeshu²⁰ (cf. Hananiah, Hannibal) means 'Jesus is grace,' not 'Grace of Jesus,' and should therefore be placed in this category. On the same analogy also it appears that Brikhyeshu²⁰ should be rendered 'Jesus is blessed,' not 'Blessed of Jesus'; and the existence of a name Brikhshēbyāneh²¹ ('Blessed is his will') places this beyond doubt. The last, however, is perhaps an expression of resignation referring to some event in the life of the parents, and in that case should be assigned to the first class of names. The name Abhai²² ('The father is living'), if the father is God, belongs to the general class, but, if it refers to some event in the life of the natural father, to the personal class.

Besides these two main categories we find also a class of semi-religious names which express moral or spiritual qualities or conditions—e.g.,

Hanānā¹ = 'Gracious' (cf. Hanan, Hanno, Chariton), Zakhai² = 'Innocent' (cf. Heb. Zaccai = Ζαχαρις, and Innocentius), Nāsihā³ = 'Illustrious' (cf. Cleon, Eucles), and Ḥabib⁴ = 'Loved' (cf. Agapetus), and names derived from the day on which the child was born, such day always having some religious significance (cf. Noel, Paschalis)—e.g., Barhaddshabbā⁵ = 'Son of Sunday,' Bar 'Arubthā⁶ = 'Son of Friday,' Yaldā⁷ and Bar Yaldā⁸ = 'Nativity,' and 'Son of the Nativity,' and Denhā = 'Epiphany.' Bar Ṣaumā = 'Son of the fast' also perhaps denotes birth during Lent. Denhā is indeed too common to allow us to think that all bearers of the name were born on the Epiphany; but neither were all Noels born on Christmas Day, and a name, when once established, is perpetuated by tradition. Finally, we may add names of humility such as Ze'urā⁹ = 'Small,' and Maklikhā¹⁰ = 'Lowly.' In strange contrast to these are Mārā¹¹ = 'Lord,' Māri = 'My lord,' Mārthā = 'Mistress' (see above), Māruthā = 'Lordship,' Shalitā¹² = 'Ruler,' Rabbulā, a corruption of Rabbunā = 'Teacher,' and Kāyumā = 'President.' Such names can hardly be said to have any religious significance; and, if there is any such significance in the numerous names which express relationship, it is lost to us. These names are Abbā = 'Father,' Abbi¹³ = 'My father,' Aha¹⁴ = 'Brother,' Hāthi¹⁵ = 'My sister,' Dādā = 'Uncle,' and the two strange names Ahādabu¹⁶ = 'His father's brother,' and Ahudemeh = 'His mother's brother.' Of the last two the former can be paralleled by the Heb. Ahab and the latter by the Babylonian Ahummissu; and it has been suggested that they point to an ancient practice of incest, or that they express a wish that the child may grow up the brother, i.e. the helper, of his father or his mother;¹⁷ but neither explanation is quite satisfactory. Curious also are the names which express age. In the case of Bābusā¹⁸ we might suppose that the bearer had no younger brothers or sisters and the name 'Baby' stuck to him through life, and we can also imagine that two brothers might be known as Kashiish¹⁹ ('Old') and Talyā²⁰ ('Young'); but why any child should have been named Sābā ('Old man') is a more difficult matter. The word was used, however, like the Greek γέρων, for a hermit, and, as we also find a name H'bishā²¹ ('Recluse'), it may be a name of dignity of the same kind as those mentioned above. The names Sāhdā ('Martyr'), Bar Sāhde ('Son of martyrs'), and Sāhdnnā²² ('Little martyr') were probably originally given to children born during a time of persecution, possibly to posthumous sons of martyrs, and Bar Shebyā²³ ('Son of a captive') and Bar Samyā²⁴ ('Son of a blind man') must have referred to the child's parentage. Shemshi²⁵ ('My sun') sounds like a term of endearment, but may be a relic of sun-worship (cf. Samson). Of names derived from animals (cf. Leo, Ursula), of which several are found in Heb. (see *HDB*, s.v. 'Names, Proper'), the

present writer knows, besides Tabithā mentioned above, only two doubtful examples in Syriac. Of these one is that of the early Edessene martyr Gurya ('Lion's whelp'); but this word is stated in the lexicon of Bar 'Ali to have been used by a curious transition of meaning for one who has subdued his passions,¹ and it is possible that this is the meaning of the name. The other is the name Nunā, which may, like the Heb. Nun, be rendered 'Fish'; but there was a Greek word *νῦνος*, perhaps of Egyptian origin, which, at first a title of honour, afterwards denoted 'ascetic' (whence our word 'nun'), and a not uncommon name Nonnus, and Nunā may be only a Syriacized form of this name. Of names denoting products of the earth it would also be hard to find an example in Syriac, for Pher'ā² merely means 'sprout' and might be a metaphorical term for 'child.'

LITERATURE.—The authorities are cited in the footnotes.

E. W. BROOKS.

NAME OF GOD (Jewish).—1. The Tetragrammaton.—The substitution in pronunciation of *Adōnāi* ('Lord') for the Tetragrammaton (the *shem ha-mephorash* of the Mishn. *Yōmā*, vi. 2) of which indications are to be found in the later Biblical books, and which is clearly recorded in the Mishnāh (*Sōṭah*, vii. 6), became the general usage of the Synagogue, even when reading from the Scroll of the Pentateuch. The Tetragrammaton had been retained, while the Temple stood, in the regular priestly benediction (Nn 6^{22a}), with special ceremoniousness on the Day of Atonement (Mishn. *Yōmā*, vi. 2). The true pronunciation of the Tetragrammaton was not freely transmitted, but was esoteric, and communicated by the teacher only to qualified disciples (*T. B. Qiddushin*, 71a; cf. the interesting sections on this whole subject in Maimonides, *Guide of the Perplexed*, ed. M. Friedländer, London, 1881-85, pt. i. ch. lxi. ff.). The Mishnāh so severely prohibits the utterance of the Tetragrammaton that the pronouncer of it was threatened with exclusion from a portion in the world to come (Mishn. *Sanhedrin*, xi. 1). Other paraphrastic substitutes for the name of God became common—e.g., *Māqōm*, lit. 'place,' from God's omnipresence, a phrase that is cited by Philo (*de Somniis*, i. 11), or 'Our father in heaven' (cf. *Annotated Edition of the Authorised Daily Prayer Book*, London, 1914, p. xxiii), and frequently in Rabbinic texts 'the Merciful' (as in the famous phrase 'the Merciful desires the heart' [*T. B. Sanh.* 106b]), 'the Holy One, blessed be he.' In the Kabbalistic literature there are many combinations of letters which are treated as substitutes for the name of God (*JE* ix. 164).

2. The Name in magic.—The reverence in which the Divine Name was held did not remain without consequence to dabblers in magic. Among many primitive peoples names were freely used for magical purposes. Naturally the Divine Name would be particularly potent, and we often find references to the use of the Hebrew Name in the Talmud (*T. B. Sanh.* 65b), but more particularly in mediæval legends of marvel and mystery (see CHARMS AND AMULETS [Jewish]; and *JE* ix. 164). Maimonides, referring to this subject (ch. lxxii.), denounces the folly of those who believed that by means of any arbitrary combination of letters they could construct a name which would operate miraculously. Yet, despite this, there were throughout the Middle Ages, and even more recently, those who claimed to be 'master of the Name' (*ba'al Shem*), and possessed of miraculous powers.

3. The Name as motive.—The close association between the Name of God and the being of God

led to certain developments. God Himself is, in Rabbinic and later Jewish literature, often referred to as 'The Name' (*T. B. Sanh.* 56a). Possibly this explains a frequent Rabbinic idiom. To do an act for the 'sake of the Name' was to be moved by desire to serve without any ulterior thought of self-profit. A similar metaphor was used in which the reference to God was omitted. To do a thing for its own sake was expressed by the term to do it 'for its name.' This is shown in such passages as the following:

'Let a man ever engage in the study of the Tōrah and in good deeds, even though not for its name [for its own sake], for through acts performed from a purpose not for its name [i.e. for selfish motives], he will reach the stage of doing good for its name [i.e. for its own sake]' (*T. B. P'sāḥim*, 50b).

Then, again, a convert to Judaism would be baptized 'in the name of *gēruth*' (i.e. of becoming a *gēr*, or convert), a slave would be manumitted 'in the name of freedom.' But most important of all was the phrase 'the name of heaven,' i.e. of God, for this belongs to the remarkable conception now to be described.

4. Sanctification of the Name.—(a) The idea of the imitation of God was based on the text *Lv* 19²: 'Ye shall be holy: for I the Lord your God am holy.' Abba Saul (1st cent. A.D.) comments on this injunction in these terms: 'Seek to be like God. As he is gracious and merciful, so be thou' (*Mekhilta* on *Ex* 15², ed. M. Friedmann, Vienna, 1870, p. 7). Man's self-sanctification was a sanctification of God (*Sifra* on *Lv* 19², ed. I. H. Weiss, Vienna, 1862, p. 86c). The same idea is expressed in other Rabbinic utterances (cf. W. Bacher, *Agada der Tannaiten*, Strassburg, 1890, ii. 367; F. Perles, *Bousset's Religion des Judentums*, Berlin, 1903, p. 68; I. Abrahams, in *Jewish Addresses*, London, 1904, ch. iv.). Later in the mediæval period, to the idea of the imitation was attached also the sense of initiation; hence the sanctified man in the mediæval phraseology came to signify 'mystic' (cf. I. Abrahams, *Trans. of the Jewish Historical Society*, v. [1902-05] 190).

(b) Sanctification and profanation of the Name were applied also to the effect of the individual's conduct on the world's opinion. Israel is to God like the court to a king (*Sifra*, loc. cit.); it is the duty of Israel to make God's name honoured, to prevent it from being disgraced. Israel sanctified the Name when his conduct reflected credit on God.

Thus it is told of Simeon b. Sheṭah that he bought a mule from an Arab, and returned to the vendor a jewel which he found suspended round the animal's neck. Whereupon the Arab exclaimed: 'Blessed be the Lord, the God of Simeon son of Sheṭah.'

Of another anecdote Phinehas h. Jair is the hero. Two strangers stayed with him and left in his charge two sacks of grain. He sowed the corn, and reaped a prosperous harvest for six seasons. One day, when the seventh goodly harvest was ripening, he accidentally met the strangers again. 'Come and see your sacks,' he said. They hesitated, for they felt certain that their corn was mouldy. But Phinehas took them to the field, and said, 'Here are your sacks.' 'If man is thus true, what must God's truth be?' comment the Rabbis (*Lev. Rabbāh*, iii.).

Such acts sanctified God's name, as Ezekiel (20⁴) had said: 'I will be sanctified in you in the sight of the nations.' Any act, again, by which God's name was degraded in the eyes of the world was the most heinous sin; it was unforgivable except by the offender's death (*T. B. Yōmā*, 86a). 'Hypocrites must be exposed, because they profane the Name' (*ib.*, and *Tos. Yōmā*, ii. 12). There are numerous passages in which the ugliness of moral corruption in men of reputed piety is commented on. Men whose conduct belies their profession profane the Name; similarly with a gluttonous student of the Tōrah (*P'sāḥim*, 49a). The Rabbis strongly maintained the inwardness of morality.

'Inside must be clean as the outside' (*T. B. Yōmā*, 72b). 'Whenever the Rabbis have forbidden anything for the sake of

¹ R. Payne Smith, *Thesaurus Syriacus*, 2 vols., Oxford, 1868-1901, s.v.

² Ass. ii. 240.

appearance, that same thing is forbidden in the innermost recesses of one's own privacy' (*T. B. Beza*, 9a).

Yet they realized that there were two elements in virtue, the one personal, the other communal. The offender not only sinned against his own conscience; he profaned the Name in that the outer consequences of his act affected the public conscience (cf. I. Abrahams, 'The Sanctification of the Name,' *American Hebrew*, vol. xci. [New York, 1912] no. 25).

(c) The sanctification of the Name implied, from another side, the acme of heroism. Israel being God's witness, God, as it were, ceased to be God unless Israel witnessed to Him (*P'siqṭā de R. Kahana*, ed. S. Buber, Lyck, 1868, fol. 102b), though another passage (*Sifra*, loc. cit.) adds that, while it is Israel's paramount duty to sanctify God, God is sanctified even though Israel fail. But Israel's testimony to God must not stop even on the brink of the tomb (Maimonides, *Code*, i. 5). Sanctification of the Name becomes a synonym for martyrdom (Perles, loc. cit., points out the analogy with the Greek *μάρτυς*). The Synagogue liturgy enshrines this idea:

'Our Father, our King! do it [i.e. have compassion] for the sake of them that went through fire and water for the sanctification of thy name' (*Authorised Daily Prayer Book*, p. 67).

On the model of the joyous acceptance of a martyr's death by R. Aqiba (c. A.D. 135) pathetic prayers were composed for recitation by those who were called upon to die for Judaism. One such prayer terminates thus:

'Blessed art Thou O Lord our God, King of the Universe, who hast sanctified us by Thy commandments and commanded us to love the glorious and awful Name, that was, is, and shall be eternally, with all our heart and all our soul, and to sanctify Thy Name before the world' (Nordlingen, *Posif Omeg*, Frankfurt, 1723, p. 69).

For Biblical usage see art. GOD (Biblical and Christian), vol. vi. p. 253 f. See also GOD (Jewish), vol. vi. p. 296.

NAMELESS GODS.—I. Name and epithet.—A study of the names of divinities suggests that they were first called by epithets or adjectival words describing them or their functions before they were called by personal names. These epithets frequently became the personal names of the gods, as philology shows. For, as Jevons points out,

'A personal name is an epithet the meaning of which comes in course of time to be forgotten.'¹

It is probably innate among the folk to describe a man by some function or peculiarity or by his occupation rather than by his personal name. If this is the case even where personal names exist, much more would it be true of a time when personal names, whether of men or of gods, had not yet been evolved. At one time both men and gods were, strictly speaking, nameless. Again, where a god's epithet has now practically become a personal name, he is often called by other epithets, while the personal name tends to become sacred; it is used only on particular occasions, and is tabu at all other times and often to whole classes of people—e.g., the women and children of a tribe. Many savage divine names are still little more than epithets, and this is especially noticeable in the case of the high gods. The god Daramulun of S. Australian tribes has a name which means 'leg on one side,' or, as explained by others, 'a sacred staff.'² The god is 'the lame one' or 'the possessor of the sacred staff.' Baiame, another Australian high god, appears to mean 'the maker,' from *baiā*,

'to make', or possibly 'big man.'¹ Another epithet of these gods is Mungan-nganr, 'our father.'² Daramulun has become a personal name, as it is too sacred to be uttered except at the mysteries. Hence other epithets are used for him—Papang, 'father,' Biamban, 'master.' The Eskimo Torn-garsuk means 'great spirit' (*suk*, 'great,' *torngak*, 'spirit').³ Other names of such gods mean 'father,' 'grandfather,' and the like—the Zulu Unkulunkulu, 'old, old one,' or 'great great grandfather'; the Pawnee Ti-ra-wa, 'the spirit father'; the Huichol Tatevali, 'our grandfather'; the Bahar Bök Glaih, 'the grandfather who thunders'; the Guiana Wacinaci, 'our father,' or Ifilici Wacinaci, 'our great father'; the Blackfoot Nā-pi, 'old man'; the Dravidian river-goddess Būrhi Thakurāni, 'the old lady.'⁴ Other epithet-names are as simple as these—e.g., those which refer to the position of gods, viz. the Carib Tamosi Kabotano, 'the ancient one in the sky'; the Déné Yuttaere, 'that which is on high'; the New Britain Nara i tara dat, 'he or some one who made us'; the Japanese *kami* (the term for 'god' or for 'gods' generally), literally 'above'; the Chinese Shang-ti, 'sovereign above' (another example of an epithet becoming a name which is not to be lightly used).⁵ Other epithet-names concern the god as creator—the Arawak Wa murreta kwonci, 'our maker'; Zuni names meaning 'creator and master,' 'maker,' 'finisher'; the Buru Opo-geba-snulat, 'the lord moulder or creator of man.'⁶ Others are equally descriptive, like Oro, 'torment,' the Egba god of vengeance; the Dinka Dengdit, 'the great rain,' also known as Nyalich, literally 'in the above'; the Hottentot Tsuni-goab, 'wounded knee'; the gods of the Japanese *Kojiki*, Izanagi, 'the male who invites,' and Izanami, 'the female who invites,' or the three chief gods, 'the deity master of the august centre heaven,' 'the high august producing wondrous deity,' and 'the divine producing wondrous deity,' or the goddess of Yomi (Hades) 'the ugly female of Hades'; or Fiji gods who meet the soul as it passes into the other world and whose epithet-names describe their functions—'ghost-scatterer,' 'reed-spear,' 'the dismitter,' etc.⁷

Usener, studying mainly Greek and Roman religion and mythology, has drawn attention to what he calls *Sondergötter* and *Augenblicksgötter*. These are gods of one function only, and often merely of a momentary function. They had no personal names, but epithets or adjectival names, expressing that function. They were the basis of the later personal gods with personal names, in which the reference to the original function of the god had become obscure. The greater gods whose names now suggested no definite meaning were apt to absorb local divinities with epithet-names—names whose meaning was clear and pointed to their functions. These epithet-names now became titles by which a god was invoked.⁸ Examples of such *Sondergötter* were the twelve divinities invoked at the sacrifice to Tellus and Ceres—each of them associated with some single action from the first

breaking of the ground to the storing of the harvest—Vervactor, Redarator, Imporcitor, Insitor, Obarator, Occator, Sarritor, Subrincinator, Messor, Convector, Conditor, Promitor. Like these were the deities associated with the chief events of man's life from his conception to his death—Levana, Edula, Potina, Statilinus, etc. Similar Greek *Sondergötter* are Kourotrophos, Pandrosos, Erechtheus, Brizo, Iatros, Hygieia, Muiaeros, and a host of others. Of all these it may be said that their names are on the border-land between personal names and mere adjectival epithets—the name fairly clearly expressing the function. This is seen too where such an epithet-name has been taken up by an outstanding god, while yet a class of gods described only by such an epithet was also the subject of a cult. 'Αλεξικακος and ἀπορρόπαιος were applied to Zeus, Apollo, Heracles, but there were also θεοὶ ἀλεξικακοί, θεοὶ ἀπορρόπαιοι. Sometimes a god more or less clearly defined was known merely as Μέγιστος, 'the greatest' (as at Boulis), or as θεὸς δάβιος, θεὸς ἀγαθός, θεὸς ὅσιος, or as παρθένος, or simply as 'the god,' 'the goddess.'

This resembles what appears to have been an early Semitic method of naming gods by a title—e.g., Ba'al, 'owner' or 'lord,' i.e. the lord of a sanctuary or of the land in which a community is settled. Hence there were innumerable Ba'als distinguished from each other by a local appellative—e.g., Ba'al Sidon. Ba'al, however, never became a proper name, except in Babylon as the name of the chief god Marduk. Strictly speaking, the *b'alm* were nameless gods or spirits, though to a *ba'al* might later be given a more personal name. Yet even the name of the *ba'al* of Tyre, Melkart, means no more than 'king of the city.' In Egypt, where the importance of the name was so great, some gods, those of the various nomes, were nameless. Alike in character and in functions they were distinguished from each other by the name of the community where each was worshipped, like the local Ba'als—e.g., 'he of Edfu,' 'she of Nekheh.' There were also many functional deities, Egyptian *Sondergötter* or *Augenblicksgötter*.¹

In some instances gods are actually nameless either because of the mystery which surrounds them or because they are called by some oblique epithet, or it may be because their names have been forgotten. It must be remembered that often, when a god has received a personal name, that name becomes too sacred to be used. It remains hidden and secret, unlike other titles by which the god is called. Instances might be cited from the lowest savagery up to the Hebrews, with whom the name Jahweh was forgotten for this reason (see GOD [Jewish]). Generally a god has some less sacred name, but it is obvious that in such a case he might become nameless or be mentioned only by a circumlocution or epithet. Among the Fuegians their god was known only as 'big man in the woods.'² With the Eskimos the wife or mother of Tornarsuk is a nameless being dwelling under the sea.³ To the native tribes of California their 'high god' was merely 'the one above,' or 'the old man above.'⁴ Similarly the Zulus know dimly of 'a king which is above' or 'the lord on high'—not heard of first from white men.⁵ The jungle tribes of Chotā Nāgpur worship indeterminate beings in sacred groves, 'not yet clothed with individual attributes,' 'of whose form and functions no one can give an intelligible account.'⁶ Herodotus says of the Pelasgians that they sacrificed to gods who had set in order all things, but they gave no title

or name to any of them. He also adds that the oracle at Dodona advised them to call their gods by the names of barbarian (Egyptian) gods of whom they had heard.¹ Similarly Strabo, citing Posidonius, says that the Kallaikoi were 'godless' (ἀθεοί), and that the Celtiberians sacrificed by night at the time of full moon to a nameless god (ἀνώνυμῳ τινὶ θεῷ).²

Of these tribes as well as of the tribes of Thrace described by Theophrastus and others as ἀθεοί, Usener points out that they had gods without personal names, but called by adjectives. Hence by those accustomed to clearly defined gods they were regarded as goddesses.³

The same phenomenon is perhaps to be seen in China, where the numerous *shen*, tutelary or departmental gods, have little individuality or mythology, and are defined only by their functions.⁴ In this they resemble the groups of nameless *kami* in Japan, or the gods mentioned in the older writings as worshipped at the greater temples yet not mentioned by any personal name.⁵ Some of the highest Etruscan divinities, the *dei involuti*, were nameless—perhaps an instance of a sacred name being forgotten.⁶

Here we may note the teaching of St. Clement of Alexandria about God. In his desire to eliminate all taint of anthropomorphism from God, he maintained that we could understand Him not so much by what He is as by what He is not. And, as a logical consequence of this negative conception of God, he added: 'Nor can we say that God has shape or name.' Such terms as 'the One,' 'Father,' 'God,' etc., are not strictly appropriate.

'Such high names we employ because of our incapacity to find the true name, so that the mind may have something to rest on and steady it. None of these names taken separately expresses God.'⁷

This abstract negative method of regarding the being of God is seen also in Philo and the Neo-Platonists. Philo taught that God was without qualities and incomprehensible in His essence. He cannot be described, and even the patriarchs did not know His name. He was the Nameless Existing. So to Plotinus God as the One could be described only negatively. The doctrine of the Divine Namelessness characterized all the Alexandrian schools of thought,⁸ and was really to some extent characteristic of Hebrew and Jewish thought (cf. Job 26¹⁴ and GOD [Jewish]). God has a name which 'has not been sent into this world.'⁹ It is also found more or less in all mystic thought¹⁰—e.g., the teaching of the Upaniṣads that God is known only to those who profess not to know Him; of Lao-tse that 'the Tao which can be expressed is not the eternal Tao'; of the Egyptian hymn to Amen-Ra, 'whose name is hidden from all his creatures'; of St. Augustine that God 'sciendo ignoratur et nesciendo cognoscitur';¹¹ and of Hooker that 'our safest eloquence concerning Him is our silence.'¹² From a different point of view agnosticism insists on the unknowableness, and therefore the namelessness, of God.

The tabu on divine names applies equally to the secret or sacred names of men. These are not to be used lightly or even uttered by others—e.g., that of a husband by a wife, of a mother-in-law by a son-in-law, etc.—so that a person is called by a circumlocution or the like, or the names are in some cases known only to a very few persons. An example of this is found among the Arunta and

kindred tribes of Australia, where the *churinga* name, i.e. the name borne in the Alcheringa (q.v.) by tribal ancestors and now applied to descendants, is known only to the older men of the totem group. The women, till they become very old, do not even know of the existence of such names.¹ In other Australian tribes a man gives up his name for ever at the time of initiation to manhood, and thus has no name, but is called brother, nephew, etc.² In other cases a child is sometimes nameless for some years in infancy, because, as with the pagan tribes of Borneo, to give it a name while it is still feeble might direct the attention of malicious spirits to it. Hence a boy is called *Ukat*, a girl *Owing* (=Thingumybob).³

2. Unknown gods.—In some polytheistic systems caution suggested that, as there were many gods, it was possible that there were some not known by name or function to men, besides the number who were known. Hence it was safe to recognize, to pray, or offer sacrifice to gods who were unknown as well as to those who were known. In the Babylonian penitential psalms, while unknown sins are often confessed, many unknown gods are addressed lest any, being forgotten, should still visit the penitent with his anger. It is probable that such a cautious point of view explains the altar seen by St. Paul in Athens with its inscription *ἀγνώστῳ θεῷ*. That such altars were well known there is proved by several literary references. Pausanias twice refers to these, once to 'altars of gods called unknown and heroes' seen by him in Athens, and once to 'an altar of unknown gods' at Olympia.⁴ Philostratus and Tertullian both refer to altars of unknown gods in Athens.⁵ In the *Philopatris* ascribed to Lucian, but perhaps by another author, 'the unknown god of Athens' is mentioned. Elsewhere, however, there is a clear reference in Lucian to the purpose of such a cult of unknown deities. First several gods are invited by name to an assembly, and then the unknown gods whose altars men propitiate with sweet odours.⁶ The same cautious attitude is seen in a passage of Diogenes Laertius, who tells how at the time of plague in Athens Epimenides let loose sheep from the Areopagus, and advised that wherever one lay down sacrifice to the appropriate god should be made. Hence now there are nameless altars (*βωμῶν ἀνωμένων*) throughout the *δῆμοι* of Attica.⁷ Like the Babylonians, the Romans at sacrifices called upon all the gods after invoking the special deities in question, and on occasions when there was doubt regarding the divinity who had caused an earthquake or other prodigy sacrifice was offered to one under the formula 'whether a god or a goddess.'⁸ Occasional examples of this uncertainty regarding names are found on inscriptions, and with the Romans as with the Greeks there were altars to unknown gods.⁹ The same caution is found wherever there is a cult of ghosts. As time goes on, the names of the dead are forgotten, but they are still capable of doing harm if neglected. Hence all the dead are invited to a sacrifice in one general formula, as with the Zulus or the Hindus.¹⁰ Similarly many of the invocations of the Veddas to

the *yaku* ('ghosts') address these without name—'my departed one,' 'multitude of relatives,' or simply 'you.'¹

For other instances see *ERE* vi. 276^b (Egypt), 294^b (Japan), and cf. J. G. Frazer, *Pausanias's Description of Greece*, London 1893, II. 33 f. Cf. the 'unknown father' of the Gnostic Saturninus.

3. Groups of nameless spirits.—Where crowds of spirits, ghosts, genii, or simply beings are supposed to exist, these are too numerous to have each a personal name. But, as they have a generic likeness, so they have a generic name. They are anonymous beings with a collective name, and their functions are often but vaguely defined. Examples are found in the *wunda* ('ghosts'), *mrarts*, or *iruntarinia* of Australian tribes; the *inue* ('invisible rulers') or *torngak* ('spirits') of the Eskimos; the *vui* ('spirits') and *tamate* ('ghosts') of the Melaneseans; the crowd of nameless *yaku* of the Veddas; the *amadhlozi* ('spirits') of the Zulus; the 'above persons,' 'ground persons,' and 'under-water persons' of the Blackfoot Indians; the *atua* ('spirits') of the Maoris; the *bhūtā* of Indian folk-belief; the *nats* of Burma; the *jok* (spirits of long-dead ancestors) of the Dinkas; the *aphangak* ('ghosts') and *kilyi-khama* (other spirits) of the Lengua; the *kenatma* of the tribes of Guiana; the *toh* of the pagan tribes of Borneo. Among higher races there are such collective groups as the *shen* (gods, spirits, and ghosts) and the *kwei* (demons) of the Chinese; the *daēvas* of Zoroastrianism; the anonymous groups of spirits possessing only a generic name in ancient Egypt; the sprites or bogeys of Greece with a generic rather than a personal name; or such a group as 'the Seven' demons of the Babylonians. Any individual spirit in these groups would simply be called by the generic name. But some of these may come to be more clearly defined, or may be summed up in one particular being. These would then stand out above the others, and a definite, personal name would be given them, or a more definite being with a personal name might be included in the collective group. Qat, the hero-god of the Melaneseans, is an outstanding *vui*. Among the 'above persons' of the Blackfeet are Thunder and Wind. The Dravidian tribes with, e.g., their hosts of nameless tree-spirits know also of special forest-gods, Barām or Sarnā Būrlī, evolved from these. Among the *bhūtā* there are individualized examples with personal names. In Burma some *nats* have attained to the dignity of a personal name—*nats* of prominent trees or of the whole forest. In China the *shen* include Heaven, Sun, Moon, Thunder, Earth, etc., which stand out more prominently than the great mass of the *shen*. Among the Veddas the *yaku* of rocks and hill-tops tend to become named, taking the name of the hill which they inhabit. The *yaku* of important men are occasionally remembered by name long after their death.

4. Name and personality.—That the name has come to be regarded as part if not the whole of the personality in universal folk-belief is undoubted. To know the proper name of a man, spirit, or god inevitably gave one enormous power over these. This, however, implies a certain amount of theorizing about the name, and it is probable that even personal names existed before they were regarded in this light. Usener, followed by Höfding,² has maintained that the transition from momentary and special gods to gods who can properly be called personal is signalized by the acquiring of proper names. If this means that a god or a man has no clearly marked and definite personality until he acquires a personal name as distinct from an ad-

² H. Höfding, *The Philosophy of Religion*, p. 130 ff.

jectival name, it is certainly not true. There was a period when men as well as spirits or gods had no personal names, and perhaps only very vague adjectival names. Yet men had a real sense of their own and of each other's personality, and this must have been true also of their thought about spirits or gods or worshipful beings. No doubt the personal name crystallizes the functions, characteristics, and actions of a man, but the man is there even before he is named, and others have a clear idea of him as an acting and living personality. Even Höfding admits that 'the word serves to help and support, to retain and to develop the results won within the realm of ideas, but it cannot be their exclusive cause.'¹ And, in fact, if the name was first a descriptive epithet, referring to some function or action or to the position of a spirit or god or of a man, it is obvious that some definite idea of these beings as personalities already existed. Personality is doubtless a more or less fluid conception to the savage, as is seen by his belief in the possibility of metamorphosis, yet that belief exists where the personal name exists and where it is the subject of the most stringent tabus. The groups of spirits already referred to, with no individual names but only a generic title, have functions and characteristics which are clearly enough defined, and they are conceived as personalities. Where one of them has become pre-eminent and has received a distinctive name, that name in the first place would be descriptive of some characteristic in which he was supposed to differ from the others. But the characteristic no less than the name which defined it is that which marks this spirit off from all the others. That the conception of *mana*, *orenda*, *wakanda*, and the like—impersonal power called by a descriptive name—is primitive and preceded the belief in beings to whom personality was ascribed is unlikely. These are rather 'generalizations from many separate experiences.'² What man first believed in was a being or beings to whom personality, however man first conceived it, was given. That personality was not necessarily in human form. It was described by an epithet, which later became a personal name. Even thunder might be conceived as a being, a personality, before the idea of an anthropomorphic Thunderer arose. The nameless gods of the Pelasgians had some personality, for they were regarded as setting all things in order and distributing all things—actions of a clearly personal kind.

LITERATURE.—H. Höfding, *The Philosophy of Religion*, tr. B. E. Meyer, London, 1906; F. B. Jevons, *An Introduction to the Study of Comparative Religion*, New York, 1903, ch. iv., *Comparative Religion*, Cambridge, 1913, ch. viii.; H. Usener, *Götternamen*, Bonn, 1896. J. A. MACCULLOCH.

NANAK.—Nānak, the founder of the Sikh sect, is variously known as Guru Nānak, Bābā Nānak, and Nānak Shāh, the word *guru* meaning 'spiritual preceptor,' *bābā* signifying 'father' or 'one worthy of reverence,' and *shāh* denoting 'king' or 'chief,' the first, moreover, being in origin Sanskrit and the last two Hindi and Persian respectively, while all three are commonly used to designate ascetics. Guru Nānak, as we prefer to call him, was the first of the ten *gurus* of the Sikh community. Wherever representations of him are found, he is invariably shown as an old man with flowing white beard, such an appearance being more in accordance with his character for great wisdom than a more youthful picture would have been.

1. Sources.—In writing an ordinary history the historian sets about collecting materials with which to form a connected narrative, and, generally speaking, it is not impossible, or even difficult,

¹ P. 147; cf. F. B. Jevons, *An Introduct. to the Study of Comparative Religion*, p. 1311.

² J. Estlin Carpenter, *Comparative Religion*, London, 1913, p. 82.

to ascertain and state matters of fact with tolerable accuracy. In the case of Nānak, however, or any other of the Indian leaders of thought whose life belongs to the dim past, it is a very different thing. A number of *janamsākhis*, or biographies, of the *guru* are available. These are for the most part MSS in the Panjābi language and in Gurmukhi characters, which are peculiar to Panjābi. The present writer has before him a copy which, according to a statement on the final page, was written in the city of Amritsar half a century ago. The name of the scribe and the amount charged for making the copy are also stated, and the volume closes with the pious wish that those who read and hear the sayings of Nānak may have the gift of discipleship. At the beginning of the MS there is a singular Introduction—a description of a visit paid by Rājā Janak, father of Sitā of ancient Hindu story, to the infernal regions under the escort of Rājā Dhārm, who corresponds to Pluto of the ancient Greeks. A graphic account is given of the wretched condition of the sinners in hell, and of the marvellous change produced in that condition by a portion of St. Rājā Janak's merit being put to their account; they are set free not for one age only but for the succeeding age as well, until the Kal Yuga, the iron age, the age of vice, which is the present. The same Rājā Janak came into the world in this age in the person of Guru Nānak, that men, entering his order, might be saved from the consequences of their actions. Rājā Janak is thus introduced to the world again, and the author of this *janamsākhī* has thought it his duty, in order to glorify Guru Nānak, to embellish his narrative with such astounding and childish fables as would make history impossible. This is disconcerting, but we are not confined to that particular narrative; earlier *janamsākhis* are available. E. Trumpp, who, at the instance of the Government of India, wrote a translation of the *Granth Sāhib*, as the Sikhs call their book, made also a translation of a *janamsākhī* which he judged to date from the end of the 16th or the beginning of the 17th century. It is written in the characters in which the oldest copy of the *Granth Sāhib* is written, and is signed by the fifth *guru*, Guru Arjun, himself. In comparison with other and more modern copies it is free from the miraculous element, and may, therefore, be considered more reliable than the rest.

M. A. Macauliffe (*The Sikh Religion*, Oxford, 1909, Introd. p. lxxxvi) tells us that he used a MS which bore the date A.D. 1588, just fifty years after Nānak's death. Which of these two *janamsākhis* is the older cannot, probably, be ascertained, but they are both highly flavoured with fable, and one or two sentences in which Macauliffe appraises them throw the necessary light on their intrinsic worth.

'We must premise that several of the details of this and of all the current *Janamsakhis* appear to us to be simply settings for the verses and sayings of 'Guru Nānak. His followers and admirers found dainty word-pictures in his compositions. They considered under what circumstances they could have been produced, and thus devised the framework of a biography in which to exhibit them to the populace' (p. lxxxvii).

Trumpp also indicates the direction in which historical research is likely to be profitable. He found, on comparing the old copy with current MSS, that everything that appeared to throw a dubious or unfavourable light on Nānak had been left out, whereas other things, which spoke of his deification, had been interpolated. Closer research soon convinced him that the usual Sikh tradition concerning Nānak could by no means be trusted; he had reason enough to assume that the formation of myths about their first *guru* had already progressed very far, notwithstanding that his life fell altogether within the period of historical light, as

among the rubbish of miraculous and often absurd stories he could detect very few historical facts that deserved credit. The man as he had him before him in his own words and sayings, as contained in the *Granth*, would by no means agree with what the miraculous stories had made of him.

From this it is seen that the able translator of the *Granth Sāhib* had found the real man behind the fictitious veil of fable. With respect to the tales, he has only one opinion, and that is that they are rubbish, but there is more in the *janamsākhīs* than tales which serve only to supply a background for Nānak's sayings and to please the multitude—there are the verses themselves, regarding some of which Trumpp says :

'The meetings and verbal contests with other Faqirs and Shekhs, which are described at full length, are in themselves very probable, but in other respects of no importance, except that they give some hints to the mental development of Nānak' (*Ādi Granth*, Prefatory Remarks, p. v).

Let us emphasize the exception.

For the study of the mental power and mental growth of the Guru we have also the *Granth Sāhib*. *Granth* is simply the Sanskrit word for 'book,' and *Sāhib* is an Arabic word for 'lord,' and this title of the two combined is indicative of personality and greatness, wisdom and power; the Sikhs look on this book as their lord, whom they must obey. It is a collection in Panjābi, Hindi, and even Persian, of moral poems and apothegms composed and uttered by Guru Nānak and other religious and philosophical teachers. It was compiled in A.D. 1604. From its contents can be deduced a fair conception of the development of religious ideas from the 12th to the 16th cent., for the various compositions in the book are those of *bhagats* ('saints') scattered over that period, including, of course, Guru Nānak. It shows to what extent Nānak was indebted to his predecessors in the Indian field of thought within those limits of time, and how much their influence tended to bring about the remarkable reformation that took place. The Reformation had begun before his day. Nānak was fourteen years older than Luther and died eight years before him, and, when that great reformer took his stand for truth at the Diet of Worms, Nānak was in his humble way seeking to guide the Indian people to the recognition of a personal God. The Indian reformation was salvation from atheism, and we may see in Nānak the highest and best that it reached.

2. Life.—Bābā Nānak was born in the month of Vaisākh (April-May), A.D. 1469, in the village of Talwandi, now, owing to his fame, known as Nankāna, about 30 miles south-west of Lahore. He was born on a moonlight night when a watch of the night remained. Celestial, 'unbeaten' music was heard, which doubtless means that auspicious omens in sounds and sights greeted the arrival of the infant. He was named Nānak Nirākārī or Nirankārī, i.e. 'Nānak, servant of the formless one.'

His father, Kālū, Khatri by caste and Vēdi by clan, was a small farmer, who had also the duties of land-steward to perform to the owner of the village, at that time Rāe Bulār, a Musalmān Rajpūt of the Bhatti tribe of Rajpūts. It seems that Kālū was a petty merchant as well as farmer and land-steward. Nānak's early days were, therefore, spent in the freedom of farm and village life, and in close proximity to the boundless desert, which must have had endless charms and possibilities for him. As a boy he seems to have exhibited remarkable talents. There was a manifest difference between him and other lads, for, while they were intent on the games that boys usually delight in, he was immersed in meditation

on spiritual things. He was of a dreamy disposition, so that, to his discredit, it is recorded that he lost everything that he took out of the house. This caused his father great annoyance, which led him to upbraid the priest who had on the occasion of the bestowal of a name on the child declared that the fame of his son would be like a canopy over him. 'A fine canopy!' said Kālū.

At five he was able intelligently to talk about the Vedas and other Hindu *Sāstras*. His father took him to school and, the auspices being declared good by the priest, he gave the customary presents to the schoolmaster, and Nānak was admitted. Children have been known to read for their amusement at three, and, when the case of a boy of eight is cited as being able to recite a thousand lines of Virgil, we need not wonder that Nānak at seven astonished his master when the following incident occurred.

'Sir,' said Nānak to his teacher, 'what have you learned that you may teach me?' 'I have learned all the branches of knowledge,' replied the teacher; 'I have read the *Sāstras* and the Vedas,—I know arithmetic and book-keeping—I know everything.' 'All that kind of learning is utterly useless,' said Nānak. 'Listen, Sir :

Burn worldly love, rub the ashes and make ink of it; make of faith the best kind of paper;
Make the heart the pen, the intellect the writer; ask the Guru and write the judgment;
Write the Name and the praise thereof, write that which has no end or limit.

Sir, if you are able to teach me this manner of knowledge, then teach me.'

At the age of nine he learned Persian, and after a time he left school. Then he consorted with *sādhus* and *faqirs*, Hindu and Muhammadan mendicant ascetics who frequented the desert. Being in their company was much more to his mind than herding cows or doing any other sort of farm labour; indeed, he got into trouble over the herding of his father's buffaloes, for he fell asleep at the border of a wheat-field, which the herd entered and nearly ruined. Other instances of a like nature are recorded of him, and at twelve he was no better, as the following shows :

Broken-hearted, Kālū said to him, 'Nānak, you have been born in my house, and now that I am old my name is being ruined. I am hopeless and utterly undone. First your sister Nānaki was born and then you came, such as you are. I had hoped that my name would live after me, but you have disgraced it during my lifetime.' Nānak was silent, then Kālū said again, 'I am worn out and dying, and you say never a word.'

When he was seventeen years old, the crisis came. His father sent him to do a little trade, strictly enjoining him to spend the twenty rupees with which he entrusted him to advantage. Saying, 'Father, forgive me this once, and you will see what good purchases I shall make,' Nānak set out. But, meeting a company of devotees, he spent all the money on them, and, when he returned empty-handed, the exasperated Kālū 'struck him a blow on the left cheek with the right hand and a blow on the right cheek with the left so violently that Nānak's cheeks were instantly discoloured.'

It became evident to his relatives that he would not settle down to any regular work in Talwandi; therefore the plan was conceived of sending him to Sultānpur, in the district of Jalandhar, where his sister, Nānaki, the wife of Jairām, lived. By this time, however, he himself was married and had two sons, Srī Chand and Lakhmī Dās. Leaving his wife and children, he travelled to Sultānpur, where, by the recommendation of his brother-in-law, who was employed in the commissariat of Nawāb Daulat Khān, he obtained employment in Government service as storekeeper. His wife, Sulakhni, daughter of Mūlā, a Khatri of the same profession as Kālū, and residing in Batāla, a town of the present District of Gurdāspur, had been most unwilling that he should leave her, as is told pathetically in the *janamsākhī* :

The people of the house said that it would be good for him to go; perhaps his mind would become settled there. But his wife began to weep and said, 'Thou hast not shown thy love very much in the past, and now that thou art leaving me perhaps thou wilt not come back to me.' 'Silly one,' said Nānak, 'what were we doing here, and what shall we do there? I am of no use to thee.' She rose and pleaded with him, 'When thou didst sit in the house I thought myself queen of the whole world, and now I shall not care to live.' Then the Guru was touched and said, 'Do not grieve, every day thou shalt be queen.' She said, 'My husband, I shall not remain behind, take me with thee.' But the Bābā said, 'It is of the Lord that I go. If I make a livelihood there, I will send for thee. Obey my order.' Then she was silent.

At Sultānpur he devoted himself to his duties, and did so well that his faithfulness was everywhere recognized. Of his earnings he employed a part in supporting himself, and the rest he gave away in God's name. Mardānā, a village-musician of the Dūm class, professional players, came from Talwandī to see him and stayed with him. The duties of the day done, Nānak would make verses and sing them while Mardānā played the accompaniment. In the very early morning he bathed in the Bein river. This over, he began the labours of the day, and we can very well believe the truth of the statement that, when, in weighing out provisions, he came to the number 13, which in Panjābī is *terā*, he would pause and mutter, 'Terā,' which has the meaning also of 'Thine,' i.e. 'I am thine.' This is quite in accord with the Hindu mind and the ascetic manner.

He seems to have had a peculiar experience in Sultānpur. One day, while bathing, he remained longer in the water than was usual, and whether he had fallen into a state of semi-consciousness while he was carried down by the stream, or whether he had emerged and become absorbed in meditation, is not known, but it is believed that he saw a vision in which he was commanded to 'remain in the name, give alms, perform ablutions, worship, and remember' the Lord.

From this time we find him accompanying *faqirs*, except for an interval between two occasions when his enemies accused him of squandering the money of the Government. On both occasions the balance of his accounts proved his thorough honesty, but this annoying experience of suffering at the instance of detractors determined him to have done with the world altogether. Henceforth we know him only as the itinerant bard preacher accompanied by his musician Mardānā, who plays the *rabāb*, or *rebeek*, an instrument of the nature of the violin.

The itinerancy of the Guru is divided into four parts. He travelled east, south, north, and west, and at last, returning to the bosom of his family in Kartārpur, in the Jalandhar Duāb, he passed away in Oct. 1538.

It is not necessary to relate the incidents that Guru Nānak's ardent followers have collated in order to give the world a concrete narrative of his life subsequent to his retreat from the office of storekeeper, for their zeal has so far exceeded their common sense that the relation of the incidents alleged to have happened would detract from Nānak's reputation for wisdom rather than add to it. We prefer, therefore, to let these incidents alone, with the remark that the framing of the narrative (barring the miraculous element) and the course of the various discourses and discussions on religion are quite what one would expect among Hindu *sādhus* or Muhammadan *faqirs*.

3. Doctrines.—Reviewing Guru Nānak's distinctive position, we notice that his life as a preacher of righteousness began with the trumpet blast, 'There is no Hindu and no Musalmān.' He went on to show that they were both false, and thus incurred the odium of both. He fearlessly attacked idolatry, and, if he did not rise to a high degree of spiritual enlightenment, we can only say that Christian truth had not been conveyed to him.

He expressed himself in these selections from the *Granth*:

'The True One is, O Nanak, and the True One will be. True is the Lord, of a True Name, His love is infinitely inexpressible.

O Father, how shall I write of it?'

Nānak had a sense of sin which was wanting in the early teachers, and increased with the years.

'May on me, the sinner and vicious man, favour be bestowed. O Lord, be merciful to me that Nanak may cross.

I am not chaste, nor truthful, nor learned; foolish and ignorant am I.

Nanak says, "I have done mean actions."

Save the sinner! This is the prayer of Nanak, O my soul!

Covetousness is a dog, falsehood is a sweeper, living by cheating is carrion, To defame another is to touch filth, tale-hearing is fire, wrath is an evil spirit.

I am a sinner, Thou alone art pure.

As full as the ocean is of water so many are my vices.

Bestow mercy, have compassion, cause the sinking stones to cross.

The True, the Inapprehensible, the Infinite, Himself does all. I am a sinner; Thou art the Pardoner.'

The consequence of sin is not transmigration, but punishment in hell; the wicked at last 'sit outside weeping,' 'are marched off and struck in the face,' 'the sinner is beaten,' 'is marched with black face to Hell,' 'is banished from the presence of the Supreme Lord.'

The doctrine of the sinfulness of man and the danger into which sin has brought him coincides very much with what we regard as truth; and not only so, but in Nānak's portion of the *Granth*, as well as in the portion written by his Sikhs ('disciples') and successors, strong emphasis is also laid on the doctrine of the necessity for a mediator:

'The Dhau [white ox on which, according to the Hindus, the world rests] is

Dharm [duty or religion], the Son of Daya [mercy].

Thy Name is the Supreme Spirit; by taking Thy name a man is saved from going to Hell.

Brother, the dangerous ocean of existence terrifies me; if the True Guru be found, He who is friendly to man, He conveys him across by virtue of the Name of the Lord. O Nanak, that ocean is crossed by means of the True Name, the King above kings.

The palace of my Lord is beautiful, adorned with gems.

His palace of pearls, diamonds and gold, is enchanting.

Without a ladder how shall I ascend to His castle?

The Guru is the ladder.

In the future world no question will be asked of him whose companion the Guru, the Creator, is.

Without a boat there is no road on the sea.

The Guru is the boat.

Ik Aunkar. The True Name is the Creator, the Spirit without fear, without enmity, a Timeless Being, the Gracious Enlightener of Darkness.

(The Sikhs themselves derive the word *guru* from the Sanskrit root *grī*, 'to utter,' and they also give it a traditional signification, 'the darkness-enlightener'; we therefore translate the last expression in the opening invocation in the *Granth* as above.)

'If I abide within the Name, the Name comes and dwells in my heart. Without the Guru there is darkness; without the Word there is no understanding. Death comes not where the Infinite Word of the Guru is.'

Union with God is clothed in the language of human love:

'I have fallen asleep, my Beloved is awake. She who by the True Guru is united to the Lord abides in devotion; Love, O Nanak, is her companion.'

Finally, what is the attitude of the saint towards the world?

'In the house from which thou must at death depart kill thyself;

He that dies by the Word [of the Guru] is dead; he will not die again.'

It is true that Guru Nānak in a few solitary passages calls the world a play of the Creator:

'The play lasts to-day and to-morrow';

but he declares also that there is a higher arena beyond this passing show of earthly life:

'Whom thou unitest with Thyself he remains united; having gone he treads the true arena.'

If he says, as he does, that God is all in all ('Thou alone; Thou alone'), he also says, 'In the

true Lord are all virtues; in us are all vices.' If he says that 'duality sinks the boat's load,' he but seems to safeguard the truth of God's sovereignty, and, lest man should presume to ascribe evil to the nature of God, he insists on a virtuous life:

'Abandon vices and practise virtues, and thus acquire the truth—lest ye repent';

and he pathetically expresses his humility and longing when he says:

'O, my Lord, who knows Thy qualities? My vices cannot be numbered.'

Guru Nānak was a seeker after God, and, as we regard his thoughts concerning God and man and the true *guru* who mediates between them, and also his thoughts on deliverance from sin and misery and the attainment of happiness by union with God, we have no hesitation in declaring the conviction that, although he used the terms of the philosophy of his day to declare the oneness and greatness of God, yet the idea of God as a cold apathetic abstraction never satisfied him. Although it is now the fashion among the Sikhs to regard all their *gurus* as the 'true *guru*' (*sat gur*), yet, when pressed, they tell us that the true *guru* is God, and the true *guru* of the *Granth Sāhib* is not Nānak, but is the Supreme, the *gur-dev*, the incarnation of God, the sinless one, and it cannot fail to strike the least observant reader of the *Granth* that the only religion that can satisfy the aspirations of the Sikhs, and disclose the identity of the *sat gur*, and that claims to do so, is the Christian. Whether Nānak was acquainted with Christian truth is a debated question, but, whether he was or not, we must allow that, being in some degree conversant with the Muhammadan faith, he may have known something of the revelation of God in His Word, the true teacher, God-incarnate, the Lord Jesus Christ.

LITERATURE.—E. Trumpp, *The Ādi Granth*, 1877, published by the Government of India; M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909. J. W. YOUNGSON.

NĀRĀYANA.—*x.* Origin and meaning of the name.—Nārāyana is an ancient and dignified epithet which has been applied to various Hindu gods. It is not the name of any distinct Hindu divinity. The word is believed to be a patronymic, derived from *nara*, 'man,' so that it means 'son of man,' but it is not known of whom it was originally used.

One of the hymns of the *Rigveda*,¹ the subject of which is the origin of the universe, attributes the creation to the sacrifice of Puruṣa by the gods. Puruṣa is conceived as a gigantic being in human form, a primeval man. This poem, which is called the *Puruṣa-sūkta*, has exercised a great influence on Hindu thought. It was incorporated in each of the other three Vedas; and the word *puruṣa* and a number of the phrases of the hymn have formed part of the theological language of Hinduism ever since. It has been conjectured that the name Nārāyana was coined as an epithet for Puruṣa; and the derivation of the word fits well into the guess. In three passages in the *Satapatha Brāhmaṇa*² Puruṣa is definitely named Puruṣa Nārāyana, and there is a clear reference in each case to the *Puruṣa-sūkta*. In the *Kātyāyana Śrautasūtra*³ Nārāyana occurs as a patronymic of Puruṣa; and Kātyāyana's *Sarvānukramaṇi* gives Nārāyana as the name of the author of the *Puruṣa-sūkta*. The *Mahānārāyana Upaniṣad* contains a lyrical passage⁴ which is reminiscent of the *Puruṣa-sūkta*, and uses Nārāyana as an epithet of Puruṣa. It is noteworthy that all these works belong to the *Yajurveda*. Further, throughout Hindu history the word 'Nārāyana' seems to carry with it some association, strong or weak, with the origin of the

world, and frequently also with the hymn which celebrates Puruṣa. Thus far all the evidence would lead us to conclude that Nārāyana was coined to be an epithet of the gigantic being who is sacrificed in the *Puruṣa-sūkta*, and that, when it is used as a honorific title for some other god, the purpose is to identify him with Puruṣa.

But, when we turn to the earliest occurrence of the word in the literature, we meet a serious difficulty. The word first occurs in a litany of praise to eleven gods in the *Maitrāyaṇi Samhitā*¹ of the *Black Yajurveda*. In one stanza of this litany Puruṣa is used as a title of Śiva, and in another Nārāyana is used as a title of Viṣṇu. The *Black Yajurveda* is a much earlier work than the *Satapatha Brāhmaṇa* (the book in which Nārāyana occurs for the first time as an epithet of Puruṣa), and the facts just mentioned make it rather difficult to believe that, when it was compiled, Nārāyana was regarded as in any way attached to Puruṣa.

It would seem to be more consistent with all the evidence to suppose that Nārāyana was an independent conception, the origin of which has been lost, and that it was applied now to one now to another divine being even in very early times. The truth is, evidence does not exist to enable us to decide the question of origin. Yet at an early date it unquestionably became associated with Puruṣa.

At a much later date a new derivation was suggested for Nārāyana. In Hindu, as in Greek, thought one of the earliest theories was that the world had arisen from water. In the *Taittirīya Samhitā*² of the *Black Yajurveda* we read:

'This universe was formerly water, fluid. On it Prajāpati, becoming wind, moved';

and the idea is repeated in innumerable passages in the later literature. Then, somewhere about the beginning of the Christian era, some one suggested that it was Nārāyana who at the creation moved on the waters, and suggested also that the word was derived from *nārāḥ* ('the waters are called *nārāḥ*, for they are sprung from *Nara*') and *ayana* ('moving').³ Henceforward most Hindu writers prefer this secondary derivation of the word.

To sum up: at all periods the name Nārāyana suggests a personal spirit connected with creation. It is frequently used so as to recall the *Puruṣa-sūkta*; and in some cases it definitely stands for Puruṣa. The direct origin of the word, viz. *nara*, 'man,' is given less often than the fanciful etymology from *nārāḥ* + *ayana*, 'waters' + 'moving.'

2. History of the use of the term.—The earliest and most frequent use of the word is as an epithet of Viṣṇu; but it is also applied to other divinities.

(1) *As a title of Viṣṇu.*—(a) The very earliest occurrence of the word, as we have already seen, is in the *Maitrāyaṇi Samhitā*.⁴ It occurs in a litany in praise of eleven divinities, a litany for which the *Gāyatrī*, the most famous of Hindu prayers, has served as the model. Each stanza, devoted to a single god, copies the rhythm of the *Gāyatrī*, and repeats its leading words, while the name of the god and two of his epithets help to fill up the intervening spaces in the lines. We here reproduce the stanzas in which Śiva and Viṣṇu are praised. The italicized words are from the *Gāyatrī*:

'Tat Puruṣāya vidmahe; Mahādevāya dhīmahi:
Tan no Rudraḥ prachodayāt.

Tat Keśavāya vidmahe; Nārāyaṇāya dhīmahi:
Tan no Viṣṇuḥ prachodayāt.'

'We know about Puruṣa; let us think about Mahādeva:
May Rudra stimulate this in us.

We know about Keśava; let us think about Nārāyana:
May Viṣṇu stimulate this in us.'

¹ x. 90.

² xii. iii. 4. 1, xiii. vi. 1. 1, 2. 12.

³ xxv. vii. 86.

⁴ See § 2 (2) (b) below.

¹ ii. ix. 1. See § 2 (1) (a).

² vii. i. 5. 1; Muir, l. 52.

³ See, e.g., Mann, i. 8-10; Muir, l. 25.

⁴ ii. ix. 1.

It seems clear that this litany was a good deal used in the schools of the *Black Yajurveda*; for we find an echo of it in a later work belonging to that Veda. See below (c).

The title *Nārāyaṇa*, then, in this its very first occurrence, and at this very early date, is given to Viṣṇu.

(b) The title is also given to Viṣṇu several times in the earliest part of the *Rāmāyaṇa*; ¹ but, as this poem has been seriously interpolated, it is difficult to make certain that the lines are original. If they are, they show that about 500 B.C. the Vaiṣṇavite sect was already accustomed to use *Nārāyaṇa* as an equivalent of Viṣṇu.

(c) *Nārāyaṇa* does not appear in the early prose *Upaniṣads* at all; but it crops up in two passages in one of the second group, the verse *Upaniṣads*. In one of these it is an epithet of Viṣṇu. In the first chapter ² of the *Mahānārāyaṇa Upaniṣad*, which is ritualistic in character, the following modification of the verse quoted above from the *Maitrāyaṇī Samhitā* occurs (words from the *Gāyatrī* are again italicized):

'Nārāyaṇa vidmahe; Vāsudevāya dhīmahi:
Tan no Viṣṇuḥ prachodayāt.'

'We know about Nārāyaṇa; let us think about Vāsudeva:
May Viṣṇu stimulate this in us.'

One of our best scholars ³ gives the 3rd cent. B.C. as the lowest possible chronological limit for this *Upaniṣad*. The couplet is noticeable also as being the earliest passage in which Vāsudeva is used as an epithet of Viṣṇu.

(d) Scholars believe that those parts of the *Rāmāyaṇa* in which Rāma is represented as an incarnation of half the essence of Viṣṇu were composed and added to the original epic about the 2nd cent. B.C. It is noticeable that, in strict agreement with the passage just quoted from the *Mahānārāyaṇa Upaniṣad*, Viṣṇu receives in these additions ⁴ both *Nārāyaṇa* and *Vāsudeva* as titles.

(e) In the *Bhagavad-Gītā*, in which for the first time the claim is made that Viṣṇu is not one of the crowd of Hindu divinities but the mighty All-soul, the Brahman of the *Upaniṣads*, the word *Nārāyaṇa* does not appear at all. From this time forward, however, all Vaiṣṇavite literature claims that Viṣṇu alone is the Supreme, and uses *Nārāyaṇa* as one of his most honoured epithets. In this sense it occurs very frequently in the *Mahābhārata*. One section of the epic ⁵ is devoted to an exposition of the theology of the chief Vaiṣṇavite sect of the time, the Bhāgavatas. In it Viṣṇu is called *Nārāyaṇa* and *Puruṣa*, and the section is called the *Nārāyaṇīya*. So *Nārāyaṇa* and *Puruṣa* are used as titles of Viṣṇu in a late passage interpolated into the sixth book of the *Rāmāyaṇa*, ⁶ which may belong to the same time.

Thereafter these names are used as titles of Viṣṇu in countless passages in every type of Vaiṣṇava literature.

(f) The late sectarian *Upaniṣads* attached to the *Atharvaveda* ⁷ are in two groups: those which represent Viṣṇu as the All-god and those which give Śiva that place. In the former group the *Mahā Upaniṣad* is perhaps the most important. Here Viṣṇu as the All-god is called *Nārāyaṇa* and *Puruṣa*. The same is true of the Vaiṣṇavite *Purāṇas* and the *Pāñcharātra Samhitās*.

In the chief Vaiṣṇavite sect of S. India, the Śrī-Vaiṣṇavas, the sectarian mantra runs, *Oṃ namaḥ Nārāyaṇāya*, 'Oṃ! reverence to Nārāyaṇa.' Rāmāṇja, who belonged to this sect, in his famous commentary on the *Vedāntasūtras* called the *Śrī-bhāṣya*, constantly uses *Nārāyaṇa* as an

equivalent of Viṣṇu, and appeals frequently to the *Mahā Upaniṣad* and the *Subhala Upaniṣad* as *śruti* (i.e. revelation) in support of his claim that Viṣṇu is Brahman.¹

(2) *Other uses*.—Although the Vaiṣṇavite sect had in this way appropriated the old title *Nārāyaṇa* for their own divinity, and were prepared to hold it against all comers, other Hindus refused to acknowledge that it was a necessary appanage of Viṣṇu.

(a) It is used as a title of Brahman, the old god of creation, at the beginning of the *Law-book of Manu* ² and elsewhere.

(b) In the earliest *Upaniṣads*, which are in prose, the main stream of the teaching tends to represent Brahman, the Supreme, as impersonal; and it is only in occasional phrases that ideas which are consistent only with a personal theology occur; but in the later *Upaniṣads*, which are in verse, there is a considerable tendency to interpret Brahman as personal. In the majority of these theistic passages no divine name except Brahman is used; but in the *Svetāśvatara Upaniṣad* ³ the sectarian god Rudra is introduced to make the personal character of the Supreme more vivid. Then, in one of the latest of these verse treatises, the *Mahānārāyaṇa Upaniṣad*, the name and the concept of *Puruṣa* are used for the same purpose. The passage shows many traces of the *Puruṣa-sūkta*. The word '*Puruṣa*' is used once, but *Nārāyaṇa* is used eight times, clearly as an equivalent for *Puruṣa*. This striking lyrical passage ⁴ has given its name to the whole work, the *Great Nārāyaṇa Upaniṣad*.

(c) As we have seen above (§ 2 (1) (c)), *Nārāyaṇa* occurs in another passage of this work as an epithet of Viṣṇu. As the *Upaniṣad* is a composite work, the two sections are probably of distinct origin, so that the variant use of the word need cause no difficulty.

(d) Śaṅkarācārya, the great exponent of the monistic form of the Vedānta, uses *Nārāyaṇa* as an equivalent for Brahman, the Supreme God of the philosophy. Faced with Vaiṣṇavites who claimed that Viṣṇu was Brahman, and Śaivites who claimed that Śiva was Brahman, he declared that neither claim was acceptable, since Brahman was no sectarian god, but the impersonal Supreme behind all phenomena and all gods. He uses *Nārāyaṇa* as an epithet of Brahman, ⁵ and will not allow that it belongs to Viṣṇu.

3. Among the Jains *Nārāyaṇa* is the eighth of the nine black Vāsudevas, a group of mythical Tirthankaras said to have lived in the Duṣshamasunshamā period. ⁶ In the *Saddharma Puṇḍarīka*, a Mahāyāna Buddhist work, the body of a *bodhisattva* is compared with *Nārāyaṇa's* body. ⁷ Both are clearly reflexions from later Vaiṣṇavism.

4. In modern India *Nārāyaṇa* is universally regarded as a name of Viṣṇu.

LITERATURE.—This is cited throughout the article. See also O. Böhtlingk and R. Roth, *Sanskrit-Wörterbuch*, Petrograd, 1855-75; and M. Bloomfield, *Vedic Concordance*, Harvard, 1906.

symbol (*bāna*, *vāna līnga*), made of white quartz, being found in its bed. The river is also known as Kewajī, 'the flowing lord,' and bathing in its waters is a potent mode of removing tabu or sin pollution. The river priests rank its sanctity above that of all other rivers. Freedom from sin, they say, is gained by bathing for three years in the Sarasvatī (*q.v.*), for seven days in the Jumnā (*q.v.*), one day is sufficient for the Ganges (*q.v.*), while the mere sight of the Narbadā cleanses the sinner. The local prophecy declared that the holiness of the Ganges would cease in A.D. 1895, while that of the Narbadā would continue through all the ages of the world; the first part of this prediction, in the opinion of the Ganges priests, has certainly not been fulfilled. It is the desire of many an orthodox Hindu that he may die on the Narbadā's banks, and the ashes of the dead are brought from long distances and consigned to its waters. Even the Ganges herself, it is said, comes once a year in the form of a black cow and bathes here. On this day, which is observed as a festival, the merit of bathing is double that of both the rivers combined. The most noted places of pilgrimage are Amarkantak, Omkār Māndhātā, and Chāndōd, which, if the Ganges gave way to the Narbadā, would become the southern Benares. Few Hindus would dare to swear falsely, standing in the river with a red flower garland round the neck, and holding in the right hand some of the holy water. Like all sacred rivers, the Narbadā resents being confined by a bridge, and more than once her floods have caused loss of life, which is said to have calmed her wrath.

W. CROOKE.

NĀSIK.—The town Nāsik (said to be derived from *Skr. nava-śikhā*, 'nine peaks,' as it is supposed to be built on nine hills), headquarters of the District of that name in the Bombay Presidency, is a famous place of pilgrimage, on the banks of the river Godāvari (*q.v.*), about 30 miles from its source; lat. 19° 48' N.; long. 73° 47' E. It is the Nasika of Ptolemy (*J. W. McCrindle, Ancient India as described by Ptolemy*, Calcutta, 1885, p. 156). It has been identified with the place visited by the Buddhist pilgrim Hiuen Tsiang, and capital of King Pulakesin II.

'Within and without the capital are five *stūpas* to mark the spots where the four past Buddhas walked and sat. . . . There are, besides these, other *stūpas* made of brick or stone, so many that it would be difficult to name them all. Not far to the south of the city is a *saṅghārāma* [monastery] in which is a stone image of Kwan-tsz'-tsai Bōdhisattva. Its spiritual powers extend (*far and wide*), so that many of those who have secretly prayed to it have obtained their wishes' (*S. Beal, Si-yu-ki*, London, 1884, ii. 257; *BG* i. pt. ii. [1896] 354 f.; cf. V. A. Smith, *Early Hist. of India*³, Oxford, 1914, p. 426).

The position of the group of Buddhist caves in the vicinity, known as Pāṇḍu Lenā, also points to the sanctity of the place in Buddhist times. They are situated in an isolated hill about 5 miles S.S.W. from the town. The caves are seventeen in number, and form a small but very interesting group. The great Chaitya cave is not so remarkable as others of the same series.

'But there are two Vihāras, which are very far in advance of any yet met with, and display in their façades a richness of decoration quite unlike the modest exteriors of those excavated before the Christian era. Notwithstanding this they all, except Nos. II. and xvii., belong to the Hinayāna or first great division of Buddhist caves, being devoid of images, or any representations of Buddha as an object of worship, or in fact of any of those characteristics which marked the introduction of the Mahāyāna theosophy' (*Fergusson and Burgess, Cave Temples of India*, p. 266).

The Chaitya cave contains an inscription of Kṛṣṇarājā, second king of the Andhra dynasty, which arose after the death of Aśoka (c. 220 B.C.; Smith, p. 206). The series extends from this period down to

about A.D. 600. The place appears in Hindu tradition in connexion with the story of Rāma, who is said to have spent part of his exile at Panchavati, a suburb north of the Godāvari river, and many places in the neighbourhood are associated with his adventures. About the 11th or 12th cent. A.D. Jainism seems to have prevailed here, and devotees of that faith excavated the Chāmbhār caves and made additions to the Pāṇḍu Lenā group. But, though it is a place of great sanctity, the Benares of W. India, as it has been called, the existing Hindu temples, most of which were built in the period of Marāthā rule, are not of much importance or dignity. That of Someśvara, a form of Śiva, attracts numerous pilgrims, and one group of buildings is the work of the famous princess of Indor, Ahalyā Bāī (A.D. 1750–1818), one of the great temple-builders of modern times. Other noteworthy shrines are those of Rāma, known as Gorā, 'white,' to distinguish it from the Kālā, or 'black' Rāma of Panchavati; a large temple dedicated to Bālājī, or the infant Kṛṣṇa; that of Śiva as Tilbhāndeśvar, so called because the *līnga* is believed to grow yearly to the length of a grain of sesamum (*tīl*); that of Viṭhobā, associated with Rādha and Kulkmini; that of Śiva Kapāleśvara, the 'skull-wearer'; and that of Kālā Rām or Śrī Rāmji, one of the finest modern temples in W. India. Śākta-worship is represented by the shrine of Bhadrā Kālī. In the bed of the Godāvari are numerous sacred bathing-places (*tīrtha*) and holy pools (*kuṇḍa*). The holiest of all is known as Rāmakuṇḍa, 'the pool of Rāma,' which is renowned for its purifying properties. As, for the people of N. India, a father's funeral rites are best performed at Gayā (*q.v.*), so those of a mother are never so perfect as when solemnized at Rāma's pool in the Godāvari. Crowds of pilgrims are constantly arriving at the place from all parts of W. India, Berār, the Nizām's Dominions, the Central Provinces, and at the greater feasts from even more distant places. Their names are carefully recorded by the local priests, known as *kṣetra upādhyāya*, 'teachers of the holy land.' The circuit of the temples and holy places occupies three days. It also attracts crowds of religious devotees, who in former times caused much trouble to the authorities by their turbulence. There is little evidence of Islām, except a Jāmi Masjid, or cathedral mosque, partly built from the ruins of Hindu temples.

LITERATURE.—For the Buddhist caves see J. Fergusson and J. Burgess, *The Cave Temples of India*, London, 1880, p. 263 ff. The place is described in *BG* xvi. [1893] 541 ff.; *IGI* xviii. [1903] 410 ff.

W. CROOKE.

NĀSIR IBN KHUSRAU.—Abū Mu'in al-dīn Nāṣir ibn Khusrāu (in Persian, Nāṣir-i Khusrāu) was born in A.D. 1004 at Qubādiyān, a town lying north-east of Balkh in the district of the upper Oxus. The first forty years of his life are practically a blank as regards biographical information, but it is clear that they were not wasted. Not only did he master the literary, scientific, and philosophical learning of the age in all its various branches, devoting particular attention to the study of religions, but he also thought deeply on the great questions which his ardent search after truth impelled him to attempt to solve. For a long time he could find no sure ground for belief, and he seems to have consoled himself by indulging in the pleasures of wine. When he was forty-two, he had a dream in consequence of which he determined to make the pilgrimage to Mecca. Having resigned his post—a secretaryship under the Seljūq government—he set out for Mecca, where he accomplished the immediate object of his journey, and then travelled by land to Egypt, arriving in Cairo in August, A.D. 1047. Here he

they made holes with their hands or with sticks and deposited the seeds in them. The work was done in common, the field of each man being taken in order. A number of dishes were made out of corn, one half drink and half food like the *sofki* of the Creek Indians, another of dry powdered corn which could be carried long distances without spoiling and in compact form. It was therefore usually taken by war parties and on distant hunts. The fruit or seeds of a certain kind of cane, bearing at irregular intervals, and that of two kinds of grains, one growing wild, the other being slightly cultivated, were also used. Marsh potatoes were used in seasons of want. Beans and pumpkins were among their cultivated plants. The principal native fruit was the persimmon, out of which a kind of bread, often spoken of by early travellers, was made. Peaches, figs, and water-melons were early introduced by the Whites. Walnuts and chestnuts were eaten to some extent, and probably, like other tribes of the southern United States, the Natchez expressed oil from hickory nuts and acorns, although notices of such usage seem to be wanting from the pages of our authorities. Salt was obtained from the salt lies in N. Louisiana. Tobacco was cultivated and was of great ceremonial importance. When they smoked, they usually mixed it with dried sumac leaves in about equal proportions.

4. Social customs.—It may be inferred from the information furnished by du Pratz that, when a woman was confined, she was forced to leave the house and give birth to her child in a small hut apart from other houses. The child was not put on its feet until it was more than a year old, and it was usually allowed to suckle as long as it chose. Training after the first few years of life was largely in the hands of certain old men, who were probably the oldest male members of the mother's clan or family. The work of the men was war, the ball-game, hunting, the performance of ceremonials, the cutting of firewood, fishing, cultivating the communal cornfields, at least part of the dressing of skins, felling trees, making bows and arrows, mattocks, and paddles, building houses, and taking care of the tribal lore and legends. The women carried in the wood which had been cut, brought in the game and cooked it, had entire charge of the house, made pots, baskets, garments of skin, mulberry-bark, and feathers, spun the bison and opossum hair, and made mats and numerous other things. Chastity before marriage was not valued, and, indeed, the reverse is said to have been inculcated, but after marriage strict fidelity was demanded of the wife. We do not hear of severe punishment being inflicted on adulterers such as was usual among the Creeks; divorce is said to have been extremely rare.

When a man died, his relatives came to mourn over him for an entire day. Then they arrayed him in his finest garments, painted his face, and ornamented him with feathers. Afterwards they laid him in a grave in the earth, placing by his side his arms, a kettle, and some provisions. For a month his relatives went to the grave morning and evening and wailed there, each mentioning the relationship which existed between himself and the dead man. The nearest relatives continued this for three or four months, and during the same period they had their hair cut or singed off, abstained from painting the body, and absented themselves from all festivities. The funeral rites observed on the death of a member of the ruling Sun caste were very elaborate and imposing (see below, § 7).

5. Games.—In ancient times the most popular game among them was one called by early travellers the 'chunky' game.

Two or more players participated. Each was provided with a pole 15 or 16 ft. long and shaped like a letter F. One of them then took a stone cylinder or roller about 3 ins. in diameter by an inch in thickness, which he rolled along on the ground, and at the same time he and the other players threw their sticks in the same direction, the object being to see whose stick lay nearest when the roller, or 'chunky' stone, came to rest. The 'chunky' game was the great gambling game, and while it was in progress quantities of property changed hands.

On festive, or rather ceremonial, occasions they played a game similar to lacrosse, but it was nearer the form of that game in vogue among the southern Indians generally, viz. the game in which two ball sticks were used. The women played a game with three pieces of cane which were treated like dice, the canes being allowed to fall on the ground and an account kept of those which fell convex side up. The children amused themselves by knocking to and fro a ball made of Spanish moss.

6. War.—War was an institution and was waged largely for social advancement. War parties varied in number from two or three to several hundreds, and participation in war expeditions was entirely voluntary. A war leader invited volunteers by setting up two red poles ornamented with red feathers and reddened arrows and tomahawks. When a sufficient number of warriors had presented themselves, a drink was brewed from the *Ilex cassine*, the 'black drink' of the traders, imbibed in quantities, and again ejected, though du Pratz says that this was preceded by a symbolic feast in which dog meat occupied a conspicuous place. After a speech by an old man and certain other ceremonies, the party marched off into the woods in single file. Some young men acted as scouts, but sentinels were not ordinarily set at night. A shaman accompanied each party, or at least each party of any consequence, and a war bundle was taken along and hung in their midst every night from a red pole pointing towards the land of the enemy. They attacked by stealth, killing the adult men and carrying off the women and children. Adult males were also captured, if possible, and reserved for torture by fire in a square frame made of poles, but not at a stake. If a Natchez woman who had lost her husband took a fancy to one of these devoted captives, however, she could claim him in the place of her former spouse. After striking a blow the Natchez warriors scattered about the place small tablets of wood marked with designs indicating their tribe, their war leader, and some other facts. The scalps of those who had been killed were carried home and preserved along with the scalps torn from those taken alive and devoted to death. Each war party was accompanied by a *berdache*, a man who dressed and acted like a woman. This individual cooked their meals for them, and performed other such duties about the camp. Sometimes, when war threatened with a very powerful tribe, the entire nation constructed, or resorted to, a stockade made of trunks of trees standing upright, interwoven with cross-pieces or reinforced by other posts between the first uprights, and having towers at intervals, besides two to protect the gateway made by the overlapping of the sides of the fort.

Peace-making was a formal ceremony, in which a pipe-stem ornamented with white feathers and provided at one end with a stone pipe played an important part. This stem was called a 'calumet' by the French, who were familiar with its use. The war calumet, hung up by a war leader when preparing for an expedition, was provided with red feathers from the flamingo. Treaties of peace sometimes resulted in alliances between small tribes much reduced in war and some large tribe whose effective force was thereby considerably increased.

7. The Sun family system.—When first clearly revealed to us the Natchez tribe consisted of nine

precipitated by the high-handed, overbearing conduct of the French governor of the post, F. Chopart. The uprising took place on 28th Nov. 1729, the post was completely destroyed, and about 250 Frenchmen killed. The next year the Natchez were attacked by the French and Choctaw, who recovered most of the captives, but did very little damage besides. Early in 1731 Governor Perrier of Louisiana attacked the Natchez again in a new fort which they had built on Black River to the west of the Mississippi, and induced about 400 to surrender, whom he sold as slaves in Santo Domingo. A bloody guerrilla war followed, in which one notable success was won by St. Denis, commander of the post of Natchitoches, though it was otherwise rather disastrous for the French. In a few years, however, the Natchez retired to the Chickasaw and Cherokee, and still later those among the Chickasaw went over to the Creeks, where they constituted a separate town for many years. The hands among both Creeks and Cherokee retained their identity and their language until after the southern Indians had been removed to the west of the Mississippi. Even there a nucleus remained for a long time, but to-day the Natchez among the Creeks have been absorbed entirely by the larger tribe. Practically the same fate has befallen those who had cast in their fortunes with the Cherokee, but fortunately three or four still have sufficient command of their language for purposes of record.

2. Mode of life.—In physical type the Natchez differed little apparently from the other southern Indians, though in their personal habits and general bearing they were—if we may trust early writers—at a decided advantage.

The only article of male attire never dispensed with was the breech-clout, made of a dressed deer-skin passed between the legs and tucked under a belt at either end. In colder weather or on dress occasions they added a shirt made of two dressed deer-skins, moccasins, and leggings, the last extending from the thighs, where they were fastened to the belt with thongs, to the moccasins, under the upper edges of which they were inserted. They were held in below the knee by means of garters of bison hair usually ornamented with beads or porcupine quills. Over all in the most severe weather was thrown a bison skin, dressed with the hair on and the hair side turned inwards. The summer dress of the women was a skirt which extended from the waist to the knees. This was originally of deer-hide, of a native fabric woven from the inner bark of the mulberry, or of feathers woven into a netting of bass-bark, an old fish net, or some similar article. In colder weather a kind of mantle of the same material was added, which passed over the left shoulder and under the right arm. Boys wore no clothing at all until they were twelve or thirteen. Girls went naked until eight or ten, when they assumed a garment made of a fringe of mulberry threads fastened to a cord about the waist and extending to the ankles. After contact with the Whites they first made their garments in the old way but out of European goods, and later adopted European clothing without essential modification. The hair of the head was cut or burned off above all the way round the crown, only a single tress being left, which hung over the left ear, and a few hairs for the attachment of feathers. The women allowed their hair to grow long and gathered it up in a netting of mulberry threads into a kind of queue behind with tassels at the end. Both sexes pulled out the hair on all other parts of their bodies. Both also wore necklaces of beads and pearls. The men wore feathers on their heads, deer-bone bracelets round their wrists, and iron, brass, or copper wire in their ears, besides using fans of turkey feathers on dress occasions. Spike-shaped ornaments of shell were worn in their ears by the women, and the men suspended shell plates about their necks. Red paint, made by burning ochre, was liberally employed by both sexes, and also blue, black, and white paints. These paintings were probably in part ceremonial and social as well as ornamental. The women blackened their teeth with tobacco and wood ashes. Men and women had their faces tatued, and the women of the upper classes were

also tatued upon the body, but body tatuing was indulged in most extensively by the warriors, the designs in their case representing noted feats accomplished by them. They were in both black and red. The foreheads of infants were artificially compressed in the cradle.

The houses were either square or round, made of a framework of hickory poles, interlaced with canes which formed a backing for mud walls. Over the latter were hung cane mats, then rows of grass in bundles overlapping, and over all other mats. Around the walls inside were platform beds raised on stakes and covered with cane mats and bison skins. They also had very low chairs or seats cut out of one piece of wood. Mats and baskets of all shapes and sizes, including large carrying baskets, sifters, winnowers, etc., for reducing corn to meal, were made out of cane, or rather out of its outer skin. Some were double-woven, and they had very good red, yellow, and black dyes with which excellent designs were worked, though few specimens have survived to the present time. Earthen vessels of as diverse kinds were also made, probably by the coil method, but they were not so successful in this art as in basketry. The weaving of mulberry-bark thread has been alluded to and also feather work and work with bison hair. Certain nettles, opossum hair, and other substitutes were resorted to. Skins were fastened in frames, the hair was removed, and then they were softened and whitened by rubbing with a flint and with deer brains. Permanence was given to the acquired softness by smoking them over fires of bison dung, rotted wood, and ears of corn. Many of these skins were beautifully painted in a variety of colours, and they were also ornamented with porcupine quills. Some of their knives were probably of flint, but the commonest kind was made by splitting a very hard cane into four pieces. Axes were of deep grey stones of fine grain. With these, in conjunction with fire, they felled trees, and shaped them into canoes, mortars for pounding corn, and other necessities. Rafts made of canes served as temporary ferries.

3. Hunting and agriculture.—The principal animals hunted were the bear, deer, and bison. The first-mentioned was generally sought out in a hollow tree, driven from it by means of fire, and then shot. Although his flesh was eaten to some extent, he was particularly sought on account of his fat, which was melted and poured into skin bags made out of the skins of deer taken off whole. Deer were usually stalked by single hunters, who provided themselves with stuffed deer heads, and are said to have imitated the actions of this animal very cleverly. Sometimes a hundred Indians would go together and secure the deer alive by means of a surround. In historic times bison were not found very near the Natchez country, but the Natchez periodically visited regions where they were plentiful. Usually they attacked them by stealth and in small parties. Turkeys were hunted with dogs. Fish were shot with arrows, lanced, or caught with hook and line. Certain kinds were caught in bass nets as they ascended the Mississippi. Part of the meat which they secured was kept for a certain time by smoking on a scaffold over the fire. The dog was the only domestic animal, and they were exceedingly fond of it, but it was of little practical use.

Meat was of far less economic importance to the Natchez than corn; of this they seem to have had several varieties, most conspicuous being the 'little corn,' a kind of popcorn, and the flour corn. Their sole agricultural implement was a bent hickory stick, or the shoulder-blade of a bison set in a wooden handle. With these primitive mattocks they cleared and weeded their fields, after which

is every reason to believe that it was here that the stone statue was preserved into which the Natchez culture-hero had had himself transformed. Thus it was only natural that the temple should be treated with much the same obeisances and cries as were bestowed upon the Suns. This was done by each person who passed it. The firstfruits of the year were brought to it, and likewise the seed before it was planted. Presents made to the nation were offered here, displayed by the guardians of the temple to the spirits, and then carried to the Great Chief and by him distributed to the nation.

Besides the offerings to the temple, sacrifices of small bits of food were made to the four cardinal points by every Natchez before he would eat. On certain days they painted their faces black and fasted, and fasting was one of the ways by which a man became a shaman, and brought on rain, or accomplished other supernatural feats.

9. **A theocratic State.**—The Natchez State was thus to all intents and purposes a theocracy. The sun or a being associated with the sun was the supreme deity. From it had come the culture-hero who had established the Natchez organization. Of immortal nature, this culture-hero had not actually died, but had transformed himself into a stone statue, and was still present with his people in that form in the innermost recess of the temple. Near him, symbolic of his solar character, burned a perpetual fire, the fire below representing that which burned eternally above. And, finally, the Natchez State was still in the hands of and under the direction of the descendants of this founder, and they, being of divine origin, received homage almost like that of the deity himself.

10. **Shamanism.**—Control over the weather was supposed to be in the possession of certain old men who attempted to affect it by sympathetic magic. Those who claimed to be able to drive away the clouds were distinct from those who professed that they could cause rain, and both again were in most cases distinct from the real doctors, or medicine-men. The latter sometimes prescribed medicines, many of which were also known to the laity, but more often they grappled with the disease by means of fasting, dancing and singing about the sick man, smoking constantly, and making various contortions of the body. The missionary Le Petit says:

'They have a little basket in which they keep what they call their spirits; this is to say, small roots of different kinds, heads of owls, small parcels of hair of fallow deer, some teeth of animals, some small stones or pebbles, and other similar trifles.' Like shamans among all the other southern tribes, they sometimes made cuts over the affected parts with a flint and pretended to suck out the disease, which then presented itself to the beholders as a piece of wood, a straw, a piece of leather, and the like.

11. **Mythology.**—Little of the ancient mythology of the Natchez is preserved, but we are told that they had a flood myth according to which all mankind were once destroyed by water except a very few who saved themselves by fleeing to the top of a mountain. All their fire had been extinguished, therefore the cardinal bird went to heaven and brought some new fire from there.

12. **Eschatology.**—Those Natchez who had lived well and in accordance with the tribal regulations looked forward to life after death in a beautiful country well stocked with game, while those who had not done so were supposed to be proportionally miserable. According to one writer, they believed in metempsychosis, but perhaps his statement was a result of the misunderstanding of some totemic idea.

JOHN R. SWANTON.

NATIONALITY.—Nationality is that quality or complex of qualities in a group of persons which combines them in a nation. The persons thus combined may have the quality in different degrees. This is shown by the ease with which some, as compared with others, are detached from the national group by the operation of other motives, such as self-interest, common human friendliness, and countervailing attachments of various sorts. This tenacity of the quality as motive may also be distinguished from its liveliness as idea and its fervour as sentiment, and these two, moreover, from one another. Ideality and emotionality mark, and indeed constitute, the self-conscious stage of the development of nationality. The quality of tenacity is grounded rather in the strong personal instincts of attachment and affinity out of which all consciousness of unity between persons grows. Nationality is a fact long before there is any talk of national ideals or national sentiment. But, with the development of the society and the persons concerned in it, this consciousness of unity in the group emerges, as part of growing self-consciousness in the individuals. There dawns the conception of a national self, whose interests more or less are identified with those of the individual self, and more or less ought to be set above them. This national self thus appears from the first as a double object of affection—loved as we love ourselves naturally, and to be loved even more fervently as a matter of duty morally. Thus national sentiment grips human nature by both hands. By the left hand it allies itself to self-interest, personal pride, and all the egoistic train, rejoicing the poor man by the common wealth, exalting the mean man by contemplation of the national glory. By the right hand it swings to higher levels the individual will—to the levels of disinterested affection, self-devotion, cheerful acceptance of social duty as the chief aim of individual life. The sense of nationality differs from person to person, not only in the degree of its tenacity, its ideality, and its emotional fervour, but even more, and more importantly, in respect of the relative strength of the selfish and the moral impulses in it.

These distinctions do not, however, exhaust its variety; nor do they sufficiently explain the host of occasions when it is with fair reason either praised or blamed. Every complex sentiment—or, to speak more precisely, every psychosis involving ideas, instincts, and sentiments—has as many variants as there are possible combinations of its factors in all their varieties and degrees. Variety especially attends the out-put of ideas and their preservation in the development of the psychosis. As the experiences of different national groups, and of different persons in each group, differ, so the type of nationality in the group, and the particular manifestation of it in the person, will differ correspondingly.

towns, two of which had been adopted in the manner just indicated. The remarkable thing about their social organization was the power exercised by a certain family called Suns. This family does not seem to have been large, one early writer stating that there were eleven, another that there were seventeen Suns, but perhaps they referred only to adult males. This family might be called a caste, except that, unlike castes as we know them elsewhere, marriage between the Suns and the common people, instead of being prohibited, was obligatory. The family was perpetuated in the female line, the children of female Suns always being Suns. The royal blood had sufficient power in the male line, however, to preserve a distinction between the children and grandchildren of Suns and the common people, two different grades of nobility having been created for these children and grandchildren. The exogamous nature of this Sun clan suggests that it was really a clan similar to those found among so many primitive peoples, but the French writers upon whom we are dependent mention no other clans as existing in their time, although the late descendants of the Natchez had them. Another reason for exogamy may be found in the fact that the wives and husbands of Suns, when these died, were strangled to accompany them into the future state of existence, while a Sun could on no account be put to death. From among these Suns the Great Sun, or head civil chief, and the Great War Leader were drawn. These men were treated with great respect even by other members of the Sun family, and by the common people they were approached with the most abject servility. They had a right to the property and labour of their subjects, could have as many wives as they chose, and add to or reduce the number at will. Their authority even seems to have extended to the power of life and death over their subjects, but it probably made a great difference who the individual happened to be. This paternalistic system seems to have been reflected also in the various households of the Natchez tribe, in which the oldest uncle had very great authority. Nevertheless the head chief was assisted by a council of old men who had considerable influence, and in the course of Natchez history we find the authority of certain village chiefs endangering that of the real national head. There were evidently many official positions of lesser consequence which we may surmise to have been filled by the other members of the Sun family, and by the two grades of nobles already mentioned. It is important to observe, however, that the last two grades were attainable not merely by birth but by individual prowess or virtue, thus furnishing the necessary medium for the utilization of such talent as strayed into plebeian frames. Such promotion was also bestowed upon parents who strangled a child to accompany one of the Suns to the world of spirits, and upon all those who assisted in strangling the adult victims sacrificed at that time.

The mortuary rites of a Sun, especially of one of the chiefs of the nation, were elaborate, impressive, and gruesome.

Thus on the death of the Tatued-serpent, the Great War Chief of the Natchez, in the year 1725, those in the house uttered loud cries, which were immediately taken up and re-echoed throughout the village, while guns were discharged to inform all the other villages in succession of the sad event. At a signal from the Great Sun water was dashed upon the fire in the house, and an officer, going outside, uttered a howl, which was repeated everywhere as a sign that all the fires were to be extinguished in the same manner. This was done, however, because the Great Sun had decided to die also, and he was persuaded by the Frenchmen present to abandon this resolution. Meanwhile the body of the deceased had been dressed in his finest clothing, and surrounded by his various war honours. Food was offered him at intervals. The wives of the deceased and all the others who were to accompany him into the spirit-world rehearsed

their parts twice a day until the date fixed for the funeral. When that day arrived, the body of the Tatued-serpent was carried outside on a litter, borne round the house several times, and then carried in spirals towards the temple. When this was reached, the victims, who had followed, placed themselves on mats and were immediately strangled to death with cords passed about their necks, the ends being held by one person at each side. The body of the Tatued-serpent was buried inside the temple, his nearest relatives with him or just outside, and those belonging to different villages in the temples there.

8. Religious ideas and practices.—The common religious ideas were like those current among American peoples, and indeed among primitive peoples, generally, such as have been denominated under the general term 'animism' but might perhaps equally well have been called 'anthropomorphism.' Nevertheless, among the Natchez, a peculiar cult had evolved in harmony with the unique social organization of the tribe. Naturally a great deal of this has been lost and much distorted by the chroniclers upon whom we have to depend, but the main outlines are plainly discernible. Above all other deities was one who was particularly present through the sun. According to du Pratz, the native name of this being was Coyocop-chill (*Koyokop shihl*), 'the great spirit,' and under him were a multitude of lesser spirits known as Coyocop-téchou (*koyokop teshu*), 'servant spirits.' The name 'great spirit' at once suggests a possibility of European influence in this conception, but, whether the name was truly aboriginal or not, the conception squares so perfectly with the Natchez social organization that there is little doubt that it is in the main genuine. The founder of the Sun family, according to native myth, had himself come from the sun with his wife, and had, like culture-heroes everywhere, brought civil order out of chaos and established the rites and usages of the Natchez nation as they were to be ever after. He also established the temple, and laid down regulations for its maintenance. From him were descended the family of the Suns, and hence it was that they enjoyed the privileges of the demi-gods which in theory they indeed were. This information is given us by du Pratz, but a letter of the missionary St. Cosme makes a most important addition to it. He writes:

'The chiefs were regarded as spirits descended from a kind of idol which they have in their temple and for which they have a great respect. It is a stone statue inclosed in a wooden box. They say that this is not properly the great spirit, but one of his relatives whom he formerly sent into this place to be the master of the earth; but this chief became so terrible that he made men die merely by his look; that in order to prevent it he had a cabin made for himself into which he entered and had himself changed into a stone statue for fear that his flesh would be corrupted in the earth.'

The temple was an oblong or square building in the head village of the Natchez, separated from the cabin of the Great Sun by an open plaza. The dimensions are given by Charlevoix as 40 by 20 ft., and by du Pratz as 30 ft. each way. The doorway faced east and upon the plaza, and on the roof were three wooden birds looking in the same direction. The southern third of the building was cut off from the rest by an inside partition and evidently contained the most sacred objects connected with Natchez worship. In the middle of the larger room burned a perpetual fire, which the guardians of the temple kept alive, on pain of death, by pushing three hickory logs progressively inwards as they were consumed. The fire smouldered rather than burned. Directly behind this fire was a raised platform about 4 ft. high, upon which the baskets carrying the bones of some of the Suns were laid. Elsewhere were other baskets used for the same purpose, and in addition there are said to have been baskets containing certain 'idols' or fetishes. A few carvings are noted by some travellers, among them one of a rattle-snake. In the inner sanctuary du Pratz could make out only two carved planks, but there

history of the nations. In the development of this ideal consists the second part of the higher patriotism—that part, indeed, which more particularly marks it as patriotism rather than as pure humanitarianism. Under this lead the public spirit of the good citizen—his nationality—makes efforts and sacrifices for a double end: (1) to promote the welfare and virtue of his State by reform of institutions and development of persons within its borders, and (2) to promote the development of the higher nationality by using his influence to make his State internationally beneficent as occasion occurs.

The latter, it should be noted, is an object for the achievement of which a vigilant intelligence is as necessary as a vigorous good-will. Otherwise evil is apt to be done under the pretext of good—a thing which other nations call hypocrisy; it is not the same as individual hypocrisy, since the men who achieve the evil are not generally the same as those who proclaim the good as the national aim. At this stage of prosperous national existence, indeed, when international beneficence emerges more distinctly as an end, a mingling of humility with sharp self-criticism is needed to keep patriotic virtue pure. In dealings with other nations, the haughtiness of professed virtue without sympathy is, of course, the most hateful of national vices. And this leads reflexion to the core of the matter of international morality. Good-fellowship between nations, as between persons, depends only in part on the *intention* to act beneficently. Sympathy and respect for others are of its prime essence. The strong nation intending beneficence, as well as good faith and honour, fails to achieve and perhaps finally ceases to desire that end, if it be deficient in national fellow-feeling.

There is no room for doubt that distinction of nationality is a present political fact of weighty significance to be reckoned with in problems of human intercourse. It is a first duty of the political philosopher, and of the politician as such, to understand this strong motive force in nations. Nor is it less the business of the moralist and teacher to understand its action in the development of personal character, the uses, and more especially the abuses, to which it can be put, according to the ideals under which it is stimulated. A prior question, however, may be raised, as to the ultimate reasonableness of the national sense and its morality in relation to the ideal of universal human brotherhood. Admitting that national sense is a reality to be reckoned with in politics and utilized in ethics, it may still be urged that it ought to be transcended as civilization progresses, and that the higher forces of reason and humanity ought to be enlisted against its further development.

The consideration of this point requires a careful analysis of the ideal which the national sense subserves. What is it in the commonwealth of the world that the nationality of nations makes for? This, whatever it may be, is the ultimate ideal of nationality, though between the national ideas of different nations distinctions appear, according to the development of the ideal in them and according to the idiosyncrasies of race and circumstance which colour its application. These idiosyncrasies pertain in truth to the national type, and so are to be viewed as associated with rather than as qualifying the national ideal.

Human society originates in a multiplicity of communities. Each community is a group of persons united by ties of blood, traditions of common interest, habits of common action, a common language, and, most of all, mutual intelligibility. The members of such a group instinctively hang together, connected by a many-

stranded bond of affections and affinities. The alien appears to them as alien because his interests and habits seem to be different, so that, even apart from difference of language, they feel incapable of imagining what he thinks or would be at. Hence we have the primitive suspicion and the civilized distaste for the typical alien as unintelligible. The persons most free from this bias are those of penetrating sympathetic insight; and, when this fraternizing tendency marks the racial type, aliens are easily absorbed into the group. Errant members, on the other hand, lend themselves to absorption elsewhere in so far as they are apt to make themselves intelligible in the universal human sense. For common human nature is in fact much the largest part of the human nature of the average member of every group.

With the inevitable conflicts that arise between the groups, these higher errant tendencies, as well as others less respectable, provoke a reaction. Desertion to other groups becomes a crime, and the idea of loyalty to the home group as a necessary virtue transforms the group of kindred into a tribe or infant nation. We need not dwell on the use of the chief or king and of the tribal deities in this development. In actual history it is associated for the most part with international struggles in some form. The sense of nationality thus developed is, therefore, at least in its primitive form, a compound of social and anti-social elements. That this primitive character is apt to survive in more settled circumstances when no longer called for we know from our every-day experience of the anti-French, anti-German, anti-Russian, and other destructive elements which intertwine themselves from time to time with British loyalty. That is what may be expected from the origin of the virtue. It has grown, as a matter of fact, from acts of hostility as well as from instincts of faithful affection; and it is only by the further development of its social side together with general humanitarian instinct that it can be purified and preserved. On its positive social side, however, it acts on the primitive as on every society to weld a group of kindred into a band of comrades, resolute to preserve their unity by loyalty to the band. This is political union and the beginning of conscious nationality.

As human life develops, the common consciousness of each nation grows in interest and complexity. Every event in national history, every achievement in national literature, every reform in the national institutions, the customs, traditions, ways of thought, manners, even mannerisms—all contribute to the sense of national unity. The citizen from his youth up learns to love all the dear familiar things that mark the common life, learns also to be proud of and rejoice in them as in some peculiar sense his own. Nor is it by the merit of his country only that he is possessed. The history, the literature, the glory of his nation, the suffering also, even the shame and the crime, affect him as of his inmost life. This is so less or more, no doubt, but his nationality has reached its developed consciousness in so far as it is so. Such a citizen has passed the instinctive stage in which men of common blood, habits, and interests hang together; he has passed also the merely political stage in which they band themselves together of deliberate intent and under pledge of mutual faith. He has reached a further stage, the national stage proper, in which he is conscious of the national type as his, to be guarded, cherished, and developed by him at all costs and as a precious privilege. This stage is marked by concentration of attention on the end which has been subserved indirectly in the earlier stages, i.e. on the development and

Varieties of history and circumstance supply one main clue to the varieties of nationality which characterize different nations. That the national type itself, whether based on racial or historical considerations, affects the variety of this element in it would also seem to admit of no doubt. Nationality can hardly feel quite the same in the lively atmosphere of an imaginative race as in quarters where wits move more slowly and ideas are more rare. Yet there is some risk of error in exaggerating these distinctions. The common characteristics of human nature, as shown by our mutual intelligibility, are great enough to overshadow the effect of these minor varieties in the composition of a property so universal as this.

One distinction stands out, however, as important for discussion here. This is the distinction already made between the moralizing and non-moralizing elements in the psychosis, and so between good, bad, and indifferent kinds of national sentiment. With the development of this distinction history and circumstance have much to do—so much, indeed, that it would almost be true to say that the character of the national sentiment can be inferred from consideration of the national circumstances, past and present. This is only an example of the general psychological truth that average human nature on the whole responds to the claims made upon it, adopts, or at least favours, the ideals set before it, and falls in with the sentiments prevailing in its company. Hence, when the nation is poor, oppressed, or in danger, the call upon the citizens for help, thrilling as it then is with evident reality, evokes a passion of self-sacrifice and devotion: we have nationality at its most picturesque and characteristic—almost at its best—concentrated upon the common resolve that the nation shall live. The elements here are all noble: the individual self of each citizen is strongly asserted, in disregard of the interest of self, for the preservation of the prime social good conceived as national existence. To the consideration of this end as a prime good we shall return presently. Assuming its goodness, we have in the total situation the supremely moral attitude of personal self-devotion for a good social end. Compare the case of a nation prosperous beyond all real need of more wealth, honour, or security. Nationality here has a part to play much less exacting, indeed, however it be played, but much more likely to be played ill. In the absence of any real claim on the citizens for the preservation of the State, national instinct may be dormant for the time. On the other hand, it may easily enough be roused, and, in the absence of high guiding ideals, it may naturally ally itself with its primitive associates, the military anti-foreign instincts. Sacrifices and efforts will then be demanded for the remedying of fancied ills, the strengthening of imaginary weak points, or the further increase of national honour, security, and wealth with their inevitable accompaniment, taken in this sense—the subjugation or humiliation of others. Instead of a defensive we have in the latter case an aggressive nationality; and simultaneously the spirit of self-devotion in the citizens is apt to be largely—not wholly—replaced by the desire of personal gain from the effect of the national operations. Thus the motives lose their purity of personal virtue at the same time that the national end becomes injurious internationally. History rings with the tale of nations to whom the beginning of the end came thus. The prosperous nation is not, however, bereft of good outlets for the national spirit of her citizens. No nation that the world has ever seen has been so prosperous as to need no labour of love within her boundaries for the improvement of the condition of her people. Prosperity has always been accompanied with abundance of

individual poverty; ignorance, ill-health, and vice are always with us; the sum of knowledge is never complete; the national possibilities in art and literature are always unsatisfied; the ideals of the perfect life remain ever unfulfilled. Public spirit is the prime incentive to the fulfilment of these ends. The national sense under good guidance flows easily into such channels. A little reflexion shows that attention to all matters of internal development in a nation's life is of a piece with the patriot's stern defence of her in arms; it is another kind of national self-preservation, the maintenance of the body politic in health, by action of the strong parts upon the weak so that these also may live and serve. This is at once the development of civic virtue in each and the establishment of profound organic unity in the whole.

The spectacle, however, of the prosperous nation spending all its national spirit on the development of its citizens, noble as it is, does not satisfy fully. There is an analogy between the personality of persons and the nationality of nations. A person living alone might live rightly for self, but a very imperfectly developed personality would be the result—a moral and intellectual being starved for lack of its proper sphere of action. Human persons, as we know them, could not have come into existence without human society. So also nations could not have come into existence without contact with each other; the passion of mutual adherence in the members of a nation, *e.g.*, is the counterpart of a capacity for rivalry with, or even passionate hostility to, an opposing group. The nations by their commerce in peace and war have brought each other into active existence. They stand side by side as units distinct, possible foes, possible friends, much as the primitive men do; and, just as the elements of interpersonal virtue are in the latter situation, so are the elements of international virtue in the former. The personality of the man is shown in his dealings with other persons, as courteous or morose, frank or suspicious, just or unjust, false or true. The character of the man is determined in the estimation of his neighbours by these signs. There is much that is analogous to this in the relation of nations. And what analogy suggests direct thinking confirms; for it is certainly the fact (1) that a nation becomes what it is, and thus defines the character of its nationality, partly by action and reaction between it and others, and (2) that it is an object of national desire, in the mind of the patriot who is the organ of such desire, to bear a good character among the nations of the world for justice, faith, and even courtesy.

If so much be admitted, the shallow pretence, sometimes advanced in thoughtless sceptical mood, that nations have no morals, no conscience, falls to the ground. That there is such a thing as national honour will not be denied, nor will any reader of these pages be likely to argue that military honour¹ is the only meaning of the word. National honour is the preservation of national character in the eyes of the nations, and this end can be achieved only by a national existence in accordance with the character to be ascribed. So far, therefore, as the desired character goes, nations have morals and certainly have consciences. How far it goes is, however, another question. The development certainly is not complete throughout the international community.

None the less the ideal of national virtue internationally manifested, as something more than a mere character for courage and treaty-faith, has always had a strong hold on patriotic minds; and sometimes it has played a prominent part in the

¹ This idea corresponds to the dueller's obsolete notion of personal honour, which, however, long co-existed with the true idea of honourable character that finally absorbed it.

NATURALISM.—1. Definition.—The words 'nature' and 'natural' are used in a bewildering variety of senses. Nearly every school of ethics might claim that in some sense it expounded and exalted the maxim, 'Live according to nature.' In particular, this maxim is a convenient enough summary of the ethical theories advanced by Sophists, Stoics, Butler, and Spencer respectively—to mention no others. But in each of those cases the same maxim is very differently understood. So with the adjective 'natural.' To know what it means in the phrase 'a natural law' is no help towards understanding its significance in either 'the natural son' or 'the natural consequence.' 'Be natural' is excellent advice, but by 'the natural man' we may mean with St. Paul the unregenerate. Similarly, 'naturalism' may be used in different senses. The particular meaning varies with what we oppose it to. Another complication is that the 'naturalist' is not necessarily an adherent of naturalism. The former term has now acquired a very specific meaning; it connotes one who pursues a certain branch of study, not one who holds a theory which can be called 'naturalism.' For one who holds by naturalism there is no one-word term in the English language. The word 'naturalism' was fairly often used in the 17th cent. as descriptive of a certain type of theory, but fell into disuse, and within the last quarter of a century has been revived (cf. Ward, *Naturalism and Agnosticism*, p. 20). We need not mention all the vagaries in its usage. In its revived and modern acceptance it means a certain type of *Weltanschauung* which has had its upholders ever since the first rise of philosophy. It includes all types of theory which rule or try to rule out of consideration whatever is called 'supernatural' or 'spiritual' or transcendent of experience. It attempts to transcend materialism (*q.v.*). It is not easily distinguished from positivism (*q.v.*).

2. Historical survey.—To write the history of naturalism in any detail would be to transcribe many pages from the history of philosophy. Here we shall merely indicate its broad features. Naturalism has always appeared at times when the scientific spirit has awakened. It has always been the outcome of enthusiasm for science. It has always been due to an exaggerated appreciation of science and scientific method, which has been oblivious of the limitations of science and uncritical of its presuppositions.

In ancient Greece the scientific spirit arose in opposition to the popular, naive, mythological, or theological explanations of phenomena. It aimed at giving a reasonable view of the world of nature by discovering and setting forth certain simple and intelligible principles or laws from which the whole complex of phenomena might be deduced. Various philosophers—e.g., the Sophists, Leucippus, Democritus, Epicurus—developed a naturalism which was either atheistic and materialistic or ignored all supernatural and spiritual elements. Nature in their view was self-contained and self-explanatory. Postulating only atoms in motion, the philosopher could explain all phenomena. The soul of man was only rarefied matter.

In mediæval times the reign of ecclesiastical authority was so absolute, and interest in natural phenomena so small—the scientific spirit, so far as it was awake, limiting itself almost exclusively to the defining and marshalling in logical order of dogmas—that it can scarcely be said that naturalism found any articulate expression.

Only with the revolt against authority and with the development of re-awakened interest in nature which led to the birth of modern science do we find once more a bold and thoroughgoing naturalism. In the 16th, 17th, and 18th centuries naturalism

on the whole was frankly materialistic and in many cases atheistic, though in some instances enthusiasm for nature led to a poetical and emotional pantheism. The naturalistic position of this period may not unfitly be summarized in the words of the famous sentence with which Hume closes his *Enquiry concerning Human Understanding*:

'If we take in our hand any volume; of divinity or school metaphysics, for instance; let us ask, Does it contain any abstract reasoning concerning quantity or number? No. Does it contain any experimental reasoning concerning matter of fact and existence? No. Commit it then to the flames: For it can contain nothing but sophistry and illusion.'

The Darwinian theory of evolution gave naturalism a powerful fresh impetus. In conjunction with the nebular hypothesis it seemed to explain fully man and the world in which he finds himself. All phenomena connected with them could be brought under the categories of natural science, tabulated and classified. Yet modern naturalism is in a sense not so intolerant of the 'supernatural' as the older was. The older was dogmatic in its denial of the spiritual and dogmatic in its affirmation of matter as the absolute reality. The modern is in alliance with agnosticism, and studiously calls attention to the fact that it neither affirms nor denies anything 'supernatural'; it is simply not concerned with it. Whether this is a consistent and reasonable attitude is, of course, a debatable point. Again, modern naturalism appears anxious to avoid the charge of materialism, which it professes to transcend. Matter and spirit, it points out, are only abstract conceptions, not substantial realities. We know, and are concerned with, only material phenomena and psychical phenomena.

'The fundamental doctrines of materialism, like those of spiritualism and most other "isms," lie outside the limits of philosophical enquiry. . . . In itself it is of little moment whether we express the phenomena of matter in terms of spirit, or the phenomena of spirit in terms of matter: matter may be regarded as a form of thought, thought may be regarded as a property of matter—each statement has a certain relative truth' (T. H. Huxley, *Collected Essays*, London, 1893-94, i. 162, 164).

The attempt is thus made to make naturalism a neutral monism neither materialistic nor spiritualistic. Whether it is really neutral we must consider below.

3. The doctrines of naturalism.—Naturalism is older than science, as we understand science, but it is not older than the scientific spirit. Throughout its long history its essential character has not varied. Only the rise of modern science made it surer of itself—more complete and imposing as a system. Its aim has always been the laudable one of explaining all phenomena in the simplest, most intelligible fashion, of reducing the complex to simple terms, and of exhibiting all things rising in accordance with some universal principle or law to whatever degree of complexity they may manifest. It sets out to explain everything on the lowest terms, with the fewest possible postulates of agencies required for their production. Its rule is 'Principia non sunt multiplicanda.' This, we may say, is the first characteristic of naturalism—its 'reduction' of the complex to the simple, its 'explanation' of the higher in terms of the lower. It has made an ambitious attempt to carry this out completely, and is persuaded that it has succeeded. Psychological phenomena may be explained in terms of physiology, physiological in terms of chemistry, chemical in terms of physics, the physical all in terms of matter and motion. That is the ultimate basis to which all things may be reduced; all phenomena, no matter what their complexity, are simply phenomena exhibited by matter in motion.

Next, naturalism holds that the complex arises from the simple by a process of evolution. At no stage has any outside, transcendent agency or power been involved. In the whirling atoms of

preservation of human types. These are types of persons and types of societies.

The loyal citizen of the developed kind, possessed by a full sense of nationality, conceives the national type as a kind of person and also as a kind of society of such persons. Many of the real persons and much of the real society he may perceive to be at present quite different. His ideal is likely, indeed, to surpass the reality, as otherwise there would be nothing to do or desire, no progress possible, development at an end, no action called for except that of defence in case of need. No nation has ever yet reached such a stage, although some have stagnated—and most of these have decayed—because they acted as if they had reached it. To our loyal citizen, however, we may ascribe more sense of fact. It will be natural, therefore, that he shall find much fault with persons and institutions as they are. This is inevitable if he is earnest about realizing the national type as the best, and is, at the same time, no blind idealist to substitute imagining of what ought to be for faithful perceiving of what is. The blind idealist is a danger to the national development second only to the contented realist who desires no improvement.

It may be instructive briefly to compare the nationalist and imperialist ideals, treating both as ideals with a view to the end which they imply. Merely nationalistic imperialism, the motives of which are territorial aggrandizement, political supremacy, and monopoly of the world's industrial resources, does not enter into this comparison. The latter is but an extreme development of the crude mediæval nationalism centred in the constant endeavour to get the better of others in the division of material advantage. From time to time the world suffers an outburst of this crude spirit in some strong nation not come sufficiently to consciousness of the higher nationality. To other nations it is a menace: they are thrown back on their instincts of material defence, internal progress everywhere being retarded for the time. The imperialist ideal is not, however, this tearing national selfishness, though it may be invoked to make the latter seem more humane.

A great nation, like Britain, France, or Germany, conscious of its own national type as good, may well give rise within its borders to the idea of benefiting the world by imposing that type on all whom it can reach. In a sense and up to a certain point, great nations do this in respect of alien immigrants who become naturalized within them, though, if these be numerous, homogeneous, and of marked racial type, it may become an anxious question whether the cherished national type may not itself be modified by them. The United States offer on the whole the most striking example of successful absorption of strangers on a large scale.

It is another matter when an attempt is made to impose the national ideal on other peoples from without. The Roman empire, with its genuine extension of Roman citizenship to the provincials, is an example of success in this attempt. Yet in the end it was a double failure. The Roman type was in the long run blurred, though an ample heritage, no doubt, of ideas and institutions remained. The native development of the nations that became provinces was arrested and their self-reliance for the time being destroyed. So they too went down before the fresh barbarian, and their type also suffered eclipse. Thus the world lost what it might have had—a Latin Italy and a Celtic Gaul.

Let us view the matter, however, from the modern standpoint. The attempt could not, of course, be made with respect to another nation

existing as such, except in the absence of any regard to the other nation's national sentiment as a political and moral force. It would not be possible for any of the great nations to absorb a small European nation on any credible pretext except that of national self-interest. The world as it is now, therefore, can only for the most part supply material so diverse racially from that of the great nations that subjugation in some form—not absorption by real development—is the only possible result. A few apparent exceptions, mostly rather far-fetched, suggest themselves, the most striking being that of the S. American Republics, all or any of which might conceivably be merged in the United States. But it is obvious that this result, whether achieved by consent or by force, could be maintained only by self-government on the plan of the United States; and under self-government the S. American would not become N. American at all: the difference of type would remain, whatever might be said in favour of such a powerful political alliance otherwise. The case of the British and the Boers is a real case, and of great real interest, though the scale is small. Will the Boers take on the British type and identify themselves in course of time with the British nation? Or will they, on the contrary, absorb the British colonial who really does settle, and develop an Afrikaner national ideal under the British flag? The nearness of race and fundamental identity of religion facilitate equally both results. The causes of divergence are historical, and self-government neutralizes their effect.

It should be noted that identity of flag by no means argues unity of nation. The most serviceable idea of an empire would seem to be that of a group of self-governing States under one central government for a small number of purposes, primarily that of defence and treaty-making. The degree of self-government may be greater or less, and, even without political independence, nationality in the higher sense remains unshaken so long as the members of the group feel that they are a separate nation and work to maintain and develop their own national type. The dual State of Austria-Hungary furnishes a striking historical instance. The four nations of Great Britain and Ireland also defy all attempts to ignore their individuality; each in its own way asserts its own distinctive traits, of language, history, literature, and personality; each claims more or less successfully some separateness of treatment relative to difference of ideals and needs; each demands its own birthright of being and becoming what it is and believes it is meant to be. But the greatest and most noted example is the British empire as a whole, constituted as a union of self-governing States scattered round the world.

The case of the Jews is unique and should be mentioned apart. It is that of a nation strong, capable, strictly cohesive, with no political aspirations, relying exclusively on the bonds of race, history, literature, and religious customs.

LITERATURE.—The theory of the subject is treated briefly in J. S. Mill, *Considerations on Representative Government*, London, 1861, ch. xvi.; H. S. Maine, *Lectures on the Early Hist. of Institutions*, do. 1875, ch. iii.; E. Renan, 'What is a Nation?', in *The Poetry of the Celtic Races and other Studies*, Eng. tr., do. 1896; W. Bagehot, *Physics and Politics*, do. 1887, chs. II. and III. For concrete illustration reference may be made to G. Mazzini, *Life and Writings*, new ed., London, 1890-91, esp. I. (see 'Unity of Italy,' pp. 267-309), III. (see pp. 1-40), v. (see 'Royalty and Republicanism in Italy,' and 'The Holy Alliances of the Peoples'), also *Essays*, Camelot Series, London, n.d. (essays I. and II. deserve notice). Still more immersed in the concrete is the interest which attaches to T. Davis, *Essays*, Dundalk, 1914, and to Mrs. J. R. Green, *Irish Nationality* (Home University Library), London, 1911. More recent books are R. B. Haldane, *Higher Nationality*, London, 1913; E. Zepallos, *La Nationalité*, do. 1914; A. J. Toynbee, *Nationality and the War*, London and Toronto, 1915, *The New Europe*, do. 1915.

SOPHIE BRYANT.

First let us ask, Is naturalism really the neutral monism that it professes to be? Does it in any real sense transcend materialism? In the essay 'On the Physical Basis of Life,' from which we quoted above, Huxley says (*Collected Essays*, i. 159, 164):

'Any one who is acquainted with the history of science will admit that its progress has, in all ages, meant, and now more than ever means, the extension of the province of what we call matter and causation, and the concomitant banishment from all regions of human thought of what we call spirit and spontaneity. . . . As surely as every future grows out of past and present, so will the physiology of the future gradually extend the realm of matter and law until it is co-extensive with knowledge, with feeling, and with action. . . . There can be little doubt, that the further science advances, the more extensively and consistently will all the phenomena of Nature be represented by materialistic formulæ and symbols.'

It is not obvious in what way a materialist would desire to modify this statement. He might conceivably say that that was exactly what he meant by materialism. The fact seems to be that, while the name 'materialism' is repudiated, and some theories of the older materialists are discarded, just as some old hypotheses of natural science have been discarded, naturalism as a *Weltanschauung* is in no essential way distinguishable from materialism.

The most important points, however, to which attention must be directed are: (1) the view which naturalism takes of consciousness and will; (2) its denial of, or refusal to consider, teleology; (3) the rejection of metaphysics.

(1) As we have seen, naturalism regards consciousness as epiphenomenal and the freedom of the will as a delusion. All our knowledge is of phenomena, and over the course of phenomena the spirit can exercise no control. It is not difficult to see that, if we carry this out strictly, we land in absurdity. If the theory is to be consistent or mean anything, it must hold that all the sequence of physical processes can be explained from itself. Everything is the necessary, inevitable result of the physical phenomena that preceded. Shakespeare's dramas, theories of naturalism, and their refutation are all simply the necessary outcome of the world-process, and as phenomena can be explained, with all the explanation about which we need to inquire, without assigning any real effective rôle to consciousness (cf. Otto, p. 346 f.).

'We know only phenomena'; but what is meant by a phenomenon? It is a question of the utmost importance, and it is safe to say that naturalism pays little, if any, heed to it. It takes for granted the uncritical 'realism' of 'the plain man,' according to which in sense-perception (which is the foundation of all knowledge of nature) we have mirrored in the mind an image exactly corresponding to a real object external to us. Naturalism takes an external world for granted, and the phenomena in which it is most interested are the objects and the happenings in this external world, of which knowledge is gained in sense-perception. It forgets the simple truth that, strictly speaking, we can know nothing but facts of consciousness; that an external world is an inference, the truth of which cannot be 'scientifically' proved; that sense-perception is not a simple ultimate thing, and that what we perceive is certainly not what science shows to be the physical phenomenon which results in perception, but an interpretation of, or an inference from, it. We perceive, e.g., a tree, but the physical phenomena which precede are (a) ether waves striking the retina, (b) nerve-vibrations. It turns out, then, that what we are really in immediate relationship with is not 'phenomena,' but what naturalism regards as secondary and almost negligible, 'epiphenomena.' After all, consciousness must be allowed a very real importance, for the only world of nature that we can

examine is the world as it exists in consciousness. That is the only world that we know, and the statement that all things would be what they are, were there no consciousness, is manifest nonsense.

Once again, let us consider science. Its greatest glory admittedly lies in its marvellous generalizations, its far-reaching inductions. If science is to confine itself strictly to the study of phenomena, what justification can be found for any of its laws and inductions? What right has it to make a statement about 'all bodies' until it has examined all? None, save what can be provided by 'epiphenomenal' reason.

Nor must it be forgotten that science deals in abstractions and ideals. Each particular science deals only with one aspect of phenomena; no one science nor all the sciences together can exhaust all the concrete fullness of any object that they investigate. Even the sciences that are almost purely descriptive describe an ideal which includes all that the members of the class have in common, but leaves out points in which particular individuals of the class may differ. It describes, e.g., the lion, but to the description no particular lion may in all respects conform, so that all that may be said of it is included in the description. The lion described by zoology is, in fact, an abstraction, an ideal. But abstractions and ideals belong to the 'epiphenomenal.' Hence from many points of view we perceive the vast and primary importance of the despised 'spiritual.'

With regard now to the autonomy of spirit, it may suffice to say, we have seen that facts of consciousness are the fundamental realities with which we have to deal, and every one will admit that it is a fact of his consciousness that at his will he can produce changes on phenomena—that he has a real power of self-determination, and that only so can moral distinctions have any meaning.

(2) Naturalism denies or at least ignores teleology. It limits itself to the search for causes; it takes no account of reasons. If it did not insinuate that there are no reasons and that to ask what is the purpose, the meaning, of phenomena is foolish and altogether unnecessary, we should have no quarrel with it on that account. But its view is that a phenomenon is completely explained when we have analyzed it into its component parts, reduced it to its simplest terms, and shown how it came to be what it is. Now, when we have analyzed a thing into its components and shown how they came together, we have not really 'explained' it at all. We have explained its make; we have not explained itself. We have described it—nothing more. Except in pure mathematics a whole is greater than the sum of its parts, and the wholeness of the whole is not explained by enumerating its parts. It is evident that there are many phenomena which are in any sense 'explained' only from a teleological point of view, and that in their case the question, What is it for? or, Why is it as it is? is of more interest and value for its explanation than the query, How was it produced? or, How did it come to be what we find it? The only satisfying explanation of a piece of machinery is an account of what it is for—what it is meant to do. In comparison with that, the question, What is it made of? or, How was it made? is of secondary importance. So with human actions generally. We may surely ask, Why did he do it? as legitimately as, How did he do it? That within a certain range final causes are operative is fact of consciousness. Naturalism has no right to forbid the inquiry as to whether they are operative everywhere, and must form an important part of the explanation of the world-process. We are not concerned here to show that nature exhibits purposiveness. Our business is only to vindicate the

the primal fire-mist lay all the promise and potency of the development that was to come, alike the light of setting suns and the thoughts that should find it glorious. The whole development and differentiation of the simple into the complex came 'of itself.' Any stage of world-development arises exclusively from, and is conditioned by nothing except, the stage that immediately precedes it. Any phenomenon is fully explained when what preceded it has been discovered. This scientific 'cause' is the only kind of cause with which naturalism will have anything to do. Everything comes necessarily out of what goes before it. Because of what precedes, it is what it is, and could not be anything else. There are no final causes. It is our sole concern to discover the causes of things, not their *reasons*. Thus naturalism takes a strictly mechanical view of the world of nature. But what of consciousness and self-consciousness? What of will, choice, and moral judgment? In the whole range of phenomena these occupy but a small part, but it is the most important part of all. In these questions we have the real storm-centre of the naturalistic position, and the point that calls for closest attention. Naturalism is usually willing to admit that it cannot bridge the gulf between the physical and the psychical, that in spite of its best efforts at explanation something of a riddle remains. But its faith in the primacy of the physical remains unshaken; it is inclined to hint that, if only our knowledge were more perfect than it is, we should see that no gulf existed, that the continuity of all phenomena whatsoever was unbroken. In the present imperfect state of our science, naturalism lays great weight on the theory of *psycho-physical parallelism*. Every psychosis has its neurosis. Every psychical phenomenon has its counterpart in some corporeal process. To maintain its view that every physical change is sufficiently accounted for by the physical state that preceded, naturalism concludes that the psychical is but an epiphenomenon with no real determining influence upon the physical. As the shadow reproduces the changes of the real object, so is the psychic process a shadow of the physical. The more psychology is 'associationist' and 'sensationalist,' the better can the strict correspondence of psychical and physical, and the dependence of the former on the latter, be exhibited. To identify the two classes of phenomena is not possible; hence naturalism must conclude that it is simplest to assume some unknown unity connecting the two. Both are aspects of one and the same fact. But vital and psychical are secondary. They are determined by cosmical mechanism; it is not affected by them.

'The spiritual becomes the "epiphenomenal," a merely incidental phosphorescence, so to say, that regularly accompanies physical processes of a certain type and complexity' (J. Ward, art. 'Naturalism,' *EBR* xxxv. 88).

It follows that there is no such thing as the autonomy of spirit, no freedom of the will, no spontaneity to be attributed to reason. Reason in some obscure way is the product of Nature. Nature has somehow come to self-consciousness in man. In the mind of man Nature has polished for herself a mirror in which her phenomena are reflected, and she is busy improving her mirror so that a clearer reflexion is gradually being attained (cf. Ward, *Naturalism and Agnosticism*, i. 22). The adherent of naturalism, indeed, cannot deny some activity to reason, but its activity is narrowly circumscribed. Its great function is to receive sense-impressions; thereafter it may be as active as it can, in associating and comparing them, though even in associating them it is bound by laws which can be perceived to have the same rigour and constancy as any natural law.

According to naturalism, 'man is essentially a sensitive subject, though able to reason about his sensations—that is, to associate, compound, and compare them. He is supposed to be built up of sense-perceptions associated with feelings of pleasure and pain. Recipient of external impressions which persist in idea and are accompanied by pleasure or pain on his part, and thus followed by other ideas and impressions, man's mental constitution is explained without attributing to reason any spontaneous or productive function' (Sorley, *Ethics of Naturalism*, p. 161.).

Hence naturalism adopts with enthusiasm the positivist view. All our knowledge is of phenomena; we have no concern with anything but phenomena, and they are to be investigated according to the methods which science has perfected. Apart from the natural sciences we have no knowledge in the real sense. If they were only so advanced as to be able to give us a perfect view of all the phenomena of nature and all their interrelations at any moment, in their light we could forecast accurately the whole future world-development. To a being provided with a perfect science the hairs of all heads would be numbered, and not a sparrow could fall to the ground without his knowledge (see E. du Bois-Reymond, *Ueber die Grenzen des Naturerkennens*, Leipzig, 1884, p. 6, quoted with similar statements in Ward, *Naturalism and Agnosticism*, i. 41). Metaphysical inquiries as to entities such as 'matter,' 'spirit,' and 'God' are all needless and profitless. All that is usually known as philosophy is to be discarded.

'Philosophy itself, in all its highest speculations, is but a more or less ingenious playing upon words. From Thales to Hegel, verbal distinctions have always formed the ground of Philosophy, and must ever do so as long as we attempt to penetrate the essence of things' (G. H. Lewes, *Hist. of Philosophy*², London, 1867, ii. 547).

The true philosophy has at last been discovered. It is science.

'A new era has dawned. For the first time in history an Explanation of the world, society, and man, is presented which is thoroughly homogeneous, and at the same time thoroughly in accordance with accurate knowledge: having the reach of an all-embracing System, it condenses human knowledge into a Doctrine, and co-ordinates all the methods by which that knowledge has been reached, and will in future be extended. . . . Its basis is Science. . . . Its superstructure is the hierarchy of the sciences—i.e. that distribution and co-ordination of general truths which transform the scattered and independent sciences into an organic whole wherein each part depends on all that precede, and determines all that succeed' (*ib.* ii. 590).

4. Criticism.—The primary *motif* of naturalism is altogether praiseworthy. It vindicates the rights of reason to inquire into phenomena and search for an explanation of them. It reprobates a lazy 'supernaturalism' which lays fetters on the spirit of inquiry, and declines the drudgery of trying to understand the world in which man finds himself by saying, 'All things are as they are by the will of God, whose ways are past finding out.' Yet in its fully developed form naturalism results in the denial to reason of its rights, and imprisons man in a dreary enough fatalism. It is all the more difficult to criticize naturalism because many of its exponents, and these the most popular, do not adhere consistently to a scientific precision of language in setting forth their views. They often seem to bring back with one hand what they have put away with the other. In speaking of 'nature,' e.g., they sometimes represent it quite anthropomorphically (cf. Otto, *Naturalism and Religion*, p. 24 ff.). It is to be wished that they who would reduce all things to mechanics would adopt uniformly a machine-like precision of expression, avoiding poetical imagery which, if interpreted literally, would confute naturalism, and, whichever way taken, is apt to be misleading.

We cannot here criticize naturalism in the fullness of detail required to confute it. We must refer the reader to such books as Ward's *Naturalism and Agnosticism*, Otto's *Naturalism and Religion*, and the numerous answers to Haeckel's works. We must be satisfied with indicating the main points in which naturalism is vulnerable.

than exactly determined, it is a question whether some deviations from the mean of precise measurements would not, on such a supposition, be wider than they actually are, so that Nature's lack of success in her attempts at exactitude would reveal itself.

It has been pointed out that the higher, i.e. the more general and abstract, and quantitative laws of science presuppose theories, and that the introduction of symbolic elements is essential for the application of mathematics to physics. It may be further remarked that laws and general theories are alike presupposed in all quantitative measurement—or at least whenever measurement of time (the conceptual absolute time of physics) is concerned.

2. The derivation of physical laws; the validity of the belief in universal law.—With respect to the way in which we come to know laws, it will be obvious that they are not among the data of science or on the same level as observed facts. This is not so plain in the case of the cruder, the purely empirical and approximate, laws, as in that of the higher, the quantitative, and more abstract. But in neither case is the law perceived like a phenomenon; what are observed are not laws but 'cases.' Laws do not state facts; they state relations, or at least standards or types to which facts have been found to approximate. On the other hand, scientific or physical laws, in that they always refer to the actual or sensible world, are not *a priori* or self-evident, like the laws of thought. Pure thought is characterized by logical necessity, and deals with universals; facts are particular and contingent. Yet in the ideal of science, as conceived, e.g., by Kant, we have the fusion of the actual and the necessary, the particular and the universal. If Kant's own theory of knowledge be rejected, this ideal is not attained; we have, in actual science, no fusion of the empirical and the rational, but only juxtaposition. If there be science of the ideal type, as Kant too hastily assumed there is, then it is true that there must be epistemologically necessary presuppositions of such science; in other words, if phenomena are wholly calculable, the processes of Nature and the course of thought must alike be conditioned by necessary connexion. Only the determined is completely knowable. Innumerable instances of particular and approximate uniformities naturally engender, or psychologically cause, the belief in a universal reign of law extending to the unknown as well as to the observed; but the psychological cause of a belief is one thing, its epistemological validity quite another. Law, in this wider sense, possesses, as we have seen, no demonstrability, no assured epistemological validity. Such a reign of law cannot be proved empirically, because experience can never furnish universal knowledge; nor deductively, because there is no self-evident or *a priori* general truth from which it can be deduced. It is therefore a postulate—a necessary presupposition, indeed—of ideal science; but in actual knowledge of Nature its validity is entirely dependent on, and co-extensive with, the observed applicability of law to the behaviour of phenomena. Similarly, every particular law, being neither a perceived entity nor a proposition deducible *a priori*, possesses necessarily no further validity than it has been actually observed to possess. In any more extended sense it is but a postulate. Indeed, every physical law of the higher type—such as Newton's law of gravitation—including conceptual symbolism as well as reference to concrete phenomena, originates as a hypothesis. Few laws of Nature would be discovered by Bacon's method of disinterestedly collecting all the facts and then eliciting their significant relations; and

none at all would be discovered if experience were wholly passive, or knowledge wholly the result of mechanical association. The fruitful symbol and the useful hypothesis are not found ready to hand, or given with the phenomena observed, but are invented—Newton's 'Hypotheses non fingo' notwithstanding—and such invention, like all work of creative genius, is intuitive rather than ratiocinative. The progress of science from empirical facts to laws, principles, and theories is by a struggle for existence between hypotheses, and survival of the fittest of them. Many perish for the one which survives, even though scientific hypotheses are perhaps never random guesses, and generally are shrewd conjectures based on clues, and, as such, are likely to emanate only from minds scientifically informed and trained. The law, then, is the successful hypothesis—the hypothesis, which, together with its deduced consequences, fits the facts or is 'verified.'

Laws, like the conception of universal law, will thus originate in the active selective mind of man. And so it is sometimes represented that laws of Nature are created, not discovered, and that there is more truth in saying that man gives laws to Nature than in saying that Nature prescribes laws to man (see K. Pearson, *The Grammar of Science*³, London, 1911, i. 86 f.). This would seem to be an exaggeration, for 'creation' implies too much. The particular form in which a law is expressed is certainly a human creation, and the creation or discovery—whichever it be—of a law is due to the inventive and selective activity of the human mind. But it is also true that, unless Nature were characterized by such and such constant relations, and her phenomena were connected in a certain way entirely independently of whether humanity is cognizant of her regularity or not, it would not be possible to fashion laws having scientific value. We cannot dictate any laws to Nature, with impunity, unless they already be her laws, i.e. unless Nature be *gesetzmässig*. Hence the laws of Nature are not adequately described as creations, though their verbal expression and their symbolical associativeness are such.

If the mind be the lawgiver, 'it gives nature no other laws than such as nature would follow under the conditions it fixes, and does actually follow, so far as these conditions are realised, or are established for the sake of experiment' (A. Rehl, *Intro. to the Theory of Science and Metaphysics*, Eng. tr., London, 1894, p. 236).

It would seem better, then, to speak of physical laws as 'discovered' rather than as 'created.'

Laws are nowadays regarded by men of science as formulæ merely expressing observed results, as characterized neither by universality (applicability to the unobserved) nor by necessity; they are often said to be descriptions, not prescriptions or enactments; they are not entities 'binding Nature fast in fate,' but provisional generalizations which may be modified or superseded (in many cases, at least) in the light of further knowledge. Of 'laws that never shall be broken' actual science knows nothing; a broken law would be but a false or incomplete description. Thus, J. Dewar, in an address to the British Association, 1902, said:

'It is only the poverty of language and the necessity for compendious expression that oblige the man of science to resort to metaphor and to speak of the laws of Nature. In reality he does not pretend to formulate any laws for Nature, since to do so would be to assume a knowledge of the inscrutable cause from which alone such laws could emanate.'

At the same time, few men of science would regard the significance of a physical law as exhausted in its capacity briefly to summarize past observations. Laws certainly imply also the belief that their application extends to unobserved cases—e.g., the future. They thus express probabilities, and have been compared to guide-posts, which tell us what to expect as a result of certain experiences.

legitimacy and importance of such an inquiry. Naturalism may confine itself to a mere description of the course of nature if it chooses. We insist that it shall be left open to others, if they choose, to try to satisfy the human craving for no mere description, but explanation. And for explanation the teleological point of view is indispensable.

(3) As to the rejection of metaphysics and the proposed shelving of philosophy in favour of science, we must refer the reader to the art. POSITIVISM. Suffice it here to say that science suggests questions of perennial interest and great importance which it itself has no means of answering, and that the idea that science is the true philosophy is entirely unscientific, inasmuch as, while there are many particular sciences, there is no such thing as a science which might co-ordinate them so as to produce that superstructure described by Lewes (see above).

Bergson, *Creative Evolution*, Eng. tr., do. 1911. W. D. NIVEN.

NATURAL LAW.—I. Different kinds of scientific laws, and their nature.—The term 'law' is used in the natural sciences to denote propositions of very various degrees of generality and abstractness. The simplest, or crudest, type of law is the statement of approximate uniformities of co-existence or of sequence observed to obtain between phenomena of much the same degree of concreteness and of conceptual elaboration as those which form the objects of unscientific knowledge. Laws of this type which refer to uniformities of co-existence are but expressions of the elements common to a class of phenomena which are at the same time more or less similar and more or less various. 'A law is nothing more than a docket into which we collect phenomena which have something in common' (A. Hill, *Introd. to Science*, London, 1900, p. 15); it states that the character which such phenomena have in common belongs to them all. Such laws express the results of comparison and elementary classification. Those of the same type which refer to uniformities of sequence are also formulæ in which multitudinous phenomena are stripped of their variety, and are reduced to unity, or more or less to identity; but they originate from generalizations of facts among which succession and connexion in time are an important consideration. Observation establishes, for instance, that this and that metal plate, when beaten with this or that rod, grows warm; and, when these particular facts are generalized into 'Concussion produces heat,' we have a simple, approximate or inexact, empirical law, which is but a general concept embracing similarly recurring processes, comparable with the class-concept, such as that of 'mammal.' 'Laws of Nature are nothing but generic concepts for the changes of Nature' (H. von Helmholtz, *Physiol. Optik*, Leipzig, 1866-67, p. 454).

The establishment of such laws as these, however, which are all of the form 'So far as we have observed, A is related to B,' marks but the earliest stage of a science. As science develops, the directly observed phenomenon, or the 'brute fact,' is itself resolved into co-existences and successions; and so the relations expressed by the 'brute law' are transformed into more complex relations between simpler phenomena. If laws of the first

type are rough inductions, purely empirical and contingent, they are often afterwards shown to be deducible, as particular cases, from more general or higher laws. As science proceeds towards its goal, the 'Nature' with which it deals becomes more and more abstract, because it is further conceptually elaborated; and the results of this procedure are visible in the higher laws with which science, at its middle stage, is mostly concerned. Thus Boyle's or Mariotte's law, that the volume of a gas at constant temperature varies inversely as the pressure upon it, introduces the notions of pressure, temperature, and mass, which are not matters of direct sense-experience in any empirical observation of the behaviour of gases. These are rather symbols, and the application of them to concrete phenomena presupposes the adoption of scientific theories. Moreover, it cannot be said of symbols that they are 'true' or 'false'; they can only be more or less suitable or convenient for a given purpose. Symbolism, in fact, as well as induction, enters into the higher laws of science. Thus Newton's law of gravitation not only presupposes more elaborate classification and generalization than does any law of the simpler kind described above; it differs further in being more conceptual, in introducing the idea of mutual acceleration, which is of the nature of a symbol, and in inventively associating this idea with the concrete phenomena; instead of being a mere induction from Kepler's laws, it is rather a symbolization of them, involving the confident adoption of the laws and hypotheses of dynamics.

H. Poincaré (*La Valeur de la science*², Paris, 1909, p. 238 ff.) maintains that empirical laws can often be resolved into two components: (1) a definition or convention, neither true nor false, but convenient, which can never be verified or refuted by experience, and (2) an empirical law rendering the prediction of brute facts possible. The latter component is always capable of revision in the light of further discoveries, and the former is erected into a 'principle,' which is of merely economic value. The symbolic, or descriptive and conceptual, element thus introduced into the higher laws of science is generally too simple for the complete representation of actuality; hence it is frequently found that there are circumstances in which laws do not hold. Symbols used by science are, indeed, sometimes avowedly fictitious, and laws are in some cases rendered applicable to phenomena only when quite unverifiable assumptions are adopted. Laws of a very high degree of generality, such as the principle of the parallelogram of forces, are sometimes asserted by high authorities not to be geometrically derivable, but to be based on an appeal to experience; but, of course, verifiability in experience can never be more than approximate. To pass from such inevitable approximations to absolute exactness involves the invocation of a principle—the simplicity of Nature—which, again, cannot be derived experimentally, but must be assumed for convenience's sake.

The approximateness of every experimental law has, indeed, been pressed by some physicists, especially of the French school, into a proof of their provisional, arbitrary, and conventional nature. So far as experimental observation, with its limitations of accuracy, goes, we rather establish an indefinite number of quantitative laws, all slightly different; and it is urged that the selection of one among these—the simplest—is a mere artifice. But too much can easily be made of this approximateness of observation. Certainly it affords no proof of the inexactness, but only room for theoretic doubt, at best, of the exactness, of quantitative laws; and, on the other hand, if Nature herself were always 'tending towards accuracy' rather

¹ See also the short introduction under the title Law (Natural), with the special application to psychology, sociology, economics, and history.

law. As only that which conforms to law, or is characterized by uniformity and determination, can be completely known in the scientific sense, and predicted or calculated, law is a condition of the existence of science. Laws are sought, then, with a view to making Nature scientifically intelligible, and therefore are instruments for the satisfaction of human interests, and especially of the need to act. Intelligibility, from the point of view of science—though not necessarily from that of philosophy, which takes a wider outlook—involves calculability; and this in turn involves the elimination of quality, and its replacement by the quantitative. The world has to be mutilated and simplified, as we have seen, before science can deal quantitatively with it, and the formulation of laws is a means to this end.

Physicists of the positivist and nominalist schools are inclined to see the sole function of law in economical or brief summarizing of past experience:

'To save the labour of instruction and of acquisition, concise, abridged description is sought. This is really all that natural laws are' (Mach, p. 193).

According to this view, laws are conceptual descriptions of how things change, resums of the routine of perceptions; and the necessity which we associate with the conception of law is said to lie in the world of conceptions (*e.g.*, in the theory of mechanics), and to be illogically transferred to the world of perception. The theory of knowledge of which this view (maintained, *e.g.*, by Pearson in *The Grammar of Science*) is the outcome, is based upon a confounding of the two distinct senses borne by the term 'sensation,' viz. (1) the object apprehended by sense, and (2) the process or act of conscious apprehension; and it seems to many to be committed to idealism of the solipsistic type, through failing to recognize the important distinction between individual or private experience and

the universal experience due to intersubjective intercourse.

On the other hand, it is maintained in some quarters that laws are explanations of the world rather than merely symbolical descriptions of experience.

'Physico-mechanical laws are, as it were, the telescope of our spiritual eye, which can penetrate into the deepest night of time, past and to come' (von Helmholtz, *Pop. Lectures on Scientific Subjects*, Eng. tr., London, 1893, i. 168).

Laws analyze phenomena into their real elements, are universals (if hypothetical), and claim universal validity. As a quality is an irrational surd, and as change is deemed inexplicable save as change of motion, laws aim at the establishment of purely quantitative relations; and the causal law, as used in science, approximates inevitably towards a statement of identity, expressed in equations. This view seems to mistake the abstraction for the noumenal reality, and, in aiming at a realistic account of what goes on behind phenomenal appearance, to overreach itself and to leave us with a purely kinematic, and therefore a purely conceptual, world. Perhaps the failure of both these extreme types of doctrine as to the nature of law and of science in general indicates that 'law' is not an ultimate category, that the cosmos is not capable of being adequately or comprehensively described or explained in terms of law, and that law itself has a teleological implication as well as a teleological origin.

NATURE (Primitive and Savage).—Whatever opinions may be held regarding the relation of animals to external nature, there can be no doubt that it has been an object of interest to man since his earliest existence as man. This is seen in the existence of so many myths regarding the phenomena of nature. These are found not only among savages, but in the lore of more civilized men, as well as in the mythologies of the higher religions. Everywhere man sought to know the origin of things, and suggested explanations for all the things which he observed, from the daily course of the sun in the heavens to the markings or colours of beast or bird. Sometimes he personalized the parts or phenomena of nature, *i.e.* regarded them as living beings.¹ He also constantly tended to bring his divine or worshipful beings into relation with nature, whether as makers or creators of things, as the producers of, *e.g.*, rain or thunder,

or as the ultimate destroyers of the world. The whole phenomenon of nature-worship in all its aspects shows again that man felt a strong bond uniting him to nature, which he sought either to strengthen or to loosen, according as he considered nature or the powers behind it friendly or hostile to him. The conditions of modern life are so different from those of the savage or of early man that we can with difficulty imagine what nature meant to them. Yet it must be obvious that men living in the closest touch with nature, immediately exposed to its hazards or rigours, directly benefiting by its agencies, and depending upon it without any intermediate agent for shelter and food, must have been quickened by it and stirred by thoughts concerning it, such as are foreign to more sophisticated life. To some extent this is also true of the peasant, with whom much of the earlier attitude persists and much of the older lore remains in spite of other influences at work upon him. The mythologies and the poetry of poly-

¹ This is different from personification (*q.v.*), the idea of a personal being more or less separate from that which he personifies.

Laws state the relations of things, and these relations are generally believed to be constant. The validity of such belief cannot be demonstrated. It would require an *a priori* premiss, and none such is forthcoming. If the principle of uniformity or the principle of induction could be demonstrated, such a premiss would lie to hand; in the absence of demonstration for these principles, universal law remains a postulate to be applied tentatively and to be trusted with safety no further than it has been found to be verified, and every particular law expresses a probability. Some maintain that the greater the number of cases in which the principle of uniformity has been observed to hold, the greater is the probability that it is universally true, and that the probability (in the subjective sense) amounts now to practical certainty; others affirm that, unless uniformity be first presupposed, there is no basis for a theory of probability.

In any case, such necessity as would characterize scientific law in the event of the principle of uniformity being valid would remain contingent. For before law can be universal, or the world completely calculable from its past states, it must be presupposed that the world is a closed system, with no interference from without. Such a negative cannot be proved. Hence the necessity of law would remain hypothetical. A law can never tell us positively what was or will be; it can only tell us what will be, provided certain conditions are fulfilled, while we have no reason to assert that they will be fulfilled.

3. Reign of law in the actual world.—The assumption of universal law, on the strength of such uniformity as we can observe, is the more plausible so long as we agree to regard the actual, concrete, sensible world as identical with the highly abstract and conceptual world to which advanced science refers. This plausibility diminishes, however, when necessary distinctions begin to be drawn between the two worlds just mentioned. If mathematical or quantitative laws seem to 'apply' absolutely to the world of science, this may be due partly to the fact that the world of science has first been clipped to suit the laws. And this would seem to be the case. In the first place, the phenomena with which science deals are not the concrete objects of sense-experience as such, but conceptual constructions; the sun, *e.g.*, is replaced by a perfect sphere or by a point.

The law always contains less than the fact itself, because it does not reproduce the fact as a whole but only that aspect of it which is important for us, the rest being either intentionally or from necessity omitted' (E. Mach, *Popular Scientific Lectures*, Chicago, 1898, p. 193).

So, if actuality 'obeys' law, it is yet more than the law, and the law does not exhaust the truth about it. There is more in the world of experience than can be contained in concepts and laws, historical or irrational elements in knowledge and in being which cannot be expressed in symbolic science; the world is not rationalizable without remainder: 'reality is richer than thought,' as Lotze often remarks. Science is not an adaptation of thought to things, exclusively; it is at least as much an adaptation of things to a particular kind of thought. Science makes suitable assumptions at the beginning of its process of thought; it impoverishes reality in order to get under way at all; it can proceed only by means of highly artificial manipulation of the residue of experience which it retains. Laws are after all our account of Nature's doings or habits, not hers; and in interpreting her exclusively in the light of them we may very easily perpetrate 'the psychologist's fallacy.' If the world, as science has constructed it—and the world of science is undoubtedly a construction—were a realm of law, a closed system, or a 'block universe,' the important

question remains, What is the relation of this geometrical world, wherein all change is change only of configuration and motion, to the actual world of experience? That the scientific schematism applies to it is at least partially true, for experience has hitherto found it to be so. That the actual world is such a schematism, such a mechanism, and no more, is not thereby proved. The whole structure of science, and the means by which it has put together its law-governed, largely conceptual, and symbolic world, show that there is at least room for escape from any such view. And this brings us to the question of the metaphysical and theological interpretation of the fact that Nature seems to be more or less a realm of law.

4. Metaphysical and theological interpretation of the reign of law.—Various views on this question can here be but briefly indicated, without discussion.

Finality cannot be philosophically reached until the problem of our knowledge of the external world is solved. Much depends on whether the realistic or the idealistic theory of perception of physical reality is valid. The issue is also dependent on whether a pluralistic or a theistic view of the world can be established.

Thus, if the primary properties of matter be alone 'real,' and if they are perceived 'diaphanously,' if, further, mind, including logically ordered thought, can be regarded as caused or determined by matter in motion, then it would seem to follow that the world is a mechanism behaving according to necessary relations between its elements, a realm of rigid law, of complete calculability. If, on the other hand, there is no ultimate duality between the subject and object of experience, either apart from the other being a mere abstraction, and if real activity belongs to the subject, then it is easy to construct a spiritualistic world in which conformity of things to law implies the 'greeting of spirit by spirit,' in which possibly there is a God who 'geometrizes,' and which, if there be not such an Intelligence behind it, is intelligent itself. From this point of view, spiritualistic pluralism and theistic monism remain as alternatives. According to the former of these theories, the conformity of Nature to law would be the expression of habit, of behaviour consolidated into routine, on the part of the monads or spiritual units of which the world is composed, and would constitute Nature as *naturata*, in contrast with the new beginnings, or incalculable activities not as yet crystallized into consilient habits—*Natura naturans*. Theism is consistent with such pluralism, save that the plurality would be regarded as not absolute, but as embraced by one supreme Being giving a unity to the whole which the partly clashing interests of the many would not completely achieve. In this case Nature's uniformity would ultimately be the expression of what Leibniz called *coutume de Dieu*, a system of law capable of being altered by Him, a system by Him and for Him. The necessity in law would be rational necessity, not an exhibition of blind fate; laws of Nature would be, as Newton and Berkeley held, thoughts of God. As teleology denotes expression of purpose, a world characterized by such complete determination as is contemplated in ideal science (science as conceived by Kant) would be perfectly consistent with teleology, and a system of law merely a means to the attainment of a divine end.

5. The functions of 'laws' in science.—A few words remain to be said with regard to the purposes which the discovery and use of laws are said to fulfil in the natural sciences.

The conception of natural law is, of course, teleological, and is derived from that of juridical

volcano or earthquake, the scorching sun, the river drowning him, the lightning striking him, the storm destroying him. Others seemed to be watching him—trees must often have suggested this, or a jutting mass of rock, or the surrounding hills.¹ Some made strange noises as if of vague speech—the trees creaked and groaned, the wind sighed or roared in the forest or the mountain-gorge, the river and the waves made various audible sounds. These were more or less the things which man himself did; in these nature was like him. He moved, acted, spoke, and cried; he was sometimes kindly disposed; he could kill and destroy; some men had a strange aspect; some of them towered above their fellows. All this gave a more or less clear idea of the aliveness of nature or of many of its parts, not necessarily to all men directly, but to the more thoughtful of them, and it issued in a crude personalization. Man could regard nature only as in relation with himself, and those parts of it in which he was more immediately interested, or with which he was more directly in contact, would first be assumed to be alive. To the forest-dweller the trees by which he was surrounded would be all-important, or the river which swept through the forest. To the dweller in more open country other objects would be more immediately important—sun and moon, wind, lightning and thunder. Mountains or the sea would appeal more directly to those who dwelt among or near them. The priority of the greater or the lesser powers of nature in appealing to man would entirely depend upon his environment, so that it is impossible to say which of these came first in importance. This is not sufficiently taken into account by those who theorize upon this subject.²

The idea that man, animals, the objects or forces of nature, were alive, could do things, acted in this way or that, suggested that all had power or, perhaps, were powers.³ There might be, however, two kinds of power—that which is seen in ordinary actions and that seen in unusual or extraordinary actions beyond man's ordinary power or the common processes of nature. Both, but the latter especially—the supernatural, so to speak—might be conceived in time as potential in all things. It was not always being put forth, but it might flash out at any moment. This in turn gave rise to the conception of a universal impersonal power or storehouse of power pervading all nature, and of which all things, all persons, have less or more. It is the source of that power as existing in persons and things. To it, however, in turn certain anthropomorphic attributes may be ascribed, approximating to the personal. It is on the border-land between the impersonal and the personal. But we must not forget that these conceptions are things of long growth and have a long history behind. Though they are found among various savage peoples as a kind of metaphysical notions, they obviously involve long ages of reflexion. They could not have been evolved before men had had a long experience of innumerable concrete instances, and they cannot be adduced as explaining the origins of nature-worship, although they may have modified its history.

These conceptions are seen in various degrees in the *mana* of the Melanesians and Polynesians—an impersonal force manifesting itself in ghosts, spirits, some men, and certain things;⁴ the Annamese *tin*—the force existing in all persons and things,

without which they could not exist, of which some have more, some less, and which is nevertheless independent of them;¹ the Tlingit *yek*—the store of supernatural (not ordinary) power as it manifests itself in objects of nature or men, such manifestation being conceived personally as that of a spirit;² the Iroquois *orenda*—power existing potentially and universally in men, animals, things;³ the Omaha *wakanda*—invisible and continuous life permeating all things, causing motion and giving permanency of form, e.g., to mountains, rivers, animals, men, impersonal yet having in its entirety attributes of an almost personal kind;⁴ the Algonquin *manitu*—an omnipresent property manifesting itself variously and awaking everywhere a sense of mystery;⁵ the *mulungu* of the Yaos—a sort of supernatural power, a universal agency in all things, the agent in mysterious actions or beings, impersonal, yet sometimes regarded as a person or even as the equivalent of God.⁶ For a full discussion of these see R. R. Marett, *The Threshold of Religion*, London, 1909; E. S. Hartland, *Ritual and Belief*, p. 36 ff.; F. Bouvier, *Animisme, préanimisme, religion*, Paris, 1911; and, more briefly, J. E. Carpenter, *Comparative Religion*, London, n.d. [1913], p. 80 ff. See also artt. *MANA*, *MANITU*, *ORENDA*.

Though these conceptions are not 'primitive,' it is obvious that they point to an earlier stage when all objects in nature which came into man's purview were endowed, as he or the animals were, with life or the potencies of life and action. Another series of beliefs, the result of a long process of evolution, and probably proceeding in some cases alongside the growth of the *wakanda* group of conceptions, is that summed up comprehensively as animism. Man discovered that one main source of his 'aliveness,' his power of acting, was the fact that, besides a body which was alive, he possessed a spirit or soul which was now regarded as the animating cause of his being. Hence it was easy for him to suppose that animals and natural objects of all kinds were also animated by soul or spirit.⁷

This was already noticed by an observer of savages in the 17th century. Le Jeune says: 'Les sauvages se persuadent que non seulement les hommes et les autres animaux, mais aussi que toutes les autres choses sont animées' (*Relations de la Nouvelle France*, Paris, 1638, p. 109). Similarly E. im Thurn says that, according to the Indians of Guiana, men, animals, plants, rocks, stones, waterfalls, streams, etc., are all alike animated by a spirit (*Among the Indians of Guiana*, London, 1883, p. 350).

Some of the beliefs of the *mana* type are more or less parallel to animism, and now and then they seem almost to pass over to it. The Tlingit *yek* manifests itself in a multiplicity of objects at once as supernatural energy and as spirit, so that there are innumerable *yek*. The Battak think of *tondi* as a reservoir of life-power which pours down into men, animals, and plants in various degrees, as well as into inanimate objects. It gives to the body energy for thought, will, feeling; it can leave the body in dreams, and finally departs at death. It is thus not a little like the spirit or soul, yet it is differentiated from the shadow, double, or self, the *begu*. *Tondi* here resembles the Annamese *tin*, while *begu* is equivalent to the Annamese *khi*, a kind of soul present in all things and persons, and a second condition of existence. Thus some conceptions of the *mana* class tend to be the equivalent of the second soul as believed in by many savages.

Now, it is one aspect of the animistic belief as far as men's souls are concerned that they can leave their bodies temporarily, as in sleep, and finally at death. This temporary exit of the soul must also have been believed of the souls of natural objects, while, where any natural object ceased to exist—e.g., when a tree died or a well was dried up—its soul might become altogether detached. Hence the spirit animating the sun, mountain, river, or tree might be regarded apart from these—a sun-spirit, mountain-spirit, tree-spirit. Again, men's souls became ghosts, and ghosts were apt to become

theistic races of a higher type are rich in evidence of the love, respect, or fear of man for nature. Poetry everywhere has found in nature some of the most valuable sources of its inspiration and subjects of its interpretation. It teems with descriptions of nature, or with analogies drawn from its workings or its scenes. Sometimes, with more mystical writers, it regards nature as a symbol of spiritual verities, 'a living garment of God.' So, too, philosophy and science have sought to pierce its secrets, or philosophy, joining hands with religion, has sometimes regarded it as divine or a mode of the divine existence. Theistic thought has always shown the keenest interest in nature, as even a superficial acquaintance with the OT or with modern Christian thought would show. Nature's attraction for men is, in fact, perennial, whether as a thing of beauty, a restful consoler of heart and mind, a suggestive symbol, or a baffling mystery. They will go to it directly or they will study it under the guidance of an Emerson or a Wordsworth—the greatest of all those who have entered reverently into its inmost sanctuary.

1. Theories of nature-worship.—The subject of this article is in the main that of nature and its phenomena as objects of worship to savage and to more civilized men. There is no doubt that nature-worship is a thing of very ancient date, and that it has entered largely into most forms of religion and continued to affect those which sought to shake themselves free of its influence. Some, indeed, have held that nature-worship, in some shape or form, was the earliest aspect of religion. But, quite apart from what may be said on the side of animism as one of the origins of religion—though this is now more and more set aside—it is hardly likely that the particular forms of nature-worship claimed as the beginnings of religion or the reasons alleged for regarding them as worshipful by such writers as Max Müller or von Hartmann are true to fact. It is impossible for any one to tell what was man's religion in the very beginning, but man may have had religious aspirations or may have worshipped gods before he turned to nature as the source of worshipful objects or as affording satisfaction to his deeper longings. The high gods of even the lowest savages do not appear to be dependent on nature or to have been evolved from a personification of any part of nature or from nature-spirits. They appear to be 'older than any beast-god or god of the natural elements.'¹ Puluga, the Andaman high god, invisible, immortal, and the cause of all things, lives in the sky, and thunder is his voice, yet there is nothing to show that he is a personification of one or the other.² This is also true of the Australian high gods, who also are sky-dwellers. Indeed, such races as these can hardly be said to worship nature at all.³ Certainly they do not worship the sky, and, though they have sun- and moon-myths in plenty, and though sun and moon are personified, they are not worshipped. The Fuegians know of a being described as 'a great black man . . . wandering about the woods and mountains,' who is aware of man's conduct and punishes certain wrong actions, but he does not appear to be a nature-spirit.⁴ Even the evil spirits of the woods and of the sea and their progeny known to the Andamanese seem to be dwellers in those regions, not personifications of them.⁵ They are not propitiated, and are self-created and immortal, and inde-

pendent of Puluga. Among the Veddas, another low race, there is nothing but a cult of ancestral ghosts, or *yaku*, sometimes vaguely attached to forest-glades, rocks, and hill-tops, but not derived from these. Sun, moon, and heavenly bodies are not worshipped, though the former are personalized.¹ Indeed, it is but rarely that among the lowest savages a direct worship of nature can be found, the reverence for the creative being or the cult of ghosts existing instead. There are exceptions, as with the Bushmen, who, besides knowing and praying to Cagn, the creator, addressed also the sun, moon, and stars,² and the Hottentots, who, besides a cult of divine beings, known as Tsi Goab and Heitsi Eibib, and of ancestors, have ceremonies at new and full moon and at the rising of the Pleiades, and offer 'religions honours and invocations' to the moon.³ Again, the cult of ghosts and ancestors may exist apart from nature-worship, and owes nothing to it, though it may influence it in various ways (§ 2); and, though tribal or tutelary gods may sometimes be nature-powers, this is by no means always the case. Nature-worship is, in fact, but one of several forms of religion, and it is not necessarily the earliest or antecedent form.

2. Origin of nature-worship.—In considering the origin of nature-worship, it may be well to dismiss from our minds theories of animism or of *mana*. The objects or powers of nature—rivers, mountains, thunder, wind—as first viewed by man were or possessed, in his view, exactly what he himself was or possessed, whether that was *mana*, soul, or neither. They were simply regarded as alive in the sense in which he regarded himself as being. This must be the answer to the question, How did man regard nature and natural objects and forces around him? He knew himself alive, a being or person, one who moved and acted, who did things, and he probably saw in the things around him, especially in those which moved or did things, or in those which in any way suggested life, a reflexion of his own personality, greater or less. The things around him had varying capabilities, varying spheres of action, where action was concerned. Some were in motion—the river, the clouds, the sun and moon, the trees swayed by the wind. Some were vast entities—a huge tree, a broad river, a high mountain. Some were of strange, abnormal aspect—certain trees or rocks may have an unusual form, and it is certain that such things have a great attraction for the savage mind.⁴ Some acted or did things—the clouds poured down rain, the trees shed their leaves, or brought forth these and fruits, the earth produced vegetation, the thunder rolled and crashed, the lightning darted and shone, the sun gave light and heat, the mountain seemed to cast down stones and rocks in the avalanche. Some seemed beneficial to man, for it was inevitable that man should regard what he obtained from nature in the light of gifts or benefits to himself—earth was the producer, the trees bore him fruit, the sun and the fire gave warmth, thunder and rain broke up drought, sun, rain, and earth caused growth, sun and wind dried up floods, sun and moon gave light, the sea, lake, and river were sources of food, the tree and the cave offered shelter. Others, again, seemed hostile to man; at least they often caused great injury to him—the avalanche, the falling tree, the

⁵ Man, p. 159.

stars are the eyes of the dead (Hottentots), their souls (Eskimos, Persians, Vedic Indians), or human beings transformed, myth and belief show that they are often regarded as living beings with human characteristics (cf. Lang, *Custom and Myth*, London, 1884, p. 121 ff.). Trees, again, as most generally beneficent, their fruit a staple of life, themselves things which showed growth, dying down in winter and reviving in spring, would easily be regarded as alive and worshipped as such. The influence of animism, however, has generally obscured this, and we hear mainly of tree-spirits or deities of grove or forest. Magical rites connected with trees perhaps continue the older train of thought.

Where sun, moon, mountain, tree, etc., are thus personalized, regarded as living and acting, they can hardly be conceived as other than anthropomorphic personalities, because man knows no other personality than his own. They may, however, be conceived as animals, since these may be regarded by man as a kind of persons. Thunder was conceived by the American Indian tribes as a bird—the thunder-bird, with a human face and a nose like an eagle's bill, according to the Dakotas.¹ Rivers, perhaps because of their sinuous gliding motion, are sometimes conceived as snakes. But, when they are thus personalized, there arises the possibility of an inevitable if gradual separation of the sun, moon, or mountain person from the actual sun, moon, or mountain. He becomes a sun-, moon-, or mountain-god—a separate personification of these natural objects. This might happen quite apart from animism. The Marûts, Helios, or the earth-mother might be winds, the sun, or the earth regarded as persons, or personifications of the winds, the sun, and the earth, with these as their vehicles or symbols, their spheres of action. This process of separating a nature divinity from the object with which he was once identified or which was he, was one which might occur independently of animism, but which would be aided and hastened by it. We now consider animism in its relation to nature-worship.

When man came to realize that he had a soul or spirit, it was natural to attribute the possession of such a spirit to the objects around him, regarded already as living beings, and some of them already for him objects of worship. Now, when any object is thought to have a superabundance of *mana*—which is often itself regarded as 'supernatural'—or where it is possessed of a spirit, there is an added inducement to worship it, mainly because the range of its activities is increased. Hence both these conceptions, but especially the latter, have greatly developed certain forms of worship and have also given rise to other forms of worship or belief—ghost-worship and the worship of spirits or powers connected with nature, or the belief in these. As far as animism is concerned, it begins with attributing to all objects in nature—sun, moon, stars, rivers, lakes, the sea, trees, stones, clouds, winds—a soul or spirit, the animating power of these objects which have already been personalized.² This is a practically universal doctrine,³ and it has influenced all later forms of religion. But, as it was thought that souls could leave human bodies temporarily or permanently, it is obvious that this would also apply to all natural objects animated by souls. Souls could exist apart from bodies, either after death, as wandering spirits or ghosts, or in the other world, or, as was often thought, they had a separate existence before being incarnated in human bodies. What applied to human souls would also apply to souls animating objects of nature. They might come to be regarded as having a separate life of

their own, though still more or less connected with these objects. At the same time, the more purely animistic theory might still continue. What is certain is that in many quarters there is a belief in nature-spirits, spirits haunting trees, forests, mountains, rivers, etc., using these as a dwelling-place, but not animating them in the sense in which a soul animates a body. We can hardly doubt that the one belief is dependent on the other, and, in fact, it is often difficult to see where the dividing-line between the two lies, though many spirit groups associated with some part of nature tend to become independent of it. It is nevertheless the case that animism let loose the crowd of spirits with which man's world is haunted, whether these were ghosts of men or spirits of nature. The spirit, or *numen*, animating a tree, a river or any part of it, a mountain or its gorges and rocks, would tend to become a spirit more or less separable from the river, tree, etc. Since there are many trees, and since various parts of a river or mountain are apt to be personalized, the result would be a number of spirits connected with these objects or dwelling in them, but liable to appear apart from them and often to assume a distinct form. Examples of such spirits are the *nats*, which, according to the Burmese, dwell in trees, the *toh*, which the pagan tribes of Borneo believe to infest rivers, forests, mountains, the sea, the similar nature-haunting supernatural beings of the Haidas, the *vuks* of the Melanesians,¹ the immense variety of river, or wood, or mountain spirits, demons, or genii thought to exist at all levels of civilization. Some of these are envisaged in grotesque or horrible forms; some in graceful guise, like the nymphs or naiads of Greece. But they are generally malevolent, and man seeks to propitiate them by prayer, offerings, and other rites. In some cases such spirits may be derived from human ghosts or these may mingle with actual nature-spirits, but more often the latter are quite independent of any ghostly ancestry.

Sometimes these groups of vague spirits are assumed to have a chief or chiefs, on the analogy of human society, and these may in time become personal divinities of some department of nature; or the host of spirits may be concentrated in individual gods of the forest, the rivers, or the mountains, with definite personal names; or the vague *numen*, or spirit, of a great forest, river, or mountain may develop into a great god, whose province is the rule over all forests, rivers, and mountains—departmental gods and sometimes creators of the objects which they rule (e.g., the Vedic Indra, associated with thunder and storms, or Vayu with winds, the Polynesian Tane Mahuta, maker and lord of trees and forests, and a host of others); or, again, where there was but one object of the kind in nature—sky, sun, moon, earth, or sea—the *numen* of these would become a personified god, ruling them and more or less associated with them. This separation of a god from the personalized object has already been regarded as a possibility apart from animism. In any case such gods tend to become more and more separate from the objects which were their source, more and more anthropomorphic, yet lofty divine beings, ruling the sun, moon, sky, earth, or sea; hence the number of such gods separate from, yet connected in some way with, these natural objects, which are found in all polytheistic religions. Such are earth-divinities like the Greek Demeter, the great goddess of the Semitic and Mediterranean races, the Teutonic Hertha, Târi Pennu of the Khonds; the sky-gods like Zeus among the Greeks, the Babylonian Anu,

demons and wandering malignant spirits. And, if spirits of natural objects were capable of finally leaving them, this might be the source of the belief in spirits haunting departments of nature, each group more or less attached to these—wandering spirits of the forests, of the streams, of the mountain-gorge—and generally evilly-disposed to men, in this resembling most wandering ghosts. Such spirits are often ghosts of the dead, or are connected with them, but not invariably so. The spirit of a man killed or drowned at a certain place might be supposed to haunt it, and would tend to be regarded as a local spirit. The forest- and water-spirits of the Finns are spirits of the dead, and the *idgins* of the Buriats—lords of localities and of the phenomena of nature—are deified human spirits.¹ These must be regarded, however, as occasional, not as general, instances.

But, before the phenomena or objects of nature were regarded either as possessing *mana* or as animated by souls, it is certain that they were worshipped. We have already seen how many human traits were ascribed to them by man, although they were obviously a different kind of beings from himself and his fellows, and this as well as the relation in which they stood to man—benefiting him or doing him harm—led man to try to come into personal relation with them and prepared the way for their worship. If man believed that a tree could give him food or a river could drown him, and that these were living beings whose actions expressed their attitude to him, it was easy for him to show his gratitude to the one or to deprecate the violence of the other by acts or words which were acts or words of worship, however crude and elementary. But, further, many of the phenomena or objects of nature were clearly greater, stronger, and stranger than man. They were also more crafty and possessed of mysterious force, which, generally quiescent, might dart forth at any moment to spread havoc. A tree suddenly crashed down, lightning flashed forth, the tornado whirled in its devastating course, the river rushed along in flood. All these incidents, which meant so much more to one dwelling in the midst of nature than to more sophisticated and protected men, must have had the effect of making man believe that nature was full of strange powers, which, while some of them seemed kindly disposed, might be erratic in their action or even consistently hostile. Now, man, surrounded by human beings, some of whom are friendly, others doubtful in their attitude, others hostile, will cultivate friendship with the first, and, if he is not strong enough to overcome the two last, will deprecate their anger or violence by a submissive attitude or by gifts, unless he tries to get the better of them by stealth. His friendly or deprecatory actions are not worship, though they might become so if the men in question were regarded as divine. This forms an analogy to man in his relation to the powers of nature. His actions with regard to these are friendly, deprecatory, or propitiatory, and, since they are actions towards beings like yet different from himself and more and more regarded as 'supernatural,' they tend to become acts of worship. And perhaps, where man tries to force the hand of such stronger powers by acts of a stealthy, cunning nature, we have the beginnings of magic. It should also be remembered that, if man had already conceived beings of the nature of the high gods of the lowest savages, and had bowed before them in crude religions respect, awe, or worship, this would be easily transferred to the personalized powers and objects of nature. Here, then, we have the beginnings of the worship of nature. But with the growth, on the one hand, of the idea that these

living beings in nature had *mana*, or supernatural powers, or, on the other hand, of the idea that they were animated by spirits, a great impulse was inevitably given to the development of nature-worship. For now the force possessed by these beings was raised to a more mysterious and awesome height, and, again, the way was open for a crowd of detached spirits to throng every part of nature or for greater divinities to emerge from nature, to take at once ever more anthropomorphic and more divine forms, while never losing touch with it. Moreover, quite apart from the satisfying of man's temporal needs, he quite probably wished to get into relation with these nature-beings because they seemed to offer satisfaction to his dim religious or moral sense or his vague intellectual needs. Man associated himself with these beings for these ends instinctively rather than by way of reasoned and conscious motives.¹ And doubtless in the end this was the most important reason of all.

3. Varieties of nature-gods and -spirits.—The influence of animism or of *mana* conceptions as well as the growth of the idea of natural objects or powers as personalities has largely obliterated the more primitive view of these as being simply alive; but traces of it are still to be noted, especially in mythology, which is so often conservative of older strata of belief and thought. This is seen especially in myths about the sun and moon. These are often regarded as husband and wife (Ainus), with the stars as their children (Dravidians, Andamanese); they are said to have descended to earth to rescue a persecuted step-daughter (Buriats); or the sun rises from his mother, the earth, in the morning and returns to her at night as her husband (Indonesians). Other examples may be seen in the art. EARTH, EARTH-GODS; MOUNTAINS, MOUNTAIN-GODS.² The cult of actual nature-powers or objects considered as personal beings is found sporadically not only in the lower culture, but also amidst the more developed religious ideas of higher races.

Examples of this are found in the Vedic hymns, where also a much higher view prevails. Rivers are addressed as 'mothers' and 'protectors,' and prayers are offered to the mountains, to the sun, to winds, and to the earth. Traces of such 'animatism' occur in Greek religion—the worship of rivers or of the sun as such. In Egypt Seb, the embodiment of the earth, bears evidence of having once been the earth *sans phrase*, while even the monotheistic worship of Aten was a worship of the energies of the sun, and the myth and cult of Ra show how the sun had once been personalized. A cult of the sun can also be seen behind the cult of sun-gods with the ancient Arabs, in modern Hindu rites, and among many Dravidian tribes; and, indeed, this is true wherever the sun is personified as a god (see artt. BENGAL, BERAR, BERBERS, BRAHMANISM, DRAVIDIANS, HURON, LAPPS). The moon was worshipped as such by Dravidians and Hottentots, personified by the Lapps, and regarded as an old man or a hunter by the Central Americans and the Eskimos. Earth as a fruitful mother is worshipped by many races, and the cult is often paid directly to the earth even when a personified earth-goddess is known. Rivers are often worshipped as such—e.g., by the Celts (*q.v.*), who regarded them as divine or as fertile mothers, while in Egypt the Nile was worshipped as a man. More usually, however, the cult developed into one paid to gods or spirits of rivers. Again, though mountain-gods or -spirits are often worshipped, mountains themselves are still regarded as divine and worshipful, as myth and cult show (see MOUNTAINS, MOUNTAIN-GODS, § 2). Especially among the American Indian tribes, where the winds are presided over by gods, they themselves or the quarters whence they blow are venerated as rain-bringers or controllers of the harvest (see *ERE* i. 253, 381^b), just as behind the personified winds of the Greeks (Boreas, Zephyrus, etc.) and the Vedic Vayu and the Maruts (the storm-winds or gods of these) lurk the winds themselves. Fire as a leaping, devouring thing, but also as giving heat, would easily be conceived as living and itself divinized. In many passages where the Vedic Agni is referred to it is difficult to say whether the actual fire or its personification as a god is intended. Like the earth, the sea has a double aspect. There are sea-gods, but the sea itself is a great being, feared by men yet also beneficent and worshipped, while even the personified sea-god is sometimes spoken of as the sea itself, as when the Celtic sea-god Manannan is identified with a great wave (*Bodleian Manuscripts*, § 46; cf. *RCel* xii. [1891] 105). Apart altogether from the belief that

² Cf. also the chapter on 'Nature Myths,' in Lang, l. 122 ff.

¹ See *ERE* vi. 24*, iii. 7b.

regarded as the work of savage man's high gods (see GOD [Primitive and Savage]), beings like himself, only bigger, more powerful, more crafty, who 'made things,' as he himself did; or the work is sometimes assigned to any prominent object in nature regarded as a living being—e.g., the sun or moon; again, even while the personalization of things in nature is most active, they are sometimes connected with what seems to be their source, and derived from some being dwelling in that source. The sea or a divine old woman living in the sea (Eskimos) sends storms; rain comes from the sky or from a god or beings dwelling there (Dengdit in Dinka belief, Mura-Mura in Dieri belief); thunder, the avalanche, or the flood might be regarded as caused by some being or beings behind nature, acting freakishly, as man himself often did. Such a method of thought is seen clearly at work where the spirits or forces supposed to animate things or phenomena are coming to be separable from them, or where the separation is complete and they are personifications of these. Then they have complete control of them—the spirit or god of storms sends storms, that of the river drowns men, that of agriculture causes growth. These are so many manifestations of the power and presence of such gods and spirits. Similarly the diffused supernatural power believed in by the Tlingits (*yék*) manifests itself locally as spirit in natural objects, animals, etc.

'The sky spirit is the ocean of supernatural energy as it manifests itself in the sky, the sea spirit as it manifests itself in the sea, the bear spirit as it manifests itself in the bear, the rock spirit as it manifests itself in the rock.'¹

Nature, in fact, is very apt to suggest to man either its own activity or the presence of a god or spirit, just as caves, trees, springs, or mountains were regarded as manifestations of deity—the *b'ālim*—by the Canaanites, or as the rainbow is thought to be the bow and thunder the voice of Mulungu of the Yaos, or a violent wind or whirlwind is so often supposed to be the vehicle of malevolent deities or demons or supernatural beings of some kind. Nature is so personal to man that he easily fills it with personal presences—embodiments of its parts—of woods, streams, or hills.

'He who wanders in the woods perceives how natural it was to pagan imagination to find gods in every deep grove and by each fountain head. Nature seems to him not to be silent but to be eager and striving to break out into music. Each tree, flower, and stone, he invests with life and character; and it is impossible that the wind—which breathes so expressive a sound among the leaves—should mean nothing.'²

How much more is this true of those things which suggested vast, superhuman, mysterious power—thunder, lightning, tempest, the waterfall, the roaring flood. These were easily personalized, or regarded as evidences of divine working.³

4. Man and the processes of nature.—As man was so dependent on nature for food as well as for other things, it was inevitable that he should come to think that he could aid its processes, so that these should work smoothly and produce a superabundance of results, or assist the gods or spirits of nature in their working. The sun might be strengthened for its work, the rain made to fall, storms driven away, the fertility of the earth augmented, the life of plants or trees stimulated, or the powers or gods behind these aided. The rites by which these ends were supposed to be attained are of a vast variety, and in the main belong to the province of magic (*q.v.*), though they have also a constant religious reference, and such religious rites as sacrifice and prayer enter largely into these magical actions. But what man did first as a means of assisting processes which lay outside his power came in time to be regarded as necessary to them. The powers of nature, its gods

or spirits, came to be regarded as dependent upon the magical rites which men performed. This subject has already been considered in the art. MAGIC, but it shows how closely man considers himself to be related to the nature which everywhere surrounds him and to the powers which animate or control it.

Tylor, *Primitive Culture*⁴, London, 1903. J. A. MACCULLOCH.

NATURE (American).—At the time of the discovery of the American continent there existed on it a system of thought which was old when Sumerian civilization in the valley of the Euphrates was at its zenith, between the tenth and the fifth millenniums before our time. In this system all objects of sense and feeling of the present are derived or evolved as expressions from primal myth-born beings of three, rarely five, great cosmic periods; beside and beyond these uncreated beings nothing else existed. These beings of the primal time were conceived of as man, or mankind; for the native name for 'man,' or 'human being,' was and is the generic appellation by which they are known in myth and epos; and they were, of course, real and constant in substance, while their form and their manner of existence were fictitious. They were real and constant because they were and are the bodies, the elements, and the processes of the world of sense and feeling; and so in myth and later in the epos they do or effect things which are impossible to man; and their form and mode of existence were fictitious because they were wrought and ascribed in terms of human physical and psychic expression and existence. In attempting to give an English name or appellation to these primal beings the American descendants of the myth-makers call them 'the first people,' 'the ancestral people,' 'the ancient people,' 'the man-beings,' and 'the ancients' or 'the old people' who lived in the youth of the world. They were later called the gods, because as universal forces or powers of the world they controlled the operations of what we are pleased to call 'nature.' In this manner it was conceived that these man-beings or gods controlled or shaped the welfare of men.

In the American system of thought every element, every manifestation, every phenomenon, every body of being, and every process of cosmic or psychic power was conceived of as one of the primal man-beings; even the faculties of mind and body were by some regarded as once some of the first people. It is clear that the American himself is absolutely excluded from the company of the primal 'first people.'

The pitiless, though constant, need of adaptation to the forces, bodies, and elements of the environment and the varying struggle to satisfy the prompting of the faculties of the bodily and the psychic self to meet this need are the starting-point of myths of genesis—myths of origin—or the poetic narratives of birth, death, and re-birth of all things. The man of the earlier time perceived around and within himself powers, potencies, and bodies which experience taught him were in a state of constant activity which in measurable degree

the Zulu Lord of Heaven, Ukko of the Finns, Tien in China, the sky-god of the Hopi, whose symbol is the sun; sun-gods like Rā in Egypt, Surya of the Vedic Indians, the Canaanite Shamash; moon-gods like the Vedic Soma, or that of the Central Americans, regarded as father of gods and men. Such gods as these tend to become the principal deities of any polytheistic system, and one of them often becomes the supreme head of the pantheon—Zeus, Indra, Rā, Anu, Hirume (the sun-goddess of Shinto). Here, *mutatis mutandis*, they are akin to the 'high gods' of savages, independent alike of nature-worship, though controlling nature, and of animism. Much of the lore and mythology about these gods, some of the ritual of their cults, the powers which they still retain over the objects or forces of nature, show their earlier ancestry and connexion with nature, though in this there are varying degrees of such connexion. The native gods of Shinto—the sun-goddess, rain-, storm-, thunder-gods, sea-, river-, earth-, mountain-gods, and the like—are still closely dependent on nature. So, too, are the Vedic gods, though these, besides occurring in anthropomorphic forms, are often moral governors, and also some of the Egyptian gods. Greek divinities who were earlier nature-gods threw off much of their old dress, and in certain aspects some quite freed themselves from it,¹ yet traces of their origin could still here and there be seen. All such gods tend to retain those parts of nature from which they originated as their symbols or attributes—sun, storm, thunder, growth. Some of them, as they rise in dignity, tend to take over functions or govern departments which, strictly speaking, belonged to gods who lagged behind. Thunder, from being regarded as itself a divinity, is often regarded as merely the voice of a god; or it may be regarded as the god of agriculture, perhaps because rain accompanies it and makes the ground fertile. Zeus, besides his original function, assumed many others, or, rather, a number of gods associated with these were assimilated by him, so that he was at once a sky-god, god of rain, of thunder, of agriculture, of mountains, besides coming to be the representative for the Greeks of the highest conception of deity. So, if Apollo was once a sun-god, his functions later became far removed from causing sunshine, until he retains as few traces of the sun as Artemis does of the moon. Some gods, indeed, retain only the slenderest link with the department of nature from which they originated.²

¹ Cf. *ERE* vi. 395a.

² The relations of man's worshipful beings might be graphically expressed as follows:

In polytheistic systems there will be many more gods than those who are connected even remotely with nature—gods of war, of crafts, city or community gods, abstract gods, and so forth. Yet even then and also where great nature-gods predominate there will also be many lesser nature-spirits, either those of this or that part of nature—governing it, dwelling in it—or else hosts of indeterminate spirits haunting woods, rivers, or mountains. The Chinese worship not only Shang-ti, the anthropomorphic heaven-god, but spirits controlling departments of nature—mountains, the sea, rivers, fire, rain, etc. The same phenomenon is seen in Celtic religion (see *CELTS*), and indeed in all the greater polytheisms. Much more is it the case in barbaric or savage instances. The pagan tribes of Borneo reverence the vague hosts of *toh* as well as the higher gods, some of these being nature-deities—gods of fire, of harvest, of thunder, of lakes and rivers—and others not derived from nature. This is only one example out of several which might be adduced. The importance of nature-worship as a large though by no means the only factor in the evolution of religion is seen in its various manifestations over the whole field of religious evolution, but not least in this that even in the highest forms of polytheism many of the gods still bear traces of their nature origin, and even the greatest gods are still brought into relation with nature, as in Babylonian theogony, where Anu is placed in heaven, Bel on earth, and Ea in the great deep. The logical outcome of nature-polytheism is pantheism (*q.v.*), as in India, though many polytheistic religions escaped this. Yet even theistic religions cannot escape the necessity of bringing God into relation with nature. Aspects and phenomena of nature are His instruments, evidences of His presence, or His symbols, as in the OT—much of this being based on the earlier Semitic nature-worship; or all nature is regarded as the creation of God, the field of His working, upheld and sustained by Him; or, again, theists, without reverting to pantheism, may use pantheistic language and speak of nature as 'the garment thou seest Him by.' Pantheism can never be a final resting-place for the human soul, and it has grave moral defects, but, in the words of a wise thinker,

'The system is an emphatic admission, or rather proclamation, that there is a secret in the Universe that belongeth unto God, unfathomed and fathomless by men.'

No religion save deism has ever banished God from the universe which He created. Hence both savage high gods and some of the gods of polytheistic religions may have their abodes in some part of nature without necessarily being derived from it. This should always be kept in mind in examining the gods of any religion. A god dwelling in the sky, like the Andaman Puluga or the Australian Baiame, is not always a sky-god in origin, and a god whose symbol is the sun may not always have been a sun-god, nor is a god who controls rain, like Dengditi of the Dinkas, or one who sends storms always a personification of rain or storm. Where such parts or phenomena are not personalized, the question still remains, Who causes them? The answer will inevitably be that it is the god who looms largest on man's horizon or has most potential power. Such a question may even be asked where these personalizations exist, for savage and primitive thought is inconsequent and admits of many contradictions. Creation-myths show that man has always been interested in the origin of the world around him, and the fact that its parts were believed to be alive did not hinder him from speculating as to how they came into existence. Creation is often

¹ J. Duncan, *Colloquia Peripatetica*², Edinburgh, 1871, p. 23.

If, then, it be true that the deities of a people are psychologically faithful reflexes of the distinctive features of the social organization of which they are regarded as members, it follows that, where comparatively complex social and religious organizations are found, it is futile to expect to deal with them as if they were the products of a 'primitive' mind, for evidently they have not the aspect of primitiveness. Certain predilections and predispositions as to the reasoning power and logical rigour of the American mind must be held in abeyance in any serious study of the ideas and conceptions evolved from it. If the premisses of American thinking be granted, the conclusions drawn from them are found to be consistent with them.

Among some American tribes man, the creature, ranked very low in power and knowledge, because every object and phenomenon except man was divine, while in other and more highly organized tribes man shared *orenda* with the gods or first people. One of the most striking traits of all the American deities is their self-existence. To this extent, then, they are peculiar and above human estate, experience, and knowledge. And, though both gods and men are derived, in mythic narrative, from an original first mother or parent, yet it is easy to see that the first people are self-existent, while man—the first human being—remains the creature of a god.

It is to be noted that in this American system of thought there is no concept or implication of a primal chaos preceding the events which resulted in the present constitution of things. In the myths from certain areas of America the metamorphosis of the first people—in mythologic phrase, the gods or deities—was achieved coincidentally with the first hint of the coming of the American folk to each place of those areas; but in other areas the American is created or formed by one or more of the gods of the third cosmic period. With the establishment of the present order begins the story of the existent bodies and processes of earth and sky, described in terms of human form and mind, and of their inter-relations with the American race of people. By means of two well-marked yet inter-related classes of myths—the narrative poems of creation or metamorphosis and the narrative poems of the great recurrent processes and of the bodies and beings of 'nature'—the American philosophers have related what they thought of the universe of their experience. The invisible forces of which the objects of sense are the evident expression were conceived as emanating from living beings endowed with human life, mind, will, and purpose. But it has been seen that these personified forces were in fact poetic fictions of the mind, created in the image of man; but, as they actually represented universal principles of unmatched power, they came to be regarded as superior to man in resource and immunity from destruction. The story of the activities of these personages became myth—a more or less sacred narrative—legend, or saga. And thus the cosmic bodies and processes as expressed in the environment became duly dramatized in the rites and ceremonies of long and intricate rituals.

This universal principle of physical and psychic change or metamorphosis in American myth and poetry explains why so-called animals occupy so important a place in the religious thought and culture of the peoples. It is a dogma developed from these myths that some of the first people are represented in the various species of animals, birds, reptiles, plants, trees, vegetables, and striking topographical features, as their 'elders' or 'ancestors.' These 'elders' or 'ancestors,' then, were and are in mythic phrase merely transformed

man-beings or first people of the first great cosmic period. Such an ancestor or elder on the tongue of an American of the elder culture is a deity. The myths thus explain the phenomena in religious expression. Hence there are found in abundance so-called animal-gods—beast-gods, bird-gods, fish-gods, reptile-gods, plant-gods, tree-gods, and vegetable-gods and goddesses. And the fact must not be disregarded that these ancestral deities were not the ordinary animal, beast, bird, fish, plant, or insect, but rather an ideally humanized creature of inchoate mind. Hence in Sumeria, Babylonia, and Egypt, and also in the descriptive visions of the Hebrew prophets and the mythic and religious art and culture of other early and lowly peoples, human-bodied personages with animal heads, or animal-bodied figures with human heads and aspect—of heroic proportions and unmatched power, some with floral symbols and other masks indicative of the kind of divine expression intended—are abundantly in evidence.

It must be noted, however, that the best-known gods of these early Oriental peoples are those representing the recurrent processes or phenomena of nature, and that of the gods or deities answering exactly to the first people of the American system of thought concerning the cosmos there have been found none but vestigial remains or traces. The mythic narratives of the primal first people in these places were lost or, by being misunderstood, entirely neglected. Were those myths available, it would be possible to explain to-day why plants, vegetables, insects, birds, beasts, reptiles, and fish have such prominence in the religious culture and thought of these lands.

J. N. B. HEWITT.

NATURE (Buddhist).—It has been recognized and often emphasized that Buddha is not an atheist; that he admits the existence of those supernatural beings who, although there are many kinds among them,¹ can in a general way be styled gods, *deva*. But the importance of these beings in the daily life and even in the spiritual life has been minimized by several writers, denied by some, and fully recognized only by very few scholars.²

The origin and the reason of this mistaken view on the 'godlike' side of Buddhism lie in the fact that gods seem to be of no use in the Path. It is a very plausible opinion that the candidate to *arhat*-ship has nothing to do with deities; very few texts dealing with the Path even refer to them; possibly not a single one points to the usefulness of god-worship. Nevertheless, it is evident that the Buddhist ought to entertain social relations with all beings, 'expanding' sentiments of compassion and benevolence in the ten cardinal directions. It is well known that gods—and especially the chief of the gods, Sakra—furnished the future Buddha with opportunities of self-denial. To deny the relations of the Buddhist saint with gods and his obligations towards them would be to deny his relations with his fellow-men, and to forget the altruistic features of the Good Law. Altruism, of course is not insisted upon in the Little Vehicle, but it is always *sous entendu*. That altruism is the principle on which depend the relations of the true Buddhist

¹ On the meaning of *deva*, 'god,' *devaputra*, 'god-son,' 'angel,' *devatā*, 'deity,' see T. W. Rhys Davids, *Dialogues of the Buddha*, London, 1910, ii. 115.

² See E. J. Thomas, *Buddhist Scriptures* ('Wisdom of the East' series), London, 1913, p. 99; A. Foucher, *Étude sur l'iconographie bouddhique de l'Inde*, Paris, 1899-1905, ii. 105.

affected his welfare and that of his fellows. In attempting to understand or explain the reason or the source of such activity, whether constant or variable, and his relation to it, he correlated this expression of strange and irresistible forces with his own conscious life, with the impressive sub-conscious energies of his own being, and with the superconscious promptings of his mind.

Lack of knowledge of the things of the distant past prompted the early ancestors of the American to project their own life into that unknown past; and ignorance of the things of the future induced them to project this present life into the dimly inferred next life. So it comes that the unknown future and the equally unknown past are but more or less idealized reflexes of the present experiences of man; neither is, in any mysterious sense, a revelation of other beings or other worlds. The study of the conceptions of the man of lowly culture and attainment indicates that he employed almost exclusively one means of defining the unknown. He interpreted and defined the unknown in terms of the known. And here the known quantity was the man himself. To the early American the origin of the bodies and the elements and processes of the earth and sky and the causes of their activities, as matters of environmental experience, were unknown. But it is found that all the biotic and psychic properties, faculties, and attributes, real or fancied, believed to be manifest in man were imputed to the objects and bodies of the environment, and their operations were then defined in terms of human activity, and hence all such objects and processes became duly endowed with life and mind and with all that these imply. And so, primarily, there were in American thinking at least three classes of persons or man-beings: (1) a part of the first people, few in number, whose minds and character remained unchanged and who lived in harmony with their environment—those first people who escaped the toil and strife of the 'war in heaven' and its fateful consequences, and who now dwell serenely in homes above the sky; (2) all those things or man-beings in the present world, exclusive of the American himself, who owe their existence to the metamorphosis of the great majority of the first people; and (3) the deities, gods, or man-beings who came into their present form in the second cosmic period as a final result of the collisions and struggle which closed the first period, i.e. all those who were changed in the second period. Some of the second class, after due metamorphosis, at the close of the second period, rejoined the first people who had not been changed in the struggles which brought about the close of the first period; and these have largely become the gods of the American, for they are uncreated and so divine. The American himself belongs to the third period and is a creature of one or more of these deities.

In attempts to explain the origin of myth and religion among men of low culture students of the developments of opinions have devised and used the term 'animism,' defined as 'the belief in spiritual beings,' 'the deep-lying doctrine of spiritual beings,' and 'the groundwork of the philosophy of religion, from that of savages up to that of civilized men,' for the mental process which imputes the form, attributes, and qualities of man to the objects, elements, forces, and processes of the environing world. But it must be noted that it is not animal life in its broad sense, but only human life, mind, passions, and form that are imputed in this process. This is a distinction which it is important to keep in view. And along with the imputation of these things goes that of the arts, the culture, and the institutions of the people. Thus it is found that the social

organization of the first people—the deities—is merely a reflex of that of the people themselves. Each of the deities was believed to have greater power in his or her own *natural* sphere than man, although the American who was ritually cleansed and secure might be able to do more effectively than one of the deities the things that fell within his competency.

By assuming the reality of these fictitious first people the American explained to his own satisfaction the origin and development of the forces of life and nature and the reasons for them. It thus becomes evident that an idol, as popularly conceived by careless observers, had no place in the American system of thought. The symbols or figures in wood or stone, in painting or sculpture, of any one of the deities or first people were never the object of any kind of worship. The rite was performed in honour of the deity so represented.

American myths inform us that in that great primal cosmic period the man-beings became restive through constant attrition and the frequent collision of diverse and sometimes quite contrary activities, natures, and mental attitudes; for offence had been given, with intention or without, and injury suffered, and, because each individual character had become ripened, manifest, and fixed, conflict of desires and purposes and bitter strife supervened, and the struggle did not cease until nearly all the first people had become changed, by a complete metamorphosis, into the various elements, bodies, and kinds of living creatures, with the exception of man, that have existed or now exist on earth, in the sky, or in the waters; they became the fauna and the flora and the striking topographical features of the birth-land of these myths. The earth, the sky, the sun, moon, and all the bright stars represent some of the first people of the first cosmic period. The spirits, minds, or lives of these first people were unaffected as to duration by the forced metamorphosis. Hence myth has its river-gods, rock-gods, mountain-gods, plant-gods, vegetable-gods, anthropic animal-gods, bird-gods, and fish-gods, who lived before the metamorphosis in the assumed first great cosmic period of peace and harmony and unmanifest character.

The first people and their metamorphosed selves, the gods, American myths inform us, perform their most characteristic duties and functions by means of a distinctive impersonal magic power which the Iroquois of the Mohawk dialect call *orenda* (q.v.), a word which with slight dialectic variations exists in all Iroquoian tongues.

With the gradual increase in complexity and compass of social and other institutions among American peoples and therefore with the unification of rule among them, there also came to pass like changes in the organizations of the first people, who ruled over those elements, bodies, or processes which they embodied; e.g., among the Iroquoian peoples the Earth-Mother is the chief matron in the great lodge of the gods; the ancient corn-woman, one of the changed first people, is the goddess Corn-Mother; and so with the goddess Bean-Mother, the goddess Squash-Mother, and all the myriad other first people. For their bounties to man, woman, and child these goddesses receive due homage and worship, as do all the metamorphosed first people, whose activities in the present world bring welfare and contentment to the American peoples. In the activities of these gods—conceived, however, in terms of human character and achievement—moral considerations were not involved; but, at a later time, when some of them became part and parcel of the social fabric, their deeds, thoughts, desires, and counsel acquired a potent moral value and implication.

freedom, He is withdrawn from all direct contact with the world, and His action is mediated by angels and spirits, personifications of the forces of nature and of divine attributes.

God created at first, besides heaven, earth, and sea, 'all the spirits which serve before him, the angels of the presence, and the angels of sanctification, and the angels [of the spirit of the fire, and the angels] of the spirit of the winds, and the angels of the spirit of the clouds, and of darkness, and of snow and of hail and of hoar frost, and the angels of the voices and of the thunder and of the lightning, and the angels of the spirits of cold and of heat, and of winter and of spring and of autumn and of summer, and of all the spirits of his creatures which are in the heavens and on the earth' (*Jub.* ii. 2, Charles's tr.; cf. *Enoch* lx. 11 ff.).

Apart from the personifications, the conception is not unlike that of deism. God as First Cause created all things, but at the same time He created spirits and angels, to which as second causes He deputed the control of all the processes of nature. It is an amalgam of animism and deism.

In Alexandria Jewish thought was formulated under Greek influence, and the action of God upon the world is expressed in more abstract terms. The heathen practice of regarding objects of nature as 'gods that rule the world' is repudiated, and an 'argument from design' is urged as a reason why men should recognize God 'by giving heed to his works' (*Wis* 13¹⁻⁹). Nature is simply and directly obedient to God's will. The marvels of OT history were God's acts of new creation for the sake of His people (*Wis* 19⁶; cf. 16¹⁷⁻²⁴). Here Wisdom personified is the mediator of God's activity in creation and providence (*Pr* 8²⁷, *Wis* 7²² etc.).

In the more developed system of Philo God's Logos and His powers are at once the media of His action and the principles of being and order in the world. His fidelity to OT ideas guards Philo from merging God and His powers in nature as mere immanent principles. He follows the Mosaic teaching that God created the world, though whether out of nothing or out of pre-existing matter is not clear. He carries the doctrine of divine transcendence and of the metaphysical antithesis between God and the world to the extreme limit, though he does not accept moral dualism. The world in itself is not evil, but the most perfect work of God. Philo gives profuse descriptions and discussions of the world as it exists. He follows in the main the teaching of the Greek science of his time, but expresses it in allegories of OT language. He conceives nature in general as a system of uniformities as complete and regular as that of modern science.

'Equality, the mother of justice . . . has ordered all things well, things in heaven and things on earth, by immovable laws and ordinances' (*de Justitia*, 14).

Yet some relics of primitive animism survive, as in the idea that the planets were living beings which moved themselves in their uniform order (see James Drummond, *Philo Judæus*, London, 1888, i. 267-313).

2. Primitive Christian teaching.—(a) *Common elements*.—In the NT, as in the OT, there appears a sense of the order and beauty of the world, as the product of God's wisdom, power, and goodness. They were not scientific or philosophical principles of uniformity or necessity or of the reign of law, but a *sensus communis* of the customary and normal processes of nature. Extraordinary events which we call 'miracles' were therefore regarded as signs and wonders, but not as violations of a natural order or law. They presented no intellectual problem, for they were manifestations of the power of God working freely according to His inscrutable will. They were neither contrary to nature nor above nature, but a part of the totality of divine operation which constituted, sustained, and governed the whole world. This pure and arbitrary theism had, however, been modified by

influences of Persian dualism and Greek polydæmonism allied with survivals of Semitic animism.

Angels might intervene and direct the course of nature for man's benefit (*Mt* 28², *Jn* 5⁴ RVm; cf. *Rev* 14¹⁸ 16⁴), but they too were agents of God's will and ministers of His power. Demons and evil spirits could also work injury to man, and certain classes of diseases were traced to their agency. The devil and his angels were a semi-independent kingdom over against God, but they too were subject to the power of God.

(b) *Jesus Christ* adopted these ideas and terms of His time. But whatever of dualism or pluralism was involved in them He eliminated by bringing all the processes of nature into the most direct and intimate relation with the idea of the Fatherhood of God. This governed His fundamental attitude towards nature. God's love and care for man determined all His activity in the world, and nothing happened except by the Father's will. 'All things are possible with God' (*Mk* 10²⁷), and not even a sparrow falls to the ground without the Father's will (*Mt* 10²⁹). God gives 'good things' to them that ask Him (*Mt* 7¹¹), and those who seek first His Kingdom and His righteousness will find nature and providence gracious (*Mt* 6³³). The processes of nature were neither eudæmonistic nor retributive in detail. Pain and sorrow were terrible realities which the best could least avoid. On the other hand, a misfortune like blindness need not be the result of sin (*Jn* 9²), and calamities did not prove that the victims were greater sinners than others (*Lk* 13⁴). The lilies grew beautiful, although they neither toiled nor spun. God 'maketh his sun to rise on the evil and the good, and sendeth rain on the just and the unjust' (*Mt* 5⁴⁵). The order of nature is the process of divine love and mercy. Christ's view of the world is teleological and optimistic. God directs all nature to fulfil His fatherly purpose, and nothing exists or happens which cannot be subordinated to that purpose.

The sayings of Jesus are unique in their time for their appreciation of nature's glory. His interest extended to birds and flowers, and His parables reveal that intimate communion with Nature which enabled Him to see in her face the symbols and the effulgence of divine truth. He loved all Nature. There might be evil spirits, alien enemies in Nature's realm, and in men sin and evil were manifest, but Jesus taught no doctrine of permanent and radical evil in the nature of things. He was no ascetic who held things to be evil in themselves. He condemned the pursuit of mammon and riches only because men made *things* their supreme good and put them in the place of God. But He appreciated *things* in their right place and use (*Mt* 11¹⁹ 15¹, *Lk* 7³⁴). And, even so far as the world had been subordinated to evil influences by men's sins, God's action in it would eliminate the evil and bring into existence a regenerate world (*Mt* 19²⁸, *Lk* 20³⁴⁻³⁶). This is no scientific or philosophic theory of the universe. It was not then, nor is it yet, demonstrably true. But it is the attitude of Christian faith towards the universe, because it is the Father's work.

(c) *Apostolic theories*.—Christ's ruling ideas appear in the writings of the apostles, but, as they addressed heathen as well as Jewish readers, they had occasion to develop in a more speculative way the conception of the relation of God to the world. Paul in several places expresses the principles that were subsequently developed into the cosmological and teleological proofs of the being of God. At Lystra he declared that the living God 'made the heaven and the earth and the sea, and all that in them is,' and that 'he left not himself without witness, in that he did good, and gave you from

with 'gods' is certain. Just as gifts, not to the *pretas* (dead), but to human beings in order to help the *preta*, are in the oldest and most orthodox Buddhism the substitute for offerings to the dead, so gods are not entitled to worship (*pūjā*) or to sacrifice (*homa*),¹ but they must take their part in the general benevolence of the saint. The saint must honour the deities 'who haunt the spot where he has taken his abode.'

'Revered, they will revere him; honoured, they will honour him again; they are gracious to him as a mother to her own, her only son; and the man who has the grace of gods, good fortune he beholds.'

And the best way of honouring the deities is 'to give them the merit of his gifts to the brethren, good men of good control.'²

Among all beings, Buddha has been the most honoured and beloved by the 'gods.' The joy of the 'angels' at the birth of Buddha is described in a well-known hymn of the *Suttanipāta*, which has been unduly compared with the gospel narrative of the Nativity. These deities are not 'angels,' but, from the moral point of view, poor creatures, unable to enter the way of salvation, very good nevertheless—at least many of them—and of a very gentle nature. They were happy at the birth of Śākyamuni and miserable at his death.

'For twelve leagues, Ananda, around the Fig-tree grove of the Mallas, the Upavatana of Kusinārā, there is not a spot in size even as the pricking of the point of the tip of a hair which is not pervaded by powerful spirits. And the spirits are murmuring . . . the death of a Tathāgata will take place. . . . They dishevel their hair and weep, stretch forth their arms and weep, fall prostrate on the ground, and roll to and fro in anguish at the thought: "Too soon will the Exalted One die."³

From the physical point of view, *devatās* are by no means contemptible. Some possess 'great might and power.'

'A Devatā by intense meditation on the idea of the minutest portion of earth and on the idea of the widest expanse of water, can make this earth move and tremble and be shaken violently.'⁴

And, if Buddha, and all the saints like Buddha endowed with the power of benevolence,⁵ command the love and obedience of all the deities, that is not the case with ordinary people; since the oldest days of India—in fact, since palæolithic times—deities have assumed two aspects: they are frightful (*rudra*) and propitious (*śiva*); they are fanciful, covetous, capricious; human beings have to 'tame' them, if they want to live happily. Hence the efforts of Buddha to 'convert' the deities, to teach them the elementary rules of morality, 'not to kill,' etc. We are told that he succeeded; he can at least boast of having converted and turned the chief of the spirits, 'Holder of the Thunderbolt' (Vajrapāni guhyesvara), into the protector of the faithful;⁶ the once formidable goddess of small-pox, Haritī, the child-devourer, into protector of mothers and of children;⁷ nevertheless, much remains to be done—as the race of malignant spirits is increased every day by the rebirth of malignant men—and accordingly Buddhists have been provided with protections, 'cuirasses' (*kavacha*), *paritrā* (*pirit*), or *rakṣas*, of every kind. We must not suppose that the Buddhist monks were, in old days, ignorant of the first principles of the faith, namely, that gods have nothing to do with salvation, that a good Buddhist has nothing to fear

from the demons, but sin and distraction (*pramāda*) are the real Fiend; but it may be safely surmised, from the texts themselves, that the ancient Buddhists were concerned with the *rākṣasas* and the *yakṣas* just as Burmese monks are nowadays concerned with *nats*, and just as Tibetan monks are concerned with *yi-dams*.

The stories of the conversion of Vajrapāni and of Haritī are among the good stories of Buddhist folklore; and the history of this conversion, i.e. the processes by which nature-gods of the most malignant forms have been developed into faithful and benevolent deities, is not to be forgotten by the student of the history of religion. Buddhism has deified its saints and 'sanctified' the Hindu gods—a movement in two parallel directions, the second of which has proved not the less important for the prosperity and the longevity of the Good Law; both may possibly have modified to some extent the primitive position of the Saṅgha. Rhys Davids remarks ('Buddhist Suttas,' *SBE* xi. [1900] 20) that the Mahāparinibbāna passage commented upon above (p. 210, n. 2) 'gives Buddhaghosa [the orthodox commentator of the Pāli canon] a good deal of difficulty, as it apparently inculcates offerings to the gods, which is contrary not only to both the letter and spirit of Buddhism, but also to the practice of Buddhists.' *Bhakti*-offerings, *pūjā*-offerings—that is to say, devotional and liturgic offerings—are indeed contrary to the letter and to the spirit of the oldest Buddhism, but it is an old Indian *dictum* that 'Each god is entitled to obtain his own offering' (*yādṛśo yakṣas tādṛśo balih*); and it may be confidently asserted that Buddhism has never—in practice—denied the right *balī* to the right *yakṣa*. These are mere trifles, small concessions to the needs of practical life, which cannot endanger the normal and energetic endeavour of the saint walking in the Path.

LITERATURE.—On the old Hindu pantheon in Buddhism much information can be found in the *Mahāsamayasutta* and in the *Āṭṇāṭṭiyasutta* (*Dighanikāya*, xx. and xxxii.).

L. DE LA VALLÉE POUSSIN.

NATURE (Christian).—I. Antecedent factors.—Christianity entered into a heritage of ideas about the world consisting of a background of Semitic mythology, the revelation of the OT with Jewish developments of it, certain elements from Persian thought, and ultimately the whole framework of Greek philosophy.

In its developed form the OT doctrine affirms that Jahweh, now the one, universal God, created all things out of original chaos, gives a mythical (Babylonian) account of the method and process of creation (Gn 1-2), and establishes God's providential rule over all things upon His creatorship (Is 40). The world therefore is a manifestation of God's power, glory, and goodness (Pss 19, 29, 104, etc.). All the processes of nature are His direct acts, the thunder is His voice (Ps 29), the light His garment, the winds His messengers, the lightning His ministers (Ps 104²). But Jahweh was no nature-god. He was in no way involved in nature, no system of natural laws or cosmic principles limited or qualified His action, nor was His being dependent on the world. The OT does not argue from the world to God in the manner of the cosmological and teleological arguments, but it descends from the idea of God into the world, and in its manifold beauty, power, and goodness it apprehends the free and sovereign activity of God (P. Thomson, 'God in Nature and in History,' *Exp* II. i. [1881] 161-179, 241-252).

In post-canonical Jewish literature the ideas of God's freedom, sovereignty, and transcendence were still more enhanced; and the idea of the world as an independent reality over against God is more emphasized. To secure God's holiness and

¹ On the contrary, Mahāyāna Buddhism is devotional, and Tantric Buddhism is liturgic. The *homa*-literature is pre-eminent in Tantrism.

freedom, He is withdrawn from all direct contact with the world, and His action is mediated by angels and spirits, personifications of the forces of nature and of divine attributes.

God created at first, besides heaven, earth, and sea, 'all the spirits which serve before him, the angels of the presence, and the angels of sanctification, and the angels [of the spirit of the fire, and the angels] of the spirit of the winds, and the angels of the spirit of the clouds, and of darkness, and of snow and of hail and of hoar frost, and the angels of the voices and of the thunder and of the lightning, and the angels of the spirits of cold and of heat, and of winter and of spring and of autumn and of summer, and of all the spirits of his creatures which are in the heavens and on the earth' (*Jub.* ii. 2, Charles's tr.; cf. *Enoch* ix. 11 ff.).

Apart from the personifications, the conception is not unlike that of deism. God as First Cause created all things, but at the same time He created spirits and angels, to which as second causes He deputed the control of all the processes of nature. It is an amalgam of animism and deism.

In Alexandria Jewish thought was formulated under Greek influence, and the action of God upon the world is expressed in more abstract terms. The heathen practice of regarding objects of nature as 'gods that rule the world' is repudiated, and an 'argument from design' is urged as a reason why men should recognize God 'by giving heed to his works' (*Wis* 13¹⁹). Nature is simply and directly obedient to God's will. The marvels of OT history were God's acts of new creation for the sake of His people (*Wis* 19⁶; cf. 16¹⁷⁻²⁴). Here Wisdom personified is the mediator of God's activity in creation and providence (*Pr* 8²⁷, *Wis* 7²² etc.).

In the more developed system of Philo God's Logos and His powers are at once the media of His action and the principles of being and order in the world. His fidelity to OT ideas guards Philo from merging God and His powers in nature as mere immanent principles. He follows the Mosaic teaching that God created the world, though whether out of nothing or out of pre-existing matter is not clear. He carries the doctrine of divine transcendence and of the metaphysical antithesis between God and the world to the extreme limit, though he does not accept moral dualism. The world in itself is not evil, but the most perfect work of God. Philo gives profuse descriptions and discussions of the world as it exists. He follows in the main the teaching of the Greek science of his time, but expresses it in allegories of OT language. He conceives nature in general as a system of uniformities as complete and regular as that of modern science.

'Equality, the mother of justice . . . has ordered all things well, things in heaven and things on earth, by immovable laws and ordinances' (*de Justitia*, 14).

Yet some relics of primitive animism survive, as in the idea that the planets were living beings which moved themselves in their uniform order (see James Drummond, *Philo Judæus*, London, 1888, i. 267-313).

2. Primitive Christian teaching.—(a) *Common elements*.—In the NT, as in the OT, there appears a sense of the order and beauty of the world, as the product of God's wisdom, power, and goodness. They were not scientific or philosophical principles of uniformity or necessity or of the reign of law, but a *sensus communis* of the customary and normal processes of nature. Extraordinary events which we call 'miracles' were therefore regarded as signs and wonders, but not as violations of a natural order or law. They presented no intellectual problem, for they were manifestations of the power of God working freely according to His inscrutable will. They were neither contrary to nature nor above nature, but a part of the totality of divine operation which constituted, sustained, and governed the whole world. This pure and arbitrary theism had, however, been modified by

influences of Persian dualism and Greek polydæmonism allied with survivals of Semitic animism.

Angels might intervene and direct the course of nature for man's benefit (*Mt* 28², *Jn* 5⁴ RVm; cf. *Rev* 14¹⁸ 16⁴), but they too were agents of God's will and ministers of His power. Demons and evil spirits could also work injury to man, and certain classes of diseases were traced to their agency. The devil and his angels were a semi-independent kingdom over against God, but they too were subject to the power of God.

(b) *Jesus Christ* adopted these ideas and terms of His time. But whatever of dualism or pluralism was involved in them He eliminated by bringing all the processes of nature into the most direct and intimate relation with the idea of the Fatherhood of God. This governed His fundamental attitude towards nature. God's love and care for man determined all His activity in the world, and nothing happened except by the Father's will. 'All things are possible with God' (*Mk* 10²⁷), and not even a sparrow falls to the ground without the Father's will (*Mt* 10²⁹). God gives 'good things' to them that ask Him (*Mt* 7¹¹), and those who seek first His Kingdom and His righteousness will find nature and providence gracious (*Mt* 6³³). The processes of nature were neither eudæmonistic nor retributive in detail. Pain and sorrow were terrible realities which the best could least avoid. On the other hand, a misfortune like blindness need not be the result of sin (*Jn* 9²⁴), and calamities did not prove that the victims were greater sinners than others (*Lk* 13⁴). The lilies grew beautiful, although they neither toiled nor spun. God 'maketh his sun to rise on the evil and the good, and sendeth rain on the just and the unjust' (*Mt* 5⁴⁵). The order of nature is the process of divine love and mercy. Christ's view of the world is teleological and optimistic. God directs all nature to fulfil His fatherly purpose, and nothing exists or happens which cannot be subordinated to that purpose.

The sayings of Jesus are unique in their time for their appreciation of nature's glory. His interest extended to birds and flowers, and His parables reveal that intimate communion with Nature which enabled Him to see in her face the symbols and the effulgence of divine truth. He loved all Nature. There might be evil spirits, alien enemies in Nature's realm, and in men sin and evil were manifest, but Jesus taught no doctrine of permanent and radical evil in the nature of things. He was no ascetic who held things to be evil in themselves. He condemned the pursuit of mammon and riches only because men made *things* their supreme good and put them in the place of God. But He appreciated *things* in their right place and use (*Mt* 11¹⁹ 15¹¹, *Lk* 7³⁴). And, even so far as the world had been subordinated to evil influences by men's sins, God's action in it would eliminate the evil and bring into existence a regenerate world (*Mt* 19²⁸, *Lk* 20³⁴⁻³⁶). This is no scientific or philosophic theory of the universe. It was not then, nor is it yet, demonstrably true. But it is the attitude of Christian faith towards the universe, because it is the Father's work.

(c) *Apostolic theories*.—Christ's ruling ideas appear in the writings of the apostles, but, as they addressed heathen as well as Jewish readers, they had occasion to develop in a more speculative way the conception of the relation of God to the world. Paul in several places expresses the principles that were subsequently developed into the cosmological and teleological proofs of the being of God. At Lystra he declared that the living God 'made the heaven and the earth and the sea, and all that in them is,' and that 'he left not himself without witness, in that he did good, and gave you from

heaven rains and fruitful seasons, filling your hearts with food and gladness' (Ac 14¹⁵⁻¹⁷). He used similar arguments on Mars' Hill (Ac 17²⁴⁻²⁶) and in the Epistle to the Romans (1²⁰). The point of the argument in each case is, not the being of God, which is assumed, but His nature and operation. Creation, providence, and nature are manifestations and proofs of the unity, spirituality, power, and goodness of God. Conversely, the Apostle's conception of God becomes his interpretation of nature. Paul is acutely conscious of the presence of evil and sin in the world (Eph 2³). Sin has made its seat in the flesh, whose very nature has been therefore corrupted (Ro 7¹⁸). Yet Paul's view of the universe as a whole is optimistic. 'To them that love God all things work together for good' (Ro 8²⁸; cf. vv. 20, 21). The world as God's creation is essentially good. Man's sin has subjected it to vanity, but it has not turned nature from God's purpose of goodness, and His salvation will deliver it from corruption 'into the liberty of the glory of the children of God.'

Paul retains the OT idea of God's direct creatorship (2 Co 4⁶, 1 Co 12¹⁸ 15³⁸), but in his later writing as well as in Hebrews and the Fourth Gospel traces are found of the Philonic doctrine of the Logos as the mediator of creation and the principle of nature. The term is used only in the Fourth Gospel, where the Logos is identified with Christ, and represented as issuing from God to be the maker of all things and the principle of life and light immanent in the world (Jn 1¹⁻⁴, 10). Similarly, according to Paul and Hebrews, Christ emanates from God (Ph 2⁶, He 1³) and 'all things have been created through him, and unto him . . . and in him all things consist' (Col 1¹⁶, 17). God 'appointed him heir of all things, through whom also he made the worlds' (He 1²). This conception of the Logos, as it is the interpretation of nature, differs in some important respects from that of Philo. The Logos is more closely identified with God, and therefore expresses better God's creative activity and immanence in the world. Its identification with Christ gives it the moral significance of His person, and the world process derived from Him is likewise moral (W. Beyschlag, *NT Theology*, Eng. tr., Edinburgh, 1895, ii. 98). The dualism which Philo had inherited from Plato is thus almost, if not entirely, eliminated. Perhaps something of it survives in Paul's doctrine of the flesh, in the belief in evil spirits, and particularly in the Johannine idea of the world as evil. This world is primarily the world of men in their opposition to God (Jn 1¹⁰ 17¹⁶, 1 Jn 3¹⁻¹³), but sin has vitiated the whole fabric of society, and even the objects of creation which form its environment (1 Jn 2¹⁵⁻¹⁷). Yet God so loved the world that He gave His only-begotten Son to save it (Jn 3¹⁶), and in the final consummation of salvation He will make a new heaven and a new earth (Rev 21). Man may be sanctified in flesh and spirit (1 Th 4⁵, 5²³, Ro 6¹⁹). All rule and authority and power and dominion, all evil spirits, will be brought into final subjection to Jesus Christ (1 Co 15²⁴⁻²⁷, Eph 1²¹).

Judaism had over-emphasized the transcendence of God and His arbitrary rule over the world. Greek thought tended to merge God in the world, which then became a necessary manifestation of divine reason. Christ and the apostles qualified Jewish transcendence by the revelation of God in Christ and of His immanence in nature and man. Yet it was not the essential and necessary immanence of Greek thought, but the personal and moral immanence of love and grace. Christ interpreted nature through His own filial consciousness of the Father; and the apostles through Christ's moral and redemptive personality. Nature, therefore,

could not be a system of mechanical uniformity and necessity, but it was a moral order in which God's unchanging purpose of grace is realized in His free activity through Christ. In such a system the antithesis of natural and supernatural could not arise, for with God all things are possible and natural, and without Him nothing is possible.

3. Hellenistic-Christian theories.—(a) *Assimilation*.—When the Christian Church entered the heathen world, it came face to face with a long tradition of Greek cosmology and science. Plato had established a dualistic separation between the sensual and the supersensual, between the world and God. Aristotle had defined their relation theistically—God was the First Cause of the world—and he had greatly enlarged the scientific knowledge of the world. The Stoics had conceived the universe as a system of law and necessity, wherein the world-process was ordered and governed by the divine Logos, and, inconsistently, they interpreted the process teleologically as realizing the ends of divine reason. Eclecticism had gathered all these ideas together into a more or less coherent system. On the basis of Platonic dualism Aristotle's scientific theism and Stoic monism had so far coalesced that God as transcendent cause was conceived as creator of the world and as the author and sustainer of its order and law.

Both the natural tendency to assimilate prevalent ideas and the necessity to commend itself to contemporary intelligence compelled Christianity to assume a scientific and philosophic form, which it did by adopting the current ideas of Greek science without change, and by adapting to its use such philosophic principles as would best harmonize with its own principles.

(b) *The Gnostics*.—The Gnostics were the first Christian theologians who developed a theory of the universe on the basis of religion. On two points their theories diverged so widely from the Christian position as to involve a direct contradiction of it. They conceived the relation of God to the spiritual universe pantheistically rather than theistically, as a process of emanation rather than as an act of creation. On the other hand, they conceived the material universe in a thoroughly dualistic fashion. The formless matter out of which the world was made, by one of the lower æons or spirits, was evil and antagonistic to God, so that the cosmic process was a strife between good and evil, and nature was so predominantly evil that it was destined to perish in the process of the redemption and restoration of the world of spirits. A still more extreme dualism, moral and metaphysical, was embodied in Manichæism (*q.v.*; see also Harnack, *Hist. of Dogma*, iii. 316-336). Such dualism was not only inconsistent with the Divine Fatherhood, but incompatible with the more general principles of monotheism, and the Christian Church opposed Manichæism and repudiated Gnosticism.

(c) *The Greek Apologists and Fathers*.—The Greek Apologists and Fathers developed a new theory of the world, which, while it did not quite eliminate dualism, strove to comprehend under the category of the Logos the complete rule of God over the whole world-process.

'God, the Maker of this universe, has made all things by the Logos which is from him' (Athenag. *Leg.* iv.).

'The immediate Creator, and, as it were, very Maker of the world was the Logos, the Son of God, while the Father of the Logos, by commanding His own Son—the Logos—to create the world, is primarily its Creator' (Origen, *c. Celsum*, vi. 66).

'For God is good, or rather is essentially the source of goodness: nor could one that is good be niggardly of anything: whence, grudging existence to none, He has made all things out of nothing by His own Logos, Jesus Christ our Lord' (Athan. *de Incarn.* iii. 3).

As to the method of creation, the account given in Genesis was generally accepted, but with vary-

ing interpretations. Clement and Origen defended the Mosaic cosmogony, but, by allegorical interpretation, they read into it much of their Neo-Platonic philosophy.

'God of his goodness and love created the world of Ideas, the invisible heaven and earth, and in accordance with this divine model, the Word gave shape and substance to the material universe' (O. Bigg, *The Christian Platonists of Alexandria*, p. 107; cf. p. 240).

Creation was an eternal process issuing from the unchangeable essence of God, and therefore of the nature of a physical and necessary emanation, as distinguished from the Christian idea of a free creative act, which was the general view of the Greek Fathers in the 4th and 5th centuries (Origen, *de Prin.* i. ii. 10, iii. iv. 3; Harnack, iii. 249; cf. Windelband, *Hist. of Philosophy*, p. 250 f.).

From the Apologists to Athanasius, there was also considerable development of ideas on the two points of the *immediacy* and *completeness* of God's creative act. The mediating Logos, according to the Apologists, was an independent being of temporal origin; according to the Alexandrians, He was co-eternal with God, but *ἕτερος θεός*; according to Athanasius, He was co-eternal and consubstantial with God, so that God in Him stood in direct relation to the world. According to the Apologists, the world was created out of pre-existing matter (Justin, *Apol.* i. 10); according to the Alexandrians, God created out of nothing the matter with which He made the world (Clem. *Strom.* v. xiv. 89; Origen, *de Prin.* ii. i. 4 f.); and Athanasius argues that Almighty God could only create out of nothing (*de Incarn.* ii. 4 f.).

God of His goodness created the world for the sake of rational beings. From Plato downwards the world was conceived teleologically as the scene and process whereby God realized His purpose of goodness towards man. For man as a rational being was essentially superior to all creatures, and the whole of nature is arranged to supply his needs and to afford opportunity for the development of his rational capacity (Origen, *c. Celsum*, iv. 75-99). It might therefore be expected that the world in all its parts and operations would manifest the wisdom and goodness of God. And the Greeks, both pagan and Christian, were duly impressed with the unity, harmony, order, and beauty of the universe. Although the Greek theologians had but little scientific interest in nature, they make frequent references to its order and bounty as evidences of the being and nature of God (e.g., Origen, *c. Celsum*, i. 23).

Yet the harmony was manifestly marred by evil.

'The sure and universal conviction was that the present condition and course of the world is not of God, but is of the devil' (Harnack, i. 182).

All Christian doctrine involves the idea of a fall, whereby the processes of nature as well as the lives of men were turned aside from their original and proper course. Platonic and Gnostic theories which traced evil to matter, and which would therefore make evil inherent in nature, were indeed strenuously repudiated. The fall was moral, not natural, and due to the voluntary acts of rational creatures, among whom Origen reckoned the sun, moon, and stars, as well as men, angels, and evil spirits (*de Prin.* ii. ix. 6). But he regards even the diversity and plurality in the universe as a departure from the unity, from God—a metaphysical fall which seems to establish evil in the nature of things. And the practical dualism of asceticism and monasticism found much support in Origen's philosophy. But his belief in monotheism, in the almighty power and goodness of God, and in free will led Origen, like the other Greek Fathers, to deny vigorously that evil inhered in nature. He also rejected the idea of a mechanical uniformity,

either in the recurring cycles of the universe or in the order of nature, because it would exclude the free will from whose acts sin and evil had to be derived. Nor was evil permitted to mar ultimately the perfection of God's plan, for He so orders the whole that it fulfils one ideal of perfect harmony (*ib.* ii. i. 3). He has so ordained the cycles of the æons and the processes of nature that they serve to discipline rational beings, and to lead them back to the original unity. Thus will all evil and disorder disappear 'when all things shall be re-established in a state of unity and when God shall be all in all' (*ib.* iii. vi. 6). Apocalyptic hopes proved the way of escape from dualism and despair for the early Church. Because of sin the present world was evil and under the dominion of demons, but it was a temporary phase to pass away speedily, and a restored and renovated world after God's perfect plan would soon be ushered in with the new age. Though the world was bad, nature was good and able to cast off its evil condition.

4. The Latin Fathers.—The Latin Fathers adopt in the main the theory of the universe developed in Greek theology, though with some characteristic differences.

'The one God, by His commanding word, His arranging wisdom, His mighty power, brought forth from nothing this entire mass of our world, with all its array of elements, bodies, spirits, for the glory of His majesty' (Tert. *Apol.* 17; cf. 11, 21).

The Genesis story is accepted literally as the way in which God perfected all His works in due order (Tert. *adv. Herm.* 29).

(a) *Tertullian*.—Tertullian states with new emphasis and clearness that God made the world out of nothing and it will therefore return to nothing. This is the theme of several of his treatises against the Gnostics (e.g., *adv. Herm.*, *adv. Valent.*). One characteristic difference between Greek and Latin thought was that the former was never quite free from a pantheistic tendency to derive the world to some extent by way of emanation from God's essence, but in Latin thought God's creative activity is free and even arbitrary, for it is not conditioned by His essence. Conversely, the world thus made out of nothing by God's free act assumes a more independent existence over against God. Although Tertullian and Minucius Felix wrote against Stoicism and rejected its pantheism, their view of nature as a totality of substances, laws, principles, and order, once created complete in itself, was largely Stoic. To the Stoic conception of a self-subsistent world they added the Hebrew-Christian conception of God as its original Creator. They came nearer to the deistic view than the Greeks. Nature was a most holy and 'reverend' work of God, 'an object of reverence' (Tert. *adv. Marcion.* iii. 11, *de Anima*, 27). As it enshrines the wisdom and truth of God, man may learn from it the general principles of religion and morality apart from revelation (*de Res. Carn.* 12). There is a common law of God 'prevailing all over the world, engraven on the natural tables' (*de Corona*, 5 f.). Tertullian appeals to the Roman emperors for the fundamental human right to worship as a privilege of nature (*ad Scapulam*, 2). The knowledge of God is manifest, not only from the works of His hands, but from 'the noble testimony of the human soul by nature Christian' (*Apol.* 17; cf. *de Test. Animæ*, 1). Christian experience is the special realm of the supernatural revelation and operation of the Spirit of God, but all nature's processes also correspond with the mind of God. There are two divine operations, natural and supernatural, but one truth. Tertullian shows a deep interest in the detailed processes of nature, which he conceived in the manner of Heraclitus as continual change ending in a final conflagration. He realized the difficulty which

evil and sin presented to his view of nature as a perfect work of God. Some evils and calamities he explains as means to the fulfilment of God's purpose, but radical evil and sin he traces to the free action of men and evil spirits. Nature is originally and essentially good, but the devil is the corrupter of nature (*de Cult. Fem.* i. 8). Yet he cannot corrupt the substance created by God. Paul's censure of the flesh applies not to its substance but to its action (*de Res. Carn.* 10). Christ abolishes not *carnem peccati* but *peccatum carnis*, not the substance of flesh but its *culpa* (*de Carn. Christi*, 16). And in the human soul the rational element belongs to its nature, but the irrational elements and the sinful tendencies emanate from the devil and enter the soul by acts of sin (*de Anima*, 16). Yet sin entered into human nature, and so into the world, at so early a stage that in a secondary sense it has become part of nature.

'The corruption of our nature is another nature, having a god and father of its own, the author of corruption' (*de Anima*, 41; cf. 16, 27, 89).

Even death is not a condition of nature, but the result of sin—the product of a fault and defect which is not itself natural; but it is easy to apply the term 'natural' to faults and defects that are inseparable from us since our birth, or even earlier (Traducianism). Thus, while Tertullian vigorously contends against the metaphysical dualism of the Gnostics, and in the main adopts the optimistic theory of nature which he had derived from the Greeks, his deep sense of sin and evil led him to lay the foundations of that Western doctrine of radical evil which was more fully developed by Augustine. Tertullian's writings also abound in ascetic teachings which easily led to the pessimism and contempt of nature that became rife in later ages. The large place and powerful influence which he ascribes to the devil in human conduct and destiny were inconsistent with an optimistic conception of nature in the widest sense. He never really faced the problem of evil on the large scale. He could retain his conception of nature as a perfect work of God only by assuming a realm of evil outside nature balanced by a realm of grace above nature, neither of which he attempted to fit into a theory of reality as a whole.

(b) *Augustine*.—The doctrine of radical evil was further developed by Ambrose of Milan (see Harnack, v. 49), and was finally stated as part of a system of the universe by his disciple, Augustine. With Augustine Patristic thought for the first time attains to a thoroughly subjective point of view. God and the soul are the two poles on which his whole system revolves. His interest in external nature and his theories of it are therefore secondary to and dependent upon his view of the relation between God and the soul. His philosophy is fundamentally spiritualistic. He even approaches pantheism. Will is the sole efficient cause. The will of God is the original and supreme cause of all things. Created spirits, angels and men, both good and bad, are also efficient causes in a secondary sense, but they have no power except what God has bestowed upon them. Material or natural causes are not efficient causes at all, 'because they can only do what the wills of spirits do by them.' Nature as a system of law and order is 'an order of causes in which the highest efficiency is attributed to the will of God' (*de Civ. Dei*, v. 9). God, being supremely good, can will only that which is good, and therefore all nature or substance is essentially good. By His good will He has given existence, form, quality, life, reason, beauty, position, relation, and all other attributes to everything in its due order, not only to heaven and earth, men and angels, but to the smallest and most contemptible

animal, to the feather of a bird, the flower of a plant, the leaf of a tree—all have their harmony and mutual place as parts of the great whole. It is not a necessary uniformity in nature, but the harmony of God's will. Even miracles are miracles only in a relative sense, for all events, whether normal or abnormal, issue directly from the will of God. Even the evil which other wills do, God so overrules that it does not mar, but rather completes, the harmony of His good purpose (*ib.* v. 11, vii. 30, x. 12, xi. 22, *de Moribus Manich.* 7, c. *Faustum*, xxi. 5).

Yet Augustine was intensely conscious of the reality of evil both in himself and in the world around him. In their normal state both the individual soul and human society were given over to evil as kingdoms of the devil. But this too was not of nature, but of will. God was the author of all natures and substances, and He could make nothing evil (*de Moribus Manich.* 2).

'The origin of sin is in the will; therefore in the will also is the origin of evil, both in the sense of acting against a just precept and in the sense of suffering under a just sentence' (c. *Faustum*, xxii. 22; cf. *de Civ. Dei*, xii. 1).

Physical evil is the result of moral evil. Pelagius argued therefore that nature, in spite of sin, is essentially good, because sin is only a momentary act of will that cannot pervert or corrupt the nature or produce an evil nature (Harnack, v. 194). But Augustine held that nature and will are so intimately bound up together that the will perverted by sin perverts and vitiates the nature itself, so that it becomes impotent to resist sin ('*natura vitata, massa perditionis, non posse non peccare*'). But there was in Augustine's doctrine a deeper element of dualism, a relic of Manichæan or Platonic influence, for the nature that was vitiated by sin held the capacity of corruption because it was created out of nothing, and evil is the privation of being; Augustine seems to regard the privation of existence in created things as in some sense a positive evil (*de Moribus Manich.* vii. 10, c. *Epistolam Manichæi*, xxxvi. 41). On the other hand, nature thus vitiated by sin can be restored to goodness, not by the creative or providential act of God, but by a supernatural act of grace through Jesus Christ and the Church, which is therefore a new and higher order of existence over against the old order of the sinful world. External nature is involved in the calamity of sin as the instrument of its punishment. God has not withdrawn all His creative goodness, for He has filled this misery of the human race with the rich and countless blessings of nature, and of the arts and sciences of civilized life (*de Civ. Dei*, xxii. 22, 23, 24). Yet the whole framework of nature has been irretrievably disordered by sin:

'From this hell upon earth there is no escape, save through the grace of the Saviour' (*ib.* xxii. 22), and 'all to which the New Testament invites belongs to that future inheritance which awaits us in the world to come' (*ib.* xxi. 15).

Nature as it is, therefore, stands in a double antithesis: (1) to original nature as God created it, and (2) to the realm of grace into which the elect are delivered from the corruption and misery of the present world. Augustine's doctrine of the two realms, of nature and grace, or of the natural and supernatural, has held sway over Christian thought down to the present time.

5. *Mediæval supernaturalism*.—The living interest of mediæval thought was almost entirely metaphysical.

(a) *John Scotus Erigena*, the most powerful and original mind in the early Middle Ages, in his chief work, *de Divisione Naturæ*, defines nature as the *processus* of the divine being in four successive stages: (1) nature uncreated and creating, or God in Himself; (2) nature created and creating, or God as proleptical cause of all things; (3) nature

created but not creating, the world as the continuous evolution process of the one divine substance; (4) nature neither creating nor created, God all in all at the end of the process.

'Of fatal necessity God eventually withdraws again into Himself; this is the final cosmic absorption in the bosom of the Great All' (M. de Wulf, *Hist. of Medieval Philosophy*, pp. 167-170).

Erigena's identification of all reality with God was not generally accepted by the Church, but the predominance of the metaphysical standpoint is equally manifest in the chief problem that engaged the thought of the later Scholastics.

(b) *The controversy about universals.*—The problem was mainly epistemological. Realists and conceptualists were manifestly concerned about abstract ideas, and nominalism, in spite of its more empirical trend, confined its outlook to the abstract problem of knowledge, and developed no interest in things.

(c) *The mediæval metaphysics of nature*, apart from Erigena's pantheism, was in all essentials Augustine's. God created all things by an act of will after the exemplar that He had in His mind (Aquinas, *Summa Theol.* i. xix. 4). He created all nature's good, and evil is neither a being nor a good, but the absence of being (*ib.* xviii.). The causality of God extends to all beings, not only to species, but to individuals. All things are directed by God to one end. The order of the universe is also a good which God has created (*ib.* xxii. 1, 2). And this order involves a gradation of being which admits the possibility of evil, but all actual evil issues from evil wills (*ib.* xlix.). All the Scholastics regarded the world chiefly as an effect of which God is the cause. Anselm, indeed, not content to base the proof of God's existence on creation, devised the ontological argument, but his successors rejected it, and fell back on proofs of the cosmological type. These have been criticized as implying a deistic separation between God and the world which limits His being and negates His immanence, but it is equally true that they tend to empty the world of its reality, for its substance or nature which was good was only the activity of God, while the evil in it was the negation of divine activity.

(d) *Practical dualism.*—While the metaphysical theory of evil represented it as negation, for the practical thought of the time it was the most terrible and dominant reality. The dualistic trend in earlier thought ran riot in the Middle Ages under the two forms of asceticism and diabolism. (i.) From the 2nd cent. downwards ascetic ideas asserted themselves in the Church. In the 3rd cent. men began to flee from this evil world to find peace and salvation in the desert. During the 4th cent. monasticism established itself as a permanent institution in the East. Its rise in the West was later—the Benedictine order in the 6th cent., the Clunian reform in the 11th, the Mendicant orders in the 13th—but it dominated the life and thought of the Western Church in the Middle Ages. Its chief, though not its only, underlying principles were that the world of sense was evil and therefore to be avoided, and that the normal processes of nature were, if not essentially evil,¹ at least occasions of evil.

¹ To many, indeed, virginity was neither more nor less than the very essence of Christian morality' (Harnack, *Monasticism*, Eng. tr., London, 1901, pp. 65, 67).

(ii.) Above all, the present world was under the dominion of the devil and his host of evil demons. Primitive animism, belched forth from the abysses of Western paganism, allied itself with Manichaean, monastic, and chiliastic elements in the mind of the Church, and all but submerged Christian mono-

¹ St. Francis of Assisi was a notable exception, whose love of nature was equal to his asceticism, but he stood alone, except for some intimations of a revived appreciation of nature found in poetry.

theism and every idea of a world created, ordered, and ruled by divine wisdom and goodness. Evil spirits swarmed upon the earth, ubiquitous and nearly all-powerful. Nature and man were their playthings. Magic, sorcery, witchcraft, possession, *incubi*, *succubæ*, alchemy, heresy, even science and philosophy, were forms of their activity. God, Christ, the Virgin, angels, saints, and sacraments afforded but uncertain protection against their devices to destroy men's souls. For the popular mind, a metaphysical supernaturalism was a poor protection against a nature diabolism.

(e) *Symbolism.*—The remedy was sought neither in science nor in theology, but in a symbolic interpretation of nature. If actual nature had been reduced to vanity by evil spirits, it still retained the form and image of the true and good, and so could be the efficacious instrument of divine grace. The idea that things had a double meaning, one obvious and the other hidden, had prevailed in many forms, in animism, poetry, Christ's parables, Plato's idealism, Alexandrian allegorism. The Patristic age developed the doctrine that the water of baptism, and the bread and wine in the Supper, had a mysterious and miraculous significance and efficacy for salvation. But there was no logical reason for limiting symbolical significance to a few natural elements. Sacraments were multiplied, and Hugo of St. Victor (1096-1141), in his *de Sacramentis Christianæ Fidei*, propounded the theory that the whole visible creation was a symbol of the invisible world and a revelation of divine truth (H. O. Taylor, *The Mediæval Mind*², vol. ii. ch. xxix.). But the symbolical interpretation of nature did not really reconcile it to God nor present a Christian theory of it. It was but a magic bridge cast by illusion over the chasm of dualism, and it availed only so long as the illusion lasted. When men at last brushed away the cobwebs of animism, diabolism, and symbolism, and gazed upon Nature herself, they entered into a universe very different from the supernaturalism and symbolism of the Church.

6. *Physical science in the Middle Ages.*—The mediæval Church preserved the tradition of science, and in its later period one here and there who manifested a new interest in nature may be reckoned as a forerunner of the modern science of nature. The end of the Patristic age, from Ambrose and Augustine to Gregory, descended to the lowest level of ignorance and indifference about nature. A semi-mythical book called the *Physiologus* supplanted the place of natural history (Taylor, i. 76). Boethius (470-525), by his translation of Porphyry's *Isagoge* and Aristotle's *de Categoritis* and *de Interpretatione*, revived some study of logic. Martianus Capella (5th cent.), in his *Satyricon*, or *de Nuptiis Mercurii et Philologiae*, gave a compendium of the seven liberal arts, grammar, rhetoric, dialectic (= *trivium*), arithmetic, astronomy, geometry, and music (= *quadrivium*), which became the standard text-book. Similar compendia were *de Artibus ac Disciplinis Liberalium Litterarum* of Cassiodorus (c. 470-570), *Originum seu Etymologiarum Libri XX* of Isidore of Seville (c. 560-636), *de Natura Rerum* of the Venerable Bede (c. 674-734), and *de Universo* of Rabanus Maurus (c. 776-856). Physics or natural science was included in all the traditional divisions of philosophy, but it only amounted to a collection of traditional lore.

From the 10th to the 12th cent. a new quickening influence emerged in the Arabian philosophy derived from Aristotle by Avicenna (980-1037) and Averroës (1126-98). Gerbert of Aurillac (c. 950-1003) handled the traditional material with a new sense of the importance of mathematics and natural science. The school of Chartres was a centre of great intellectual activity. Bernard (1090-1153) wrote on

Porphyry, and, under Platonic influence, conceived nature as a living organism. His brother, Theodoric (c. 1100–55), compiled numerous books of natural knowledge. Gilbert de la Porrée (1076–1154) wrote *de Sex Principiis*—an attempt to complete Aristotle's treatment of the categories. William of Conches (1080–1154), in his *Magna de Naturis Philosophia* and *de Philosophia Mundi*, propounded an atomic theory of the universe, and displayed the interest in the medical and physiological studies of Galen and Hippocrates which marked the school of Chartres. John of Salisbury (? 1115–80) and Alan de Lille (? 1128–1202) closed the period of mere compilers and disseminators of ancient knowledge.

The greater writings of Aristotle were rediscovered about the middle of the 12th century. The stages of their appropriation by the Christian Church are represented by the writings of Alexander of Hales († 1245), Albertus Magnus (c. 1200–80), and Thomas Aquinas. Aristotle's spirit of observation and research into nature affected Albert more than the others, but his scientific achievements were negligible. Vincent of Beauvais (c. 1190–1264), in his *Speculum Majus*, another encyclopædia, reveals a genuine interest in nature (Taylor, ii. 247 f.). But all these men, whatever they observed and admired of nature, looked out upon it from the prison-house of Scholastic metaphysics. Roger Bacon (? 1210–? 1294) was of a different type—the herald of a new day. He revolted against the *a priori* methods of Scholasticism, and laid down the experimental method of modern science as the only adequate way of investigating nature—'*Oportet ergo omnia certificari per viam experientiae*' (ib. ii. 536).

One important result of the new recognition of nature as a witness of truth, and of science and philosophy as media of knowledge, was a new emphasis upon the distinction between natural and supernatural knowledge, and the acceptance of the doctrine of twofold truth, one *secundum rationem* and the other *secundum fidem*. Albert and Thomas recognized the distinction between natural and revealed religion and tried to reconcile them. Duns Scotus allowed to philosophy and theology, the natural and the supernatural, each its separate realm. But very soon the divergence grew still wider.

7. Humanism and science.—In the 15th cent. the study of the classics led men back to a new appreciation of nature and a free investigation of it, which in the 16th cent. produced the beginnings of modern science.

(a) *The philosophy of the Renaissance* was not so much a new theory of nature as a new attitude towards it. But the scientific discoveries of Copernicus and others in the 16th cent., of Galileo, Kepler, and Newton, transformed the conception of nature, and came into conflict with much that had been embodied in Roman Catholic dogma. Since the Church would not reconstruct its dogmas, a deep cleavage was made between theology and science, and once more nature was abandoned, if not to the devil, to what was confessedly an un-Christian interpretation. From the standpoint of Roman Catholic dogma the modern conception of nature is essentially un-Christian and in most respects even anti-Christian.

(b) *Protestantism* as represented in theology was only partially and gradually liberated from mediæval metaphysics, but the new spirit of free inquiry into nature's secrets found more complete expression in philosophy, science, and literature. Hence arose the so-called 'conflict between religion and science,' which was really a conflict between the old and new systems of philosophy and science.

(c) *Rationalism.*—Preoccupation with external

nature exclusively in the 17th and 18th centuries produced materialism, sensationalism, and rationalism—systems which denied altogether any spiritual meaning to nature.

(d) *Pantheism* at the other extreme, by identifying God as *natura naturans* with the world as *natura naturata*, also made all reality an impersonal, non-moral system of necessity.

(e) *Deism.*—The deists, both heterodox and orthodox, accepted the current scientific view of nature as a uniform system of properties and laws which worked automatically, but in virtue of God's creative act, and they found in it therefore evidences of certain universal truths of religion—God, virtue, future rewards and punishments. The orthodox school affirmed in addition certain special revelations and acts of God by which He remedied the defects that had entered into nature's mechanism along with sin. These the rationalists denied. But both schools assumed a twofold dualism of God and the world, of the supernatural and natural, and both placed God normally outside the universe. Nature and the Christian revelation were two distinct operations of God, and the tendency was to regard nature independently of God as self-sufficient and self-explanatory.

(f) *Naturalism.*—In the 19th cent. naturalism (and positivism), allied with agnosticism, became the legitimate successor of deism. Physical science in itself need not be religious or irreligious, but, if it is put forward as a philosophy, as a complete and adequate account of the world as a whole, it involves the denial of any moral or spiritual significance in the world. Writers like Huxley and Spencer limited all knowledge 'in the proper sense of knowing' to phenomena; and religion, the spiritual, the supernatural, were relegated to the region of the 'unknown and unknowable'; but the knowledge of nature therefore could have no religious significance. A similar but less drastic dualism between scientific knowledge of nature and religious knowledge as it is given in Christian experience appears in the school of Ritschl and in writers like Mansel and Newman.

8. Idealism and theism.—But modern thought has not been content to rest in a view of nature which leaves the new knowledge unrelated to religion, or which makes nature a complete antithesis both to God and to the spiritual being of man. A long succession of philosophers—Descartes and Leibniz, Kant, Berkeley and Butler, Hegel, Lotze, the Cairds, Rudolf Eucken, James Ward, and many more—have striven to interpret nature in correlation with the conception of God as living and personal, free and immanent in the world, by His power, wisdom, and goodness continually forming and guiding it to fulfil His perfect purpose of holiness and love. This theistic philosophy has not solved all its problems. The relation of the infinite to the finite, of the eternal to time and to the process of evolution, of the One to the many, the existence of evil, both moral and physical, are yet no more than formulated questions without answers. Theism is more a faith than a science, and it is not altogether a Christian faith. Modern thought cannot accept the Patristic and Scholastic method of imposing a Christian interpretation upon nature by authority. The Christian view has found more confident expression in some modern poets, such as Wordsworth and Browning, than in philosophy. The speculative methods of theistic philosophy move but slowly and uncertainly towards Christ's idea of the world as the Father's home and workshop. All that can be said is that theism represents nature in a way more congenial to Christian experience and thought than any other system, and that its line of progress, if it can make any progress, is set in the direction of the Christ-

ian ideal of a world in which 'all things work together for good to them that love God.'

T. REES.

NATURE (Egyptian).—Various attempts have been made in the direction of classifying and arranging the enormous multitude of Egyptian gods. There is one groping, however, which, while it cuts across many of the other arrangements that have been suggested—human gods, animal gods, composite gods, and so forth—seems to mark a fairly broad and manifest division of Egyptian religious thought. On the one hand, we have abstract gods, called into being by the Egyptian religious consciousness as the expression of certain qualities which they found more or less present in their own natures, and assumed therefore to be necessarily inherent in their divinities. On the other hand, we have nature-gods, created by the people as the expression of certain aspects of the world and the visible universe around them. It may be a question which of these two classes of divinities came first into being; but on the whole, looking to the character of the Egyptian as a religious thinker, it seems probable that the rise of the abstract gods was a later development, and that the earliest developments of Egyptian religion were in the direction of forming gods out of the aspects and powers of nature as seen around the earliest inhabitants of the Nile Valley.

'As among all other early peoples, it was in his natural surroundings that the Egyptian first saw his gods. The trees and springs, the stones and hill-tops, the birds and beasts, were creatures like himself, or possessed of strange and uncanny powers of which he was not master. Nature thus makes the earliest impression upon the religious faculty, this visible world is first explained in terms of religious forces, and the earliest gods are the controlling forces of this material world. A social or political realm, or a domain of the spirit where the gods shall be supreme, is not yet perceived. Such divinities as these were local, each known only to the dwellers in a given locality' (Breasted, *Development of Religion and Thought in Ancient Egypt*, p. 41.).

Later, as it would appear, the more abstract aspects of divinity came into view; abstractions such as Maat, the goddess of truth, make their appearance, and even the old nature-gods change their character to some extent, and are more philosophically conceived; but Egyptian religion never made any very great advances in the direction of philosophic abstraction, and the nature-gods occupy, from first to last, by far the most important position (cf. PERSONIFICATION [Egyptian]).

They fall into two great groups: (1) sky-gods and (2) earth-gods. It would perhaps be simpler to call the sky-gods by the title of sun-gods, for they are all more or less connected with the cycle of solar deities, while the main earth-gods belong to a perfectly distinct cycle. The two great currents of religious thought in Egypt are those which deal with the Rā, or solar, cycle of divinities, and those which deal with the Osiris, or earthly, cycle. The two are found, as was to be expected, already existing side by side at the earliest period

of which we have any record; the rivalry between the two schools of thought and worship continues throughout the course of Egyptian history, and the developments of doctrine which derive from these two different lines of thought give rise to a good deal of that extraordinary confusion and inconsistency which are the first things that strike the student of Egyptian religion. The Egyptian never finally discarded either the one group or the other in his mind, and he kept side by side all the developments that arose out of the two theories of God without worrying over the fact that they were often absolutely inconsistent with each other. So we have, e.g., heavens that belong to the solar cycle co-existing in the religious literature with heavens that belong just as manifestly to the Osiris cycle, and are totally inconsistent with the others. The story of Egyptian religion is practically the story of the parallel development and rivalry of two groups of nature-gods—a heavenly, or solar, and an earthly, or Osirian. The intervals when other gods seem to onst both groups are not really exceptions to this statement. Thus, to take the most notable instance, the rise of the Theban god Amen to supremacy in the land, coinciding with the rise of Thebes as the capital city, is accomplished only by the stock-in-trade of the solar cycle of gods being credited to the Theban deity, who thus loses or sinks his own original character in order to become adequate to his new glory; Amen becomes Amen-Rā.

1. Sky-gods.—It is not difficult to see why the cosmic gods were headed and ruled in the Egyptian theory by the sun-god.

'The all-enveloping glory and power of the Egyptian sun is the most insistent fact in the Nile valley' (Breasted, p. 9).

Among the many natural agencies that were of importance to him, the Egyptian saw none that could be compared with this, and probably the very earliest form that religious thought took was the establishment of some kind of conception of a sun-god. There are in Egyptian religious literature traces of a still earlier form of sun-worship than that which we find in existence in the earliest historical period—a form in which the god was a Horus, or a group of Horuses, out of the innumerable company of deities of the same name which existed in Egypt. The many forms in which the sun-god was represented are doubtless survivals of the multitude of local cults of the everywhere present deity. Roughly, however, the prevalent idea represented the sun-god under three aspects. He is Khepera, the god of coming into being or becoming, in the morning when he rises, his emblem being in this case the winged beetle. He is Rā when he sails across the heaven in his boat during the middle of the day, and is represented as either a hawk-headed or a ram-headed human being, with a solar disk upon his head. He is Tum or Atum, 'an aged man tottering down the west,' when he appears as the setting sun.

Rā, to take the most generally used of his titles, is at the head of the Egyptian pantheon, and has in his company a cycle of other divinities representing other aspects and forces of nature. The theories of how he came into being are various. At Memphis it was held that Ptah, the artificer-god, shaped an egg out of which came the sun-god. Elsewhere a lotus-flower appeared out of the primordial watery element, and held Rā concealed among its leaves; or, as at Heliopolis, the god had appeared originally as a phoenix upon the ancient pyramidal stone in the temple. Having come into existence in one or other of these ways, Rā (or Nebertcher, as he is called in the texts referring to this particular period of his being) then by his own masculine power produced a pair of gods—Shu, the space- or air-god, and Tefnut, his wife.

'I, even I, spat in the form of Shu, and I emitted Tefnut. I became from God one, Gods three, that is to say from myself two Gods came into being on this earth' (Budge, *The Gods of the Egyptians*, i. 317).

Of Shu and Tefnut are born Seb or Geb, the earth-god, and Nut, the sky-goddess; and of them are born Osiris and Set, Isis and Nephthys. Osiris and the chief figures in the Osirian cycle here appear in the Rā group of gods, but in an entirely subordinate position, and with no very marked reason for their presence, as they have no particular function to perform. This would seem to point to the fact that, when the gods were thus grouped—which cannot have been at the very earliest period—the Osiris group was already in existence and had to be incorporated somehow or other, though in a form quite inconsistent with the importance attributed to Osiris and his retinue in his own legend.

Rā's function as sun-god is at first a purely material one. He is the source of life and increase, the driver away of storm, the expeller of rain, and the breaker up of cloud. He has enemies who fight against him, and in one legend he loses one of his eyes—an attempt, no doubt, to account for eclipses; another version of the losing of the eye seems to be associated with the waxing and waning of the moon, whose close connexion with the sun would speedily be detected. In this case the lost eye is restored by Thōth, the moon-god. Beginning with these purely natural functions, Rā at a very early period developed into a more ethical governor of the world, and we learn how men rebelled against his rule, and were destroyed in vengeance by the fierce goddess Hathor (Sekhmet), who may in this case, as also in some other instances, represent the destroying heat of the sun. Finally, Rā became the great beneficent ruler of the world, the giver of every good and perfect gift.

Of his cycle, Shu, the air-god, is practically confined to a single action. He is the separator, and it is his function to separate Nut, the sky-goddess, from the embrace of Seb, the earth-god, and to keep her continually arched over the world, while Tefnut, his wife, is a mere feminine adjunct to him. Nut was not worshipped, and had no local establishment, and Seb, at least in the developed form of the Rā legends, was purely passive, though there are signs in remnants of earlier legends of his greater activity as divider of the earth. The appearance of Set as well as Osiris in the cycle of the solar god suggests that he may have represented some natural phenomenon, like the rest of his group—probably the darkness. In this case the enmity between Set and Horus, which finds full development in the great Osiris legend, would be the transference to a later tradition of a much older enmity between the solar Horus, who stands for the sun-god of the earliest Egyptian belief, and the darkness. In one of the Pyramid Texts Seb, the earth-god, assigns their respective domains to Horus and Set in a fashion that suggests the entire equality of the two divinities of light and darkness in this early stage of Egyptian religious thought. While Rā is to be viewed as the typical and representative sun-god of Egypt, it must be remembered that he is only one of a great number of forms of the same divinity. Many of the nome-gods of the land were, as was natural, sun-gods also, and were identified, when occasion arose, with the great central deity.

The cosmogony attached to this solar cycle of gods was as manifold and as inconsistent as the company of gods with which it had to deal. In one version the sky appears as a great cow, whose feet rest upon the earth and form the four pillars of the universe, while the barque of the sun-god

passes along its belly. In another the sky is represented by the form of a woman, the sky-goddess Nut, who bends over the earth, touching it at the four cardinal points with her feet and the tips of her fingers, while the sun-god's barque sails over her back. But in the most generally received idea the heavens are represented as a great iron canopy stretched over the earth, and supported upon four pillars. From this canopy the stars hang like lamps; and round the margin of the earth below runs the great river, the celestial Nile, along whose surface the sun-god sails in his barque all day, appearing in the morning from behind the eastern mountains, and disappearing behind the western mountains in the evening. This, of course, raised the question of how the god got back from west to east in time for his morning re-appearance; and the result was the invention of the journey of Rā through the realms of the dark under world—a doctrine which received extraordinary and fantastic development during the period of the XIXth dynasty. In his journey across the heavens the sun-god met with many enemies, particularly the great serpent Apap; and the crew of his boat had to fight for him against the monsters which would have devoured him. Here, no doubt, we have survivals of some primitive theory of eclipses.

Along with the sun-god there goes a company of other gods and goddesses. Among these the first place must be given to the moon-god Thōth or Tahuti, though later he became more a god of learning, and was, indeed, the head of the Hermopolitan ogdoad, which consisted of abstract deities. The reason for this transference of Thōth from his original position as a nature-god to the position of a god of learning and letters is fairly obvious. Owing to its rapid motion among the stars, the moon has always been the most convenient regulator of all periods of time greater than the day, and from its motions reckonings have been made and dates fixed in all ages and among all nations. Therefore it was perfectly natural to attribute to the moon-god the invention of letters and figures, and the control and regulation of all forms of learning. Later, and especially in connexion with the rise of Thebes, another form of the moon-god came into prominence, though without affecting the prestige of Thōth, who by this time had fully taken his place as the god of learning. This was Khonsu, who formed the third member of the Theban triad, which consisted of Amen the father-god, Mut the mother-goddess, and Khonsu the son. In this development the moon-god is represented as of purely human form, while Thōth is always figured with a human body and the head of an ibis. A late romance tells us that the temple at Thebes possessed two images of Khonsu, of which the one was named 'Khonsu-of-Good-Counsel-in-Thebes,' and the other 'Khonsu-the-Expeller-of-Demons,' and that the latter image, which appears to have occupied a secondary rank, possessed magical powers.

The sky-goddess Nut, so long as she remains a sky-goddess, is merely a pictorial adjunct to the solar god, and appears to have received very little veneration in historical times. In another of her manifestations, however, she becomes the favourite goddess of the Egyptian pantheon, under the form of the goddess Hathor. This title, 'House of Horus,' distinctly indicates her nature as a sky-goddess, and her association with the oldest form of solar worship; but, for what reason is unknown, she became at an early date not only the chief of all the goddesses, but the special object of women's adoration, and the goddess of pleasure and of love, the Egyptian Aphrodite. While this is so, another and a more terrible aspect of her character is

revealed by the ancient legend which recounts the rebellion of mankind against Rā and pictures Hathor as the eager executrix of the sun-god's vengeance upon humanity. In this aspect she is identified with the lioness-headed goddess Sekhmet, and may perhaps be held, as Renouf suggests (*Origin and Growth of Religion*, p. 179), to represent the destroying heat of the sun. Another sky-goddess of great antiquity, and, at the beginning and near the end of Egyptian history, of great importance, is Neit of Sais, 'the mother who brought forth the sun.' As this epithet suggests, she is originally a creative goddess, and is sometimes represented as having woven the universe as a weaver weaves cloth—an early version of the 'roaring loom of Time.' To this cycle of the solar gods there belongs its own theory of heaven and of the destiny of the dead in the hereafter. It would be more correct to say theories; for there are two versions more or less inconsistent with one another, as is not uncommon in Egyptian religion. In the one the blessed dead are received into heaven, there to shine as the stars in the firmament; in the other they are privileged to enter the boat of the sun-god, and to voyage with him through the realms of day and night.

2. *Earth-gods.*—Over against the sky-gods and goddesses of the solar cycle, and, no doubt, in the earliest stages of Egyptian religious thought, more or less hostile to them, were set the earth-gods, of whom the foremost and most important by far are those of the Osiris cycle. The beginnings of the Osiris story lie very far back in Egyptian history; and the Osiris who is met with in the earliest stages of the Egyptian religion is a very different being from the beneficent king of Plutarch's legend, slain by his brother, and afterwards appointed king and judge in the realms of the dead.¹ The original Osiris of Egyptian religion is purely and simply a nature-god—and a nature-god who is not necessarily of a beneficent type at all. The earliest notion of the relation of Osiris to human beings discernible in the Pyramid Texts is that he is a power hostile to them, against whose malevolence protection has to be sought in magic utterances.

The reason for this apparently strange beginning of the gracious god of the resurrection is to be found in the original rôle played by Osiris as a nature-god. He appears, in the earliest thought, to have represented the Nile. Now it is easy to see the stages by which, as the Nile was gradually pressed into the service of the Egyptian residents, the Nile-god became a beneficent deity—in fact almost the most precious and beneficent of all deities, so that he grew to be a noteworthy rival of Rā himself in the esteem of men. But in the beginning of things, when the Nile was yet unbridled, and the idea of utilizing its overflow had not yet dawned upon the inhabitants of the valley, that very peculiarity of the annual inundation which made the river an inestimable boon in later years must have made it a terror. Lives would be threatened, homes destroyed, and labour lost. Until the movements of the river were understood, and to some extent regulated and taken advantage of, the Nile-god must have been regarded as a destroying deity. Particularly before the Egyptians had learned to bury their dead safely beyond reach of the waters of the inundation, the Nile and its deity must have been a terror to them. This is probably the reason why in the Pyramid Texts we find traces of an Osiris who is hostile to men, and against whom the dead need to be protected by words of power.

¹ Plutarch's legend, none the less, seems to represent with considerable accuracy the later developments of the Osiris myth.

The identification of Osiris with the Nile is rendered absolutely certain by a number of passages in the Pyramid Texts—e.g., in the passage of the finding of the dead god by his son Horus we are told:

'Horus comes, he recognizes his father in thee, youtful in thy name of *Fresh Water*.'

And again, in a passage where the inundation is directly ascribed to him:

'The lakes fill, the canals are inundated by the purification that came forth from Osiris'; while later King Ramses IV. addresses Osiris thus:

'Thou art indeed the Nile, great with fields at the beginning of the seasons; gods and men live by the moisture that is in thee.'

The identification of Osiris with water is carried still further by making him identical, not only with the Nile, but with the ocean also:

'Thou art great, thou art green, in thy name of *Great Green*; lo! thou art round as the Great Circle; lo! thou art turned about, thou art round as the circle that encircles the *Hanebu* (the *Egeans*).'

From the identification of Osiris with the life-giving river it is only a step to the identification of him with the life-giving function generally. Here, therefore, he enters into relationship with the soil over which the water of the inundation flows. Life is produced by the combination of the water and the soil, and so, by a natural process, Osiris at a very early stage has become a god of the fruitful soil, and is even identified with the earth itself. In a very remarkable passage quoted by A. Erman (*ZÄ* xxxviii. [1900] 30-33) Osiris is addressed as follows:

'When canals are dug, . . . houses and temples are built, when monuments are transported, and fields are cultivated, when tomb-chapels and tombs are excavated, they rest on thee, it is thou who makest them. They are on thy back, though they are more than can be put into writing. [Thy] back hath not an empty place, for they all lie on thy back; but [thou sayest] not: "I am weighed down." Thou art the father and mother of men, they live in thy breath, they eat of the flesh of thy body. The *Primeral* is thy name.'

The last sentences show the process by which Osiris is being gradually transformed. He is now an earth-god; the atmosphere is his also; further, he is beginning to become a god of sustenance—'they eat of the flesh of thy body.' The process takes another step, in which Osiris is identified, not only with the soil, but also with the grain and the fruitful plants produced by the soil, and becomes a god of corn and wine. He had already reached this stage by the date of the Pyramid Texts. He is addressed in these as 'Thou lord of green fields,' and as 'Lord of overflowing wine.' At a later stage, in the Coffin Texts, which occupy a position in time between the Pyramid Texts and the *Book of the Dead* properly so called, we find passages in which the deceased expresses himself thus:

'I am Osiris, . . . the gods live as I, I live as the gods, I live as grain, I grow as grain, . . . I am barley.'

The idea is further illustrated by the frequent representations which show grain sprouting out of the prostrate body of Osiris or a tree growing out of his tomb or coffin, and by the fact that an effigy of Osiris moulded out of bruised corn and earth was sometimes hurried along with the dead, or in the cornfield to ensure a good crop.

The whole process of the transformation of Osiris is thus perfectly manifest. The original god of the Nile—a being hostile to humanity in some aspects of his working—becomes, as the nation learns to avail itself of the inundation, a beneficent deity who blesses the soil, then the soil itself, then the fruits that grow out of the soil.

'The god was doubtless in Egyptian thought the imperishable principle of life wherever found, and this conception not infrequently appears in representations of him, showing him even in death as still possessed of generative power. The ever-waning and reviving life of the earth, sometimes associated with the life-giving waters, sometimes with the fertile soil, or again discerned in vegetation itself—that was Osiris' (Breasted, p. 23).

When we have got to this stage, we are obviously

not far from the possibility which is realized when Osiris is transformed from a mere beneficent harvest-god, dying and reviving with his crops, to the moral and spiritual being who is regarded as the representative of good, placed over against the representative of evil in his brother Set. Set, who in the solar cycle appears to stand for darkness, in the Osiris cycle seems to stand for the desert soil as opposed to the fertile land of Egypt. He is the Red Fiend from the colour of his sands as against the black soil of the alluvial plain—ever encroaching on the domain of his brother, and ever hostile to his interests. The death and rising again of Osiris are in the beginning the mere recognition of the facts of nature, seen year by year in the changing seasons; gradually they are moralized, and become the type of immortality and resurrection, and also of the final victory of good over evil. St. Paul's argument in 1 Co 15 develops in a Christian fashion the same idea which the Egyptian thinkers of at least 3000 years before had already wrought out in their own way, when they made this Nile-earth-harvest-god into the type of the resurrection and the earnest of everlasting life.

Isis, the wife of Osiris, is regarded as her husband's helper in the securing of fruitfulness. The inundation coincided with the rising of Sothis, the star of Isis, and therefore the fruitfulness consequent upon it was attributed to her as well as to her husband.

'The beloved daughter, Sothis, makes thy fruits in this her name of "Year"' (Pyramid Text, quoted in Breasted, p. 22).

Isis, however, is regarded by Maspero as originally an independent nature-goddess, the earth-goddess of Buto, who was only introduced at a later period into the Osiris cycle. It is more difficult to see the place of Horus in the harvest story, until he has to be brought in as the avenger of his father. In the solar cycle Horus, as himself the original sun-god and the personification of light, has a natural place as against Set, the darkness, and wages unceasing warfare with him. There is no obvious reason for his appearing in the Osiris cycle, when the struggle is one between fruitfulness and barrenness, till he is brought in to round out the story as the avenger of his father; and no doubt much of the detail of the warfare of Horus with Set really belongs to the original solar form of the strife, and has been adapted to the case of Horus the avenger. Nebhat, or Nephthys, the wife of Set, is merely a concession to the Egyptian love of symmetry in families, though Renouf (p. 112) regards her as the sunset, wedded to Set, the darkness. This, of course, would give her a place in the solar cycle, but none in the true Osiris group.

3. Other deities.—In addition to the two great groups of nature-gods, the solar and the Osirian, the Egyptians recognized a great number of local deities, who may be regarded as merely variants of the chief gods already mentioned, while, further, they recognized a number of quite subordinate divinities of nature, spirits of the wood and stream and hill, sacred trees, sacred serpents, and so forth. But besides all these there were certain other divinities, not always clearly distinguished from some of those mentioned above, and yet with a sufficiently independent existence to warrant separate notice of them. Chief among these is the Nile-god Hâpi, to be distinguished from the other Hâpi, son of Horus, who was one of the four divinities to whom the charge of the internal organs of the dead was committed, and whose heads appear as the so-called canopic jars. Hâpi, strictly speaking, ought only to be a variant of Osiris; but the development and moralizing of the Osiris legend led to the detachment of Osiris from his original functions as a Nile-god, and

Hâpi took his place in that aspect, with some claim to be regarded as an independent divinity. Hâpi was one of the most widely recognized and worshipped of Egyptian gods, which is not to be wondered at when the importance of the river to the land is considered. He was, of course, particularly the object of worship in respect of the annual inundation, and it was believed that, if his worship were neglected, the inundation would not be favourable. He had temples at Memphis, Heliopolis, and elsewhere; but his place was all over the land of Egypt, and there are few localities where the familiar figure of the Nile-god is not to be seen among the temple sculptures. He is generally represented as a fat and flabby man with female breasts, typifying fertility, and is bedecked with water-plants and flowers. Sometimes he is separated into two gods, the god of the Upper and the god of the Lower Nile, wearing in the former case the lotus, and in the latter the papyrus; and a very frequent representation of him shows a Nile-god for each of the forty-two nomes of Egypt—a procession of deities advancing in single file to present gifts to the king. Associated with Hâpi are various minor gods—Hôr, Zefa, and Resef, representing food and abundance; Neper and Nepera, the god and goddess of grain; and the snake-headed Rennut, goddess of the harvest.

The local god of the Fayyum province also deserves separate mention. This was Sebek, the crocodile-god. The reason for the adoption of such a god in the lake district, where no doubt the animal abounded in early days, is sufficiently obvious. In addition to his local sanctity, he was worshipped at Ombos, where he was identified with Set; but he was also regarded in other localities as a variant of Râ and as an associate of Osiris. Sebek is represented either as a crocodile or as a human being with a crocodile's head.

Min, the highway god of Koptos, is also to be regarded in some of his aspects as a nature-god. He was the nome-god of Panopolis; but, in addition, he was more or less universally worshipped throughout Egypt as the type of the generative power of nature. He is represented as an ithyphallic figure waving a scourge in his right hand above his head. The harvest festival was dedicated to him in acknowledgment of the abundance produced by the earth, and several of the gods were identified with him when they were referred to as begetters of their divine sons.

The extraordinary development of the worship of the solar god in the reign of Amenhotep IV. (Akhenaten) can scarcely be regarded as within the range of this subject. In so far as the Aten, the life-giving principle of the solar disk, is regarded as a mere aspect of the material vivifying function of the sun, the new god which Akhenaten attempted to introduce may be regarded as a nature-god; but Atenism represents an attempt to reach something much more spiritual than anything which can be associated with the old nature-worship of the Egyptians. It is solar worship in a sense, but solar worship reduced to its most spiritual elements.

NATURE (Greek).—When Aristophanes declares in a striking passage in the *Peace*¹ that a main difference between the religion of the Hellenes and that of the barbarians was that the latter sacrificed to the sun and moon, the former to personal deities like Hermes, he was partly right, but did not tell the whole truth. The leading deities of the Hellenic stocks were concrete personal beings, vividly conceived and strikingly anthropomorphic; they were individuals of a certain moral, social, and spiritual character. None of them are merely thinly-disguised personifications of natural phenomena and forces, and many of them reveal no sign of having originated in nature-worship. Zeus himself appears to have been for the earliest Hellenes, and probably for other Aryan races, a personal sky-god who directed celestial phenomena; the earliest conception may have been of the sky as animate or as the abode of a vague spirit, and we have one or two examples in actual Hellenic cult or cult-legend of the identification of Zeus with some phenomenon of the sky, as in the Mantinean inscription recording the cult of Zeus *Κεραυνός* and in the Arcadian legend of Zeus *Καπνώτας* mentioned below. It may be also that we can discern a primitive direct nature-worship dimly revealed by the cult of Demeter *Χλόη* (Demeter Vegetation), and that there was once at Marathon a cult of the spring verdure, *Χλόη*, regarded as divine before the idea of the personal goddess had wholly penetrated and absorbed it.² But it is difficult to pronounce at what time the animistic and pre-anthropomorphic religious sense prevailed unblent with the anthropomorphic idea. Certainly, when the early Greek was worshipping Artemis or Apollo, he was not consciously worshipping the moon or the sun. Even a deity so markedly departmental as Poseidon was never identified in substance with the inland waters or the sea which were his province, nor was the element ever called by his name. Nor can we say that the people who worshipped Hephaistos were fire-worshippers, although some dim trace of a primitive conception of fire as something animate and divine survives in one or two phrases attaching to his name—as, when the fire crackled, it was said 'Hephaistos laughs'³—but, as far as we can trace it, the name Hephaistos in its original application never denoted the fire itself, but always the personal god. There is, then, much truth and reality in the pronouncement of Aristophanes; the term 'nature-god' applies to very few of the leading figures of Hellenic polytheism. Nevertheless, in the rich and many-sided popular religion of Greece we find direct worship often paid to certain of the forces and phenomena of the natural world.

Before we collect the evidence and consider its importance for the religious history and culture of the race, we should distinguish three stages in the religious perception of nature: (a) the worshipper may regard an object or a phenomenon of the material world as mysteriously divine and animate and pay direct worship to it as a conscious power that can benefit him or injure him; (b) he may regard the object or phenomenon as the abode, lurking-place, or manifestation of an immanent spirit, vaguely conceived but invested with some personality; (c) he may clothe this vague spirit with ever sharper traits of personality and individuality until it becomes a concrete god, who produces the object and controls the element or phenomenon; the god thus evolved may be confined to this function and is then a true nature-god, or he may enlarge his sphere and grow in freedom and become a moral, political, and spiritual power, no longer enmeshed in the material world at all. The

study of Greek religion presents us with all these phenomena and these religious stages.

The first we may designate—for want of a better name—as animatism;¹ the second as animism, implying a vaguely personal *δαίμων*, or *numen*; the third as theism, implying the worship and imagination of a clearly defined *θεός*.

1. Animatism.—Nature-magic, which existed in Greece as elsewhere by the side of nature-religion, belongs to the two earlier of these three stages; the Greek rarely, if ever, practised magic upon his *θεός*. Nor was his imagination, with its strong bias for concrete and anthropomorphic creation, usually content with the inchoate perception of the mere 'animatism.' Yet traces of what may be called the most primitive religious feeling in regard to nature survived in Greece. According to Pausanias, in Arcadia near Trapezous, 'sacrifices are offered to lightning and thunder and storms.'² We may, of course, suspect the presence of personal deities here; but the words of Pausanias, who is generally careful in such matters, ought to be regarded as valid evidence of a naive animatism. The feeling in the Arcadian worshipper may have been the same as Hesiod's when he advises the traveller not to 'pass through the fair-flowing water of streams, ere thou utterest a prayer gazing into the fair torrent, having washed thy hands in the white and lovely water.'³ It may be that no god or spirit to whom the prayer was directed is imagined here, but only the divine and animate water. Even Homer's rivers of the Trojan plain, Simoeis and Skamandros, are occasionally imagined as nothing more than the element itself, but conscious and passionate.⁴ On the same level was the earliest Hellenic impression of the holiness of the household hearth in itself, before they endeavoured to realize the personal goddess Hestia.⁵ At this early stage nature-magic, as distinct from religion, is likely to be practised. At Methana, near Troizen, the severed limbs of a cock were carried round the vineyards to preserve them from the baneful influence of the wind that was called Lips; the practice, which is purely magical and apotropaic, implying no personal god nor even a spirit, was still in vogue in the time of Pausanias.⁶ He tells us also that he saw them there averting hail with sacrifices and incantations, the one a religious, the other a magical device. The same union of magic with simple worship of the elements is suggested by the words of Clement of Alexandria concerning the Magi, or wise men, of Kleonai in Sikyon, who 'when the clouds are about to throw down hail avert the threat of their anger by incantations and sacrifices.'⁷ The gilds of 'Wind-soothers' or 'Wind-lullers,' called *Εὐδάεμοι* in Attica and *Ἀνεμολοῖται* at Corinth, may have worked directly on these elements⁸ by means of simple incantation-magic or may have employed some method of religious service. Concerning these few examples of the simplest and crudest religious feeling in regard to natural phenomena it is hard to speak with certainty, for the evidence supplied us may be defective, and we cannot interrogate it.

2. Animism.—In regard to the religious facts that belong to the second of the types distinguished above, our indications are fuller and clearer. In the earliest period of Hellenic history to which our record reaches back or to which our theory can penetrate, we find an animistic perception that imagines the more salient parts of nature as containing a *δαίμων*, or *numen*, that is personal

enough to be able to receive sacrifice on the altar, to hearken to prayer, to punish offences, but not yet sufficiently defined to be invested with concrete and complex personality and anthropomorphic character; and a small part of the Greek religion remains at this inchoate daimonistic stage, halfway to the higher stage of theism, down to the close of paganism.

We discern this in the worship of certain meteoric and celestial phenomena. At Titane in Sikyon there was an altar erected to the winds,¹ on which the priest sacrificed on one night every year: 'and he does other secret rites into four sacrificial pits, and, as they say, he sings over them certain incantations of Medea, assuaging the fierceness of the winds.' Apart from the element of magic, these rites of altar and sacrifice imply the worship of personal spirits—winds pure and simple would not need an altar—and these spirits belong to the dark world of ghosts. This association of furious winds with ghosts is a wide-spread animistic belief. It is illustrated by the double character attaching to the 'Tritopatores' at Athens, ancestral spirits as their name and certain inscriptions reveal them, yet explained as wind-powers by Hesychius.²

Sacrifice in itself need not imply the idea of personal spirits; but certain peculiar fashions of sacrifice to the winds, such as the wineless offering and the cake in the stormy month of December at Athens,³ the Attic sacrifice of black lambs to the whirlwind,⁴ the Laconian sacrifice of horses on the mountain-top of Taygetos,⁵ the strange and almost unique sacrifice of asses at Tarentum,⁶ must have assisted the clearer emergence of this idea in the view taken of the elements thus worshipped.

Finally, when a personal and proper name became attached to some particular wind, such as *Zéφυρος*, the west-wind, *Βορέας*, the north-wind—the names to which dramatic and personal myths could be and were attached—we have the necessary condition for the evolution of the *δαίμων* into an individual god. Such certainly Boreas became, for instance at Athens, where the love-story of his capture of Oreithyia was associated with the banks of the Ilissos and an altar erected there,⁷ and still more manifestly at Thourioi in Magna Græcia—owing doubtless to its close association with Athens—where a yearly sacrifice was prescribed for him, a house and an allotment of land consecrated to him, and he was designated by the strange cult-title of 'Citizen.'⁸ It is interesting to see the *δαίμων* of a primitive animistic cult developing into a political deity. A stimulus to this cultivation of the worship of Boreas at Athens was the aid that he was supposed to have rendered in the sea-fight at Artemision; but the earlier Attic art, dealing with the love of Boreas for Oreithyia and her capture, shows that the imagination of the people had already anthropomorphized the wind-god before the Persian wars.

As regards other meteorological worships, the cult of Zeus *Κεραυνός* at Mantinea⁹ marks a higher stage than the simple Arcadian sacrifice to the thunder and lightning mentioned above. The cult-title, Zeus Thunder, identifies the god with the phenomenon; the spirit or essence of the god is in the thunder; we may call this animistic religion, that has not yet risen to the view of a free divine personality that controls the elements. Similarly, a fallen meteoric stone was worshipped in Arcadia under the name of 'Zeus the fallen'—*Ζεὺς Καπνώ-*

τας—the stone being the god or infused with the essence of the god.¹

3. Theism.—But these primitive forms of meteorologic religion were only sporadic in Greece; the aboriginal Hellene had certainly arrived at the theistic stage and had already evolved his personal Zeus who attracted to himself the religious feelings aroused by thunder, rain, and hail.

(a) *Sun-worship*.—Of more importance is the question concerning sun-worship in Hellas. Plato² tells us that both Hellenes and barbarians were accustomed to greet the rising and the setting of the sun and moon with prostrations and kissing of the hand, and his statement is corroborated by Lucian³ and Plutarch.⁴ And Plato's *Apology*⁵ attests the fact, which throws a striking light on the culture of the Athenian of the 4th cent., that to the average man of that period these great luminaries were still regarded as divine and animate, and that the new doctrine of physical science which treated them as mere material bodies was repulsive. But the reverential feeling attested by this evidence should not be interpreted as showing that all the Hellenes of every period had a vivid belief in a personal anthropomorphic sun-god or moon-goddess. We may interpret it as inspired by the animistic feeling that the salient phenomena of nature are infused with a spirit, or *δαίμων*; or by the cruder impression that these great luminaries are animate and sentient bodies. The same may be said of another ritual that was probably aboriginal for all the Hellenes—the invocation of the sun in the formula of the oath, in which he is most frequently joined with Mother Earth. The fashion of swearing by Helios and by Ge is attested by Homer, by much literature of a later period, and by many inscriptions—the manumission of slaves, e.g., was performed under the witness of the sun. But a power invoked in an oath-formula is by no means always a personal god; the oath belongs to animism at least as much as to theism, and is often taken over objects that perhaps are vaguely conceived as animate, like a sword or an iron ring, or as merely possessing some mysterious potency. There is, in fact, no reason to suppose that for the aboriginal Hellene the sun was ever a personal high god, such as was Apollo, Zeus, or Poseidon; and the deities and heroes, Apollo, Herakles, and others, who used to be regarded as only thin disguises of the sun, have resigned these pretensions in the light of modern criticism. With one great exception, which will be considered below, the record of the cult of Helios in Greek lands is scanty and unimpressive.⁶ We rarely hear of temples, still more rarely of statues, more frequently only of altars. His power was recognized in part of the vegetation-ritual, his oblations being wineless after the ancient fashion; one of his favourite offerings was honey.⁷ The average Greek would speak of him as *θεός*; and, helped probably by Homer, whose religious and mythopoetic trend is always towards anthropomorphism, would be inclined to regard him as a personal god who ruled the sun; but he entered little into the popular mythology, and in the main played no part in the progress of the people towards the higher civilized and political life. The altar raised at Troizen to *Ἡλίου Ἐλευθέριος*, 'the sun of freedom,' after the defeat of the Persians need not have expressed more than the religious sense of joy in a freed heaven and a freed earth.⁸ The important exception referred to above is the island of Rhodes. From the earliest times till the introduction of Christianity Helios was the

great god of the island,¹ the fosterer and sustainer of the physical, cultured, and political life of the people and the State. The greatest and most illuminating monuments of his cult are the ode that is Pindar's masterpiece, the 7th *Olympian*, and the type on the early 4th century coinage of Rhodes; the artist is the equal of the poet in revealing the glow and intensity of feeling evoked by their ancestral god. No doubt the Rhodians' conception of him was entirely anthropomorphic; their offering of a four-horsed chariot which they flung into the sea suggests the radiant charioteer, such as the later Greek art depicted him.² It is only here in Greek lands that a purely elemental god is seen dominating the imagination of the people; and, as the comic poets came to remark, the smallest part of their life was penetrated by Helios. The explanation of this unique fact is to be sought in the strong persistence in the isle of Rhodes of an earlier 'Minoan-Cretan' culture and religion. We know that Rhodes was linked by many ties to pre-Hellenic Crete; the Heliadae, the sons of Helios, the earliest mythic settlers in Rhodes, are with the Telchines the representatives of the splendour of Minoan art-culture that was beginning to fade when the earliest Hellenes arrived. We have some evidence of the prominence of the sun-divinity in Minoan Crete; he entered into the legendary genealogies of Pasiphae and Idomenus; Gortyna even in late times claimed to be the pasture-ground of the herds of Helios, and we may believe that the Homeric myth in the *Odyssey* of the island that nourished the sacred cattle of the sun-god reflects a fact of pre-historic, anthropomorphic ritual;³ the curious Cretan phrase *Ἀδίου-ριος Ταύρος*,⁴ explained by the story that the sun-god led a Cretan colony in the form of a bull, probably preserves an Eteo-Cretan title of his, and suggests his association with the Minoan reverence of the bull and with the legend of the Minotaur. Finally, among the remains of the Minoan-Mycenaean art evidence has been noted pointing, though somewhat vaguely, to sun-worship or adoration of the lights of heaven.⁵

Therefore, if in other regions of the Greek world that had been once dominated by the Minoan-Mycenaean culture we discern traces of a once powerful Helios-cult, we may explain it as an abiding tradition from the early period; e.g., in the city and territory of Corinth the legends and local genealogies seem to point to an ancient prominence of the sun-god; he contended with Poseidon for the land,⁶ and he was the ancestor of personages aboriginally Corinthian, such as Aietes, Medea, Kirke; he even enters into the early Sikyonian genealogies. But Sikyon and Corinth belong to the old Mycenaean kingdom.

Again, on the slopes of Taygetos, on the promontory of Taletos, we have record of an ancient Helios ritual, and a Homeric hymn consecrates this mountain to Helios;⁷ but the name 'Taletos' and certain cult facts of the neighbourhood point back to Crete. In Elis also pre-historic Cretan influences were strong and abiding, and here we find Helios associated in cult with the Cretan god Kronos⁸ and with the moon-goddess Selene,⁹ whose Endymion may be a disguised form and a pre-Hellenic name of the sun-god.

But it is only in Rhodes that Helios enjoyed such a position as Shamash, the Babylonian sun-

god, enjoyed in Babylonia; and this is the unique example in Greek religion of an elemental cult evolving a high god of the moral and political order. In the later period of Graeco-Roman paganism there came a religious wave from the East, giving a powerful lift to sun-worship in the Roman empire; and this may account for a few of the cults in the late records of Greece, such as that of Helios *Σωτήρ*, 'the saviour,' at Megalopolis.¹

(b) *Moon-worship*.—Selene, the moon-goddess, was of no importance for the higher religious life of historic Greece, though, according to Plato, all the Greeks recognized the moon as divine. The ritual at Athens, where 'wineless' or 'sober' offerings, *νηφάλια*, were prescribed to Selene, must be regarded as ancient;² so also in all probability was her cult in Arcadia, where she was associated with Pan.³ But, generally, the record of her cult is far scantier than that of Helios, and the few inscriptions and coins that attest it are of a late period. The pre-Hellenic era of the Cretan-Mycenaean culture may have given more prominence to moon-worship; for there is some Hellenic testimony to this in the cult of the Cretan Pasiphaessa, who was worshipped with Helios in S. Laconia,⁴ a region full of Cretan influences; her name, 'the all-shining one,' her legendary association with King Minos, and her cult connexion with the sun-god seem to point clearly to a Cretan lunar goddess. On the other hand, we cannot regard the early adoption of Artemis by the Hellenes as any evidence of their devotion to moon-worship. For there is no proof or indication that aboriginally Artemis was at all closely associated with the moon.

(c) *Worship of dawn, night, etc.*—There are other figures, such as Eos, the dawn-goddess, Hemera, 'day,' Nyx, 'night,' Ouranos, 'sky,' whose names concern this sphere of nature. In Greek mythology and genealogy and to some extent in Greek art these personifications of light and darkness and the sky play a lively and prominent part; but the test of religious significance is cult; and of the actual worship of any of these evidence is almost lacking. Hemera shared a shrine with Helios at Kos, perhaps in Hellenistic times.⁵ The dawn-goddess, Eos, whose personality was lovingly treated by Greek poetry and art, had, according to Ovid, 'the fewest temples in the world';⁶ he might have correctly said that in the Graeco-Roman world she had none. Only at Athens is there some evidence of her worship, for she is mentioned among the deities to whom 'wineless' offerings were made.⁷ We have a doubtful reference in Pausanias to 'an oracle-shrine called after Nyx' on the Akropolis of Megara;⁸ but the name may only have indicated that the oracles were given in the night-time, perhaps by the earth-mother. Finally, the heaven-god, Ouranos, familiar to the readers of Hesiod, Pindar, and Aeschylus, whose counterpart, Varuna, was a high god for the Vedic Indians, had no shrine or cult in Hellenic lands, if we can trust the complete silence of literary record and inscriptions. As evidence of any ritual associated with him we have only a doubtful passage in Proclus's commentary,⁹ in which he seems to say that the ancient laws of Athens used to prescribe to those about to marry that they should celebrate in a preliminary ceremony the bridal of Heaven and Earth. It may be that this late writer has thus interpreted the ancient ritual of the *τεπὸς γάμος* of Zeus and Hera. At any rate, we may safely say

that at no known period in the history of Greek religion was Ouranos of any consideration in the popular worship. And, when Æschylus speaks of him as 'one who in old time was mighty, full of unconquerable boldness,'¹ he was probably misled by Hesiod's artificial stratification of periods, the periods of Ouranos, of Kronos, of Zens.

(d) *Star-worship*.—Another noticeable feature of Greek religion, as compared, for instance, with the Babylonian, is the almost complete absence of star-worship. The only exception hitherto noted is the sacrifice to the dog-star in Keos, described by Apollonius Rhodius and the scholiast on his verses.² It was evidently apotropaic, intended to avert the great heat of summer, and we may understand the curious statement of the scholiast, that the men of Keos sacrificed to Seirios with arms in their hands, as meaning that, while they approached him with a religious ritual, they adopted at the same time the opposite attitude of threatening him with weapons, as savages frequently threaten evil spirits or dangerous phenomena of nature. But even in Keos the cult of Seirios appears to have been too weak to stand by itself; it was linked with that of the personal god, Ζεὺς Ἰκμαῖος, the god of dew.³

It may well have been this indifference to star-worship that saved Greece, until the last days of its decline, from the superstition of astrology, which has been so many times fatal to the intellect of Europe.

(e) *Earth-worship*.—So far we may be struck with the paucity and the barrenness of pure nature-worship in the Greek communities. But our impression is modified when we study the cults of Ge, the earth-mother, and of the rivers.

The worship of the earth, imagined as a female power, is attested of nearly all the Aryan and of many non-Aryan communities.⁴ We should expect, then, that the Hellenes would bring it with them as a tradition, and there is also reason for thinking that they would have found it within the Minoan-Mycenean culture in the lands that they occupied. No part of the natural world is more likely to arouse animistic religious feeling; but it needs a comprehensive imagination to conceive of the whole earth as a single religious entity, a divine animate power. That this conception was in the average mind of Hellas in all periods of its history, and that it stimulated wide-spread worship, is proved by archaeological evidence and by the literature from Homer to Plutarch, the latter writer being still able to say in the last period of paganism: 'The name of Ge is dear and precious to every Hellene, and it is our tradition to honour her like any other god.'⁵ In the Homeric poems, besides the frequent use of the word for the common earth, the actual soil that we walk upon, we find numerous examples of the name of Ge for a divine personality. She is three times invoked in the formula of the oath,⁶ and a black lamb is sacrificed to her in the ritual of the truce arranged between the Achæans and the Trojans.⁷ Nevertheless, as we have seen, sacrifice and the oath-invocation do not always prove that the conception of the divine power is clear and anthropomorphic. And the personality of Gaia, as presented to us in the Homeric poems, remains vague and amorphous, animistic rather than theistic. She is not a figure in his mythology; she plays no part in his action or in the moral life of man. In the first part of the Hesiodic *Theogony* she is assigned a dramatic and prominent rôle in the cosmogonic account; and all the poet's myths of creation are to this

extent anthropomorphic, that the creative processes are described in terms of human love, as is usual in the similar myths of savages. Later poetry, and especially the Attic drama, often exalts the divinity of earth in glowing passages, but with an imagination that is more animistic than vividly personal. Nor does the literature as a whole convince us that the human impersonation of Gaia with which perfected Greek art presents us, as a beautiful woman with mature and tender form, ever possessed the popular mind and faith.

Cult is the surest evidence of the people's belief, if the cult-records are explicit. We have record of the public worship of Ge at the following places—Dodona, Delphi, Thebes, Athens, Phlye, and Marathon in Attica, Sparta, Tegea, Olympia, Aigai, and Patrai in Achaia, in the islands of Mykonos, Thera, Kos, Crete, at Byzantium, Kyzikos, Erythrai, Pergamon, Smyrna, Magnesia, Amasia in Pontos, and in the Tauric Chersonese.¹ But we have only scanty and vague evidence as to the question how far the religion in any one of these places was animistic only, how far theistic and anthropomorphic. No doubt, altars and temples are adjuncts of anthropomorphic religion and promote the belief in concrete individual deities; and we hear of altars on the slope of the Akropolis at Athens, at Phlye, Tegea, and Olympia, consecrated to Ge; very rarely do we hear of cult-statues, as at Aigai in Achaia; the image of the earth-goddess on the Athenian Akropolis, praying with uplifted hands to Zeus to send rain, was not primarily a monument of worship, though it could react on the religious imagination. It is likely that the ritual of Ge as a rule demanded only a *temenos*, a holy ground enclosed, without shrine or statue or even altar. The title 'Ge in the fields,' which she enjoyed at Marathon, where a pregnant cow was offered to her, suggests the vague earth-spirit rather than the humanized goddess; and other cult-titles, such as Εὐρύστερνος, 'the broad-bosomed,' at Delphi and near Aigai, Μάκαιρα Τελεσφόρος, 'the blessed harvest-ripeners,' at Thebes, Πανδώρα and Ἀνησιδώρα, 'the giver of all gifts,' at Athens and Pergamon, Κουροτρόφος, 'the nourisher of children,' doubtfully attested at Athens, are on the border-line of the animistic and the anthropomorphic imagination.

Again, we find two examples in her service of the quaint and crude ritual of throwing the offerings consecrate to her into a mere cleft of the earth; such worship is consonant with animistic feeling and it marks her off from the civilized *theoi* who gather or sit round the formal altar-table spread with offerings, and to whom a comfortable couch might be dedicated with soft carpet for their real, though invisible, feet. The broad earth needed no κλίνη, no τράπεζα. Finally, in that interesting distich of an old liturgy in vogue at Dodona—'Zeus was, Zeus is, Zeus will be, oh great Zeus! Earth sends up fruits, wherefore call on Mother Earth'—while Zeus seems presented as the everlasting God, concrete and individual, it may be that Ge was vaguely imagined as an animate potency immanent in or identified with her element.²

An ancient function in Greece of the earth-spirit was prophecy and the deliverance of oracles. This was connected with the superstition that dreams foretell the future, and that the dream enters through the ear of the sleeper from the nether realm. Hence arose in pre-historic times the habit of 'incubation,' or sleeping on the bare earth in order to obtain a mantic dream. We are not,

therefore, surprised to find that the snake, the most usual 'familiar' and incarnation of the earth-spirit, was the prophetic animal *par excellence* for the Hellenes ('prophecy was the peculiar property of snakes,' says *Ælian*¹); and that Ge was worshipped and consulted as a giver of oracles at Aigai, possibly at Olympia and Marathon, and certainly at Delphi in the pre-Apolline days. Here, according to Euripides, the earth-goddess sent up oracles through dreams, in order to thwart Apollo's divination, until Apollo appealed to Zeus to prohibit her.² Another mantic process, but also 'chthonian,' was practised in the worship of Gaia at Aigai; her priestess drank a draught of hell's blood, to fill herself with the spirit of prophecy, before she descended into a cave, which was the primitive shrine of the earth-spirit.³ As the hell is an animal closely associated with the latter, we may regard this drinking as a form of sacramental communion. Neither the function of prophecy nor sacramental communion necessarily indicates a clear anthropomorphic conception of divinity. But probably from her oracular power Ge acquired—at Delphi and Athens and perhaps at Olympia—the title of Ge Themis, 'Earth Oracle'; and there are strong reasons for believing that this double title engendered an independent goddess Themis, who, detached from Ge, became associated with Zeus and a figure of anthropomorphic religion and mythology, embodying the ethical idea of righteousness, and playing a part in the higher spiritual religion. At this point, then, an animistic nature-worship shows itself capable of a transcendental development; only, it is significant to note, in this development the name Ge drops out.

There is one more important aspect of Gaia—her association with the spirits of the dead, who find their home in the bosom of the earth-mother. She claimed a share in the libations to the dead;⁴ and she was not forgotten in the Attic service of the Anthesteria and the Gensia, two All-Souls' festivals of spring and autumn.⁵ We may think that these funeral offerings to her were dictated or accompanied by a vague idea that the fortune of the souls depended on her favour. Yet we have no evidence that any vivid personal hopes of happy individual life after death were confirmed by the worship of Gaia. But from Gaia, the mother of the spiritual goddess Themis, arose also the two brightest and most human deities of Hellenic polytheism, Demeter and Kore; and it was to these, or to Dionysos, that any living Hellenic faith in posthumous happiness attached.

We may draw the conclusion that it was the unavoidable association of the name Ge with the solid earth around us and beneath us that prevented the Greek imagination from exalting the earth-spirit up to the higher plane of religion. It was only by shedding her elemental name and disguising herself as Pandora, Aglauros, Themis, Demeter, and Kore that she could attract to herself bright anthropomorphic myths or count in the world of ethical and spiritual ideals.

(f) *River-worship*.—There remains to be considered that nature-worship which appears to have attracted most powerfully the Hellenes of the country-side and even those of the cities—the worship of rivers and of the nymphs of the fountain, grove, and meadow. In the earliest days of the Hellenic race the rushing water was regarded as an animate power; and probably long before Homer the animistic sense had been at work upon this mysterious element and had conceived of the rolling river as the abode of an immanent personal

spirit, a *δαίμων*, or *numen*, which came more and more to be clothed with a concrete and definite form, human or animal or half-human half-animal; and at the end of this process a definite and individual *θεός* might emerge. The Homeric poems give us some evidence of the various stages of this religious evolution. In the conflict of Achilles with Skamandros and Simoeis, at times the river is nothing but the divine animate element, overpowering the hero with the material force of its waves. But more often the poetic presentation is more personal; there is a *δαίμων*, a vague personality, in the water, that can feel anger and pity and fear; then, in a dramatic moment of stress, this being can emerge from the water and even ascend to the council-chamber of Zeus, in the form of a man,¹ a product of the anthropomorphic fancy so regnant in the Greek mind. It is with this imagination that Odysseus prays to the unknown river-god under the title of 'king,' and speaks of the divinity's knees that he clasps as a suppliant.²

The ritual also, as recorded by Homer, shows us something of the same shifting imagination. Skamandros has a priest, but priesthood does not always demand a personal *θεός* for its service; the Trojans were in the habit of throwing live horses into the waters;³ and this simple form of sacrifice, which we may call elemental and which survived in the later period of Greece, belongs to animistic rather than to theistic cult. So also the dedication of Achilles' hair to the river Spercheios was the pledge of a simple communion with the river or the river-spirit; it does not necessarily imply an anthropomorphic god. But, when we hear of altars erected on the river-bank for the sacrifice, we may say that such ritual attests the belief in a personal *θεός* who is sufficiently independent of his element to be able at will to quit it and to come and partake of the victim on land. Both forms of sacrifice, the animistic and the theistic, were, according to Homer, in vogue on the banks of the Thessalian river,⁴ and both were generally maintained in historical times—e.g., at Mykonos,⁵ where an inscription prescribes that of the eleven victims, a ram and ten lambs, consecrated to Acheloos, three should be offered on the altar and the rest thrown into the river. Acheloos was 'the river' *par excellence* for all the Hellenic communities, not only because it was the largest of all Greek rivers, but probably also because the ancestors of the leading divisions of the people had at one time dwelt near or within its area. We are told by Ephoros that its worship was universal and that it was even prescribed by the Dodonæan oracle;⁶ and we have definite proof of it in Attica, Megara, and elsewhere.⁷ We may therefore regard Acheloos as more than an elemental *δαίμων*, as a fully formed individual god, whose power extended beyond his element, and who might be worshipped far away from the neighbourhood of any water. And thus he might become associated with the Olympians, as he was, e.g., with Demeter.⁸

But doubtless the heart of the individual Greek turned with more yearning and love to the local river that watered the glen or the meadows in which his city arose; and the records⁹ are ample enough to compel us to believe that every locality possessed this worship. That it was real and earnest and dearer to the souls of the people than any other mere nature-worship may also be believed; for the fertilizing water was closely asso-

ciated with the life of children, as the river was *κοιτοτρόφος*, 'a nurturer of the young.' The charming communion ritual of the dedication of the hair at puberty, attested by Homer, survived till a late period in Arcadia and probably in many other places.¹ The pure and holy water of the river or font was used for the service of the high gods, as at Olympia, and for purification ceremonies—especially at marriage.² We have no hint of anything like infant-baptism in rivers; but an interesting ritual indirectly connected, we may believe, with the birth of infants is attested of New Ilion by one classical text: the maidens of the historic city of Troy were obliged on the eve of their marriage to wade into the river Skamandros, and by a solemn formula to offer their virginity to the river-god.³ The maiden at the most critical time of her life enters thus into corporeal communion with the tutelary spirit of the land; and it is reasonable to think that the ritual was inspired by the belief that the future child born of the real marriage would be instinct with that spirit. The desire to establish some ideal connexion between the new-born infant and the river, if not expressed elsewhere by this peculiar ritual, is attested by such names as Kephissodotos at Athens;⁴ and the many myths concerning princesses and heroines conceiving by river-gods might have arisen from just such a *λεπρὸς γάμος* as that which was in vogue in the Troad.

The family-ties, then, between the home and the river-god were intimately felt in Greece. And the Hellene was capable of believing that such an elemental deity could be deeply concerned with the welfare of the whole State. When the Spartan king, Kleomenes, tried to cross the river Erasinos to attack the Argives, Erasinos strove to prevent him, and the king expressed his admiration of the god for doing his best to save his citizens.⁵ When certain men were condemned as traitors at Amphipolis in 356 B.C., a part of their confiscated property was paid over to the river Strymon, whom they were held to have betrayed.

We recognize by the evidence of such facts that the cult of rivers was one of the vital forces in the domestic and even the national religion of Greece. But it is not easy to say at once and precisely how the average Hellene imagined these divinities; we have seen what is the evidence offered by the ritual; but ritualistic forms by no means bind the imagination of the worshipper. Many may have remained at the stage of inchoate religious feeling and have been conscious merely of the flowing water as animate and divine, or have believed vaguely in the presence there of an immanent spirit, or *δαίμων*, who could be angry or propitious. But there was a strong trend in the Greek religious imagination towards definite concrete forms so as to invest the once vague *numen* with the definite personality of the hero or the individual *θεός*, while Greek art and Greek mythology both express and strengthen this tendency. Therefore it is likely that the average Greek, believing in the divinity of rivers, believed in real and robust river-gods inhabiting them, as appears in the story about Skamandros quoted above, and in the popular myths concerning the combat of Herakles and Acheloos, and Alpheios's amorous attempt on Artemis.⁶ If we may trust Achilles Tatius, even the later Hellenes maintained at Olympia the simple form of sacrifice to Alpheios which may be called non-anthropomorphic, throwing their offerings directly into the water; but they attached to it a legend of a human lover-god.⁷

The form, however, in which the river-god was imagined was not wholly and always anthropomorphic; according to Aelian,¹ many of the Greek communities personified their local river under the form of a bull, suggested no doubt by the roaring of the floods, others under the form of man; but the art evidence shows that here as elsewhere the anthropomorphic fancy prevailed at last over the theriomorphic; the later coin-types present the river-god usually in beautiful human form, only with bulls' horns above the forehead.

(g) *Nymph-worship*.—The worship of nymphs possessed an equal hold on the faith and affections of the early Greek and of the Greek peasant of all ages. These are the feminine personifications of certain elemental life, the life in the fountain and stream, in the grove and the meadow. But, unlike the river-divinities, they appear to have been anthropomorphically imagined from the very beginning; for their name, which is our primary evidence concerning them, means simply 'brides' or 'young women,' and their forms in art and legend are purely human. Perhaps even more than the river-deities, the nymphs were intimately connected with the religion of the family and home. A striking passage in the *Odyssey*² shows how they were associated with the deep sentiment of yearning for one's native land; and throughout the ages of paganism they were beloved and revered as *κοιτοτρόφοι*,³ the kindly nurturers of children, the most tender title in the religious language of Greece. Though they belonged to the wild landscape of the country-side, their cult was taken over by the city-State; each division of the Doric tribes appears to have had its special worship of them;⁴ the magistrates at Kos supervise their sacrifice;⁵ and on the slopes of the Athenian Akropolis, where we have evidence of a temple consecrated to 'nymphs of the State'—*Νύμφαι Δημόδιοι*, *Νύμφη Πάνδημος*⁶—they came near to the rank of higher divinities. Though personal and human, these 'brides' of nature are usually nameless, and, in the centuries when the Olympian religion flourished, they tend to attach themselves as adjuncts to the higher divinities, such as Hermes, Apollo, Artemis, and Dionysos. And, when the higher gods were fading in the latter days of paganism, we have reason for believing that the simple faith of the peasant turned more clingingly to those tutelary half-divinities that fostered the life of his home and his soil; and their cult may have been the less easy to eradicate in proportion as they were more dimly conceived. In a degraded form, because of the ban of Christianity, the faith in them survives even to this day in Greece and Macedonia.⁷

Even in the records and products of the civilized European imagination these half-divine personalities of river, grove, and fountain are not to be ignored; for they have been a heritage of our poetic tradition, and even our great Puritan Milton could not shake off their spell. But for the just appreciation of the popular Greek mind their importance is primary; they illustrate as vividly as any part of the polytheism the plastic personifying faculty which peopled the world of nature with bright personalities, ideal but akin to our humanity; and thus Greek religion as well as Greek poetry was in its attitude towards nature anthropomorphic rather than animistic or pantheistic; thus also, by evolving these forms of beauty and grace, the

the arctic regions the chief and most terrible of the gods will rule the cold blast, and 'hell' will be a realm of pitiless frost. Thus divinities of the mountains will everywhere have similar characteristics, and will be awe-inspiring and difficult of access; deities of the storms will be variable and fickle, swift to strike, and readily appeased. The former may be expected to be constant, unchangeable, and in a mountainous region will dominate the entire pantheon. The ferocity or comparative mildness of the latter will vary with the climatic conditions of the country; their disposition will always be more or less uncertain, and their action erratic. In Egypt, where the conditions are stable, and the character and succession of the weather and the seasons may be relied upon with all confidence, nature-deities are equable and mild, ruling in general in their several provinces with consideration and equity. In the cold and storm-driven north the corresponding divinities are harsh, reckless, and cruel, and may be expected relentlessly to punish every offence against their majesty and laws. An animistic cult, endowing with some at least of the attributes and functions of life the powers and phenomena of nature that encompass its votaries, of necessity reflects the quality and characteristics of their environment, and in many respects may be looked upon as an unwritten record of their experiences and history.

In this way the nature-gods of India are brought into relation with their surroundings, and betray their origin. Where development has taken place, the change has usually, not always, been so simple and gradual that the original character of the deity in question can be discerned without much difficulty. In particular the gods of the Vedic hymns are for the most part at only a short remove from the natural phenomena which they represent. Behind the loosely wrought and transparent veil of the personality the concrete fact or phenomenon, upon which the idealization has been based, was readily apparent; and the poets or worshippers never lost their hold, as it were, of the material world, the elements of which their own imagination had converted into gods with a claim upon their reverence and fear. Those forces of nature which were most apt to surprise, hurt, inflict injury, or cause loss, whether to themselves or to their possessions, would most command their respect and exact from them offerings of propitiation. Deities, on the other hand, even though they represented constant facts of experience, as, e.g., the Indian warmth and sunshine, if the outcome of their activity were usually the happiness and well-being of man, did not need to be urged to beneficence by gifts; and consequently their worship always tended to be neglected and their claims deferred in favour of the more imperious need of the worshipper to secure himself by submission and offering against the ill-will of those who might be prone to do harm. It is probable that considerations of this nature explain the comparatively subordinate position which the direct worship of the sun occupies in India. No natural phenomenon is more continually present and all-pervading than the sunlight and heat; reverence for the sun is and always has been a permanent element of Hindu worship, and of the daily ritual and prayer of the Brahman worshipper. The beneficent action of the sun, however, might be taken for granted. The more urgent need of the worshipper was to erect altars and present sacrifices to avert the wrongs and calamities which he might otherwise suffer at the hands of more capricious deities, whose action might easily be diverted to do him harm.

To enumerate and describe even a tithe of the nature-gods and goddesses who from the Himalayas to Cape Comorin do at the present time exact or

have in the past exacted a measure of adoration and fear from a greater or less proportion of the inhabitants of the peninsula is manifestly impossible within the limits of an article. Their number is legion. It would not be incorrect to assert that of the great multitude of deities who compose the vast Hindu pantheon the character and attributes of at least nine-tenths would justify a claim to the name and rank of 'nature' divinities; the remainder, with hardly an exception, would find a place in shrines or temples for ancestor-worship, or betray their origin in deification of notable men and women of the present or past ages. Deities that are the personifications of abstract qualities or sensations are rare; nor do they seem ever to have commanded any considerable measure of practical worship, important though their rôle may have been in theory and in the constructive mythology of the priests.

There is a further reason also in the character of the nature-gods themselves which seems to render a detailed description of each and every one unnecessary, even if it were possible. They all or most of them exhibit a strong family likeness. A description true to the qualities and attributes of one would serve for many others. Practically the same divinity also re-appears under different names in different parts of the country. When facilities of communication increase, these various deities are brought into contact with one another, and are readily identified. Thus the number of distinct and individual entities among the gods is not so great as might at first sight appear. Moreover, the character and functions of a nature-deity are rarely sharply defined. They tend at the edges to indistinctness and lack of firm outline. The more readily, therefore, they pass into one another, interchange offices and attributes, and end by becoming indistinguishable or distinguishable only by a name which has ceased to connote any marked individuality. It is usual to classify nature-gods as gods of the mountains, forests, streams, etc.; within these classes a similarity of function and characteristic is universally found to exist, which has its explanation in the natural phenomena which the deities represent. Finally, all nature-gods are strongly anthropomorphic. The worshippers, by whose imaginative power they are conceived, endow them with qualities and capacities like their own. In bodily appearance, in motives and passions, in prejudices and desires, they are like men. Inasmuch, however, as they have at their disposal forces incomparably greater than human—forces, moreover, whose purpose and direction appear to be incalculable—they are credited with efficient powers on a greatly enhanced scale. The worshipper reflects his own capacities for willing, feeling, acting upon the creations of his fancy, but in so doing magnifies them, and finds himself in presence of a god.

In the hymns of the Rigveda, the earliest literature of the Hindus, a simple nature-worship is presented, the naive wonder and reverence of man in presence of the mighty forces of the universe by which he is encompassed. The Vedic deities are described in anthropomorphic terms, but their relation to the natural phenomena which they represent is usually of a simple and straightforward character. In the hands of the poets they have undergone little transformation or idealization, and are still manifestly the forces of nature more or less distinctly personified and endowed with human characteristics. Perhaps in no other early religion is the 'natural' element so clearly revealed, or the material origin so little obscured by passing into the divine. Thus also the qualities and attributes of the various gods, being constructed, as it were, after one pattern, that of man, present little

quently adopted to render an original philosophic term that hardly admits of adequate translation into a foreign tongue.¹

Hindu thought, moreover, hardly advanced to the conception of nature as a whole, a totality inseparably bonded together and unified under the control of a common law to which in every part and portion it was submissive. Set over against himself, to the Indian observer or thinker the universe was and remained individualistic, a group or rather groups of individuals, often loosely and obscurely defined, but with distinct individualities, wills, functions, and tendencies. In all this the conditions of human life and society were reflected upon the assumed life of the other world, and seen more or less distorted as in a mirror. The several members of the groups, deities of the forests, the streams, the sky, etc., bore a family resemblance, as it were, to one another; but also the groups themselves were not strongly or clearly differentiated *inter se*, and individuals on the border-line might be assigned without much difficulty to another company, and were not careful to avoid trespassing upon the sphere or functions of divinities in the main distinct and charged with a special office and work. The tendency was uniformly in the direction of assimilation, not only the individual members of the groups drawing closer together in attributes and character, in all but name, but the several groups losing their hold upon the distinctive characteristics which betrayed their origin, and becoming mere embodiments of a few leading or commanding attributes which were appropriate to all. This feature is not, of course, peculiar to early Hindu thought or conception, but to a greater or less extent characterizes all 'nature' religions, whose deities are only in rare instances clearly differentiated, more often under different names are possessed of identical attributes and discharge the same offices.

These vaguely conceived forces or powers of nature were, in the first instance at least, not defined as persons, or clothed with personal form and attribute. This stage or attitude of belief is represented widely among the less advanced animistic tribes of India at the present time, and to a large extent forms the background of the religious faith and practice of the countryside.² The ghostly object of the villager's dread is localized in this or that patch of jungle, in a rock, a tree, or a rushing stream, but is hardly individualized, or in any way distinguished from many others of his kind, who do similar deeds of mischief and ill-will and are equally to be feared. In the earliest literature of the Vedic hymns, however, the personality of the chief gods and goddesses is distinctly conceived and asserted. The poets'

¹ Illustrations are readily to hand from Indian literature. Thus *Bhagavad-Gītā*, xii. 19, 'Know that both *prakṛti* and *puruṣa* are without beginning, and that products and qualities (*guṇa*) originate from *prakṛti*.' *Prakṛti* is said to be the ground of the activity of cause and effect, *puruṣa* of the capacity of experiencing pleasure and pain (*SBE* viii. 2 [1898] 104 f.; cf. the comments of Rāmānuja on *Ved.* i. 1. 1 and i. iv. 8, *SBE* xlviii. [1804] 139 f., 365); *ib.* iii. 27, 'Actions in every instance are done by the qualities of *prakṛti*'; 33, 'Even the wise man acts in harmony with his own nature (*prakṛti*). All beings follow nature' (*SBE* xlviii. 55 f.); ix. 10, 'By me, the overseer, *prakṛti* brings forth the animate and inanimate world, from this cause the universe revolves' (*SBE* xlviii. 82); cf. *ib.* xiv. 6, v. 14, etc.

² Cf. the words of H. H. Risley, than whom no closer or more exact student of primitive Indian life can be quoted. 'More especially in Chota Nagpur . . . my endeavours to find out what the jungle people really do believe have led me to the negative conclusion that in most cases the indefinite something which they fear and attempt to propitiate is not a person at all in any sense of the word. . . . I should say that the idea that lies at the root of their religion is that of power, or rather of many powers. What the Animist worships and seeks by all means to influence and conciliate is the shifting and shadowy company of unknown powers or influences making for evil rather than for good' (*Census of India, 1901, 'Report,'* vol. I. pt. I, Calcutta, 1903, p. 352).

thought and conception have advanced far beyond the stage at which the suppliant addresses himself to a vague impersonal force; and of the leading divinities at least it may be said that they possess a character of their own, and are apprehended in and by themselves. This would tend to show that the Aryan peoples of that age were by no means at a primitive or very early stage in the evolution of religious ideas, but had made considerable progress in the orderly development of constructive thought. The conception of personality, if it forces itself upon primitive man as a given fact of experience, is only with difficulty defined, or made to apply to the unknown external powers upon which his own well-being so largely depends. These he endows with various qualities and functions, derived from his own self-consciousness and experience, as of cunning, strength, will, but he makes no effort to combine them into the whole of an individual person, a substratum whose attributes these are.

Accordingly, it would be correct to define the Hindu conception of nature as consisting, at least fundamentally, of an aggregate of forces, not clearly interrelated or acting in unison, but for the most part independent, and not set in motion by any common motive or principle. It is partially misleading, therefore, to employ the term 'force' of the Indian conception. For the so-called force is not determined by any rule or law, save that of its own volition. It is active, and works according to its own will and caprice. The animating power of the spring or the grove is really animated, and is, so far as it is self-governing and irresponsible, urged to action by no necessity or the control of a higher power or will, but is arbitrary and apt to perform the most unexpected feats of mischief-making and malice. This is the lowest and most primitive stage of naturalism, represented widely in India at the present day. A hierarchy of nature-gods and goddesses, with a gradation of authority and power, reveals itself only in the further course of evolution. Nor in this is man doing other than ascribing to the external forces of nature the faculties of self-determination and free movement which he finds within himself. The powers of the world without reflect the power within, but are conceived as endowed with a greater capacity for hurt or harm or for doing good, inasmuch as the radius of their action is indefinitely wider and the destruction that they work more ruinous and complete. Nature is essentially relative to man. For the very reason, however, that these powers are self-determining and irresponsible, they may be moved by prayer or placated by offering. The grovelling attitude of fear, the muttered petition for mercy, the rags tied to the sacred tree, the oblation poured upon the ground, and the slaughtered bird or beast are so many recognitions of the dominion which the forces of nature exercise over the worshipper, and the perpetual interference which they inject into the otherwise equable course of his life. He is always in presence of natural powers of indefinite range and capability, and the mere instinct of self-preservation prompts him to seek to propitiate them and to ward off the incalculable consequences of their spite or caprice.

A determining element in the character of all nature-divinities is the climate and natural features of the district in which they are found. Environment plays as large a part in the formation and development of early religious conceptions as in the physical growth and evolution of the human body. The deities with which the imagination of the worshipper fills the universe around him are of necessity deities of the things which he sees, and the phenomenal forces which he experiences. In the tropics a god of fire will predominate, and the supreme punishment will be torture by heat. In

the arctic regions the chief and most terrible of the gods will rule the cold blast, and 'hell' will be a realm of pitiless frost. Thus divinities of the mountains will everywhere have similar characteristics, and will be awe-inspiring and difficult of access; deities of the storms will be variable and fickle, swift to strike, and readily appeased. The former may be expected to be constant, unchangeable, and in a mountainous region will dominate the entire pantheon. The ferocity or comparative mildness of the latter will vary with the climatic conditions of the country; their disposition will always be more or less uncertain, and their action erratic. In Egypt, where the conditions are stable, and the character and succession of the weather and the seasons may be relied upon with all confidence, nature-deities are equable and mild, ruling in general in their several provinces with consideration and equity. In the cold and storm-driven north the corresponding divinities are harsh, reckless, and cruel, and may be expected relentlessly to punish every offence against their majesty and laws. An animistic cult, endowing with some at least of the attributes and functions of life the powers and phenomena of nature that encompass its votaries, of necessity reflects the quality and characteristics of their environment, and in many respects may be looked upon as an unwritten record of their experiences and history.

In this way the nature-gods of India are brought into relation with their surroundings, and betray their origin. Where development has taken place, the change has usually, not always, been so simple and gradual that the original character of the deity in question can be discerned without much difficulty. In particular the gods of the Vedic hymns are for the most part at only a short remove from the natural phenomena which they represent. Behind the loosely wrought and transparent veil of the personality the concrete fact or phenomenon, upon which the idealization has been based, was readily apparent; and the poets or worshippers never lost their hold, as it were, of the material world, the elements of which their own imagination had converted into gods with a claim upon their reverence and fear. Those forces of nature which were most apt to surprise, hurt, inflict injury, or cause loss, whether to themselves or to their possessions, would most command their respect and exact from them offerings of propitiation. Deities, on the other hand, even though they represented constant facts of experience, as, *e.g.*, the Indian warmth and sunshine, if the outcome of their activity were usually the happiness and well-being of man, did not need to be urged to beneficence by gifts; and consequently their worship always tended to be neglected and their claims deferred in favour of the more imperious need of the worshipper to secure himself by submission and offering against the ill-will of those who might be prone to do harm. It is probable that considerations of this nature explain the comparatively subordinate position which the direct worship of the sun occupies in India. No natural phenomenon is more continually present and all-pervading than the sunlight and heat; reverence for the sun is and always has been a permanent element of Hindu worship, and of the daily ritual and prayer of the Brāhman worshipper. The beneficent action of the sun, however, might be taken for granted. The more urgent need of the worshipper was to erect altars and present sacrifices to avert the wrongs and calamities which he might otherwise suffer at the hands of more capricious deities, whose action might easily be diverted to do him harm.

To enumerate and describe even a tithe of the nature-gods and goddesses who from the Himālayas to Cape Comorin do at the present time exact or

have in the past exacted a measure of adoration and fear from a greater or less proportion of the inhabitants of the peninsula is manifestly impossible within the limits of an article. Their number is legion. It would not be incorrect to assert that of the great multitude of deities who compose the vast Hindu pantheon the character and attributes of at least nine-tenths would justify a claim to the name and rank of 'nature' divinities; the remainder, with hardly an exception, would find a place in shrines or temples for ancestor-worship, or betray their origin in deification of notable men and women of the present or past ages. A determining element in the character of all nature-divinities is the climate and natural features of the district in which they are found. Environment plays as large a part in the formation and development of early religious conceptions as in the physical growth and evolution of the human body. The deities with which the imagination of the worshipper fills the universe around him are of necessity deities of the things which he sees, and the phenomenal forces which he experiences. In the tropics a god of fire will predominate, and the supreme punishment will be torture by heat. In

the arctic regions the chief and most terrible of the gods will rule the cold blast, and 'hell' will be a realm of pitiless frost. Thus divinities of the mountains will everywhere have similar characteristics, and will be awe-inspiring and difficult of access; deities of the storms will be variable and fickle, swift to strike, and readily appeased. The former may be expected to be constant, unchangeable, and in a mountainous region will dominate the entire pantheon. The ferocity or comparative mildness of the latter will vary with the climatic conditions of the country; their disposition will always be more or less uncertain, and their action erratic. In Egypt, where the conditions are stable, and the character and succession of the weather and the seasons may be relied upon with all confidence, nature-deities are equable and mild, ruling in general in their several provinces with consideration and equity. In the cold and storm-driven north the corresponding divinities are harsh, reckless, and cruel, and may be expected relentlessly to punish every offence against their majesty and laws. An animistic cult, endowing with some at least of the attributes and functions of life the powers and phenomena of nature that encompass its votaries, of necessity reflects the quality and characteristics of their environment, and in many respects may be looked upon as an unwritten record of their experiences and history.

In this way the nature-gods of India are brought into relation with their surroundings, and betray their origin. Where development has taken place, the change has usually, not always, been so simple and gradual that the original character of the deity in question can be discerned without much difficulty. In particular the gods of the Vedic hymns are for the most part at only a short remove from the natural phenomena which they represent. Behind the loosely wrought and transparent veil of the personality the concrete fact or phenomenon, upon which the idealization has been based, was readily apparent; and the poets or worshippers never lost their hold, as it were, of the material world, the elements of which their own imagination had converted into gods with a claim upon their reverence and fear. Those forces of nature which were most apt to surprise, hurt, inflict injury, or cause loss, whether to themselves or to their possessions, would most command their respect and exact from them offerings of propitiation. Deities, on the other hand, even though they represented constant facts of experience, as, *e.g.*, the Indian warmth and sunshine, if the outcome of their activity were usually the happiness and well-being of man, did not need to be urged to beneficence by gifts; and consequently their worship always tended to be neglected and their claims deferred in favour of the more imperious need of the worshipper to secure himself by submission and offering against the ill-will of those who might be prone to do harm. It is probable that considerations of this nature explain the comparatively subordinate position which the direct worship of the sun occupies in India. No natural phenomenon is more continually present and all-pervading than the sunlight and heat; reverence for the sun is and always has been a permanent element of Hindu worship, and of the daily ritual and prayer of the Brāhman worshipper. The beneficent action of the sun, however, might be taken for granted. The more urgent need of the worshipper was to erect altars and present sacrifices to avert the wrongs and calamities which he might otherwise suffer at the hands of more capricious deities, whose action might easily be diverted to do him harm.

To enumerate and describe even a tithe of the nature-gods and goddesses who from the Himalayas to Cape Comorin do at the present time exact or

have in the past exacted a measure of adoration and fear from a greater or less proportion of the inhabitants of the peninsula is manifestly impossible within the limits of an article. Their number is legion. It would not be incorrect to assert that of the great multitude of deities who compose the vast Hindu pantheon the character and attributes of at least nine-tenths would justify a claim to the name and rank of 'nature' divinities; the remainder, with hardly an exception, would find a place in shrines or temples for ancestor-worship, or betray their origin in deification of notable men and women of the present or past ages. Deities that are the personifications of abstract qualities or sensations are rare; nor do they seem ever to have commanded any considerable measure of practical worship, important though their rôle may have been in theory and in the constructive mythology of the priests.

There is a further reason also in the character of the nature-gods themselves which seems to render a detailed description of each and every one unnecessary, even if it were possible. They all or most of them exhibit a strong family likeness. A description true to the qualities and attributes of one would serve for many others. Practically the same divinity also re-appears under different names in different parts of the country. When facilities of communication increase, these various deities are brought into contact with one another, and are readily identified. Thus the number of distinct and individual entities among the gods is not so great as might at first sight appear. Moreover, the character and functions of a nature-deity are rarely sharply defined. They tend at the edges to indistinctness and lack of firm outline. The more readily, therefore, they pass into one another, interchange offices and attributes, and end by becoming indistinguishable or distinguishable only by a name which has ceased to connote any marked individuality. It is usual to classify nature-gods as gods of the mountains, forests, streams, etc.; within these classes a similarity of function and characteristic is universally found to exist, which has its explanation in the natural phenomena which the deities represent. Finally, all nature-gods are strongly anthropomorphic. The worshippers, by whose imaginative power they are conceived, endow them with qualities and capacities like their own. In bodily appearance, in motives and passions, in prejudices and desires, they are like men. Inasmuch, however, as they have at their disposal forces incomparably greater than human—forces, moreover, whose purpose and direction appear to be incalculable—they are credited with efficient powers on a greatly enhanced scale. The worshipper reflects his own capacities for willing, feeling, acting upon the creations of his fancy, but in so doing magnifies them, and finds himself in presence of a god.

In the hymns of the Rīgveda, the earliest literature of the Hindus, a simple nature-worship is presented, the naive wonder and reverence of man in presence of the mighty forces of the universe by which he is encompassed. The Vedic deities are described in anthropomorphic terms, but their relation to the natural phenomena which they represent is usually of a simple and straightforward character. In the hands of the poets they have undergone little transformation or idealization, and are still manifestly the forces of nature more or less distinctly personified and endowed with human characteristics. Perhaps in no other early religion is the 'natural' element so clearly revealed, or the material origin so little obscured by passing into the divine. Thus also the qualities and attributes of the various gods, being constructed, as it were, after one pattern, that of man, present little

quently adopted to render an original philosophic term that hardly admits of adequate translation into a foreign tongue.¹

Hindu thought, moreover, hardly advanced to the conception of nature as a whole, a totality inseparably bonded together and unified under the control of a common law to which in every part and portion it was submissive. Set over against himself, to the Indian observer or thinker the universe was and remained individualistic, a group or rather groups of individuals, often loosely and obscurely defined, but with distinct individualities, wills, functions, and tendencies. In all this the conditions of human life and society were reflected upon the assumed life of the other world, and seen more or less distorted as in a mirror. The several members of the groups, deities of the forests, the streams, the sky, etc., bore a family resemblance, as it were, to one another; but also the groups themselves were not strongly or clearly differentiated *inter se*, and individuals on the border-line might be assigned without much difficulty to another company, and were not careful to avoid trespassing upon the sphere or functions of divinities in the main distinct and charged with a special office and work. The tendency was uniformly in the direction of assimilation, not only the individual members of the groups drawing closer together in attributes and character, in all but name, but the several groups losing their hold upon the distinctive characteristics which betrayed their origin, and becoming mere embodiments of a few leading or commanding attributes which were appropriate to all. This feature is not, of course, peculiar to early Hindu thought or conception, but to a greater or less extent characterizes all 'nature' religions, whose deities are only in rare instances clearly differentiated, more often under different names are possessed of identical attributes and discharge the same offices.

These vaguely conceived forces or powers of nature were, in the first instance at least, not defined as persons, or clothed with personal form and attribute. This stage or attitude of belief is represented widely among the less advanced animistic tribes of India at the present time, and to a large extent forms the background of the religious faith and practice of the countryside.² The ghostly object of the villager's dread is localized in this or that patch of jungle, in a rock, a tree, or a rushing stream, but is hardly individualized, or in any way distinguished from many others of his kind, who do similar deeds of mischief and ill-will and are equally to be feared. In the earliest literature of the Vedic hymns, however, the personality of the chief gods and goddesses is distinctly conceived and asserted. The poets'

¹ Illustrations are readily to hand from Indian literature. Thus *Bhagavad-Gītā*, xiii. 19, 'Know that both *prakṛti* and *puṇya* are without beginning, and that products and qualities (*guṇa*) originate from *prakṛti*.' *Prakṛti* is said to be the ground of the activity of cause and effect, *puṇya* of the capacity of experiencing pleasure and pain (*SBE* viii. 2 [1893] 104 f.; cf. the comments of Rāmānuja on *Ved. i. l. 1* and *i. lv. 8*, *SBE* xlviii. [1904] 139 f., 365); *ib. id.* 27, 'Actions in every instance are done by the qualities of *prakṛti*'; 33, 'Even the wise man acts in harmony with his own nature (*prakṛti*). All beings follow nature' (*SBE* xlviii. 55 f.); *ix. 10*, 'By me, the overseer, *prakṛti* brings forth the animate and inanimate world, from this cause the universe revolves' (*SBE* xlviii. 82); *cf. ib. xiv. 5*, v. 14, etc.

² Cf. the words of H. H. Risley, than whom no closer or more exact student of primitive Indian life can be quoted. 'More especially in Chota Nagpur . . . my endeavours to find out what the jungle people really do believe have led me to the negative conclusion that in most cases the indefinite something which they fear and attempt to propitiate is not a person at all in any sense of the word. . . . I should say that the idea that lies at the root of their religion is that of power, or rather of many powers. What the Animist worships and seeks by all means to influence and conciliate is the shifting and shadowy company of unknown powers or influences making for evil rather than for good' (*Census of India, 1901, 'Report'*, vol. I. pt. I, Calcutta, 1903, p. 352).

thought and conception have advanced far beyond the stage at which the suppliant addresses himself to a vague impersonal force; and of the leading divinities at least it may be said that they possess a character of their own, and are apprehended in and by themselves. This would tend to show that the Aryan peoples of that age were by no means at a primitive or very early stage in the evolution of religious ideas, but had made considerable progress in the orderly development of constructive thought. The conception of personality, if it forces itself upon primitive man as a given fact of experience, is only with difficulty defined, or made to apply to the unknown external powers upon which his own well-being so largely depends. These he endows with various qualities and functions, derived from his own self-consciousness and experience, as of cunning, strength, will, but he makes no effort to combine them into the whole of an individual person, a substratum whose attributes these are.

Accordingly, it would be correct to define the Hindu conception of nature as consisting, at least fundamentally, of an aggregate of forces, not clearly interrelated or acting in unison, but for the most part independent, and not set in motion by any common motive or principle. It is partially misleading, therefore, to employ the term 'force' of the Indian conception. For the so-called force is not determined by any rule or law, save that of its own volition. It is active, and works according to its own will and caprice. The animating power of the spring or the grove is really animated, and is, so far as it is self-governing and irresponsible, urged to action by no necessity or the control of a higher power or will, but is arbitrary and apt to perform the most unexpected feats of mischief-making and malice. This is the lowest and most primitive stage of naturalism, represented widely in India at the present day. A hierarchy of nature-gods and goddesses, with a gradation of authority and power, reveals itself only in the further course of evolution. Nor in this is man doing other than ascribing to the external forces of nature the faculties of self-determination and free movement which he finds within himself. The powers of the world without reflect the power within, but are conceived as endowed with a greater capacity for hurt or harm or for doing good, inasmuch as the radius of their action is indefinitely wider and the destruction that they work more ruinous and complete. Nature is essentially relative to man. For the very reason, however, that these powers are self-determining and irresponsible, they may be moved by prayer or placated by offering. The grovelling attitude of fear, the muttered petition for mercy, the rags tied to the sacred tree, the oblation poured upon the ground, and the slaughtered bird or beast are so many recognitions of the dominion which the forces of nature exercise over the worshipper, and the perpetual interference which they inject into the otherwise equable course of his life. He is always in presence of natural powers of indefinite range and capability, and the mere instinct of self-preservation prompts him to seek to propitiate them and to ward off the incalculable consequences of their spite or caprice.

A determining element in the character of all nature-divinities is the climate and natural features of the district in which they are found. Environment plays as large a part in the formation and development of early religious conceptions as in the physical growth and evolution of the human body. The deities with which the imagination of the worshipper fills the universe around him are of necessity deities of the things which he sees, and the phenomenal forces which he experiences. In the tropics a god of fire will predominate, and the supreme punishment will be torture by heat. In

the arctic regions the chief and most terrible of the gods will rule the cold blast, and 'hell' will be a realm of pitiless frost. Thus divinities of the mountains will everywhere have similar characteristics, and will be awe-inspiring and difficult of access; deities of the storms will be variable and fickle, swift to strike, and readily appeased. The former may be expected to be constant, unchangeable, and in a mountainous region will dominate the entire pantheon. The ferocity or comparative mildness of the latter will vary with the climatic conditions of the country; their disposition will always be more or less uncertain, and their action erratic. In Egypt, where the conditions are stable, and the character and succession of the weather and the seasons may be relied upon with all confidence, nature-deities are equable and mild, ruling in general in their several provinces with consideration and equity. In the cold and storm-driven north the corresponding divinities are harsh, reckless, and cruel, and may be expected relentlessly to punish every offence against their majesty and laws. An animistic cult, endowing with some at least of the attributes and functions of life the powers and phenomena of nature that encompass its votaries, of necessity reflects the quality and characteristics of their environment, and in many respects may be looked upon as an unwritten record of their experiences and history.

In this way the nature-gods of India are brought into relation with their surroundings, and betray their origin. Where development has taken place, the change has usually, not always, been so simple and gradual that the original character of the deity in question can be discerned without much difficulty. In particular the gods of the Vedic hymns are for the most part at only a short remove from the natural phenomena which they represent. Behind the loosely wrought and transparent veil of the personality the concrete fact or phenomenon, upon which the idealization has been based, was readily apparent; and the poets or worshippers never lost their hold, as it were, of the material world, the elements of which their own imagination had converted into gods with a claim upon their reverence and fear. Those forces of nature which were most apt to surprise, hurt, inflict injury, or cause loss, whether to themselves or to their possessions, would most command their respect and exact from them offerings of propitiation. Deities, on the other hand, even though they represented constant facts of experience, as, e.g., the Indian warmth and sunshine, if the outcome of their activity were usually the happiness and well-being of man, did not need to be urged to beneficence by gifts; and consequently their worship always tended to be neglected and their claims deferred in favour of the more imperious need of the worshipper to secure himself by submission and offering against the ill-will of those who might be prone to do harm. It is probable that considerations of this nature explain the comparatively subordinate position which the direct worship of the sun occupies in India. No natural phenomenon is more continually present and all-pervading than the sunlight and heat; reverence for the sun is and always has been a permanent element of Hindu worship, and of the daily ritual and prayer of the Brāhman worshipper. The beneficent action of the sun, however, might be taken for granted. The more urgent need of the worshipper was to erect altars and present sacrifices to avert the wrongs and calamities which he might otherwise suffer at the hands of more capricious deities, whose action might easily be diverted to do him harm.

To enumerate and describe even a tithe of the nature-gods and goddesses who from the Himalayas to Cape Comorin do at the present time exact or

have in the past exacted a measure of adoration and fear from a greater or less proportion of the inhabitants of the peninsula is manifestly impossible within the limits of an article. Their number is legion. It would not be incorrect to assert that of the great multitude of deities who compose the vast Hindu pantheon the character and attributes of at least nine-tenths would justify a claim to the name and rank of 'nature' divinities; the remainder, with hardly an exception, would find a place in shrines or temples for ancestor-worship, or betray their origin in deification of notable men and women of the present or past ages. Deities that are the personifications of abstract qualities or sensations are rare; nor do they seem ever to have commanded any considerable measure of practical worship, important though their rôle may have been in theory and in the constructive mythology of the priests.

There is a further reason also in the character of the nature-gods themselves which seems to render a detailed description of each and every one unnecessary, even if it were possible. They all or most of them exhibit a strong family likeness. A description true to the qualities and attributes of one would serve for many others. Practically the same divinity also re-appears under different names in different parts of the country. When facilities of communication increase, these various deities are brought into contact with one another, and are readily identified. Thus the number of distinct and individual entities among the gods is not so great as might at first sight appear. Moreover, the character and functions of a nature-deity are rarely sharply defined. They tend at the edges to indistinctness and lack of firm outline. The more readily, therefore, they pass into one another, interchange offices and attributes, and end by becoming indistinguishable or distinguishable only by a name which has ceased to connote any marked individuality. It is usual to classify nature-gods as gods of the mountains, forests, streams, etc.; within these classes a similarity of function and characteristic is universally found to exist, which has its explanation in the natural phenomena which the deities represent. Finally, all nature-gods are strongly anthropomorphic. The worshippers, by whose imaginative power they are conceived, endow them with qualities and capacities like their own. In bodily appearance, in motives and passions, in prejudices and desires, they are like men. Inasmuch, however, as they have at their disposal forces incomparably greater than human—forces, moreover, whose purpose and direction appear to be incalculable—they are credited with efficient powers on a greatly enhanced scale. The worshipper reflects his own capacities for willing, feeling, acting upon the creations of his fancy, but in so doing magnifies them, and finds himself in presence of a god.

In the hymns of the R̥gveda, the earliest literature of the Hindus, a simple nature-worship is presented, the naive wonder and reverence of man in presence of the mighty forces of the universe by which he is encompassed. The Vedic deities are described in anthropomorphic terms, but their relation to the natural phenomena which they represent is usually of a simple and straightforward character. In the hands of the poets they have undergone little transformation or idealization, and are still manifestly the forces of nature more or less distinctly personified and endowed with human characteristics. Perhaps in no other early religion is the 'natural' element so clearly revealed, or the material origin so little obscured by passing into the divine. Thus also the qualities and attributes of the various gods, being constructed, as it were, after one pattern, that of man, present little

variety, and the same epithets may be and frequently are applied to each and all. As is natural, it is the element of strength, the force which they exercise and by which their influence is felt, upon which most stress is laid. Whatever else they may be to the mind of their worshippers, they are severally all-powerful, able to accomplish their aims and to do whatsoever they will. Moreover, with few exceptions they are conceived as gracious and kindly, prepared to listen to the petitions of those who approach them in sincerity with prayer and sacrifice; and they wage continual war with the powers of ill, the demons who work disaster, suffering, and wrong. In all this may be easily discerned the self-consciousness of the early Hindu worshipper, facing with courage the problems of the world around him, projecting his own thoughts and experiences into what seemed its infinitely manifold activities, and endeavouring to construe its movements in terms of his own self-knowledge and will. Few of the great gods of the Veda survived to later times.

Nature-deities form part of what appear to have been early or primitive groupings of divine powers in triads, or sets of three. These, again, were, in most instances at least, based upon and developed out of pairs of divinities, in whom was expressed the ancient cosmological conception of the creation of the universe by means of generation, the union of the male and female principles in the natural world. The oldest of these dyads, or pairs, was Dyaus-Pṛthivī, heaven and earth, Dyaus representing the wide-spreading vault of heaven, which surrounds and encompasses the earth (*pṛthivī*). Dyaus is invoked as father of gods and men, who alone apparently in the conception of the poets is without beginning and possesses the attribute of immortality. The other gods, however great and powerful they may be, are in themselves but mortal, and gain immortality only as they quaff the life-giving *soma* (see below) in the halls of the gods. Other ancient divinities linked together in nature and worship are Mitra-Varuṇa, the sun in the heavens, in his royal prerogatives of justice and power; Indra-Varuṇa, the open heaven and the cloud-storms that come forth from its womb; and others of less importance. The earliest triad that is clearly distinguished appears as Agni, Vāyu, and Sūrya, or fire, wind, and the sun; but it is possible that this is a development out of a more primitive grouping in which Varuṇa, the heavens, and Mitra, a more ancient name or form of the solar divinity, had a part.

In the nature-worship of the Veda the sun appears in many forms and under many names. His most ancient title is Mitra, joint-guardian with Varuṇa of the wide universe, with a name and cult that lie far back in Indo-Iranian times. Varuṇa is thus in origin and relation closely connected with the sun. He has come to represent the wide-spreading vault of heaven, and as 'all-seeing' embodies the ancient Indian conception of justice and right. Varuṇa is perhaps the most completely personalized of the early Vedic gods. In the later Indian mythology, under circumstances that are obscure, he seems to have lost his original character, and became reduced to comparative insignificance as a god of the sea,¹ his office and functions being transferred to Prajāpati, the sovereign 'lord of creatures,' an abstract conception of a more reflective and theistic type of thought.

¹ In a late hymn of the R̥gveda the rule of Varuṇa is already associated with the triple waters that feed the ocean:

'The waters of the sky, the waters of the rivers, the waters of the wells: the bright and cleansing waters, whose goal is the sea—may these divine waters protect me.'

In the midst of them goes Varuṇa the king, marking the truth and falsehood of men: they so pure and bright, dropping honey—may these divine waters protect me' (VII. xlix.).

In all the hymns addressed to Varuṇa there are an acknowledgment of wrong-doing, and prayer for forgiveness; the following is part of one of the most remarkable from the first book of the R̥gveda:

'However we break thy laws from day to day, men as we are,
O god, Varuṇa,
Do not deliver us unto death, nor to the blow of the furious;
nor to the anger of the spiteful!
To propitiate thee, O Varuṇa, we bind thy mind with songs,
as the charioteer a weary steed.
Away from us they flee dispirited, intent only on gaining
wealth; as birds to their nest.
When shall we bring hither the man who is victory to the
warriors, when shall we bring Varuṇa, the wide-seeing, to
be propitiated?

He who knows the place of the birds that fly through the
sky, who on the waters knows the ships.

He who knows the track of the wind, of this wide, this bright,
and mighty; and knows those who reside on high,—
He, the upholder of order, Varuṇa sits down among his
people; he, the wise, sits there to govern.

Thence perceiving all wondrous things, he sees what has
been and will be done.

May he, the wise son of time, make our paths straight all
our days; may he prolong our lives!

O hear this my calling, Varuṇa, be gracious now; longing
for help, I have called upon thee.

Thou, O wise god, art lord of all, of heaven and earth: listen
and answer on thy way.²

The most clearly conceived and defined of the solar deities is Sūrya, the bright orb of the sun, who in the mythology is the son of Dyaus. He surveys the universe in the consciousness of power, and puts to flight the evil spirits of darkness and disease. The worship of the bright sun has been in India the most persistent and universal of early cults; and under the name of Savitr, the divine vivifier, who brings life again to the world and to men after the sleep of the night, he is invoked in the daily morning prayer of every Brāhman.³ Viṣṇu, the all-pervader, is a solar deity who in the development of Indian religious thought became one of the most important and influential of India's gods. He traverses the three worlds in three strides, and is described as 'wide-stepping,' 'wide-going'—epithets that probably refer to the rapid course of the sun in the heavens through the three stages of rising, culmination, and setting. Pūṣan also, the friend and guide of travellers and especially of the departed souls who are beset by many perils on their dark journey to the lower world, seems to have been originally a form of the light-giving god. In the later literature the number of the sun-gods is multiplied to twelve, representing the twelve months of the year. These are the Ādityas, sons of Aditi, the boundless expanse or void. In the R̥gveda the name occurs once in the late tenth book, and their number is given as seven or eight, Varuṇa being sometimes reckoned with them. Aditi, in the dual, is the dual divinity of heaven and earth; and the name Āditya is also employed generally of Viṣṇu or any solar divinity.

Two deities, moreover, prominent in the R̥gveda, were directly associated with the heavens. The twin Āsvins represented probably the morning and evening stars, which were originally conceived as distinct and independent. Their functions, however, and course in the sky were so evidently similar that they were regarded as twins. The name signifies 'belonging to horses'; accordingly, the Āsvins are the two charioteers who harness the car of the dawn, and conduct it each successive day above the horizon. They are also the divine physicians, who by their skill avert sickness and

¹ I. xxv.: Max Müller, *Hist. of Ancient Sanskrit Literature*, London, 1860, p. 535 ff.; Peterson, *Hymns from the R̥gveda*, pp. 2 ff., 295 ff.

² The sacred *Gāyatri* or *Sāvitrī* (R̥gveda, III. lxii. 10; cf. Manu, II. 78-82, 148): *tat Savitir vareṇyam bhargo devasya dhīmahi, dhiyo yo nah prachodayāt*, 'On the most excellent glory of that divine vivifier let us meditate, and may he inspire our thoughts.'

³ *Urukrama, urugāya*.

disease from men. Undoubtedly the most beautiful personification of the Veda is Uṣas, the goddess of the dawn, who in her car opens the gates of the sky, and drives away the malignant spirits that love the night. She is described as bright and ever young, the daughter of heaven and sister of the Adityas. In the dual, *uṣasau*, the name is given to the morning and evening twilights.

Several of the Vedic deities have a double or even threefold form and nature, as gods of the heavens, the earth, and the waters. The chief of these is Indra, sometimes described as an atmospheric divinity. He is the storm-god, son of Dyaus, the most popular deity of Vedic times, to judge from the number of hymns dedicated to him. He rides upon his golden car, and bestows rich and bountiful gifts upon his worshippers; but he is also greatly to be feared, for the same rain that enriches and fertilizes the soil may become a flood, sweeping away the crops and destroying life. In his character as warrior-king he is thus perhaps more distinctly personalized than the majority of the Vedic gods. He is said greatly to delight in the offerings of those who pay him homage, and to indulge to excess in draughts of the intoxicating *soma*, whereby he is strengthened for the warfare with the powers of evil in which he is perpetually engaged. Prominent as is the position of Indra in the Veda, from the later mythology his figure and name almost entirely disappear.

From many texts that might be cited the following express briefly the thoughts of the poet towards the god :

'He who, immediately on his birth, the first, the wise, surpassed the gods in force; at whose might the two worlds shook, through the greatness of his strength, he, O men, is Indra.

He who fixed the quivering earth; who gave stability to the agitated mountains; who measured the vast atmosphere; who propped up the sky, he, O men, is Indra.

He who has been a counterpart of the Universe; who casts down the unshaken, he, O men, is Indra.

The sky and the earth bow down to him; at his might the mountains are afraid.¹

'O Indra, listen to our prayer; come, yoke thy steeds, and drive them towards us; all mortals call upon thee in every place, but hear our prayer, O life-giver.

Thy greatness, Indra, reached our cry, and thou protectest the song of the singer, O mighty one: when thou dost take the thunderbolt in thy hand, great and fierce god, none can resist thee.

On the days when evil men do penance for their sin, on these days he gracious to us, O Indra; the sins which Varuṇa, the wise god, sees in us—from their guilt may Indra deliver us.

Let us call on this mighty Indra, that he may give us great wealth and substance: who is the hearer of prayer—and do you gods protect us always with your blessing.²

Closely related to Indra are the Maruts, the storm-deities, sons of Rudra, himself a god of the destroying tempest, and the only one of the great Vedic deities whose temper and character are distinctly maleficent. Rudra is also the lord of the healing art, the 'greatest of physicians,' perhaps so regarded from the action of the storm-wind in clearing the valleys and swamps of fogs and noxious vapours. The constant association of the Maruts with Indra in the hymns seems to be decisive against the explanation of their original nature as spirits of plant-life and vegetation.³ The really maleficent forces of the Veda are the demons, of whom Vṛtra, the defeated opponent of Indra, is the chief. The other demoniacal powers for the most part make their appearance in classes, as *rākṣasas*, *piśāchas*, etc. Vṛtra

certainly, as a personification of the evil serpent, belongs to the sphere of nature-worship. The great majority, if not all, of the rest probably share the same character.

Vāyu or Vāta was the wind, another impersonation of the mighty tempest. He is associated with the earth (*prthivi*), of whom he is sometimes regarded as the husband.

Among the most ancient deities of the Veda was Soma, who also appears under a terrestrial as well as a celestial form. His cult may be traced back to the Indo-Iranian period, when the sacred *haoma* had a part in the Avestan rites of worship. The basis of the personification is to be found in the strange intoxicating properties of the plant, which were ascribed to divine afflatus. What specific plant, however, was originally intended is uncertain. The so-called 'moon-plant' (*Asclepias acida*), which the Indians themselves usually identify with the *soma*, possesses a bitter acrid juice, which would seem unlikely, unless tastes have greatly changed, to have been lauded as a divine drink. Others have supposed that the *soma* really denoted the grape, the knowledge of which had been communicated to the Indians in their early home. P. Regnaud, on the other hand, has argued that the name originally indicated the aromatic oil that was employed to feed the sacred fire;¹ but his arguments have failed to carry conviction to scholars. There is less ideal personification in the poets' conception of Soma than in the case with the other chief divinities of the Veda. In celebrating his virtues and influence they seem never to have lost sight of the fact that the deity whom they praised did actually represent a tangible and concrete plant. Moreover, the *soma*, though the choice libation to the gods upon earth, possessed also a mystical life in the third heaven. There, like the nectar of the Greeks, it was the drink of the gods, through partaking of which they became immortal; and men also will win immortality when they quaff the *soma* in the regions of the blest. In some sort, therefore, the *soma* was conceived as having a celestial as well as an earthly existence. It grew also in heaven, whence it had been brought down, a gift from the gods to men. In the later literature Soma changed his character, as did some other divinities, and the name was transferred to or identified with the moon, probably through some obscure idea of the influence of the moon upon vegetation and the growth and ripening of the sap. Of this identification there are hints and pre-intimations in the R̥gveda itself.² It is unlikely, however, that the conception of Soma as the moon was other than a late development of religious thought.

In the tenth *mandala* of the R̥gveda the praises of the *soma* and its irresistible power are chanted in an unmistakable drinking-song. Indra is the speaker:

'This, this is my thought, that I will get me cow and horse: have I not drunk the Soma?

Like rushing winds the draughts I have drunk carry me along: have I not drunk the Soma?

The draughts carry me along as swift horses the chariot: have I not drunk the Soma?

Prayer is drawing nigh me, like a lowing cow approaching her dear child: have I not drunk the Soma?

I, as a carpenter with a plank, turn the prayer round in my heart: have I not drunk the Soma?

The two worlds reach not the half of me: have I not drunk the Soma?

Over heaven in my might, over this mighty earth I stretch: have I not drunk the Soma?

Ha! I will put earth down this way or that way: have I not drunk the Soma?

¹ *Actes du premier Congrès international de l'histoire des religions*, 1900, Paris, 1904, II. I. 49 ff.

² R̥gveda, vi. xlv. 21, viii. lxxi. 8, x. lxxv. 2 ff., cxxviii. 8. The passages are all probably late. In x. lxxv. 5 the moon is the cup from which the gods drink the *soma*, and a similar representation is found in the *Upaniṣads*.

² R̥gveda, vii. xxviii., tr. Peterson³, I. 280 f.

³ As by L. von Schröder, *Mysterium und Mimus im R̥gveda*, Leipzig, 1903, p. 124.

I am great of the great; I have risen to the navel of the world: have I not drunk the Soma?

I have taken, and go away satisfied, to carry the offering to the gods: have I not drunk the Soma?'¹

Agni, the god of fire, takes his place among nature-gods equally with the gods of the winds and the waters; and the universal prevalence of fire-worship among primitive peoples is due to the large part which that element plays in their daily life. In the Veda Agni is the son of heaven and earth, the guardian and friend of mankind; and, like Soma, bears the character of a terrestrial as well as a celestial divinity. He is indeed credited with a threefold origin and life, as the sacred fire upon the hearth, the lightning in the sky, and in the atmospheric waters. As in the descriptions of the *soma*, the physical qualities and appearance of the fire also seem rarely if ever to be lost sight of by the Vedic poets. He strikes in the lightning, and with his fierce heat consumes those who oppose him and refuse to render him his due. He also waits upon men at the household hearth, bears their sacrifices and gifts to heaven, and with his kindly warmth promotes the growth of their crops. Agni is the eldest of the gods, high priest and seer both in heaven and upon earth, messenger and intermediary between man and god, uniting in himself the functions of all inferior and human priests, and presenting their gifts and service with acceptance in heaven. Thus Agni especially, in his offices and worship, forms the bond between the daily concrete life and labour of man and the unseen world of the gods.

'O holy and divine Agni, with thy pleasant tongue of flame bring the gods here and worship them.

We have fed thee with butter, O glorious one, that gazest up into heaven: bring the gods to our feast.

Thou dost call them to our feast; we have kindled thee and thou dost shine: dost shine mightily, O wise Agni, at our sacrifice.

Agni, come with all the gods and partake of our sacrifice: we have chosen thee for our priest.

See thy worshipper pours out the soma for thee, Agni, give him strength: with the gods sit down on the rushes.

Thou art kindled, O Agni, conqueror of thousands, and kindled dost further our sacrifice: a messenger to the gods, worthy to be praised.

Put Agni upon the altar, he to whom all creatures are known, who it is that carries our oblation: a god and priest ever young.'²

Of nature-deities that in origin were more exclusively terrestrial the chief was Prthivi, the earth, the primeval mother of all creatures, and the consort of Dyans, the sky. All natural objects, however, were deified, or conceived as animated by spirits consciously working on their own purposes, gratifying themselves in the execution of their own will, but amenable to prayer and the offerings and desires of their worshippers. All running water was regarded as especially sacred. The semi-mythical river Sarasvatī was personified as the wife of Brahmā, mother of rivers, goddess of eloquence and learning, who bestows inspiration on the seers, offspring and riches upon mankind. It is doubtful whether the Vedic Sarasvatī is to be identified with the river which later bore the name, and now as an insignificant stream flows south-westwards between the Jumna and the Sutlej to lose itself in the Indian Desert. There is evidence, however, that the modern river was formerly of much greater size and importance.³ The heir to the especial sacredness of the Sarasvatī was Mā Gaṅgā, or Mother Ganges, a river which evidently occupied an entirely subordinate position in Vedic times, being mentioned once only in the R̥gveda.⁴ In the later mythology the Ganges was the eldest daughter of Himavat (the mountain-range of the Himālayas) and Menā, the latter one

of the *apsarasas*; ¹ and descended from heaven from the feet of Viṣṇu, falling directly upon Śiva's head. Thus the sacred river has a celestial habitation and home, and is believed also to flow in a subterranean course. To bathe in its waters purifies from all sin. Death on its banks is a sure passport to heaven. And water from the Ganges is carried to the most distant parts of India for the benefit of those who cannot themselves visit the holy river. While the Ganges, however, is the most sacred river, and the chief places of pilgrimage and worship lie on its banks, other rivers approach it in sanctity. Of these the principal are the Indus, the Narbadā, and the Godāvari (*gg.v.*). According to a widely accepted tradition, the Ganges is destined at a future date to lose its pre-eminence, the place of honour being taken by the Narbadā. Every temple has its sacred tank, the water of which is more or less efficacious for spiritual as well as physical purification. The *maṅṅkarnikā* well at Benares is perhaps the most frequented and revered of countless sacred wells and pools throughout India, each with its legend or legends, which attract the Hindu worshipper, especially at the great periodical festivals.

The worship of animals and plants is universal. In part this cult is a survival of totemism, as in many parts of India among the aboriginal and backward tribes it is associated at the present day with totemistic practices. The members of the serpent and monkey tribes are almost universally held in regard; to the more common and dangerous snakes, especially the cobra, *pūṣā* (worship) is habitually rendered. The bull is sacred and inviolable throughout the length and breadth of India. The animal 'vehicles' of the great gods become themselves the objects of a special cult and fear. Thus the sacred goose of Brahmā, the *garuḍa*, the mythical eagle or vulture of Viṣṇu, the *nandin*, or bull, of Śiva, the tiger of his wife Durgā, the rat of Gaṇeśa, the parrot of Kāmadeva the god of love, share the reverence due to the gods with whom they are associated. Dangerous beasts are propitiated in order to secure their worshippers from harm; in the case of others their usefulness in the service of man has led to a measure of honour being paid to them, which in most instances, however, falls short of a real deification. More or less unconsciously behind all lies the motive power of the belief in transmigration, which presents to the mind of the worshipper the possibility that the living form may enshrine the spirit of a deceased father or other ancestor, who has chosen this as his temporary home. Nature- and ancestor-worship are so intimately conjoined that it is often impossible with certainty to assign to one or the other the priority.

The worship of the *soma* has been obsolete from Vedic times, but the cult of trees and other plants is very widely practised throughout India. The belief in transmigration has undoubtedly exercised an influence here also, inasmuch as the possibilities of rebirth extend to the vegetable and material worlds. The most sacred plant of modern India is the *tulasī*, or *tulsi*, the holy basil (*Ocimum sanctum*), a small shrub, a specimen of which may be found growing in the courtyard of most Hindu houses. It is believed to be animated by Lakṣmī the wife of Viṣṇu, or by Sītā, and the entire worship of many high-caste Indian women consists in daily circumambulation of the sacred plant, with offerings of rice and flowers. The sacred lotus, if not actually worshipped, is the symbol of unstained purity; and the *kusa* grass, from its association with the sacrifice, is pre-eminently holy. Of trees the *pīpal* (*Ficus religiosa*) is peculiarly sacred, being the abode of Brahmā, or

³ The question is fully discussed in Macdonell and Keith, *s.v.*, li. 434 ff.

⁴ In the late tenth book (lxxv. 5).

¹ See below, p. 233, and art. GAṆOĀ, GAṆOĀS.

of the triad of Hindu gods, Brahmā, Viṣṇu, and Śiva. It is worshipped by pouring water at the roots, daubing the trunk with red ochre, or fastening rags or threads to the branches, and by circumambulation. Other trees of great sanctity are the *banyan* (*Ficus Indica*), which is especially sacred to Viṣṇu, and as the Bo-tree, under which Gautama Buddha gained perfect wisdom, is equally revered by Buddhists. The *mango*, the *bel*, or wood-apple, and the *nīm* tree, the leaves of which are prophylactic against disease and snake-bite, with many others, are holy, and receive worship generally or at stated times.

Moreover, practically all the prominent and striking features of the countryside have come to be regarded as sacred, and in a measure deified. In particular, prominent rocks or hills and stones remarkable for shape or situation become the objects of a ritual worship that in its general character is similar throughout the country. The *śālagrāma* stone, a variety of black ammonite, is sacred to Viṣṇu, and the markings on the stone bear a mystical significance in relation to his worship. Vaiṣṇavites keep a specimen of the *śālagrāma* in their houses, where it is reverently bathed, and drink-offerings with incense and flowers are presented. The massive mountain-ranges of N. and Central India, and to a less degree the hills and plateaux of the south, were all personified, and admitted to the rank and station of the great gods. The impressiveness and inaccessible character of the vast Himālaya range, the 'abode of snow,' naturally claimed for it the chief place. Himālaya in the mythology was the father of Gaṅgā, the river Ganges, and of Parvatī, the wife of Śiva; and in the distant ice-bound recesses of his mountain-home some of the most holy pilgrim resorts are to be found. Other mountain peaks, however, in other parts of the country are hardly less sacred. The nymphs of the springs and groves, the mythical deities of the air, the *apsarasas*, *gandharvas*, *kinnaras*, and others, belong ultimately to the same class of nature-gods; and the personified powers of evil and disease, lurking in secret places, *rākṣasas*, *piśāchas*, *kimidin*, etc., are innumerable.

Reference should be made also to the strange cult of the implements of trade or occupation—a practice which is observed more or less throughout India, but is most prevalent where commerce has been most highly developed and organized. Its origin is probably to be traced to the influence of the trade guilds, and the desire to provide for a distinct centre of gild interest and worship.

'The tools which a man uses in his trade, the fire that warms him, the books out of which the school-boy learns his lessons, the pots with which the wife cooks the dinner, all have a part in this strange and elaborate deification, and become the objects of a worship that is by no means confined to the lowest and most ignorant strata of the population.'¹

In Bengal this worship takes place especially at the Śrī Pañcāmī festival in the spring, when even the clerks in the Government offices will gather together their pens and paper and books, and with the help of Sanskrit recitations by the Brāhman priest go through a formal ceremonial of worship, which concludes with presents to the officiating priest and general feasting.²

NATURE (Japanese).—I. APPRECIATION OF NATURE.—No race, ancient or modern, seems to have had a keener appreciation of nature than the Japanese, or to have been more inspired by it in the formation of its religious ideal. The Japanese were inclined towards this state of mind by the very character of their country—a land full of contrasts, at once tragic and smiling, terrifying and gentle, stern and mild; refusing man much and giving him more; shaken by volcanoes, devastated by floods, swept by tempests, and at the same time rich in hidden resources and dazzling splendours, fertile in crops and beauties. Such a land was bound to make the deepest impression on an intelligent, artistic people inclined by their innate goodness of heart to look on the benefits of nature rather than on its scourges, and to see in the beauty of their country a constant reason for gratefulness to the gods.

This feeling of admiration and love for nature is seen throughout the whole literature of the country.

In mythology, when the wife of the hero Yamato-dake throws herself into the waves to pacify the sea-gods, one of her last thoughts before disappearing is the recollection of a landscape; and Yamato-dake himself dies singing the praises of his beautiful country and expressing fraternal sentiments towards a tree which is near him, before being changed into a bird (see HEROES AND HERO-GODS [Japanese], vol. vi, p. 664).

These significant details show how close the communion was between the Japanese and the nature in the midst of which they lived. In the most ancient poetical collection, the *Manyōshū* ('Collection of a Myriad Leaves'), we find numerous lyrical poems devoted to the celebration of all the splendours of the Japanese landscapes, from the lofty summit of Fujiyama to the smallest herb of the plain (see M. Revon, *Anthologie de la littérature japonaise*, Paris, 1910, p. 90 ff.). Even in these poetical pieces, most of which were composed in the 8th cent., the Japanese show that particular sentiment which they express in the phrase *mono no aware*, and which consists in understanding the 'melancholy of things,' i.e. in sympathizing with all creatures, having a fellow-feeling with the sorrows of nature as well as with human sufferings. The next poetical collection, the *Kokinshū* ('Poems Ancient and Modern,' 10th cent.), has the same sentimental lyricism with less fullness and more delicacy. In cleverly constructed verses the poets vie with each other in lamenting the ephemeral duration of the cherry-blossom in spring or the sadness of the autumn evenings. The preface to this work, written by a great poet, Tsurayuki, explains how men became poets by listening to the voice of the nightingale singing among the flowers or to the cry of the frog which dwells in the water, by admiring the flower or envying the flight of the birds, by gazing at the bazes or the tear-drops of dew; he says that the collection is to include all the feelings experienced by a person of the court, from the time when the plum-tree blossom was placed in his hair to the time when he listened to the cuckoo, when he gathered the maple-branches reddened by the autumn, when at last he went to admire the snow; and he concludes by celebrating the immortality of Poetry, eternal as the evergreen pine-tree (see Revon, pp. 139, 141, 150 f.).

There is the same appreciation of nature in the prose works. The famous novel, *Genji Monogatari*, which appeared in the brilliant court of the year 1000, the masterpiece of a lady of honour, Murasaki no Shikibu, was composed on the terrace of a

¹ A. S. Geden, *Studies in the Religions of the East*, p. 406 L.

² *Census of India*, 1901, vol. i. pt. i. p. 357 I.

temple facing a lake, by moonlight, and from these circumstances it seems to have acquired a poetical illumination through and through; the most beautiful passages are perhaps those, often in verse, in which the writer introduces into the expression of human sentiments images drawn from nature (see, e.g., *ib.* pp. 184 f., 190). In the delightful book of impressions of another court lady of the same period, the *Makura no Sōshi* ('Pillow Notes') of Sei Shōnagon, we also find mingled with lively remarks and anecdotes on the artificial life of the court the most acute observation of nature and its changing aspects: the work opens with impressions of nature, in which the writer says that what charms her in spring is the dawn, when all becomes gradually lit up on the mountains; in summer the dark night, when the fire-flies cross each other's paths, and so on (*ib.* p. 200). Another well-known book of impressions is the *Hōyōki* ('Book of a Hut ten feet square'), by the hermit Kamo Chōmei (13th cent.); with this religious person the love of nature once more predominates: he also dreams of nothing better in his solitude than to have as his friends music and poetry, the harp and flutes, the moon and the flowers; the whole hope of his life, he says, rests in the beauties of the seasons; and he blames himself for being too fond of the mountains and forgetting Buddha in his contemplation of the moon when it appears on the horizon (see *ib.* pp. 259-262, 263-265, 259, note 2). This eternal theme of the four seasons reappears in a third book of impressions, the *Tsure-zure-gusa* ('Varieties of Moments of Ennui'), by the bonze Kenkō (14th cent.), who, comparing his love of nature with that of the preceding authors, connects it with all the festivals of the year (see *ib.* pp. 285-288). Thus in writings in which the inmost heart is laid bare we always find among the Japanese the same profound love of nature.

The same remark may be made concerning other kinds of literature at later periods—e.g., in the *nō*, or lyrical dramas, of the 15th cent. (see, e.g., *ib.* p. 305 f.), or in the light poetry (*haikai*) of the 17th and 18th centuries, in which we see a poet, a lover of flowers, surprised because a brutal sword-bearer dares to look upon these exquisite marvels; another, indignant because they are looked upon by aristocrats whose grand dresses cover the ridiculous skeletons of degenerates; and another expressing the horror of the flowers themselves when they see approaching them people who have just shown their lack of taste by being present at an artificial theatrical performance; while, on the other hand, those poets themselves, in their enthusiasm for nature, do not hesitate to go and ask water from their neighbor so that they may not disturb a convolvulus that has entwined itself round the bucket of their well, or to set fire to their thatched roof if it prevents them from seeing a moonlight effect (*ib.* pp. 383 ff., 391, note 3, 394, n. 3, 395, ns. 2, 4, 397, n. 2; and cf. pp. 388, 389, n. 1, 392, n. 5, 393, n. 1, etc.).

To complete our survey of this Japanese conception which sees in nature the supreme beauty and finds in its contemplation the most perfect human joy, we may refer to a native thinker who has analyzed it very carefully, viz. Kaihara Ekiken, the great philosopher of the 17th cent., whose writings have remained popular to the present day. In his *Rakkun* ('Philosophy of Pleasure') he expresses himself on the subject with great beauty and sympathy (see *ib.* p. 320).

Like their ancestors, the Japanese of to-day are dominated by the thought of the seasons—so much so that, in conversation, they do not begin by asking about one's health, but by mentioning the state of the weather; and similarly in letter-writing

they always start with a phrase indicating, in poetical terms, the point of evolution of the year with regard to the change of temperature and the blossoming of the flowers. Like the artistic people of the ancient days who had special pavilions built where they might gaze on the moonlight, which was regarded as the most exquisite spectacle that could be presented to a guest at a friendly evening party, to-day all the people of Tōkyō go and admire it for whole nights, on certain dates fixed by tradition, singing and improvising verses full of tenderness, and they desert the capital to go to various well-known places to see in turn the bloom of plum-trees, cherry-trees, peonies, azaleas, wisteria, irises, then convolvuli, lotuses, and chrysanthemums, and, last of all, the maple-leaves turning red, awaiting the arrival of the snow, the light winter-flower. In a garden famous for its plum-trees, on the banks of the river Sumida, the present writer one day saw an old statesman, Admiral Enomoto, one of the founders of modern Japan, rising from his seat in order to show his respect by hanging on a branch in blossom a little poem which he had just composed in praise of the admired tree. The Japanese, even of the poorest class, often undertake journeys to visit the most distant landscapes of the empire; for they are convinced that the most beautiful scenes are those which the gods themselves have prepared for the eyes of man. This state of mind at the present time explains and confirms what we have noticed in the past. Throughout the whole course of their history, from primitive times to our own days, the Japanese appear as essentially charmed with nature, wonderfully gifted to understand it as artists, and predestined to love and adore it.

II. *NATURE-GODS*.—The national religion of Japan is not, as was for a long time believed, a cult of ancestors, accompanied secondarily by a vague nature-worship; it is essentially a cult of nature, complete and precise, to which a much less important cult of ancestors only gradually came to be added (see *ANCESTOR-WORSHIP AND CULT OF THE DEAD* [Japanese], vol. i. p. 456). As a matter of fact, the nature-gods constitute almost the whole pantheon of the ancient Shintō; they swarm in all the departments of the physical universe, sometimes attached to an object, sometimes to a phenomenon, and sometimes to a group of phenomena or objects—to a complex region of which they become the soul and form the unity.

I. *Gods of the sky*.—The first thing that the ancient Japanese noticed when they raised their heads was what they called the 'Plain of the High Heavens' (*Takama no hara*). But for them this material heaven was only the dwelling-place of the gods; it was not itself a god. The idea of a personal Heaven did not enter their minds until under the influence of the Chinese. Meanwhile they regarded the sky simply as the abode of the supreme gods.

(a) *The sun-goddess*.—The gods of light are the first important gods revealed by the native mythology, and the most brilliant of them, the sun, shines throughout the whole sacred history in the vault of the Japanese pantheon. In art. *COSMOGONY AND COSMOLOGY* (Japanese), vol. iv. p. 164, will be found an account of the circumstances of the birth of this solar goddess, Amaterasu-oho-mi-kami, the 'great and august goddess who shines in the heavens,' at the same time as the moon-god and the storm-god, and of the way in which these three deities were made the rulers of the Plain of the High Heavens, the Kingdom of Night, and the Domain of the Ocean respectively. But Amaterasu is manifestly the highest of these deities. She receives the most glorious investiture, and holds the highest rank in the sacred legend. In fact,

she is hardly raised to the royalty of the heavens when she takes the most noble and outstanding part in the myths; and the long account of her quarrels with the storm-god only serves to show up the beauties of a truly divine character.

When that impetuous god, deserting his kingdom, darts into the sky to overthrow that of his sister, she endeavours to appease him with the most indulgent calmness; and the eclipse of the goddess at last takes place only when, disregarding her patient gentleness, he perpetrates the worst crimes: she hides in the cave from which the other celestial gods had so much difficulty in enticing her to come forth (*Kojiki*, tr. B. H. Chamberlain², Tokyo, 1906, pp. 63-65).

After this episode the wicked brother is driven from the sky, and the goddess, henceforward calm, can at last reign in peace in the Plain of the High Heavens. She soon reappears, and at the most important points of the national legend; for it is she who in her turn gives the investiture to the ancestors of the emperors. This mission accomplished, she intervenes only at rare intervals to indicate especially the cult which she desires and which the emperors hasten to render to her as the most powerful of the deities. But this anthropomorphic rôle does not change the essentially naturistic character of Amaterasu. This character appears clearly in the myths referring to her birth, her strife with the storm which darkened the sky, and her retreat which plunged the world into darkness, and also in the old myth explaining the alternation of the two celestial luminaries (see COSMOGONY AND COSMOLOGY [Japanese], vol. iv. p. 165⁴). Thus Amaterasu was originally conceived as the sun itself, soul and body, a living spirit united to its brilliant covering. But gradually the advances of reason led the Japanese to see in this planet with such a regular course a simple object of physical nature; by degrees the personal element became detached and transformed into an anthropomorphic deity, and, although the divine rôle of Amaterasu, presiding over the government of the heavens like the living emperor over that of the islands, might well be reconciled with the idea of an indivisible solar deity, this function of general direction, which was soon applied to terrestrial politics and to the superintendence of imperial advances, must have tended to develop the human character of the goddess. Even to-day the Japanese always worship the sun as a living deity, to whom they render a direct positive cult, from the artisan, who, from the depths of his dark shop, turns towards the brightness of the dawn, claps his hands, and piously recites his prayer to the goddess, to the pilgrim who on the summit of Fujiyama prostrates himself dazzled before the first golden rays of the sun and worships it leaning his forehead on the rocks.

(b) *The moon-god*.—After this triumphant goddess of day, Tsuki-yomi-no-mikoto, 'the august moon of the darkness,' seems pale; and, in fact, this god occupies only a very inferior place in the Japanese pantheon. His birth is hardly described when he disappears from the legend. According to the first texts (*Kojiki*, 50; *Nihongi*, tr. W. G. Aston, London, 1896, i. 19), he was to be the companion of the sun and to share her rule; but he has no further part in the account and his existence is hardly mentioned again. It is certain, therefore, that in the 8th cent., when the mythology was collected in those ancient books, Tsuki-yomi was a god who had long been neglected; but it is also very probable that at an earlier time he had held a different rank. The myth explaining the alternation of the two luminaries, as it appears in the *Nihongi* (i. 32), is sufficient to prove his former importance, and the texts which declare his mission, alongside of that of Amaterasu, remain like the ancient foundations of an abandoned and destroyed building, which prove its

historic existence. In the case of the moon also the advances of reason must gradually have attenuated the primitive worship; they damped it much more quickly than that of the sun, because it had not the same conquering brilliance. In the Japanese moon-worship, therefore, as we observe it at the present day, the æsthetic sentiment is more predominant than the religious. But the moon none the less receives, with the homage due to its beauty, the offerings reserved for the divine powers; the people who go to witness its superb rising at certain times and certain favourite places proceed from admiration to prayer; the enchantment of the eyes is completed by the adoration of the heart. Comparing these present-day sentiments with the primitive myths which ascribe to the moon the same birth as the sun, the same parallel government, and the same importance in a famous story, we are justified in classing it unhesitatingly in the category of the oldest nature-deities.

(c) *The star-gods*.—After the glorious blazing sun, and the bright but pale moon, the distant twinkling of the stars appears still more humble and obscure. While the sun-goddess is the queen of religion, and the moon-god is the king of poetry, the stars hardly appear at all either in the sacred texts or in the literary collections; and clearly the silence of the poets shows the state of mind of religious men. Although we can find no trace of a formal star-worship in the old documents, there are clear signs of a vague deification, undoubtedly long before the time when the legend was written. Various myths referring to secondary gods, 'the brilliant male,' 'the weaver-god,' 'the heavenly weaving-girl' (see *Nihongi*, i. 69 f.; *Kojiki*, 117), show that in the 8th cent. the Japanese still had star-gods, perhaps the last remnants of a deeper and broader worship, at all events sure proofs of an old original naturism, very attenuated but still alive.

2. *Gods of the air*.—(a) *The storm-god*.—Beneath those divine planets which move in the firmament the primitive Japanese perceived other animate powers which sport in the air; and among those great meteorological phenomena we find in the first rank Take-haya-susa-no-wo-no-mikoto, 'the august impetuous male, swift and brave.' The terrible male personifies the storm, the ocean rising to threaten the sky, i.e. the most violent of the physical forces which terrified the ancient inhabitants of the archipelago. He has hardly issued from the nose of Izanagi when he is in a fury. His father commissions him to rule the Plain of the Seas in peace; but, instead of obeying him, like the regular planets who were to preside over the harmonious alternation of day and night, he neglects his duty, and darts into nature to scatter trouble and death broadcast. He weeps, cries, and groans continually; he leaves his sea-dwelling, makes the green mountains wither, dries up the rivers, shakes the whole country, and, when Izanagi takes him to task for his behaviour, he replies that his only desire is to descend to the Kingdom of Night. Izanagi drives him from his presence; immediately he departs, ascends to the sky, attacks the sun, and commits all possible crimes; and, when he is again driven off and returns to the earth, it is, according to one version, to kill the beneficent goddess who gave nourishment to human beings (*Kojiki*, 70). These fits of anger are appeased, however, and soon the impetuous male, without changing his character, passes to other exploits. He puts to death the monstrous serpent which was about to devour a young princess (see HUMAN SACRIFICE [Japanese and Korean], vol. vi. p. 855); he afterwards appears as the god of the lower regions (*Kojiki*, 86 ff.); and lastly we read that one of his descendants received

the sovereignty of Idzumo from him (*ib.* 78 ff., 88). Thus the nature-god becomes a romantic hero, and even, in the end, a seemingly historical personage. This is the anthropomorphic evolution which we already noticed in the legend of Amaterasu, and which is often seen in the myths. But, through all these inconsistencies, the general idea remains: Susa-no-wo is the same wicked devastating god that he was originally, and, as in his first aspect he made men die in crowds (*Nihongi*, i. 20), so in his last incarnations he is sometimes a god of plague (see HOSPITALITY [Japanese], vol. vi. p. 814), sometimes a fierce guardian of the kingdom of the dead, always an enemy of light and peace, a god of darkness and confusion.

(b) *The wind-gods.*—In contrast with the storm-god stands Shina-tsu-hiko, 'the prince with the long breath,' i.e. the normal wind, with long slow breaths, whose beneficent gentleness is naturally opposed to the wicked furies of Susa-no-wo. The *Nihongi* (i. 22) relates the birth of this young god.

The creator-couple had just engendered the islands, when Izanagi noticed that all over the archipelago there was nothing but 'perfumed morning mists'; he therefore dispersed them with his breath, which immediately became a new deity: 'and that is the god of the wind.'

This origin of the wind, which came from the living breath of a god, is obviously quite logical; and the reason of its creation is admirably understood in a country of mountains, where morning mists are common. Another document emphasizes and completes this Japanese conception. In the ritual for the service of the gods of Tatsuta (see tr. by E. Satow in *TASJ* VII. iv. [1889] 442 f.) the same god reappears, transformed into a couple of distinct personages, 'the prince with the long breath' and 'the princess with the long breath.' This couple of wind-gods also form a pair of mysterious pillars on which the firmament is supported, and thus maintain the order of the world—a useful mission, which does not hinder them on occasion from disturbing it by ravaging the country. In fact, if light breezes purify the air by sweeping away the mists, autumn squalls ruin agricultural hopes; and, according to the ritual, this was exactly the origin of the worship which these gods were destined to receive, and which aimed at softening their hearts (see DIVINATION [Japanese], vol. iv. p. 806^b). The wind-gods thus appear in Shintō as pure nature-deities, elementary forces which chased the mists and contributed to the harmony of the world as long as men did not irritate them by neglect.

(c) *The rain-gods.*—In an archipelago whose climate was governed by the monsoons the functions of the winds explain the importance accorded them by the native mythology. On the other hand, other meteorological phenomena are rather neglected. There is nothing definite about clouds in the texts. As regards rain, which was so abundant in Japan, they are not quite so barren, and we find, issuing from the blood of the god of fire, a 'great god of dark valleys,' Kura-oho-kami, who doubles himself and becomes in turn the 'great producer of the rain in the valleys' and the 'great producer of rain on the heights.' This god of rain probably also plays the part of god of snow; for, in spite of its comparative frequency in the western region occupied by the primitive Japanese, the snow does not seem to have been deified by them in any special way. The rainbow appears only as the probable origin of the famous 'bridge of heaven' which in legend floats between heaven and earth (*Kojiki*, 19, 155, etc.).

(d) *The thunder-god.*—The thunder alone of secondary phenomena holds a certain rank among the gods. Thunder-storms are frequent and severe in some of the Japanese mountains, especially in the old provinces where the mythology was formed.

In this mythology, therefore, the thunder-god, Ikadzuchi-no-kami, is born from the body of the fire-god at the same time as the god of the mountains and the god of the rain on the hills (*Nihongi*, i. 29). He soon appears multiplied, in one of the more sombre myths: it is eight thunder-gods that pursue Izanagi in the lower regions (*Kojiki*, 35 f.). He again intervenes at different times in the ancient annals. It is probably he who, as in a lightning-flash, sends through the roof of a good man the sword destined for the first of the emperors (*Nihongi*, i. 115); in the form of a serpent, he frightens the terrible emperor Yuriaku himself (*ib.* i. 347); and, under the empress Suiko, he tries to strike with lightning the shipbuilders who have cut down a tree sacred to him (*ib.* ii. 147). In a more or less vague way, throughout the whole primitive period, people are conscious of his dreadful presence, and it is only by degrees that they become accustomed to his dangerous caprices. He is feared even to-day; the common people are afraid of thunder, and even the educated show some uneasiness when its voice rumbles like a mysterious warning from heaven.

(e) *The fire-god.*—The transition from the thunder-god to the fire-god is natural, since, in Japanese mythology, the thunder is born of the fire. In ancient Shintō, Kagu-tsuchi, 'the venerable who shines,' appears as the last-born of the creator-couple; and in this birth, in a human manner, of the most terrible of physical forces the mother is severely burned. At this moment new deities are born, which the *Kojiki* account makes rise from the very manifestations of her fever: metals, clay, water, gourd, river-plant, all the magical apparatus which Shintoism employs to subdue fire (see MAGIC [Japanese], vol. viii. p. 298^b). After Izanami's death Izanagi in his furious grief kills Kagu-tsuchi. Then from his scattered members arise new deities, while his blood, also deified, spurts up to the stars, or flows over the earth, where it infuses the fire-principle into plants and trees, stones and rocks (see COSMOGONY AND COSMOLOGY [Japanese], vol. iv. p. 165^b). The matricide disappears, and is not mentioned again in the sacred literature. But he leaves traces of his brief existence, viz. the terrible seeds which he has sown, the latent principles of the greatest plague that the inhabitants of the frail native houses could dread. In such a country fire was an enemy. Its former benefits, its daily uses, were forgotten; only its terrifying frolics were seen. If the fire-god was worshipped, it was not because he was admired or loved, as among other races, but because he was feared. The people tried to exorcize him (ritual xii.; cf. art. MAGIC [Japanese], vol. viii. p. 298). He is regarded in the same way to-day, especially as a force of nature against which one must make sure of safeguarding one's house by amulets, etc.; he is not so much a god of fire, in the broad sense of the word, as a god of conflagration.

3. Gods of the earth.—(a) *Sea-gods.*—This land being an archipelago, the sea which envelops it is the first thing that attracts attention, and it is very probable that it held this dominant place in the imagination of the primitive Japanese. Of the three famous gods whom Izanagi appoints to govern the universe, one is to rule the ocean, the vast 'blue plain' (*ao-una-bara*), while no one is yet selected to rule the islands; and, although Susa-no-wo, disdaining this sovereignty, immediately becomes the raging ocean which rises against the sky, and finishes in a storm, the sea none the less keeps its familiar gods, born before him (*Kojiki*, 28), its calm and faithful masters. There is first of all Oho-wata-tsu-mi, 'the great god of the ocean,' the supreme sea-god, with his wonderful

palace hidden in the depths, once visited by a mortal, who experienced there the love of a goddess (legend of Ho-deri and Ho-wori, in *Kojiki*, 145-158). Then, in accordance with the habit of doubling common in Japanese mythology, there are the 'masters of the sea' (*wata-tsu-mi*), secondary gods who, like their chief, have a general function. Lastly, there are the more special gods of the 'bottom of the sea,' of the 'middle of the sea,' and of the 'surface of the sea,' the gods of the 'gates of the waters,' i.e. of the river-mouths, with their children, the gods of foam, of froth, etc.—not to mention the local deities who here and there haunt a certain bay on the shores of the archipelago (see *Kojiki*, 28, 46; *Nihongi*, i. 220, etc.). The whole sea therefore lives, animated, spiritualized, deified, and becomes transformed into a crowd of gods.

(b) *Land-gods*.—It is from the vast sea that, according to a very oceanic conception, the lance of Izanagi, from the height of the celestial bridge, draws the first island of the archipelago (*Kojiki*, 19); then, when Izanagi and Izanami come down to this corner of the earth to live there and celebrate their union, they gradually engender the whole 'country of the eight islands,' from the humble island of Awaji to the great central one, which appears last of all, according to the law of evolution (ib. 22f.). These islands, begotten by a human couple, imagined as having bodies and faces, seem so alive that it is believed that they had been born quite small, and had grown like persons. Nevertheless they are not raised to the rank of gods; they are not worshipped individually in the temples. On the other hand, we find the Japanese earth deified under more general forms: one deity is called 'the august spirit of the great country,' another 'the god of the great earth,' and another 'the august ancestor of the earth'; and real worship is offered to them.

(c) *Mountain-gods*.—All these land-gods are very vague, and too abstract to make a clear impression on the mind; the religious imagination requires individual concrete visions. This explains why the mountain-gods appear in the first rank of the gods of the earth. Nothing could be more natural in a country dominated by its orographic system, a country whose general appearance recalls that of Switzerland, whose whole beauty depends on the continual play of mountains and valleys, dark gorges descending from the heights and graceful hillocks undulating towards the plains, stern summits and smiling landscapes. All these raised portions of the earth were reflected in the depths of the primitive soul, which made them objects of general deification. First of all there is Oho-yama-tsu-mi, 'the great lord of the mountains,' the supreme god, round whom are grouped accessory 'lords of the mountain'; although these are secondary gods, they are very broad personifications, who are worshipped like him in numerous temples, and are always adored with fear by the woodman when he fells a tree in their forests. Those are the primitive gods, whom the creator-couple engendered when they wished to fix the great lines of the country. But there are also more special gods, corresponding to the various parts of the mountain, who were born from the members of the fire-god when he was massacred by his father.

According to the most fluent version (*Kojiki*, 36), the head of Kagu-tachi became 'the lord of steepnesses,' his breast 'the lord of the descent,' his belly 'the lord of the innermost mountain,' his genital organs 'the lord of the black mountain,' his left arm 'the lord of the dense forests,' his right arm 'the lord of the first slopes,' his left leg 'the lord of the high meadows,' and his right leg 'the lord of the mountain-gates.'

In this myth the divine world was, as it were, moulded as faithfully as possible on existing natural objects. But, by super-addition, the ancient

Japanese conceived a marriage between 'the great lord of the mountains' and the goddess of the lower regions, 'the princess of the fields where grows the thatch for the roofs' (*Kaya-nu-hime*). This union of extremes gives the whole series of intermediary accidents, and there appear as children of the two deities the 'god of the passes,' the 'gods of the boundaries of the passes,' the 'gods of the dark gates,' and the 'princes of the valleys' (*Kojiki*, 29). The 'august slopes of the hills' are also deified, and the 'mountains of metal,' until at last, from a less general point of view, all mountains are deified in which a local deity can be imagined (*Kojiki*, 216, 63, 140).

(d) *River-gods*.—The importance of mountains in ancient Shintō forms a striking contrast to the scant attention paid to rivers. The reason is that the hydrographic system of the country is as modest as its orographic system is preponderating. Streams which are rather torrents, and rivers which on account of the shortness of their course cannot develop and are more like streams did not make on the mind the impression of grandeur which mountains and volcanoes did. We need not be surprised, therefore, to find that, if river-gods are mentioned in the texts (*Nihongi*, i. 281, ii. 174), they are not named; they get none of the personal titles which the myths ascribe to the other nature-gods; they are not classed in a logical hierarchy, like the sea-gods or the mountain-gods, who reproduced so minutely all the details of the structure of the country; and, lastly, if we come across water-gods provided with individual names, they are not real river-gods, but the 'gates of the waters,' the river-mouths, which border on the sea, and in some measure share in its majesty. As regards rivers proper, after the summary notice of their birth by the creator-couple (*Nihongi*, i. 18), they do not become peopled with anthropomorphic beings, princes and lords of their waves; they are ruled only by impersonal anonymous spirits, vague deities who sometimes have no visible form, and sometimes assume the appearance of an animal—a serpent (*Nihongi*, i. 209), as was natural in the savage regions of the primitive country. But they are not organized physical powers, and we do not find in connexion with them any of the famous myths that indicate the approach of great deities.

(e) *Gods of travel*.—The last group of earth-gods is that of the *michi no kami*, 'gods of routes' or of travel. There are three of them, well-known, popular, and familiar, viz. Ya-chimata-hiko, 'the prince of the cross-roads,' Ya-chimata-hime, 'the princess of the cross-roads,' and Funado, whose name means 'Halt there,' and who personifies the strong mountain-staff which saved Izanagi when pursued by the infernal deities (cf. DIVINATION [Japanese], vol. iv, p. 802^b). Faithful to this legend, they will always remain friendly, helpful gods, protectors of the living against evil spirits (ritual xiii.; art. MAGIC [Japanese], vol. viii, p. 298^b); and, just as they were piously worshipped in the ancient sanctuaries, so to-day the believer has recourse to them before setting out on a journey.

4. *Underground god*.—There is still another nature-god, a fierce god hidden in the entrails of the earth—the god of the earthquake (*Nihongi*, ii. 124). He receives very sincere worship through terror, because his dreadful convulsions, which are worse than flood, plague, or fire, are the only scourge against which man cannot fight. The ancient annals continually mention those frequent earthquakes, which sometimes made a very deep impression on the imagination (e.g., for the surprise caused by an earthquake in the 7th cent. see COSMOGONY AND COSMOLOGY [Japanese], vol. iv, p. 164^b). We can understand, therefore, why

the earthquake-god had temples in the seven provinces; why after such a great cataclysm the emperor ordered solemn sacrifices on all sides; and why among all the beliefs arising from this terror the most popular is that which beseeches Takemikadzu, the powerful and awful god, to keep the monster under his magic sword as under the crushing of a rock.

5. **Plant-gods.**—The richness of Japanese vegetation accounts for the worship of plants. In addition to the general causes which have everywhere made tree-worship one of the most ancient human beliefs, we have in Japan the existence of a flora which forced itself on the mind by its grandeur, while at the same time it supplied almost all the materials of the indigenous civilization. From the mighty mountain, with its black forests, to the fertile plain, where all varieties, wild and cultivated, swarmed, the ancient Japanese saw exuberant vegetation on every side; and, when they instinctively sought an idea for naming their archipelago, they immediately chose its two verdant aspects, wild lands and rice-fields, and summed them up in the typical name 'the luxuriant country of the plain of reeds and fresh young ears of corn.' It is not surprising, therefore, to find among the first deities engendered by the creator-couple, on the one hand, 'the princess of the fields where grows the thatch for the roofs' (already mentioned, above, p. 237^b), who is the goddess of all herbaceous plants, and, on the other, 'the father of the trees,' Kuku-no-chi, the patriarch of the forests. The latter multiplies into several beings similar to himself. He changes, too, and alongside of this fundamental god, who personifies especially the tree-trunks, there appear the god of the forked branches and the protector-god of the leaves, while such a variety as the oak becomes the object of a special cult, at least in certain parts of the country. A curious legend relates how Susa-no-wo, by pulling out the hairs of his body and scattering them, produced the trees useful for all kinds of buildings and the different kinds of fruits (see **HEROES AND HERO-GODS** [Japanese], vol. vi. p. 662^b). If we add to this the famous story which tells of the birth, from Uke-mochi's dead body, of millet, rice, corn, and the different kinds of beans (*Kojiki*, 70; and cf. the version of the *Nihongi*, in art. **COSMOGONY AND COSMOLOGY** [Japanese], vol. iv. p. 165^a), we have all the useful elements of primitive agriculture. The legends also show the real motives of Shintō phytolatry. The vegetable world, which was at first animated because the plant is a living being, which germinates, grows, and dies under the eyes of man, because the wood contains the spark of fire, because the wind and the echo give a mysterious voice to the forests, was worshipped above all because it represented the essential food of the people, being therefore the necessary basis of all social order, as well as the material of the houses, from the thatch of the cottages to the precious wood of the temples. The same reasons must have tended to develop the belief in the spirit of plants, not only in the spirit of trees (*ko-tama*) in general, but much more in the special spirits which performed useful functions, like the rice-spirit or the spirit of the wood for building. And in their turn these animistic conceptions, strengthened by a careful observation of the virtue of simples, introduced into magic its vegetable elements—wild garlic, the shining peach, or the plant of long life (*Nihongi*, i. 30, 127, ii. 186)—while the ancient and sacred cleyera, 'of awful spirit' (*ib.* i. 225), spread throughout Shintō its long evergreen branches eternally laden with offerings.

6. **Animal-gods.**—The deification of animals is still more natural in primitive Japan. The forest, the tall grasses, are full of those mysterious crea-

tures which add to the already marvellous life of the plant voluntary movement, with its miracles of gracefulness and suppleness, and, above all, the power and agility so much envied by savage man. In his eyes those fascinating existences are of the same essence as his own, with a degree more of energy; therefore he readily regards them as 'superior' beings—in Japan, the *kamis*. In Shintō mythology animals have the attributes of man—e.g., the gift of speech (*Kojiki*, 81, 86, 149, 170, etc.); but they also possess rarer qualities—e.g., the toad knows things which even the gods do not know (*ib.* 103). It is not surprising, then, that the most famous heroes of the legends often appear as inferior to the animals which they meet (*ib.* 164, 269, etc.). At least, there is a close familiarity, a community of interests, based on the identity of nature, between man and the animals as well as between the animals and the gods; these three groups make one, and the animals, not being enclosed within the hard barriers erected since then by man's arrogance, enter into legend, where they wander at liberty, take part in all the heroic adventures, and play their wicked or helpful part with the same right as the other sacred personages.

(a) **Reptiles.**—First comes the serpent, whose worship, so wide-spread in Shintoism, is explained both by the alarming appearance of that creeping, glazed, often dangerous animal and by its abundance in the thickets of the primitive country. In Japanese mythology it is surrounded with a timorous respect. Whether it appears as the spirit of a river (see **HUMAN SACRIFICE** [Japanese], vol. vi. p. 855 f.) or of a mountain (*Nihongi*, i. 203 f.), or whether it becomes a virgin-devouring monster (see **HUMAN SACRIFICE**, p. 855), the incarnation of an amorous god (*Nihongi*, i. 158), or the omen of threatening treason (see **DIVINATION** [Japanese], vol. iv. p. 806^a), it is always in a formidable and at least alarming shape. On the other hand, in the cult a serpent-bite is regarded as a divine punishment, which entails expiatory penance ('Ritual of the Great Purification,' in Revon, p. 29), and the serpent ordeal confirms this religious character (see **DIVINATION** [Japanese], vol. iv. p. 805^b).

(b) **Birds.**—Birds share in a way the superior nature of the sky; man envies their wings and is surprised at their mysterious language; he admires those creatures so swift of flight, at one moment mounting to the abode of the gods and the next settling down beside other creatures and chirping as if telling them strange secrets. Thus in the myths their essential function is that of divine messengers, and nearly always, when a person sees them appearing, he guesses that they are bringing news or a command from heaven.

When the first couple are in perplexity about the consummation of their marriage, the example of a wagtail instructs them (*Nihongi*, i. 17); when the celestial deities require to send an ambassador to earth, they choose the pheasant (*Kojiki*, 114-116); when the march of the first conqueror has to be led, a crow becomes his guide, goes in advance, and negotiates with the rebels (*ib.* 169-170); and, when the same Jimmu is kept back by superior powers, a golden kite, shining like lightning, alights on his bow, misleads his opponents, and gives the emperor the victory (*Nihongi*, i. 126 f.).

Birds thus fly from page to page through the whole legend, until the god of scarecrows (*Kojiki*, 103) puts the winged group to flight.

(c) **Quadrupeds.**—Though often more formidable, quadrupeds are, on the other hand, less mysterious. Yet a number of animals appear as gods and divine agents, at any rate as beings gifted with faculties which assure them a high place in the myths. Not to mention the bear or the wild boar, which terrify the primitive warriors (*ib.* 164, 393, etc.), the wolf is still a god, and even a 'great god' (*ohokami*), in the historical period (*Nihongi*, li. 36).

The monkey is also deified and receives sacrifices (*Kojiki*, 138, and cf. HUMAN SACRIFICE [Japanese], vol. vi. p. 856^a). Other animals are considered more or less sacred, without being regarded as gods—e.g., the deer, which appears as gifted with superior qualities (see DIVINATION [Japanese], vol. iv. p. 806^b), and whose shoulder-blade is the most ancient instrument in Shintō divination (*ib.* p. 802).

(d) *Fishes*.—Fishes are rather neglected in the mythology, but even to them is accorded the gift of speech (e.g., the story of the trepan in COSMOGONY AND COSMOLOGY [Japanese], vol. iv. p. 166^a); and, if they are not gods, they at least play the part of servants of the gods (*Kojiki*, 139, 237, etc.). Even the molluscs intervene in an active and divine way: there are two shell-fish, 'the princess Kisagai' and 'the princess Umugi,' who by magical processes bring the god Oho-kuni-nushi back to life (*Kojiki*, 83).

(e) *Insects*.—Even down to the insects, all have their part in the mythology (*ib.* 63, 86 f., 396 f., etc.); one story tells of a caterpillar which was worshipped like a real deity (*Nihongi*, ii. 188).

In a word, whether these animals are the object of great adoration or only of slight respect, it is always because of the same old naturism, the profound instinct which gives a spirit to each one, humanizes and deifies animals as well as plants, and with the same breath raises the humble lives of the organic universe and the phenomena of the material world to the higher regions.

7. *Phallic gods*.—There is a form of worship intermediary between the adoration of the animal world and that of the human world, to which we must refer, viz. phallus-worship. This aspect of Shintō is in harmony with all primitive religions, in which man thinks it right and noble to admire the phenomenon of reproduction, to deify it, and to worship it in the sincerity of his heart. Therefore, from the very beginning of the national cosmogony the idea of reproduction is shown in the names of the gods. The celestial trinity of the great beginning includes two generating deities: Taka-mi-musubi, 'the high august producer,' and Kami-musubi, 'the divine producer'; among the 'seven divine generations' which come afterwards, we may mention, among other obscure couples, Tsunoguhhi and Iku-guhhi, the god of germs and the goddess of life; and the last of these couples, in which appear the first ancestors of the human race, consists of two beings with the significant names Izanagi and Izanami, 'the male who invites' and 'the female who invites.' These two deities are commanded by the other gods to engender the archipelago, with the *nu-boko*, 'jewel-spear'; the spear is lowered from the height of the sky-bridge, stirred in the salt water of the sea until it is coagulated, then raised, and at that moment the drops which fall from its point thicken, and become the first island of Japan (see COSMOGONY AND COSMOLOGY [Japanese], vol. iv. pp. 162-164). The young deities soon descend into this island, where they discover love; and the sacred account relates their marriage with the chaste want of shame which is that of nature (*Kojiki*, 20 f.). Then several pages are taken up with the long enumeration of the islands and the gods to which they give birth; and, when at last Izanami disappears, after having given birth to fire, when Izanagi in despair goes to look for her in the subterranean region, his first cry is to beseech her to come and continue their great work of procreation (*ib.* 22 f., 38). A little later, in the legend of the eclipse, the blacksmith god, Ama-tsu-mara, who is the Cyclops of Japanese mythology, and whose name has a phallic meaning, is ordered to manufacture a *hi-boko*, 'spear,' which suggests the same kind of

ideas as that of Izanagi (*ib.* 55; *Nihongi*, i. 47). Other gods whose names contain the same element support this interpretation. We must, in the last place, mention the monkey-god Saruta, whom the shameless goddess Uzume approached in an indecent manner (*Nihongi*, i. 77), and whose phallic character was admitted in ancient Japan. Further, a material proof comes to the support of those inductions drawn from mythology, viz. the *rai-tsui*, the 'thunder-clubs' of the excavations, which seem to have been phallic images rather than objects of combat. Ancient Shintō therefore possesses a phallic cult which forms an integral part of its essential naturism; and, as it considers paternity the highest mission of the gods, it worships in all simplicity the instrument of this supreme function. This worship is difficult to trace in primitive times, but becomes much clearer afterwards. The phallus became a definite god, Konsei Myōjin, who had his temples, images, ex-votos, and phallophories; at the same time this religious current became complicated with a less respectable movement, which finally led the imperial government in 1872 to order the destruction of these emblems throughout the whole empire. Nevertheless, the investigator who deviates a little from the main roads can still find here and there, in some sacred wood, invaded by bamboos, a small ancient temple, the witness of the old beliefs; and in this virgin nature, before the ex-voto offered by some rustic worshipper, he understands how deep and pure was this particular belief of ancient Shintō.

III. *NATURE-SPIRITS*.—The nature-spirits were closely related to the real gods of nature. As a matter of fact, the physical world and the spiritual world are not in juxtaposition in the primitive imagination; they are intermingled and often confused. The nature-gods were sometimes spirits closely united to some object or phenomenon, like the soul of a man to his body; but in many cases there were also broader, freer spirits who presided over a whole department of the universe; and, if we have classed these among the nature-gods in order to define their functions more clearly by placing them in their material compartments, it is none the less true that these gods of transition lead us to the very boundary of animism. To go beyond this boundary only one more step is necessary, and immediately a new family of spirits appears before us, viz. those that are detached from things and independent even of regions, but yet have a definite function, an express mission, in the physical world. Such spirits are known by the common characteristic that it is impossible to fit them into any of the divisions of nature, although the things in charge of which they are placed class them as nature-spirits.

As a typical example of this class it will be sufficient to choose the goddess of food, who is not only a goddess of cereals, but also provides fish and game, who is not only a goddess of food but also sees to the clothing and housing of men, who therefore surpasses the flora and the fauna, and hovers over the whole of nature, but whose definite duty nevertheless keeps her among the spirits of material phenomena. This goddess, whose ordinary name is Toyo-uke-hime, 'the princess of abundant food,' has various other names, which one would at first be tempted to mistake for new deities, but which are undoubtedly only hypostases (see *Nihongi*, i. 21 f., 32, 122). On the contrary, there are different gods connected with the same kind of idea—e.g., the gods of the harvest, Oho-toshi no Kami, 'the god of the great harvest,' and Mi-toshi no Kami, 'the god of the august harvest' (cf. MAGIC [Japanese], vol. viii. p. 296^b). But it is especially Toyo-uke-hime who personifies the

fundamental nourishment by rice and other cultivated plants. The most interesting of the myths concerning her is the one describing her death, which also gives us the legendary origin of agriculture and the silk industry (*Kojiki*, 70). We can understand her importance in Shintō above all by the worship which she received. This went back to the most ancient times (*Nihongi*, i. 86), having no equal except that of the sun itself, and we may say that after the sun the goddess of food is the greatest figure in Shintō. Even to-day in the temples of Ise, i.e. in the very heart of the ancient Japanese religion, people worship the sun-goddess and the goddess of food. In one of the two great temples, the Gekū, it is the goddess of food who receives all the honours; the other deities who are worshipped there, viz. the grandson of the sun-goddess, the first ancestor of the emperors, and the two divine companions who were with him when he came down from the sky, receive only an accessory worship. In the other temple, the Naiku, the sun-goddess is paramount; and after her the god with the strong arm who made her come out of her cavern and the venerable mother of the father of the emperors are merely secondary deities. Lastly, surrounding these principal sanctuaries, the temples of the wind-gods, of the god of the soil, and of the god of purification appear simply as inferior buildings. It is therefore certain that in the mind of the worshippers as in the legendary stories the deities of light and food have remained what they were originally—the greatest gods of the Japanese—because this race loved its old traditions and never forgot either the glorious planets that had saved it from the ancient nocturnal terrors or the nourishing earth on whose bosom it had rested in the ancient days.

It is clear, therefore, that the real national religion of the Japanese is essentially a nature-religion, since it is nature-gods that compose its pantheon, people its mythology, and hold the first rank in its worship. What led the most learned Japanologists to believe for such a long time that Shintō was above all an ancestor-cult was a kind of artificial integration that took place later, when, in imitation of the imperial family, the legendary descendant of the sun-goddess, the great families endeavoured to appropriate those famous nature-gods as ancestors. For an explanation of this evolution see art. ANCESTOR-WORSHIP AND CULT OF THE DEAD (Japanese), vol. i. p. 455 ff.

LITERATURE.—This has been cited in the article.

M. REVON.

NATURE (Lettish, Lithuanian, and Old Prussian).—Nature-worship played an important part in the religious life of the Baltic peoples, the Old Prussians, Letts, and Lithuanians. Peter von Dusburg († c. 1326) makes the following statement: 'Errando omnem creaturam pro deo coluerunt, scilicet solem, lunam et stellas, tonitrua, volatilia, quadrupedia etiam . . . lucos, canipos et aquas sacras' (*Chronicon terre Prussice*, ann. 7. 1326, in *Scrip. Rer. Pruss.* i. 53).

This passage, fortunately, is supplemented and confirmed by authorities of the 15th, 16th, and 17th centuries, who, owing to the late introduction of Christianity, can furnish us with very valuable information.

1. Heavenly bodies.—The Lithuanians worshipped sun, moon, and stars. 'Solem et Lunam deos omnium primos crediderunt' (Erasmus Stella, *de Boruss. Ant.*, ii., in *Scrip. Rer. Pruss.* iv. [Leipzig, 1870] 294). The Nadravians worshipped a star deity in both male and female form.

They more commonly called this godhead Swelgsdunka, a star-goddess, whom they consider the bride of the sky and through whose power the morning and evening stars are guided. Swelgsdukks is a god of fixed stars' (Praetorius, *Deliciae Prussicae*, p. 28).

The folk-poems of the Letts and Lithuanians abound in myths of the sky and the heavenly

bodies. They probably contain very ancient matter; pagan deities such as Zemyna, Layme, and Perkun are frequently mentioned, and there is only the very thinnest veneer of Christianity. The mysterious personage called God, who was at war with the sun for three days and nights, can hardly be the Christian deity. Mannhardt would identify him with an ancient sky-god, possibly Occopirmus.

'God Himself goes to the first door;
Through the second; Dear Maria
Through the third the sun doth journey
With her two proud, golden horses'
(cf. Mannhardt, 'Die lett. Sonnenmythen,' p. 91).

Dear Maria must also represent a pagan goddess. Her woollen veil is stained with the blood of the oak-tree that was shattered by Perkun. She figures in several Lettish songs:

'Behind the mountains smoke is rising.
Who is it hath kindled fire?
Dear Maria heats the bathroom
Where bathe the little orphan maidens.'

Dear Maria seems to correspond to the Lithuanian goddess mentioned by Lasicius:

'Perkuna tete is the mother of thunder and lightning; who receives into a bath the weary and dusty sun and sends her out again next day washed and shining' (*de Diis Sam.* p. 300; 'Perkuna tete' should be translated 'the aunt of Perkun').

Mannhardt believes that Perkuna tete represents the planet Venus, who, in the folk-songs, is sometimes spoken of as a single being and sometimes appears in dual form, as morning and evening stars. There is also a change of sex. In the Lithuanian songs Auszrine and Wakarine are the handmaids of the sun; in Lettish sources, on the other hand, the morning and evening stars seem to be the beings called the 'sons of god.' There are two passages which point to the identification of Dear Maria (= Perkuna tete) with the planet Venus. In a Lithuanian poem the sun remarks:

'The morning star has kindled my fire,
The evening star has spread my bed.'

In a Lettish poem occur these words:

'By the valley spring the sons of god heat the bath chamber.'
But why should the planet Venus be called the aunt of the thunder-god?

The 'sons of god' play an important part in the Lettish songs. They are the workmen of Perkun, they woo the daughter of the sun, they serve as horses for the moon.

'Folks say
The moon has no steeds of his own.
The morning star and the evening star
They are the steeds of the moon.'

Mannhardt compares them with the Greek Dioskouroi and the Ásvins of Indian mythology (p. 305 ff.). See, further, SUN (Lithu-Slavic).

2. Thunder.—The cult of Perkun was of the utmost importance. 'The Nadravians call Perkun Dievaitis (god) kar' *ἐξάρχης*' (Praetorius, p. 21). Though disputed by some scholars, the word 'Perkunas' is in all probability derived from the common European word for 'oak,' A.S. *firgen*, 'forest'; O.H.G. *virgun*, 'wood'; Scand. *Fjörgyn* (the name of Thor's mother); Lat. *quercus*, 'oak.' Perkun, however, is not a tree-spirit, but the god of thunder and lightning:

'Epulati diis suis falsis praecipue deo lingua eorum appellato Perkuno, id est tonitru' (Michov, *de Sarm. Europ.* li. ap. Grynaeus, *Notus orbis regionum . . . incognitarum*, p. 519). 'Perkunos deus tonitru illis est quem coelo tonante agricola capite detecto et succidiam humeris per fundum portans . . . alloquitur' (Lasicius, p. 300). 'During the night there came a terrible storm with thunder and lightning and all the people thought that their god Perkuno spoke with the Křivalt' (Grunau, *Preuss. Chronik*, tract. iii. c. i.).

On the banner of king Widuwoto, Perkun was represented as a middle-aged, black-bearded man, with a countenance like fire and crowned with flames (*ib.* ii. ch. v.). The Provincial Statutes of Riga (A.D. 1428) witness to thunder-worship among the Letts: 'A tonitruo quod deum suum appellant.' Perkun is frequently mentioned by name in Lettish folk-

songs. He occupied one of the three divisions of the famous oak-tree sanctuary at Romove, which is described in detail by Grunau (tract. ii. ch. v.). Before him burned the sacred fire, tended by a priest who would lose his life if it were snuffed to go out. The statement that the god was supposed to hold communication with the chief priest in this sanctuary, by means of thunder, is confirmed by Bretkins (cf. Praetorius, p. 39). Grunau is not a trustworthy authority, but in this case his description can be paralleled from so many different sources that there is no need to doubt its essential accuracy.

3. Groves and trees.—Sacred groves and trees figure very prominently in Lithuanian religion. We hear of various wood- and tree-gods. 'Modeina et Regaina silvestres sunt dii' (Lasicius, p. 301). Praetorius mentions Gyrstis, a wood-god, Birzulis, a god of birches, and others. Sometimes the tree itself is the object of worship. The Jesuit Rostowski (cf. Usener, *Götternamen*, p. 87) obtained information that for 'fruitfulness and domestic welfare a hen is offered by men to an oak, and by women to a linden-tree as gods.' A tree whose trunk was split and then joined together again was called *romove* and deemed particularly holy. A tree of this kind was still standing at Nibndzen in A.D. 1664, and Lithuanians from far and near came to visit it (cf. Praetorius, p. 16). More often, however, the tree or grove was revered as the dwelling-place of the deity. When Jerome of Prague cut down woods 'sacred to devils,' the women complained 'that the house of their god had been taken away' (Æneas Sylvius, *Hist. de Europa*, 26, in *Script. Rer. Pruss.* iv. 239). According to Erasmus Stella (*loc. cit.*), the Old Prussians 'said that the gods inhabited the finest trees such as oaks.' To the oak-tree a special sanctity adhered. Its connexion with Perkun has already been mentioned. In the folk-songs he frequently cleaves the oak in anger, and sheds its blood. An aged Nadraivian described to Praetorius how the holy fire was obtained from oak-wood, adding that there were still many people who thought it very lucky to come across such an oak (p. 20). He also mentions (p. 16) a holy oak at Ragnit which would bring bad luck to any one who injured it.

4. Springs.—The sacred spring is frequently associated with the sacred tree. This was probably so in the case of the Romove sanctuary (cf. Praetorius, p. 19).

'An oak-tree behind the mountain,
Behind the oak-tree a lake.
The son of god hangs his girdle there'
(Lettish folk-song).

'Under the maple-tree is the spring
Where the sons of god resort'
(Lithuanian folk-song).

Peter von Dusburg (*loc. cit.*) mentions 'agnas sacras' among the many objects of Old Prussian cult.

'Orthus lacus est piscosus quem colunt; quemadmodum et Ezernim lacum deum' (Lasicius, p. 301).

In spring-time water was worshipped by the sacrifice of a fish (Praetorius, p. 34). We hear of various water-beings and gods:

'Audros deo, maris caeterarumque aquarum cura incumbit (Lasicius, p. 300). 'Szullinnus who governs the wells' (Praetorius, p. 33). 'One god Upinnis has the rivers in his power' (M. Strykowski, *Pol. Chron.* 1582, quoted by W. Mannhardt, in *Mag. der lett. literar. Gesellsch.* xiv. i.).

In Church documents of A.D. 1530 Antrimpus is identified with Neptune.

'The priests (Waldeler) of the water-god were called Naruttes; they dived into the water and conversed with the water-nixes' (Praetorius, p. 34). 'Water was honoured as a male and fire as a female deity. The former was prayed to by the name of Bangputtis, the latter by the name of Ponyke (i.e. Lady)' (ib. p. 33).

Elsewhere Praetorius describes Bangputtis as a storm-god; but the two conceptions are not necessarily inconsistent.

VOL. IX.—16

5. Weather.—Perkun was not the only weather-god of the Baltic peoples. Drebknllis was invoked in time of earthquake. Blizgnlis was a snow-god, Lituvaris a rain-god, Wejopatis lord of the wind. Praetorius was acquainted with a Prussian fisherman who had a wooden image of Wejopatis fixed on the mast of his ship. In stormy weather he was wont 'to lift up both his hands towards it' (cf. p. 27). The wind, like the water, had its priests or sorcerers.

Of these 'some were also able to charm the fire and knew how to address the Fire-Angel by name . . . and command him to do no harm' (ib. p. 44).

6. Fire.—There are a number of references to the Lithuanian fire-cult.

'Colebant autem ab origine Lithuanum numina ignem . . . qui per sacerdotem lingua eorum Zinc nuncupatum, subjectis lignis dolchatur . . . praecipuum numen Samagitticum erat ignis, quem sacrosanctum et perpetuum putebant' (Michov, *loc. cit.*).

Jerome of Prague preached to people who worshipped a sacred, perpetual fire in a temple. The priests practised clairvoyance by means of it, and were consulted as to the destiny of sick persons (cf. Æneas Sylvius, *loc. cit.*). Both Lasicius and Praetorius mention Tartois Kibirksztu, 'a charmer of sparks, a god who withstands fire' (Praetorius, p. 32). Jagaubis is a fire-god (cf. Usener, p. 92). Praetorius states that fire was a female deity invoked as Szwenta Ponyke (i.e. 'holy lady'). In his day the Nadraivian women addressed her as they raked together the fire in the evening. 'Thou Holy Lady, I will cover thee up well, that thou mayst not rage over me.' Lasicius (p. 304) mentions Polengabia, 'a goddess . . . who is believed to rule over the bright hearth.' Some editions of the *Kalevala* contain a prayer to Panu, the Finnish fire-god. The word 'Panu' is said to be a Lithuanian loan-word and is possibly related to the Gothic *fōn*, 'fire.' In the poem Panu is addressed as son of the sun, and begged to take fire up to heaven, to carry it, as a child to its mother, into the castle of the beloved aged lady (i.e. the sun), and to place it there to light up the day. The duties to be performed by Panu recall the services rendered to the sun by Dear Maria (= Perkuna tete). Is it possible that this goddess is identical with the fire-deity, the 'holy lady' mentioned by Praetorius? If so, the title Perkuna tete is intelligible, for, as we have seen, the sacred fire is an important part of the cult of the thunder-god. In Serbian folk-songs St. Elias the thunderer is often associated with the Virgin Mary, who is also known as 'Maria, veiled in fire' (cf. F. S. Krauss, *Volks Glaube und rel. Brauch der Süd-slaven*, Münster, 1890, p. 2 f.).

Some passages from the magic songs of the W. Finns are particularly interesting in this connexion.

'Ukko of the air [i.e. the Finnish thunder-god] struck fire . . . and gave it to a girl to rock, to be swung by a maiden of the air' (J. Abercromby, *The Pre- and Proto-historic Finns*, London, 1893, ii. 375). 'Kasi, the beautiful young girl, the fire-maiden of the sky, 'tis she that rocked the fire, swung to and fro the flame' (ib. p. 377). 'The origin of fire is known, the genesis of fire (panu) is guessed: dear fire was created by God. . . . The Virgin Mary, mother dear, the holy little serving-maid, 'tis she that rocked the fire, that nursed the flame' (ib. p. 378).

7. Stones.—Stone-worship is occasionally mentioned.

'Saxa pro diis culta' (S. Rostowski, quoted by A. Brückner, 'Beiträge zur litauischen Mythologie,' *Arch. für slav. Phil.* ix. [1896] 35; cf. Usener, p. 85). 'A few years ago, a somewhat high stone not far from Gumhinen or Bissersheim in a pinewood, was considered holy, and on it the neighbouring people offered money, clothes, wool' (Praetorius, p. 21 f.).

8. Mountains.—Kankarius was a mountain-god (cf. Usener, p. 93).

9. Animals.—Consecrated house-snakes were important Lithuanian deities corresponding to the Latin *penates*. 'Serpentes in singulis domibus

velut deos penates nntriebant' (Michov, p. 518). See, further, ARYAN RELIGION, vol. ii. p. 24^b, and SERPENT-WORSHIP (Lithu-Slavic). Einhorn, who was pastor at Mitau in the 17th cent., states that the Letts sacrificed a goat at cross-ways to propitiate the wolves, and to induce them to spare the flocks. Almost every kind of animal had its presiding deity. Austheia is goddess of bees, Ratainicz god of horses, Kiaulai-Krukis god of swine, Baubis god of cows and oxen, etc.

10. Agriculture.—The gods connected with agriculture form a large and important group.

The Nadravians, Zalovians, etc., believe that there is something divine about the earth, and call it Zempattys as male and Zemynle as female godhead. To this earth-deity—commonly called Zemynle—they ascribe all that which, according to the historians, was done by Pergubrius, Padrympus, Gurcho, Auszwaltis and Pilwittus' (Praetorius, p. 66).

Pergubrius was a god of field-work (*ib.* p. 25). Certain Church documents (A.D. 1530) identify Pilwittus with Ceres. Padrympus (=Potrimpo) was represented, according to Grunau (tract. ii. ch. v.), as a young man of joyful countenance, crowned with ears of corn. Gurcho was a god of food and drink honoured with offerings of milk and honey, etc. (Grunau, tract. i. ch. xvi.; cf. Usener, p. 94). He is mentioned in a document of A.D. 1249.

'Ydolo quem semet in anno collectis frugibus consuerunt confingere et pro deo colere, cui nomen Curche imposuerunt.' 'The Nadravians honour Gurcho or Padrymho under the name of Gahjauga' (Praetorius, p. 22).

Other gods of the same kind are Lankpatis, god of ploughing and sowing, Prokorimos, god of honey, etc. Waizganthos was a god of fruitfulness. At his festival in the beginning of November he was worshipped by virgins, who offered up prayers for the increase of the flax crop (cf. Lasicius, p. 306). From the passages quoted it appears that there was a tendency to confuse the various agricultural deities; possibly they were merely local forms of the earth-godhead; 'permultos Zemopacios, id est, terrestres, ii venerantur' (*ib.* p. 300). The name of this deity is connected with *zemé*, the Lithuanian word for 'earth.' It appears in various forms. 'Propter rem pecuariam Semepates colitur' (*Church Catechism*, 1547). Lasicius describes a festival of Zemiennik which took place three days before that of Waizganthos. Praetorius names the earth-god Zameluks, Zemeluksztis, Zempattys. There was also an earth-goddess: 'Zemynle was held to be the sister of Zemepattys' (Praetorius, p. 31). They received worship in common.

On the shortest day a festival was held in honour of Zempattys, 'the god of farms and farmhouses' (*ib.* p. 66). In the course of which 'each takes his bread, presses it to the ground and speaks: "O Zemypatie, thou givest us such good bread, we thank thee for it. Help us to cultivate our fields with thy blessing, and through the co-operation of Zemynle to receive more of thy good gifts."'

It is probable that the earth was originally thought of as female. 'Gahjauga' is a feminine word, although this deity was addressed at his festival as 'Lord God.' In the earliest reference to Gurcho his name appears in the feminine form 'Curche.' For this change of sex we have a parallel in the N. European deities, Nerthus, Njörör, Frey, Freyja. The subject is fully treated by H. M. Chadwick in *The Origin of the English Nation* (Cambridge, 1907), ch. x. 'The Cult of Nerthns.' Semmesmaat, the Lettish goddess, corresponding to Zemynle, is mentioned only in folk-songs. In lamentations for the dead she is referred to as the keeper of the grave (cf. Usener, p. 103). The form Semmesmäte is interesting (cf. Uggunsmäte, the fire-goddess). We have an exact parallel in Anglo-Saxon Eorðan moðr=mother of earth.

11. Conclusion.—The religion of the Letts was of the same character as that of the Lithuanians, and the two peoples had a certain number of

deities in common. The chief difference between them is that for Lithuanian gods we find corresponding Lettish goddesses—e.g., Lith. Laukpatis = Lett. Lankamaat, Lith. Wejopatis = Lett. Wejamaat, wind-mother. The most notable peculiarity of the religion of all the Baltic peoples was the large number of departmental deities worshipped by them. We hear of a god of grass-growing, of a god to be invoked for moss-gathering, and many others of the same kind.

LITERATURE.—Peter von Dusbarg, in *Scriptores Rerum Prussicarum*, i. [Leipzig, 1881]; Simon Grunau, *Preussische Chronik*, pt. i. [1517-21], do. 1876; Erasmus Stella, *de Borussiae Ant. II.*; Mathias Michov, *de Sarm. Europ. Lit.* II. (S. Gryneus, *Novus orbis regionum ac insularum veteribus incognitarum*, Basel, 1587, p. 518 ff.); J. Lasicius, *de Dis Samagitarum cæterorumque Sarmatarum et falsorum Christianarum (Respub. sive Stat. Regni, Polon. Lit. Pruss. Livon., Leyden, 1627, ch. viii.)*; Æneas Sylvius (Pope Pius II.), *Hist. de Europa*, Basel, 1551, ch. xxvi.; M. Praetorius, *Deliciae Prussicæ*, ed. W. Pierson, Berlin, 1871; W. Mannhardt, 'Die lettischen Sonnenmythen,' in *ZE* vii. [1875] 73-104, 209-244, 280-330; H. Usener, *Götternamen*, Bonn, 1896 (which gives further literature). ENID WELSFORD.

NATURE (Muhammadan).—I. Terms and definitions.—Nature is designated in Arabic by the word *ṭabī'ah*, literally 'stamping,' i.e. the impression of form on matter, which, according to Aristotle (*Met.* 1015^a 5), is only one among the senses of the Greek *φύσις*, yet clearly belongs to his philosophy. In the early translations of his works the Syriac *ḫiyān* was adopted for *physis*; the substitution of *ṭabī'ah* is not easily explained. The verb is used in the Qur'an in the phrase 'God has stamped upon their hearts,' which appears to mean 'has sealed up,' and therefore belongs to a different range of ideas. A somewhat similar use of the word *ṭaba* is found in the Midrāsh (*Numbers Rabbāh*, § 14, p. 124^b, ed. Wilna, 5645), where it stands for 'element' in the four elements, to which indeed the name *physis* may be applied, according to Aristotle (*Met.* 1014^b 33); and an even more similar employment of the verb in *B. Sanh.* 37a, where God is said to have 'stamped' (*ṭaba*) every human being with the seal of Adam, yet no two are quite alike; i.e., the (Platonic) idea 'man' is impressed on an infinite number of portions of matter. The Arabic word (for which other forms from the same root are employed) may well be the Hebrew verbal noun, which, however, is not quoted in this sense; and, though the date of the Hebrew texts quoted is uncertain, it is likely that they are pre-Islāmic. In what is probably the earliest account that we possess in Arabic of Aristotle's works, that in the history of Ya'qūbī (260 A.H.), the word already appears as an equivalent for *physis* (ed. M. T. Houtsma, Leyden, 1883, i. 148); and its introduction is likely to be as early as the 2nd cent. of Islām, since in the poems of Abū Tammām ([† 228 A.H.] Beyrut, 1889, p. 168) we find that there are already conventional equivalents for Aristotelian technicalities. Probably, then, it was coined by some Jewish Aristotelian employed as an interpreter of Greek philosophy.

The definitions of nature given by Arabic philosophers are all traceable, though not always directly, to Aristotle. Al-Fārābī (*Philosophische Abhandlungen*, ed. F. Dieterici, Leyden, 1890, p. 60) defines *ṭabī'ah* as 'the source of motion and rest when neither external nor voluntary.' This, of course, refers to the theory of the 'natural motion' of the four elements. Another Aristotelian theory appears in the definition of Jurjānī (*Definitiones*, ed. G. Flügel, Leipzig, 1845, p. 145): 'the force permeating bodies whereby the body reaches its perfection.' In the astrological philosophy of the Ikhwān al-Ṣafā (Bombay, 1305, ii. 88) it is defined as 'the force of the universal astral soul, which permeates all bodies that are below the sphere of the Moon from the globe of the

Aether down to the centre of the Earth,' or 'the operation of the Great Man,' i.e. the world. More ordinarily the meaning of nature is inferred from the subjects discussed in the *Physics*, enumerated by Avicenna (*Kitāb al-Najāt*, Cairo, 1331, p. 78) as 'existing bodies in so far as they are subject to rest, motion, and change.' This is copied by al-Ghazālī (*Maqāsid al-Falāsifah*, Cairo, 1331, p. 78). At times the word *ṭabī'ah* is used like 'nature' in the modern languages for the sum total of phenomena (e.g., in *Hikmat al-Ain*, Kazan, 1904, i. 83).

2. Nature and deity.—In spite of the close attention given by the Islāmic philosophers to the problem of determinism, it does not appear that many thought of nature as a power independent of the Deity; their reasoning deals rather with 'natures,' i.e. the properties of kinds, or causes which produce effects either in the things themselves (as the dryness and heat of fire) or in other things (as combustion in what comes near fire; see 'Alā al-dīn Tusi, *Kitāb al-Dhakhirah*, Hyderābād, n.d., p. 220). Those who maintained the uniformity of nature in the sense that these properties were invariable and immutable denied the miracles; it was possible to reply that these properties were customary, but could not be known to be invariable, and therefore the miracles were credible. Hence the name for such events is *khawāriq*, 'violations,' not of natural order but of custom (*ādah*), as though nniformity went no farther. So al-Ghazālī (*Al-Maḍnūn bihi*, Cairo, n.d., p. 18) declares that violation of custom is not incredible, his illustration being the speed with which fire melts minerals as opposed to the length of time taken by sunshine to produce the same effect. The work of a prophet may compare in efficacy with the former, at any rate where the miracle can be described as an accelerated natural process. This illustration very clearly ignores what are called 'laws of nature,' for which, indeed, the language has no proper equivalent, and of which it is likely that the Muslim consciousness is very slight. Thus, numerous travellers tell us that there is a wide-spread belief in the possibility of four years' gestation, and quite serious writers make men live for periods of two or three hundred years.

The classical discussion of this subject is in the *Tahāfut al-Falāsifah* of al-Ghazālī, whom Averroes attempted to answer (Cairo, 1302, i. 98-102, ii. 68-73). Ghazālī admits the possibility that a book might turn into a man, or that vessels of common material in a house might turn into gold. He can scarcely avoid the assumption, however (which he endeavours to refute), of a constant relation between causes and effects, and Averroes, as usual, seems no match for him in reasoning power.

Probably nature has theological importance in the theory of *karāmāt*, or 'spontaneous miracles'—violations of order which are not the acts of prophets, but occur for the glorification of saints. The Mutazilites, indeed, attempted to get rid of these and make all recorded cases miracles performed by prophets, while the orthodox view, that they are seen only by saints like those for whose benefit they are wrought and that the latter ought to disown them (*Baḥr al-kalām*, Cairo, 1329, p. 61), evinces some desire to restrict or get rid of them. It is clear that in the stories told of clouds shading the Prophet and the like the fundamental idea is that of animism, i.e. that nature behaved to the Prophet as though it possessed intelligence, and the difference of these supposed occurrences from miracles lies in their spontaneity. On the other hand, the lives of the saints show no lack of miracles that were not spontaneous, but exhibitions of these persons' extraordinary powers. The

spontaneous occurrences are at times not in order to do honour to any one, but for the contrary purpose. When a paralytic girl was given some bread baked with a fire of Ibn 'Arabī's *Fuṣūṣ al-Hikam*, she recovered (*Al-Ilm al-Shāmikh*, Cairo, 1328, p. 381).

3. Nature and man.—As applied to man the word 'nature' and its equivalent may either signify involuntary activities (Jurjānī, ed. Flügel, p. 145) or any proclivities (Harīrī, *Maqāmāt*, ed. A. I. Silvestre de Sacy, Paris, 1822, p. 319); it may stand for 'all the qualities bad and good compounded in a man from which he can scarcely depart' (Ibn al-Athīr, *Nihāyah*, Cairo, 1311, iii. 31). Its use in the latter sense is illustrated by the tradition, 'a believer may be stamped with any quality except treason and mendacity' (*ib.*).

'Natural theology,' in the sense of arguing from nature to the existence of a Creator, is said (probably with justice) to be recommended in the Qur'ān, and Islāmic writers of different ages have endeavoured to carry out this injunction. The most famous essay in this line is the *Risālah* of Ibn Ṭufail (b. 494 A.H.), which has frequently been edited and translated. The same Qur'ānic passages are alleged in justification of scientific treatises of various sorts—e.g., the 'Wonders of Creation' of Qazwīnī (764 A.H.). Writers of our time similarly claim physical science as an essentially Islāmic study, and even extend the name 'Muslims' to all who are engaged in its pursuit.

4. Appreciation of nature.—Admiration of natural beauty is not unrepresented in Islāmic works, but is probably less common than in the literature of Europe or India. A combination of the expression of this sentiment with the physico-theological argument is to be found in the treatise of the Ikhwān al-Safā, published and translated by F. Dieterici with the title, *Der Streit zwischen Thier und Mensch* (Berlin, 1858). The sentiment is also expressed in the poetical and semi-poetical literature; the descriptions of the camel, the horse, the wild ass, etc., with which the early poetry abounds come under this category.

5. Nature-worship.—Worship of nature, in the sense of the ascription to natural objects of divine attributes, is so absolutely in contradiction to the spirit of Islām that it has properly no place therein. The only form which it can with any propriety take is pantheism, by so straining the doctrine of the divine unity as to make all nature God. And this form it took with the Sūfī thinkers, of whom none expresses the idea more boldly than Ibn 'Arabī (586 A.H.):

'The perfectly wise is he who sees in every object of worship a revelation of the Truth, wherein he can be worshipped; and for this reason they call all such objects *God*, together with their proper name, whether stone, tree, animal, man, star or angel; such latter names being that of the personality therein. Divinity is a *rank*, supposed by the worshipper to be the rank of his particular object of worship, whereas in reality it is the mode whereby the Truth is revealed to the vision of this particular worshipper, who reverences this object of worship in this particular revelation' (*Fuṣūṣ al-Hikam*, Cairo, 1309, p. 890).

Hence even the fetish-worshipper worships God. This extraordinary doctrine found comparatively few adherents, and could not be professed with safety; nor can Islām be charged with encouraging fetish-worship except in the kissing of the Black Stone, the retention of which is said to have given offence to some of the early champions of the system. The charge of moon-worship that has been brought against Muḥammad appears to be groundless. Planet-worship is found in certain magical incantations, but these are not properly Islāmic. Cases of veneration paid to trees occur in various Islāmic communities (see I. Goldziher, *Muḥammad-anische Studien*, Halle, 1889-90, ii. 349-352), yet it is doubtful whether this can with justice be called

worship; it would seem that the tree in many cases is brought into connexion with some saint, real or imaginary, who is the ostensible and probably the real object of veneration. Of the worship of springs or rivers it is hard to find any trace; Ibn Iyās, however, records in the year 866 A.H. (Cairo, 1311, ii. 74) that, after various services of intercession to Allāh had failed to produce a rise in the Nile, recourse was had to the expedient of making all existing members of the 'Abbāsīd family sip some water and then discharge it into a vessel which was emptied into the basin of the Nilometer, and this process had the desired effect.

NATURE (Persian).—The Avesta has no word directly corresponding to our 'nature,' but the idea of cosmos is expressed by the term *anhū*, 'the two worlds' (dual. of *anhū*), viz. 'the corporeal and the spiritual existence' (*Yasna*, xxviii. 2), the real and the ideal world. This universe, as created by Ahura Mazda, forms a system founded on the principle of purity, or righteousness (*asha*, personified in the archangel Asha Vahishta), which is identical with Mazda's will and in fact rules in the world as a moral and physical law of nature. Mazda himself cannot operate except according to Asha; on the other hand, he cannot realize his will immediately on account of the system of Amesha Spentas, a theological parallel to the political system of satraps. The Amesha Spentas work as practical functionaries executing the divine designs in the world. The terrestrial sphere is divided into several territories every one of which is presided over by an Amesha Spenta, this genius being in some way identical with the province of nature governed by him and designated with his name. Using a technical term, the Avesta, however, calls the Amesha Spenta 'inspector' (*rātu*) of his domain, which he governs, not on his own behalf, but exclusively in the name of Mazda. Thus Vohu Mano is the *rātu* of the cattle, Asha Vahishta of the fire, Armaiti of the earth, Kshathra Vairiya of metals, Haurvatat of the water, and Ameretāt of plants. Together the Amesha Spentas preside over the whole of nature, and take care that it 'may not decay or perish'; their task is the 'advancement of living beings' (*fradāt gaēthām*, a characteristic term in Avesta, indicating its high appreciation of nature and practical life).

So far the Zoroastrian theology as known from the *Gāthās*; but besides this system we find in the younger Avesta, especially in the *Yashts*, a great number of nature-gods, some of them still reigning as old Aryan divinities from pre-Zoroastrian times, others as popular deities of a later period. Mithra as a sun-god (*Yt.* x.) is also mentioned in the Vedic hymns; the water-god, Apām Napat (*Yt.* xix.), is likewise well known from Indian religion; but most of the nature-gods are introduced into the Persian pantheon later. The goddess of water and fertility, Ardvī Surā Anāhita (*Ys.* lxv.; *Yt.* v.), seems to be identical with the Semitic (originally Hittite?) Astarte; the star-god, Tishtriya (Sirius), to whom *Yasht* viii. is dedicated, is perhaps a divinity of Babylonian origin. The quite naturalistic hymn to the moon (*Yt.* vii.) seems to be very late. All these gods act in the drama of nature broadly described in the *Yashts* in a mythological manner which is quite different from the abstract theology of the *Gāthās*.

Peculiar to Iranian worship is the cult of the elements without any personification—earth, water, fire, etc.—as powers of purity and instruments for the purification of the world. The holy fire (Ātar) is the most important of them, working—or fighting—against demons and impurity not only as

altar-fire but also as hearth-fire and an element of nature. Ātar's battle with the demons, especially the dragon Dahaka, is described in *Yasht* xix. The practical task and the moral duty of man are to assist and advance the pure elements of nature in the great conflict between good and evil spirits in the world. The eschatological ideal of Zoroastrian religion is the restoration of pure nature, when Ahura Mazda has conquered Ahriman in the last battle. On the whole, the Avesta religion may be designated a practical nature-worship, realized not only in the form of cult and theology, but also by means of culture and moral activity.

LITERATURE.—See the general works on Avesta religion by J. Darmesteter, *Études sur l'Avesta*, Paris, 1883, *Essais orientaux*, do. 1883, 'The Zend Avesta,' in *SBB* iv.² [1895], xxiii. [1883]; F. Justi, 'Die älteste iran. Religion und ihr Stifter Zarathustra,' in *PJB* lxxviii. [1897]; A. V. W. Jackson, 'Die iran. Religion,' in *GfP* ii. [1904] 612 ff.; E. Lehmann, *Zarathushtra*, 2 vols., Copenhagen, 1899–1902; J. H. Moulton, *Early Zoroastrianism*, London, 1913. Darmesteter, Ormazd et Ahriman, Paris, 1877, treats the problem in a rather speculative way; his introductions to the single *Yashts* in *Le Zend-Avesta* (Paris, 1893), iii., and esp. to his tr. of the *Vendidad* (*SBB* iv. 3), are more cautious and instructive.

E. LEHMANN.

NATURE (Roman).—I. Introduction.—Before we can undertake the discussion of nature in the intellectual and religious experience of the Romans, we must get a clear idea of where the Romans drew the line dividing nature from that which was not nature. It would be more accurate to say the line between *natura* and *non-natura*, for, although we have borrowed 'nature' from *natura*, the two words do not carry exactly the same meanings. Fundamentally *natura* signified 'birth' (as in Terence, *Ad.*, 126, 902), i.e. the process by which living objects come into being. Since after a fashion things without life come into being, they can metaphorically be said to be born. That these processes are only individuals in their own special series, and that each series is itself one of a countless number, are matters of elementary observation. Realization of these facts on the part of the Romans so extended the meaning of *natura* that it came at length to stand for the grand aggregate of the processes of becoming. But this aggregate was interpreted in two ways.

(a) By the philosopher it was understood as the entire universe, itself an immeasurably large process which initiated and directed the individual processes composing it. So Marcus Aurelius exclaims: 'O Nature, from thee are all things, in thee are all things, to thee all things return.'¹ Such a conception as that involved here tends to obliterate the line between nature and man, and ultimately results in a pessimistic philosophy. To Lucretius man is only a particle in a universe of particles whose entire tendency is downward towards dissolution. Man is as helpless as a clod against the inevitable decree that

'No single thing abides; but all things flow.

Fragment to fragment clings—the things thus grow

Until we know and name them. By degrees

They melt, and are no more the things we know.'²

But, as the Lucretian philosophy was Roman only by naturalization, so to speak, it is not our chief concern here.

(b) To the average Roman, on the other hand, the grand aggregate, *natura*, was not so much a single objective reality as a term. As such, it conveniently summed up those innumerable processes of life, motion, and change which the senses of man could perceive. But it was not the one efficient cause of all these processes; rather, each process or group of cognate processes had its own specific cause, and all of these many causes were alike marked by a certain regularity and by an

¹ *Comm.* iv. 23.

² W. H. Mallock, *Lucretius on Life and Death*, London, 1900, p. 15.

essential independence of human initiative.¹ Of the three marks of the natural just noted the last stood out most prominently in the consciousness. The mere mention of *natura* implied a contradictory *homo*. Of course, the Roman would admit that man is one of nature's works, yet he habitually thought of him as an apparently free agent outside of and in more or less opposition to nature.

2. Sources of information. — As regards the sources of our information as to the attitude of the Roman masses towards nature, there is a real difficulty in the fact that they almost wholly consist of the works of the *litterati*, whose peculiar training and manner of life dissociated them in a large part from the daily experiences of the populace. Few of the vast number of extant sepulchral inscriptions are of service in this field, except perhaps negatively. Yet we are not absolutely in the dark. By taking account of casual remarks of authors and by making simple inferences from well-attested manners and customs, we can at least approximate to the popular point of view. Moreover, the success of such nature-literature as that of Tibullus, Vergil, and Horace is plain testimony that these authors did not have to create *ab ovo*, but had ready to hand a generally sympathetic public. Their writings are, therefore, at once reflexions and enlargements of the views of the masses.

3. Roman regard for phenomena apart from their religious significance. — (a) *The land*. — As the early Italian depended almost wholly on the land for his subsistence, one must expect to find here his most intimate touch with nature. The field cleared from the forest, tilled, sown, and reaped with his own hands, was the most precious thing that he possessed. What beauty it had for him at first was the beauty of utility and of ownership, but it was at once the source of his patriotism and of his ultimate love of landscape for its own sake.²

But the bond between man and nature could not endure unless it gave man a present profit and promises for its continuance. Here it was that the native Roman philosophy, elaborated in the fields, opposed the Grecian philosophy of Lucretius. As Vergil propounds it, it is a philosophy of hope. Jupiter himself ordained that tillage should be hard, so that the skill of man might be whetted.³ The course of nature might be downward, but man is free to contend against it. Mildew, thistles, cranes, weevil, and drought might come, yet to patient toil *iustissima tellus* was generous of her bounty. The man with the mattock was the mainstay of the Republic.⁴ This was the moral of the *Georgics*.

Horace's view of nature is substantially that of Vergil. For him, too, there is no pride comparable to the pride of the freehold. Ofellus, though 'rusticus abnormis sapiens crassaque Minerva,'⁵ was nevertheless the most contented and most desirable type of Roman citizen. Here Horace strikes the rather cold note of policy. Vergil, on the contrary, seems always to cry as with the accents of a Hebrew prophet: 'Return to the plough and to the reaping-hook, "for blessed is he who hath known the rural deities."'⁶

Tibullus, unlike the two former poets, was a son of the city, and, like so many of his kind, had grown tired of city life. On his estate near

Præneste he learned to feel nature's healing power and to see her as the real builder of the Roman strength. In his opinion, no people could exist aloof from her and truly live. The worst that he could say of Hades was 'there are no fields of harvest below, no cultivated vineyards.'⁷

The same Roman view may be observed also in prose-writers like Cato, Varro, and Cicero. In the *de Senectute* the descriptions of the charms of both wild and rustic nature often border closely on the poetical.

Thus far we have noted the utilitarian bond between the Italian and nature, and we have treated it at some length because an understanding of it is essential to an appreciation of the poets' occasional rhapsodies on this theme. Now and again they seem to strike that full note of modern romanticism, the poetic fallacy. But a deeper reading discloses the fact that they have not advanced beyond the juvenile stage of thought expressed in the opening lines of Bryant's *Thanatopsis*:

*To him who in the love of Nature holds
Communion with her visible forms, she speaks
A various language.*

The language which she speaks to them is departmental, and not universal. The trees speak, the fields speak, the water-courses speak, but they speak singly and in their own several tongues. Lucretius comes the nearest to hearing the choral voice of nature, but he hears it as the disciple of a Grecian doctrine, and not as a Roman. But no Roman poet, nor, indeed, any ancient, ever quite attained that point of view of nature and that power of seeing a world in detail which we observe in Shelley's dirge beginning 'Rough wind that moanest loud,' and in Tennyson's 'Flower in the crannied wall.'

Closely allied with 'tilth and vineyard' in the Roman economy were flowers, trees, and domestic animals. From the earliest times flowers were sought and grown for their beauty and fragrance and for the making of garlands to be used in decoration and in religious rites. Poets often alluded to the favourite varieties, but gave none of them a place in romance until the time of the *Elocutio Novella*. The true use of a flower was as a symbol of the fertility and beauty of nature. Of course, the fruit-bearing trees meant much to the Roman in both literature and life. But he admired other sorts of trees as well—the elm for its service to the vine, the pine for its timber, the oak, ilex, beech, poplar, and others for their shade. The Roman poets give us many touching pictures of the domestic animals, especially those that share the labours of life with man. Horace, in his lines 'Sol ubi montium mutaret nimbros, et iuga demeret bobus fatigatis,'⁸ exhibits for the ox the sympathy of a Troyon or Horatio Walker.

(b) *The sky*. — The sky, the celestial bodies, and all the phenomena of weather had much significance for the Italian peasant and shepherd. These were the mysterious powers which with varying directness controlled in large part the conditions of his crops and pastures. The sun, moon, and stars were considered only in their physical aspects. Most of the literary epithets of the sun refer to its light or its heat. The group relating to light is much the larger, no doubt for the reason that at its source it appears to be constant. The sun's perceptible heat, on the other hand, is variable, and there seems to be some ground for believing that the Romans did not regard the sun as the only source of atmospheric heat. In their ignorance of the causes of air-currents they held the winds to be independent phenomena, if not independent agents; hence their frequent personaliza-

¹ In the light of this belief are to be interpreted the famous words of Vergil: 'Happy is he who has been able to trace out the causes of things' (*Georg.* ii. 490).

² 'The old connection between the love of the land and the love of our land . . . was to Vergil an absolutely real fact' (Countess Evelyn Martinengo-Cesaresco, *The Outdoor Life in Greek and Roman Poets*, p. 140).

tion. Moreover, as the temperatures of the year shifted with the march of the constellations, the easy, though fallacious, deduction was made that the latter were the cause of the former. This explains the significance of the days when the dog-star is in the ascendant. The greater prominence of the stars over the moon in Latin poetry lies perhaps in their importance as the common calendar of the seasons. The phases of the moon mark but brief periods and have therefore much less bearing on agricultural pursuits.

Of the seasons spring and winter receive the most frequent mention. In fact, one might say that to the Italian they are the only seasons, summer and autumn being only continuations of spring. Over spring alone was any deep emotion shown.¹ Winter was the period of sterility and idleness, and was tolerated only as a necessary evil.

Clouds were always looked upon as potential evils, for, although they brought the helpful rain, they could also bring flood or even hail.

(c) *Springs and streams*.—Springs and small streams were very close to the life of the common people. The few large rivers, like the Po and the Tiber, were viewed with awe rather than with affection. Being turbid, they were useless for drinking, and they ran at too low a level to be of service in irrigation. Horace's love for the Fountain of Bandusia² is representative of that of the populace of Italy for the myriad other springs of the land.³

R. A. Lanciani has said that the Romans were not attracted by lakes.⁴ The statement is altogether too sweeping. That they received less attention than rivers is evident, but this may be explained by their inferiority as a means of sustaining the life of man. At all events, a sure proof that the Romans were at least not insensible to their charms is seen in the fact that their shores were often chosen as the sites of Roman villas.⁵

(d) *The sea*.—In order to understand the attitude of the Roman towards the sea all that we need to know is that he was incurably a landsman. What little of his living came from the sea was practically negligible. The sailor and the merchant-captain he regarded as grasping and unduly adventurous. The sea was not meant for man. Even in a calm it was treacherous. So capricious was it that the Roman endowed it with human moods and passions. It was the world's greatest symbol of destruction.⁶

(e) *Mountains*.—To the Roman the most striking feature of the higher mountains was their barrenness; they were useless for shepherd and farmer alike. They approximated the intolerable conditions of winter. They were the home of the wolf and the bear. If they had any appeal at all, it was 'as a graceful definition of the horizon, or framing of the landscape,'⁷ or through long association. In the *de Amicitia* Laelius concedes that on this condition one can actually come to love even mountains and forests.⁸ In Lucretius, on the contrary, we observe such a rich variety of allusions to the mountains that we cannot but think that for him they came very near to possessing what we sentimental moderns call moods.

(f) *Wild animals*.—To the fiercer animals of the

wilds the Roman gave short shrift as the enemies of man. The noble beauty of the lion and the rugged majesty of the wolf were lost in bitter antagonism. In one of his letters Cicero tells a friend that the spectators at the opening of Pompey's theatre seemed to entertain a feeling of kinship for the elephants mutilated and killed before their eyes.¹ This was, indeed, very unusual, but may be attributed to a general knowledge that the elephant was often a useful servant of man. Many a Roman would shed copious tears over the death of a pet who could look with no other emotion than that of joy on the butchery of scores of wild beasts. The pet was his own; the personal element was paramount.

(g) *Under world*.—For the Roman's regard for subterranean phenomena see 5 (d) below.

4. *Deities and cults*.—The chief sources of our knowledge of the Roman deities and cults are the so-called Calendar of Numa, writers like Varro and Verrius Flaccus, myths, scattered notices in the literary authors, the anti-pagan diatribes of the Church Fathers, archæology, and anthropology. To appraise these sources severally is impossible at present. Suffice it to say in reference to myths that, influenced as they are by Greek models, they must be treated with special caution, although Otto and Pais have demonstrated that they contain a much larger element purely Roman in origin than was formerly allowed.

The distinctively Roman religion belonged, at the earliest period to which we can trace it, to the pre-animistic stage of thought. Natural objects and phenomena, and objects of a natural origin reshaped by man for his uses, were worshipped in themselves. Their powers were gauged and classified as these objects served as helps or hindrances to human well-being. Although the powers were in the main constant and regular, there was a certain mysterious margin in which they were inconstant and irregular. At first they can have been no more than mere infections, so to speak, benign or malignant in their effects, but in time the infections were condensed into special forces regarded as resident in the objects but in a certain sense independent of them and of one another. These forces were the *numina*. The Roman was now in the animistic stage of religious thought.

The step from *numen* to deity was not immediate. At best the *numen* was still little more than a 'magic potency' and lacked much of being a real *numen*, an expression of will (cf. *nuere*, 'to express will'; *adnuere*, 'to signify assent'). It was in the above-mentioned margin of difference between the regular and irregular manifestations of 'magic potency' that the possibilities for the transition were found. The variations could be accounted for only on the hypothesis that they were due to the activities of powers analogous in their freedom of initiative to human wills. Many of the *numina* were therefore conceived as wills, but the majority remained simply 'functional spirits with will-power.'² To the Roman, however, they were all gods.

It is probable that to the masses the gods were long without names, so vaguely were they conceived. Yet the growth of local cults and the invention of cult-epithets by the priests soon gave them names as well as a 'local habitation.' But the Roman could never wholly emerge from his primitive indefiniteness in this respect, for he was always more or less fearful that in calling upon a god he might speak the wrong name and thus fail in his petition.³ Many of the names were origin-

ally adjectival, but in time they became genuine proper nouns, and as such tended to transfer to the gods whom they designated at least an adumbration of personality.

5. Individual gods.—In the following discussion of the individual gods we shall exclude those of other than Italic provenance and also those of this provenance that are representative of man singly or collectively, living or dead, and of his activities and creations. The order of treatment to be observed will be based as far as possible on the sequence of the Roman's interests in natural phenomena.

(a) *Gods of the sky, atmosphere, and time.*—Juppiter (Iovis, Diovis, Dius, Diespiter) was the chief god of all the Italic stocks. He was the sky-god, or, better, the sky itself together with its phenomena, especially that of light. This would explain the absence of cults of the sun, moon, and stars among the early Italians. His importance to the farmer is obvious when one considers that the conditions of the various crops depend directly upon weather and light. The god Liber was an independent development from Juppiter Liber, and had to do with the fertilization of the seed of plants and animals.

Juppiter showed his power in the thunder, lightning, and rain, and, in fact, was thought to descend in person in the lightning-bolt; hence his epithets Fulgur and Fulmen. The cult of Juppiter Feretrius was apparently a lightning-cult in origin, whatever it was later. The silex known as Juppiter Lapis is generally explained as a celt, i.e. a thunderbolt, but there now seems to be good reason for believing that it was a flint knife symbolizing the act of killing. The name of Juppiter was applied to it in order to give it moral authority.¹ As the rain-god, Juppiter was known as Pluvius, Pluvialis, and Elicius, and, as god of the night-heavens, as Summanus. He is one of the few nature-gods of the Romans who took on moral attributes. As the *numen* who has a universal survey over boundaries between properties, he acquired the title of Terminus—a title which was later detached and given an individual identity. As Dius Fidius, he was the ever-present witness of men's observance of their pledges. To the Roman mind he seemed to sum up the positive powers of all the other *numina*.

Janus, as Consuevis, the power which brings the young to the light of day, may be considered as a nature-god. Closely allied with him is the feminine divinity, Mater Matuta, who

*'Tempore . . . certo roseam . . . per oras
aetheris Auroram deferet, et lumina pandit.'*²

She was a divinity of birth as well as of light.

The gods of the seasons were relatively inconspicuous. For the name of Angerona the ancients had many bizarre explanations. Mommsen is probably right in inferring from the occurrence of her festival on December 21 that she represented the turning of the year. She was thus a duplicate of Anna Perenna. The god Vertumnus is known only vaguely. From his function of presiding progressively over blossoms and maturing fruit we conclude that he was a god of the changing year.

(b) *Gods of human life, earth, agriculture, and herding.*—The Genius of man and the Juno of woman may be classed as nature-gods because they represent functional powers non-human in origin. Genius is the procreative function of the individual man in its aspect as a *numen*, and Juno is that of the individual woman. From indi-

³ Lucretius, *de Rer. Nat.* v. 655 f.

viduals the names were extended to the two sexes so as to include their collective lives and interests. But, owing to the great diversity of men's activities as compared with the few of women, Genius never stood out as a single independent figure like Juno. Juno presided over the successive stages of growth of the child from conception to birth. Her union with Juppiter was comparatively late.

Ceres belongs to the oldest stratum of Italic gods. She was the protectress of the crops from seeding till harvest. At her spring festival, the Cerialia, she was invoked to grant healthy growth. Her relation to the production of the chief staple foods of the populace clearly accounts for the fact that her cult was peculiarly plebeian.

Tellus, or Tellus Mater, was also of the oldest stratum of divinities. She was really Mother Earth, but in the narrow sphere of agriculture she was the seed-field which received and fostered the seed cast upon her bosom. The increasing prominence of the cults of Demeter and her circle thrust Tellus more and more into the background until finally she vanished as a name. But under the name of Terra Mater she reappeared later, and it is probable that the Dea Dia of the Arval ritual is no other than Tellus herself. In certain rites she was the representative of the under world.¹

Saturnus (earlier, Sæturnus, from *serere*, 'to sow') occupied so important a place among the oldest Italic divinities that Italy was sometimes called Saturnia. His primitive function was apparently to preside over the sowing of the grain, but gradually he acquired oversight over other agricultural operations. The central purpose of his festival, the Saturnalia, was to secure proper germination of the seed sown at the winter sowing. By a sort of contamination he acquired his chthonic characteristics from his consort Ops. Only in the legends which identify him with Kronos and make him the ruler of the Golden Age is he endowed with moral characteristics.
